The idea is not a new one. It differs only in minor details from a comprehensive plan put forth by a Presidential commission last year. But many observers here believe that if Mr. Nixon places his prestige behind postal reforms, as no President has done before, the reorganization will be passed by Congress in the next two or three years.

Those who support the plan believe that by handling mail in a business-like manner, free of political pressures, the Post Office deficit could be eliminated within five years and mail delivery could be improved immediately through a modernization of plants, machinery and operations.

There are some, in and out of Congress who argue that converting the Post Office to a corporation would create an "unregulated monopoly." The corporation, they feel, could reduce services considerably, with an eye only to making money and not to the needs of the country.

Some third class (direct mail advertising) mailers fear a corporation would take away their relatively low rates and make them pay their own way. Congress has determined, these mailers contend, that low third-class rates are beneficial to the nation's over-all economy but the corporation would not be compelled to consider national priorities.

But the major obstacles to reform, without question, are the postal workers' unions. They are among the most powerful lobbyists in the capital and are likely to oppose Mr. Nixon's plan vigorously.

"They're afraid of it," one Congressional source noted last night. "These guys carry a lot of clout with Congress now, and they don't know how they'd come out under a new structure."

Rep. Morris K. Udall, a leading Congressional advocate of postal reform, acknowledges that the chance of the proposal's passage this year is just about nil. "It's new and strange and needs an incubation period," the Arizona Democrat says. "But I'm confident that now it's only a matter of time."

NATIONAL TRANSPORTATION WEEK: A BRIEF STATEMENT

HON. THOMAS J. MESKILL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. MESKILL. Mr. Speaker, each year in May the Nation pays special tribute to the service of transportation by setting aside a National Transportation Week. Begun in 1956, this practice has continued through the years and rightfully so. It is an expression of the Nation's dependence on the vital function of transportation.

Back in 1959, it was proposed in a joint resolution of Congress to authorize the President to proclaim a week in May each year as National Transportation Week. The Interstate Commerce Commission endorsed the proposal with these words:

Public transportation is the very nerve center of commerce, and commerce is one of the most important methods by which the strength and unity of our Nation have grown. House Joint Resolution 294, would publicly recognize the vitality and resourcefulness of the people who have so capably met and continue to meet the ever-changing and growing needs of our country. It would provide the means by which a tribute could be paid to the entire transportation industry which, over the years, has had no small task in keeping abreast of all of the changing phases that have marked the development of American enterprise.

If adopted, the proposed joint resolution would serve to bring into proper focus the role of this tremendously important industry as a vital part of our national economy. The proclamation contemplated by this measure would be a forward step toward the promotion of complete understanding, not only among the carriers themselves, but between the carriers, shippers, and the public in general.

We are in complete accord with the spirit and purpose of House Joint Resolution 294 and urge its adoption.

Mr. Speaker, I welcome the idea of paying tribute to the vital function of transportation each year, and add my tribute to the men and women serving the transportation needs of our country.

LT. ROY McDONALD

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. LONG of Maryland. Mr. Speaker, Lt. Roy McDonald, an outstanding young officer from Maryland, was killed recently in Vietnam. I would like to commend his courage and honor his memory by including the following article in the RECORD:

ARMY LT. ROY MCDONALD, 21, OF CUMBERLAND, DIES IN WAR

A young infantry officer from Cumberland who had hoped to make the Army his career is among the latest casualties of the Vietnam war, authorities have disclosed.

First Lt. Roy L. McDonald, 21, who enlisted as a private in 1966, died May 7 as a result of wounds received in an ammunition explosion at a forward staging-area, the Pentagon announced yesterday.

FORT HILL GRADUATE

The Maryland-born paratrooper had earlier been listed as missing, an Army official said. His body was found later by troops scouring the area.

The body will be returned to his home for funeral services as soon as is possible, a family spokesman said. Burial will be at Hillcrest Cemetery in Cumberland.

A 1965 graduate of Fort Hill High School in Cumberland, Lieutenant McDonald enlisted in the Army in December, 1966, after working briefly at the Fairchild-Hiller Corporation in Baltimore.

After receiving basic training at Fort Gordon, Georgia, he was assigned to Special Forces schools and to Officer Candidate School. He was commissioned as a second lieutenant in February, 1967, and promoted to first lieutenant later.

The young officer had been in Vietnam since December, 1968, as part of the 101st Air Cavalry Division. He planned to stay in the Army—and perhaps go to college—on returning to the United States next year, his family said.

Lieutenant McDonald is survived by his wife, Mrs. Barbara McDonald, and a son, Roy 2d, aged 8 months, as well as his parents, Mr. and Mrs. Roy A. McDonald. All are of Cumberland.

Also surviving are three sisters, Miss Delores McDonald of Joppa, Md., Mrs. Barbara Hedrick, of Bel Air, and Miss Janet McDonald, of Cumberland.

HOW WILL FUNDING LEVELS FOR FEDERAL EDUCATION PROGRAMS AFFECT THE SCHOOL SYSTEM IN MICHIGAN?

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, there has been much discussion of the need for full funding of programs that provide Federal assistance to education. Dr. William Simmons, deputy superintendent of the Detroit public schools, in testimony before the House Committee on Appropriations, has given a comprehensive analysis of what reduced funding levels will mean for schoolchildren in Michigan.

His comments are illustrative of the problems that we will be facing all across the country if we fail to make an adequate financial commitment to education in the Congress. Dr. Simmons' comments follow and I commend them to the attention of all who are concerned about the future of education in this country:

TESTIMONY OF WILLIAM SIMMONS, DEPUTY SUPERINTENDENT, DETROIT PUBLIC SCHOOLS, BEFORE THE U.S. HOUSE OF REPRESENTATIVES COMMITTEE ON APPROPRIATIONS, SUBCOMMITTEE ON LABOR, HEALTH, EDUCATION, AND WELFARE, MAY 20, 1969

Mr. Chairman and Members of the Committee: I am William Simmons, Deputy Superintendent of Schools, Detroit, Michigan. I am pleased to have this opportunity to appear before this Committee to testify in support of a new nationwide movement for full funding of all educational programs.

My testimony today will be offered in two parts. The first part will be a discussion of the need for full funding of all educational programs in Detroit. The second part will be a discussion of the need for full funding of the impacted area legislation, Public Laws 815 and 874. All programs are fully operative in Detroit and, combined, represent a major part of our educational expenditures.

Before I begin my basic discussion, I would like the Committee to know that I completely endorse the comprehensive statement made by Carl D. Perkins, Chairman of the House Labor and Education Committee, before this body on Wednesday, May 14. This statement of the need for full funding of all educational authorizations is a document that clearly details the case. The fulfillment of the goals enunciated rests now in the hands of this Appropriations Committee.

PART I

The financial plight of the urban school districts is well known to this Committee. The Detroit Public Schools, for example, face a grave fiscal situation that, if not reversed, will seriously impair the educative process

for boys and girls served by the School District of the City of Detroit. This fiscal year the school district requires an additional $8.4 million if a deficit is to be avoided. To begin school in September with a continuation of the present program, an additional $23.1 million will be required. Where these amounts, totaling $31.5 million, will come from is a part of the dilemma.

The State has been petitioned for additional funds to help meet this financial crisis. Should funds be forthcoming, it is probable that there will only be some $5 million made available to the City of Detroit. The local taxpayers, in November of 1968, were asked to approve a millage increase with no success. This situation is typical of the situation in most of the large city school districts. The only difference is a matter of degree relating to numbers of pupils and the rate of decline in local taxation. Upon consideration of the monetary demands that are now being made on the school district from the community and from professional organizations, combined with existing deficits, it can be concluded that the fate of the schools is not hopeful.

In the midst of fiscal crisis, federal funding from such pieces of legislation as the Elementary and Secondary Education Act has provided the only monies that the Detroit Public Schools have had for program improvement for several years. Funds allocated to the school district under the various pieces of legislation, especially ESEA, have made possible a concentrated attack on problems related to the education of educationally and economically disadvantaged children of the city. The funds received have provided the only dollars available for some beginnings in the explorations necessary in the area of compensatory education especially as it relates to curricular improvement and teacher training. The major difficulty has been that the funds available from federal sources have not been sufficient. Indeed, the funds have only produced "pilot" or "demonstration" programs and, therefore, do not speak to the total needs of students in the school district, particularly so-called disadvantaged students.

Public education, especially urban public education, must, in the midst of inadequate local and state funding, look to federal grants-in-aid to help remedy the multiplicity of problems which confront it. This is true for all public education, but especially true for public education as it relates to urban centers which have become the depositories of the economically disadvantaged children of the nation.

The extension of the Elementary and Secondary Education Act for two years represents a step in the right direction; that direction is the provision of funding assurances for local school districts for more than one year at a time, allowing for more sensible planning and greater continuity in programming. Inasmuch as action in the United States Senate on this matter is still pending, the possibility of a five-year extension is still hoped for.

The school community and staff are agonized and perplexed with the "on again, off again" planning that is experienced by public school systems. Greater understanding of educational planning and the solution of educational problems would be a result of assurances of funding for longer periods and the more effective programming that could take place.

Education as a behavioral science must have the opportunity to operate long-term projects as necessary to accomplish definitive results in modifications of pupil behavior. This longer funding assurance and program life will provide the opportunity for modification of program elements to favor the inclusion of only those elements that show signs of success. This implies that more reliable information about successful program components would be possible through more carefully applied and longer lasting evaluative techniques.

Where forward funding exists, it exists in only a modified way. That is, funding guarantees are uncertain and dependent on annual congressional action or they are limited to a percentage of the present funding level. Not even is there an allowance for normal "cost-of-the-program" increases experienced as a result of wage and product cost increases. Indeed, there is not the kind of assurance that would lead to planning which can guarantee at least continuity of the existing degree of service to clients from one year to the next.

Federal funding legislation, therefore, must begin to establish forward funding statements within their text which will guarantee the continuity of program that leads to more effective solutions to educational problems.

The problem of inadequate appropriations to finance federally funded educational programs is well known. Authorizations passed by Congress are realistically recommended and are based on known needs. Final appropriations, on the other hand, are almost always far less than the amount originally authorized. This immediately indicates that existing needs will be met only to a limited extent. At no time during the operation of the Elementary and Secondary Education Act have adequate appropriations been made to meet the needs of those who expected to be served. Indeed, the appropriations for the present fiscal year were not adequate to continue the federally financed programs of the prior year because the maintenance of the same level of appropriations did not take into consideration the increased cost of doing business that is experienced in every part of the private and public sector.

The restricted allocations of federal funds have put the conduct of most programs under an operational uncertainty that strikes at the effectiveness of the program itself and simply invites unrealistic criticism.

Therefore, one of the decisons that must be made if we are to expect anything other than minor degrees of success with federal funding is the establishment by the Congress of higher levels of appropriations as compared with authorizations.

The appropriations by the Congress for federal educational programs administered by the State have not been sufficient to maintain educational programs in the State of Michigan or in the school districts of the state. The 1966–67 expenditure for all school districts in Michigan for federal educational aids for all programs was approximately $125.48 million. In 1967–68, the appropriation level provided only $121.5 million to Michigan, and in 1968–69 the appropriation had declined to $112.5 million. The decline in the allocation to the State of Michigan, in effect, caused a shrinkage of funds in the local units. ESEA, Title I, has barely maintained its average allocation, and the only program with a constant increase over the three-year period was the impacted area program, Public Law 874.

The Nixon budget for fiscal 1970 reduces even further the allocations for the State of Michigan, which, without question, will mean less funds for the local educational agencies. A review of that budget shows that there will be $3.85 million less to spend on educational programs in Michigan in fiscal 1970 than in the current fiscal year.

The effect of the decreases in Michigan on the Detroit Public Schools is especially significant, since Detroit has 16% of the total school population and 39% of the children who qualify as educationally deprived under Title I programs. Should the Nixon budget be adopted, there would be no funds for ESEA, Titles II and III, or NDEA, Titles III and V–A. The only programs where there might be a possible increase in allocations to Detroit would be ESEA, Title I, Vocational Education, and Adult Education. The increases in these programs, based on the statewide allocation, would be insignificant.

The recommendation for the elimination of all but "A" category pupils under Public Law 874 would remove an allocation of approximately $1 million to Detroit, and almost double that amount should the public housing pupils be added to the act. The point which must be made is when allocations in a budget are shifted from one program to another without additional funds being added to the total, urban school districts suffer the most because these districts participate fully in all of the federally funded programs. What we need in the urban school districts is full funding of all educational programs. A table showing the effect of the Nixon budget on certain of the educational programs in Michigan that have provided substantial amounts to Detroit is shown in Attachment #1. The allocations to Detroit for the ESEA programs are shown in Attachment #2. Needless to say, the decline in the state allocations will mean discontinuation of certain program elements in the Detroit Public Schools.

The impact of the cuts in ESEA, Titles II and III, NDEA, Titles III and V–A, and LSCA, Title I, were described by Dr. Ira Polley, State of Michigan Superintendent of Public Instruction, in a letter to all members of the Michigan congressional delegation. The reasons for continuing of funding these programs, to which reasons Detroit concurs, are dramatically described program-by-program in his attachment to that letter as follows:

Regarding title II, ESEA

1. 400 libraries have been opened in public school buildings.

2. 2½ million books have been purchased for those libraries.

3. Districts with very limited resources, or with large numbers of poor children have been able to obtain special help to provide learning materials to their children.

4. School systems have expended their own funds to train library aides and to support the education of additional professional school libraries.

5. Librarians are personally convinced of the value of this service, as the following quote from a librarian to the state department indicates: "The Title II materials have given us much more flexibility in the classrooms, many more supplementary materials and excellent resources for the children's studies. We are not conducting classes in the traditional manner where children all sit in rows and recite from memory. Instead, children are taken on field trips out of the institution to become familiar with community living. Title II supplementary books, such as "Who Will Milk My Cow" and "Bin-Bang Pig " or lovely big colored picture charts of animals, give tremendous motivation to the children. Traditional textbooks are also outdated for most retarded children. Instead, the teachers use many creative materials which are most applicable and encompass many of Title II materials."

Regarding title V–A, NDEA

1. In 1967–68, 339 school districts, including 680,000 students, participated in NDEA-supported counseling services, and 388,000 students participated in NDEA-supported testing.

2. In 1967–68, over forty schools experimented with elementary guidance programs for troubled young children.

3. Under a new approach by the state department, four community colleges have employed recruitment counselors who recruit and help poor students go on to college.

In the words of this program's director, "Total loss of NDEA V–A will terminate counseling and guidance services to students in several communities where such services have

recently been implemented, and the LEA cannot yet carry programs without help."

Regarding title III, NDEA

1. Requests for NDEA funds received from the local school districts have been double the amount of the allocations by the federal government; out of present federal appropriations, the state department, therefore, is able to match only one-half of the requests for equipment.

2. The number of submitted projects has ranged from 480 to 575 each year this decade.

3. Participation in the program has averaged 93.2% of the public school membership. Those schools which have not participated are the smaller school districts which do not feel they would receive sufficient funds to make the effort worthwhile.

4. This year, 462 school districts with 1,825,390 pupils requested funds under the "regular" NDEA, Title III, distribution. In that distribution districts which have a lower SEV behind each child receive a larger share of NDEA funds.

5. This year for the first time, the state department has made a separate distribution of funds to schools which have large percentages of poor children. Under this program 39 school districts in the state are using $975,000 in equipment grants to improve instruction in schools serving many poor children.

6. In the words of the NDEA, Title III, program director:

"With the present economic situation in the State of Michigan and the voter resistance to voting extra allocated operational millage, the elimination of NDEA, Title III, will merely compound the problems in local districts of providing sound educational programs. It is also our feeling that NDEA, Title III, is one of the better federal programs because equipment and programs developed under this Act are financed by the cooperation of federal funds and matching local funds. The matching of federal funds by local school districts, I am sure, means that much more effort and thought is given to the need, type and use of equipment in the educational process."

Regarding title III, ESEA

1. A cutback of approximately 30–32% being proposed by the United States Congress in the FY 1970 Title III funding levels will require the state department to reduce the budgets of most Michigan projects by 40% with the following implications:

Approximately 500 school districts are being served by Title III projects. Thirty-five districts, acting as fiscal agents, will receive reduced budgets.

There are over 1.7 million public and nonpublic school children touched in some way by these projects. These children will receive less.

The two areas critical to the success of Title III, dissemination and evaluation, will be reduced or eliminated.

The number of children and professional personnel receiving innovative services will be reduced.

Some excellent projects will decide to terminate and have so indicated such action at this date.

Overall quality, a distinguishing feature of Title III, will be reduced.

2. Other cuts may be:

An out-door learning laboratory in Traverse City, where potential school dropouts find a way to stay in school until they graduate.

A Metropolitan-Flint program to help the parents of deaf children help the child learn at home during his first years of life.

A program which brings learning specialists to Kent County rural schools to work with individual children who seem unable to achieve in their classes.

A seven-county effort in the midpart of the state to strengthen elementary and junior high instruction in seven districts.

A program in an urban center to cut class size sharply in schools serving poor children.

A program in the Upper Peninsula to help retarded children learn new job skills.

Regarding LSCA I and II

1. As a result of federal aid, the state has been able to grant from $350,000 to $400,000 to libraries throughout the state for books and for hiring of additional librarians and library aides. These libraries have employed staff, rented space, and started services in anticipation of continued federal support.

2. The state legislature has raised the level of its spending for the libraries of the state, partly in response to the federal presence.

3. The state department of education has employed consultants to work with local library people in improving their services to all citizens.

4. Magazines and other periodicals are purchased by the state libraries and circulated statewide, a service particularly useful to isolated rural libraries.

5. Films and records are made available where none would be otherwise.

6. The construction program has provided over 44 new public libraries, including both branch libraries in the inner city and new facilities in rural communities.

PART II

The extension proposed for the impacted area legislation coincides with the extensions proposed for all other educational programs enacted by the House in H.R. 514. Public Laws 815 and 874 are now scheduled to expire June 30, 1972. The extension proposed will make possible full implementation of forward funding and will remove many of the uncertainties that will undoubtedly affect the level of appropriations for fiscal 1970 and future years, while, at the same time, providing local educational agencies with an opportunity to achieve program continuity that is not possible under shorter extensions. Since the federal revenues provided under Public Law 874 become part of the general fund operating budgets of local school districts, such assurances are necessary at an early date because of their impact on the total school program. The dependence of local educational agencies on this vital revenue source has become increasingly important as school districts across the country are planning educational programs in the face of serious revenue deficits.

The appropriations for the impacted area legislation have been a hotly debated issue before every session of Congress since the laws were enacted in 1950. The regular appropriation process generally has not provided the funds necessary to permit 100% payment for all applicants. It is only through the supplemental appropriation process that adequate funding has been made possible.

This year, the impacted area legislation is faced with a most serious situation. The Johnson budget recommendations for fiscal 1970 proposed that the expenditure level of Public Laws 815 and 874 be limited to $300,000,000. The Nixon Administration further reduced the $300 million to $187 million. The latter budget limitation, if enacted by the Appropriations Committee, would, in effect, eliminate payment to all school districts except those with large concentrations of "A" category pupils. The Johnson Administration recommendation carried with it recommendations for the revisions of the basic legislation to the extent that almost all districts receiving impacted area funds would be eliminated from the program.

The proposed program limitations from the former Administration are detailed hereafter, and it is assumed that the estimated entitlement for full payment would be $622 million. It now appears that the program would not be fully funded at less than $600,594,000. Significantly, nothing was provided in either budget for the funding of the major disaster section of the act. Should payments under this section be required, there would be a proration of payments under the $187 million limitation to both the "A" category pupil and the Section 6 pupil.

Fiscal year 1970

[In millions]

Estimated entitlement under present law	$622
Proposed amendments:	
Require school districts to absorb the cost of education equal to 6% of enrollment for section 3(b) children	−140
Reduce the rate of payment to 25% for Section 3(b) children where the related federal property is in another school district	−117
Eliminate one-half state and national average per pupil payment rates for both Sections 3(a) and 3(b)	−75
Eliminate from the definition of Federal property those properties which are outleased by the Federal Government and on which taxes are paid	−21
Eliminate counting children in 13th and 14th grades	−4
Savings provision to prevent more than 25 percent reduction per school district in first year	+35
Total reductions (net)	−322
Entitlement adjusted for proposed reductions	300
President's Budget for 1970	300

The budget proposals of both the Johnson and the Nixon Administrations are completely inadequate in terms of the impacted area program. Since it is apparent the latest budget intends to fund only a small portion of the program, the inadequacies of the initial budget should be discussed.

The total impact of these drastic amendments, which provide a budget saving of $322 million, would vary from school district to school district, since there are few instances where all amendments would be applicable to a given local educational agency. It is apparent, however, that the 6% absorption proposed in Amendment No. 1 and the change in the definition of federal property proposed in Amendment No. 4 would eliminate most large school districts now in the program. Proposed Amendment No. 2 would provide a serious cutback in funds to all school districts across the country that could meet the new qualifying requirements. The elimination of the floor provision in proposed Amendment No. 3 would seriously reduce the level of payment to districts qualifying under the new restriction and would have a serious impact on those southern states which are now participating under the national average floor provision. Proposed Amendment No. 5 would eliminate those school districts that are now counting as eligible pupils in grades 13 and 14. This amendment is particularly damaging to school districts in California and other states where the counting of such pupils is permitted under state law.

These two laws appear to be caught in the revenue cap that has been placed on all educational programs in the proposed budget for fiscal 1970. An analysis of the educational appropriations recommended in the budget for fiscal 1970 reveals what appears to be little more than a shifting of funds. The increases in Elementary and Secondary Education Act funds, particularly in Title I, appear to be made at the expense of other educational programs. The tragedy of this type of an approach is that it takes money from one educational pocket of the local educational agency and places it in another pocket. The philosophy that federal educational funds should be concentrated to do a particular job loses its impact because all federal funds that are received in most

school districts are combined in such a way that they have the maximum effect on federally supported educational programs.

The impacted area school districts of this nation are caught in a budget squeeze. The limitations proposed by the Administration are premised on the theory that the large city school districts do not get impacted area school aid. The Committee hearing record on H.R. 514 will show that all of the superintendents from the largest cities in this nation who testified during the second week of testimony supported the impacted area program. They suggested these funds would, in part, permit them to reduce the revenue deficits they are facing in the general fund budgets which must be maintained if they are to adequately satisfy the maintenance of effort provisions in the other programs that produce funds for the disadvantaged.

One can but wonder why additional dollars cannot be made available for educational programs from a nation so wealthy as ours. It appears that funds can be found for a variety of activities that pertain to the general welfare, except in the field of education. Yet, it is seldom that our leaders do not cite adequate education for all as the basis for a more productive and stabilized nation. What we need in the support of all educational programs is more dollars, not dollars shifted from one educational program to another. While one can debate the possibility of combining programs, new programs, and the possibility of greater local and state funds for education, the fact that exists today is that the federal educational dollars, almost without exception, determine whether a school district is making forward progress or whether it has simply deteriorated into the balanced budget approach to education.

The House, in enacting H.R. 514, added a new category to Public Law 874, that of children living in public housing. The thrust of this proposal is to relieve in part the serious situations that have developed in many communities across this nation, particularly in impacted areas, when federal housing brought in pupils and then left school districts to provide school buildings and school services that were not possible without depleting the regular program of the school districts involved. Under the housing provision, this section would require an appropriation of $250 million.

The need for separate funding of this new provision was made clear in the enacting legislation and the discussion that preceded the adoption of this program by the committee. All categories of this legislation should be fully funded at the rate required for each category, and not one category at the expense of another.

The continuation of the impacted area program in school districts across this nation is not inconsistent with the need for more educational funds for the educationally disadvantaged. Funds provided to most impacted area districts are the funds that make the difference between a marginal educational program and a complete educational program. Pupils with expectant mobility must have a complete education if they are to fit into new school situations without becoming a burden to the receiving district.

I would make one further plea in behalf of the school construction provisions of Public Law 815. School districts presently qualifying under this law which has provided so many classrooms for the children of the nation are in a fiscal bind. Even though they have qualified for grants under this law, construction programs are not possible in many cases because of budget limitations during the fiscal year in which the classrooms are most needed. Indeed, there is a question as to whether or not the priority system, made necessary by the lack of funds, will not exclude many school districts who, under the laws as authorized by the Congress, will meet all eligibility requirements. An appropriation of $255 million to pay applicants eligible during fiscal years 1967, 1968 and 1969 is required if the housing needs of these districts are to be met. An additional $80 million will be required to pay out in full the requirement for fiscal 1970.

CONCLUSION

In conclusion, I would urge the Committee to report an appropriation bill that would provide for the full funding of all federally authorized educational programs. Less than full funding during these days of educational crisis, in effect, places education low on the list of national priorities when there is little question that the education of our boys and girls should appear in the highest order of any national rating scale.

ATTACHMENT NO. 1

MICHIGAN DEPARTMENT OF EDUCATION—EFFECT OF NIXON BUDGET RECOMMENDATIONS ON FEDERALLY FUNDED EDUCATIONAL PROGRAMS

	1967–68 spending	1968–69 allocation	1969–70 Nixon budget	Increase or decrease

DR. MAX NOVICH

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. MINISH. Mr. Speaker, one of the most rewarding avocations open to a man today is to work for and with youngsters. However, this is not an easy field in which to succeed—many frustrations are involved and a great deal of knowledge, patience, and understanding are required. Therefore, I am most proud today to pay tribute to Dr. Max H. Novich, of South Orange, N.J., for his outstanding achievements in training and teaching young men and boys.

Doctor Novich is a renowned orthopedic surgeon, a former professional boxer, and one of our Nation's leading authorities on amateur boxing. For years he has devoted as much of his spare time as possible to sports and to young people. A recent issue of Sports Illustrated magazine highlighted the fact that the basement of Doctor Novich's home in South Orange is converted into a gymnasium every Sunday for the children of friends and neighbors.

Doctor Novich will serve as chief physician for the American team which will participate in the 1969 Maccabees Games in Israel this summer. The Maccabees Games is a convocation of the world's outstanding Jewish athletes in a quadrennial competition. The games serve as a magnificent vehicle for forging international understanding, cooperation, and good will and are unmatched in terms of cultural and spiritual reawakening.

Recently more than 500 persons turned out to honor Doctor Novich at a Newark, N.J., dinner held to raise funds for the American Maccabees competitors. The evening's program included the following portrait of this dedicated individual and I commend it to the attention of my colleagues:

DR. MAX NOVICH

We honor "Dr. Max" tonight on his reappointment as Chief Physician for the 1969 American Maccabees Team in Israel. Even more we honor Dr. Max as the proponent of the physical fitness of youth and for his time and effort so generously given on behalf of the American Athletic Union, as Chief Physician for the American Boxing Team in the recent Olympic Games in Mexico City and for his services to the American team in the 1965 Maccabees Games in Israel.

Sports Illustrated has given world-wide recognition to our friend and neighbor for his life's devotion to physical fitness, the need for which was early established in his framework of life as a youngster in Newark.

Today, an eminent orthopedic surgeon, Dr. Max, back in the early 1930's, was a 165-pound youth with a right hand good enough to win him a boxing scholarship to the University of North Carolina, two conference championships and two NCAA awards. Later, as a medical student at North Carolina, he met tuition bills by picking up a few professional fights. For the same purpose he took over in 1939 the management of a promising Lithuanian heavyweight named Jack Brazzo.

The arrangement kept both men temporarily solvent but did not have a lasting influence on either of their lives. Brazzo changed his name to Jack Palance and became a knockout as a Hollywood heavy. Novich kept on being Novich. After winning a Purple Heart and Bronze Star in World War II, he came back to New Jersey and established himself as an orthopedic surgeon.

He has also been a New Jersey referee for amateur bouts and is on the State Boxing Commission's medical panel. He has written some 50 articles on sports medicine, has a book on athletic training coming out this spring and is generally regarded as one of the most knowledgeable American physicians when it comes to the development and maintenance of athletes.

Sports Illustrated has referred to Dr. Max as the founder, faculty and resident philosopher of "Novich's Sunday Boxing School for Overprivileged Boys" in pointing to his Sunday morning boxing class which he personally conducts in the basement of his home, converted into a gymnasium for neighborhood youngsters.

The confidence which Dr. Max instills in his charges is termed "remarkable" by this stand-out magazine and the author's words explain it in a way we all understand:

"Put it this way, without exception everyone has an ego to feed. Most of us feed ours in the corners, nibbling away, masking the process with couth little gestures, apologizing for our appetite with phony phrases. But every once in a while you run into somebody like Max Novich, who is a big, honest feeder. He is like a Jewish mother trying to get everybody to stuff themselves all the time. Only he wants to stuff your ego."

Dr. Max will be out to accomplish exactly this as he shepherds our athletes to successful competition in furtherance of world peace through individual excellence in the 1969 Maccabees Games in Israel this summer.

HERBERT E. GREENSTONE,
General Chairman.

FACING THE FACTS

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. TAFT. Mr. Speaker, Justice Oliver Wendell Holmes once wrote:

The first step toward improvement is to look the facts in the face.

To improve the mail delivery in our Nation, the first step is to establish the facts about our postal operation.

The first fact is mounting cost. Since 1838 we have had—despite repeated increases in postal rates—a history of growing deficits. The deficit has now reached over a billion dollars a year.

Despite mounting appropriations out of the taxpayer's pocket, the other fact is that service is getting poorer. Delays and breakdowns cause economic damage and personal hardship.

If we look these facts in the face we must conclude that we need a postal operation that is run as a self-supporting enterprise on a businesslike basis.

Under present procedures postal officials have not even been able to calculate the cost of delivering a letter. The interests of the Post Office Department have been organized more on the lines of a political organization than as a business enterprise.

President Nixon and the Postmaster General has now offered us a proposal to establish a Government owned but independent postal service. I am happy to join in sponsoring this measure. Under its provisions, as in other public utilities, postal-rate rises will be decided by quasi-judicial expert commissions. As in any other business, salary negotiations will have true collective bargaining. The postal worker will finally take his rightful place beside the worker in private industry. The mail delivery will assume its proper role in the modern communications system of America.

FUNDS FOR A NATIONAL SYSTEM OF SCENIC HIGHWAYS

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. CHAMBERLAIN. Mr. Speaker, on May 8, 1969, the Michigan Legislature approved Senate Concurrent Resolution 62, memorializing Congress to pass the necessary legislation to provide funds for a national system of scenic highways. I am pleased to include a copy of the resolution in the RECORD for the information and consideration of my colleagues:

SENATE CONCURRENT RESOLUTION No. 62

(Offered by Senators Schweigert, O'Brien, Rockwell, Fleming and Rozycki)

Whereas, The federal government has conducted studies on the development of a national system of scenic highways in recognition of the fact that roads are more than just conduits of commerce and transportation and in fact are conduits for pleasure, recreation, diversion, experiencing the great out-of-doors and to see and learn of the country around us and legislation to accomplish this purpose has been introduced in the United States Congress, but it has thus far not been enacted; and

Whereas, The beauty, scenery, scenic overlooks and points of interest along the southern shore of Lake Superior in Michigan's beautiful and majestic Upper Peninsula, such as Tahquamenon Falls, Porcupine Mountains and many points of historic significance mandate that such a scenic highway should be located along the southern shore of Lake Superior in the Upper Peninsula; and

Whereas, The United States Congress has not yet seen fit to pass the legislation which would enable these scenic wonders to be opened up to the view of all citizens; now therefore be it

Resolved by the Senate (the House of Representatives concurring), That the Michigan Legislature urges the United States Congress to pass the enabling legislation and appropriate the necessary funds to develop a national system of scenic highways to include a scenic highway along the southern shore of Lake Superior in Michigan's beautiful Upper Peninsula; and be it further

Resolved, That a copy of this resolution be sent to the Director of the Department of State Highways, each member of the Commission of State Highways, the governor, and to each United States congressman from Michigan.

Adopted by the Senate, May 1, 1969.
Adopted by the House, May 8, 1969.

BERYL I. KENYON,
Secretary of the Senate.

T. THOS. THATCHER,
Clerk of the House of Representatives.

A SHOCKING STATEMENT

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 26, 1969

Mr. BROOMFIELD. Mr. Speaker, the North Vietnamese chief negotiator in Paris recently made a statement that must shock the entire civilized world.

He was responding to a plea Defense Secretary Melvin R. Laird issued on May 19. Secretary Laird once more asked, as the U.S. Government has repeatedly asked, that the North Vietnamese give to us a list of Americans they are holding prisoner.

We know they are holding hundreds of these prisoners, but we do not know who they are. Of the 1,300 U.S. servicemen listed as either prisoners of war or missing in action, almost 800 were downed over North Vietnam. Most of these are pilots and we believe a substantial number are held prisoner. Of those 1,300, however, there is no way of telling how many are dead and how many are held prisoner. This subjects their families to a prolonged anguish which does not require much imagination to sympathize with.

The chief of the North Vietnamese delegation in Paris, Xuan Thuy, does not share this anguish.

As he said on May 20 in Paris and these are his words:

As long as the United States continues its aggression and does not withdraw its troops from Vietnam—

He will never turn over such a list.

The next day Secretary Laird said, and again I quote:

I am deeply shocked and disappointed by this cruel response of Hanoi's representative to such a basic request for humanitarian action.

I share Secretary Laird's shock. I can only assume that every Member of this body shares my feelings.

The United States holds no prisoners of North Vietnam. Those prisoners taken in combat are in camps maintained by the Government of South Vietnam in accordance with the Geneva Convention on prisoners of war. In accordance with that convention these camps are visited by members of the international community of the Red Cross, to assure that the prisoners receive humane treatment and adequate food, shelter, and medical care.

The few prisoners which were held by the United States itself have been returned to North Vietnam.

But hundreds of American wives, children, and parents continue to live in a tragic state of uncertainty, because they do not know anything at all about the fate of their loved ones.

I call on Hanoi to furnish a list of the American prisoners it holds.

I call upon concerned American and civilized people everywhere to voice our appeal to Hanoi to furnish such a list.

Simple human decency requires such an action. To play upon the anxiety of helpless relatives or American servicemen in an attempt to win at the bargaining table what force of arms could not achieve on the battlefield is a type of warfare beneath contempt.

It is no wonder the conscience of the civilized world is shocked by this action, and by the callous words of the chief of the Hanoi delegation in Paris.

CRIME IN AMERICA

HON. BOB CASEY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. CASEY. Mr. Speaker, in the May edition of the Police Times, the voice of American law enforcement, is an excellent article written by our esteemed colleague, Representative CLAUDE PEPPER, on our greatest domestic problem: crime.

Subsequent to this article, the House passed House Resolution 17, authored by this distinguished American, creating the Select Committee To Investigate Crime, and he was named by the Speaker as its chairman. I was privileged to have been one of the cosponsors of this legislation, and agree heartily in its goal.

In his article, our colleague states:

It is my personal belief that an even more active role must be played by the Congress in the area of crime control. We must do more than follow recommendations . . . we must make recommendations of our own.

With this, I am in full accord, and I wish my colleague and his committee members well in their vital task. Because I believe his comments should be brought to the attention of all the Congress and the American people, I am pleased to insert it at this point in the RECORD:

A VIEW FROM THE CAPITOL: CRIME IN AMERICA

(By Congressman CLAUDE PEPPER, 11th Congressional District)

In 1965, President Johnson appointed the President's Commission on Law Enforcement and Administration of Justice to make a thorough investigation of the nature, causes, and possible solutions of the problem of crime in America. The Crime Commission reported to the President and the nation in early 1967, telling us that what was required was nothing less than "a revolution in the way America thinks about crime." They summarized some of the nation's most common misconceptions as follows:

Many people take comfort in the view that crime is the vice of a handful of people . . . Many Americans also think of crime as a very narrow range of behavior . . . Many Americans think controlling crime is solely the task of the police, the courts, and correction agencies.

There are few who believe any longer that crime is the vice of only a handful. The 1967 F.B.I. report indicated 3.8 million serious crimes reported to the police, and the preliminary figure for 1968 is about 4.6 million. Juvenile crime is increasing 300 percent faster than the juvenile population. In 1969, approximately one out of every 50 Americans will be the victim of a crime. We have been listening to these statistics throughout the 1960's, and each year they get worse. During the eight-year period 1960–1967, the number of serious crimes per 100,000 population has increased 71%.

This nation has also, and tragically, become aware of the extent to which crime is not a narrow range of behavior, affecting only the few who traffic with risk and temptation. In the words of J. Edgar Hoover in a recent magazine interview:

"Recent events, such as the urban riots, and increase in crimes of violence, the assassination of prominent individuals, have brought home with a terrifying impact the danger of the criminal."

We have become increasingly aware of the danger of crime, and I think also of its complexity. To talk about "crime" is like talking about "disease." Cancer, arthritis, and pneumonia are all diseases, but their causes and cures have little or no relation to each other. So it is with crime. The diversity of the forms of illegal behavior lumped together under the single word is immense. Crime in America ranges from the holiday pickpocket to the mass looting and arson of a riot; from the shooting of an unfaithful wife to the assassination of our greatest leaders; from private desperation to the organized acumen of syndicate crime.

The belief that controlling crime is the job of the police, the courts, and the correction agencies, and no business of the private citizen, is the most dangerous of the public misconceptions identified by the Crime Commission. Public apathy in this regard is as serious as any of the other causes of our spiralling crime rate. Crime control is the occupation, the profession, of the patrolman, the probation officer, the criminal lawyer, but it is the responsibility of every American citizen. In the words of the Crime Commission:

"The responsibility of the individual citizen runs for deeper than cooperating with the police or accepting jury duty or insuring the safety of his family by installing adequate locks—important as they are. He must respect the law, refuse to cut corners, reject the cynical argument that 'anything goes as long as you don't get caught.'

"Most important of all, he must, on his own and through the organizations he belongs to, interest himself in the problems of crime and criminal justice, seek information, express his views, use his vote wisely, get involved.

"In sum, the Commission is sure that the Nation can control crime if it will."

There are indications that the American public is heeding these words, and this is no more apparent than in the Congress of the United States. An unprecedented number of bills relating to a wide range of aspects of crime control was introduced during the 90th Congress. Legislation was enacted providing $63 million dollars for the assistance of State and local governments in fiscal 1969, and authorizing $300 million for fiscal 1970, more money than has been spent by the Federal government in this area in the entire history of this country.

It is my personal belief that an even more active role must be played by the Congress in the area of crime control. We must do more than follow recommendations—and to a large extent major legislation enacted last year was in response to recommendations made by the Crime Commission. We must make recommendations of our own. With this in mind, on January 10 of 1967 I introduced legislation to establish a joint Senate-House Congressional committee to investigate crime, to report to the Congress on its findings and, when appropriate, to recommend legislative measures to be taken. This bill passed the House by an overwhelming majority of 319 to 12 but failed to become law because of Senate inaction. I have introduced identical legislation this year, as well as another measure—in which I am joined by more than 110 co-sponsors—to establish a Select Committee of the House to investigate all aspects of crime. We would like to work with the Senate on this matter, but are willing to take the lead without them if need be.

I have also co-sponsored with Congressman Bob Casey of Texas a measure to strengthen the penalty provisions of the Gun Control Act of 1968. This bill would impose a mandatory 10-year sentence on first conviction and 25-year sentence on second conviction, for those found guilty of commiting a felony while in possession of a firearm. I believe a law like this, a mandatory penalty where there could be no question in a man's mind of the risk he is taking, would go a long way toward disarming our criminals.

In the meantime, there is no more serious domestic problem than crime facing this nation today, and I commend the members of the American Federation of Police for their dedication to its prevention and control.

GI NEVER RETURNED

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. GAYDOS. Mr. Speaker, Memorial Day is the day we traditionally honor the dead. Graves of countless thousands of courageous servicemen will be visited by their loved ones and the memorial services throughout the land will be conducted in honor and respect of those who have given their all for the cause of freedom. There are some who have no graves to visit.

I invite the attention of my colleagues to a recent article from the Pittsburgh Post Gazette which depicts the heart rending emotion experienced by parents who have the agonizing memories of their dead loved ones in the service but have no graves to honor:

HER SOLDIER SON NEVER RETURNED: THERE IS NO GRAVE FOR SAD MOTHER TO VISIT

There's no grave Mrs. Jessie Corle, 427 Bell Vue Ave., Wall Borough, can visit to memorialize her son, John, a victim of the Vietnam war, this Memorial Day.

Mrs. Corle's son never returned from Vietnam. He was in a helicopter shot down 100 yards off the Vietnamese shore in 1965. His body was never found.

This Memorial Day will be the third since she learned of her son's presumed death and still the agony of uncertainty hangs about her.

"Memorial Day has no real meaning, I feel, for parents like us," she wrote to John Spada, county acting director of veterans affairs. "Our son may be dead in body, but I dare not, I will not say Cpl. John T. Corle is dead, for he lives in our hearts and minds forever."

"Now I see where you talked of servicemen's memorial flags," she wrote to Spada. "Could I have one? I can't say where I could place it but in my front lawn for our son does not have a grave to respect.

"Cpl. John T. Corle might have the sea for a grave. Who really truly knows? That's why I ask: Could I have a flag in memory of our son? But where could I put it?"

Spada said yesterday the letter touched him more than any others he's received requesting memorial markers or flags.

He wrote the distraught mother:

"It is fitting and proper under these circumstances for you to place one or more flags on your front lawn on Memorial Day in memory of your late son and of the others who have made the supreme sacrifice." He said he would provide a flag.

He also invited her to a memorial service May 18 at Aspinwall Veterans Hospital commemorating "men who lost their lives overseas and whose crosses remain on foreign soil."

Mrs. Corle's letter arrived last week and is still sitting on Spada's Courthouse desk because:

"The more times I read it the more it saddens me."

FORD LOCAL 600 ASKS ENACTMENT OF TAX REFORM BILL

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. DINGELL. Mr. Speaker, on Tuesday, May 27, 1969, I was pleased to welcome to my office two friends of long standing, Mr. Walter Dorosh and Mr. Robert Battle, who were in Washington on behalf of the 50,000 active and retired members of Ford Local 600 of the United Automobile Workers of America.

Mr. Dorosh and Mr. Battle, who are, respectively, president and second vice president of local 600, brought with them petitions signed by more than 25,000 members of local 600 in support of tax reform.

I would like to quote from the petition:

We, the undersigned, respectfully request the 91st Congress to enact a tax reform bill which would provide a long overdue change which would directly aid the great mass of our nation's taxpayers—the low and middle income workers and the younger people who are struggling to raise families in the face of a constantly increasing cost of living.

The reform tax bill should reduce the oil and mineral depletion allowance, repeal the investment tax credit, and block such loopholes as "hobby farms," accelerated real estate depreciation, multiple corporation tax-exempt municipal bonds, unlimited charitable deductions and the special tax treatment for stock options.

Your Honor, we request your Committee to give our views on tax reform serious consideration and urge the 91st Congress to enact a new equitable tax law that must close tax loopholes for the rich and increase dependency allowances to $1,200.

This was unanimously endorsed by the executive board and general council of Ford local 600.

Mr. Speaker, President Dorosh and Vice President Battle speak for a patriotic and hard-working group of American citizens who stand ready to meet in full measure their responsibilities to their country. However, these two fine officials of one of the country's truly outstanding union locals made it clear that the members of local 600 expect the Congress to adopt equitable tax reforms.

In discussing the need for tax reform with Mr. Dorosh and Mr. Battle, I noted that I had introduced legislation early in the 91st Congress to achieve this end. In assuring them of my continuing support for tax reform, I also told them that it was my intention—and they indicated their support of this position—to oppose extension of the present 10-percent tax surcharge unless and until full-scale tax reform is approved by the House. To extend the surcharge without first reforming the tax structure would merely perpetuate and enlarge the already substantial injustices built into the system for persons who draw their incomes largely from wage and salary payments.

I want to thank the members of Ford local 600, both active and retired, and their elected officials for bringing to my attention in this manner their views on this important public issue. I want to assure each and every person who signed these petitions that I shall honor their wishes and fight to the fullest extent of my ability to secure early approval of broad-scale tax reform legislation.

POSTAL REFORM

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. WIDNALL. Mr. Speaker, the President has said:

There is no Democratic or Republican way of delivering the mail. There is only the right way.

I am convinced that it is the President's broad vision, his ability to transcend the immediate concerns of partisan politics in order to see in its entirety the postal system as it is and as it should be—it is these qualities which are the really important feature of this message.

I say that these qualities are important for two reasons:

First. The ability to transcend partisan politics is the mark of a great President no matter what area he is engaged in.

Second. If the people of this country see the President lead the way, if they see that we have here a leader who is unafraid and who wants the best not just the usable, then they will demand the same qualities from all elective officials.

So this postal message is concerned not only with postal matters but with philosophical matters. It is infused with the spirit of nonpartisanship, with the belief that in order to change for the better it is often necessary to change completely, and with the imagination to discover the means by which such complete change can come about.

I am convinced that history will read this message and see in it not those particulars and concrete suggestions we applaud today, but something more: the vision of a man who quietly, earnestly, courageously works for the common good.

NEW YORK BETH ISRAEL MEDICAL CENTER CELEBRATES 80TH ANNIVERSARY

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. FARBSTEIN. Mr. Speaker, Hon. Charles H. Silver, consultant to the mayor of the city of New York and president of the Beth Israel Medical Center, a well-known and well considered institution in my city, recently spoke at the gala 80th anniversary dinner of the medical center on May 4, before a gathering of nearly 2,000 persons.

His remarks, which document the inspiring story of the Beth Israel Medical Center's growth and progress, follow:

ADDRESS BY HON. CHARLES H. SILVER

Five years ago we met in the same ballroom to celebrate the fact that Beth Israel had grown in seventy-five years from a small second-floor clinic into a splendid hospital of some 360 beds.

Today, we gather to mark our 80th anniversary. Beth Israel has become—in just the last five years—the great new Medical Center of New York with nearly 1500 beds . . . recognized for its achievements throughout the world.

Every friend and all of the members of the Beth Israel family who favor us with their presence and fill this room with faith and dedication have helped to make Beth Israel a vital center of science and research . . . a haven of health and of hope.

I am happy that so many of my days have been spent with you, that so many of my years have been devoted to Beth Israel and that this has given a a matchless opportunity to make life better, longer and more rewarding for my fellow man.

But it has not been my reward alone. It is yours, too . . . something we all share . . . every member of our medical staff, our nurses and technicians, our administrative personnel, our volunteers and certainly our loyal, conscientious and generous Board of Trustees.

I think you realize what all of you mean to Beth Israel—and more than that—I think you can appreciate what your presence here means to me tonight.

I have come to know over the years that if there is one area in which the warmth and quality of our City's heart can be measured, it is in our voluntary hospitals.

And don't think for one moment that because Beth Israel is five times . . . nearly ten times . . . the size it was five years ago, that its heart is shrinking as our dimensions grow. It is good to look about and watch new buildings rising on every hand . . . to see the scope of service to our community multiplied many times.

But I am not so much impressed by the things I see as by the things I feel. And I feel that the warm and pulsing heart of Beth Israel beats just as strong today . . . offering the same close and intimate consideration for our patients as our founders dreamed it would.

Their dream came true and it is not going to fade as we grow. The dream will live. The heart of Beth Israel will never diminish. Because of that heart, because we care—and because we believe that a doctor's business is not just sickness—but people—we will continue to give just as much personal attention to the little things that matter so much.

Perhaps, to the casual passerby, ours is a cold, complex pattern of stone and steel, much like many other structures that line our streets.

But come inside and there the picture is very different. Ceaseless activity goes on at any hour of the day or night as we wage the most vital struggle for human survival—twenty-four hours a day, every day of the year.

The wheels never stop turning. The minds never stop thinking. The hands never stop moving. The skills, the arts, the science, the machinery of medicine . . . the gentleness of nursing . . . the miracles of the research laboratory . . . the whole armory of medical innovation and inspiration is marshaled to assist the doctor and to assure the safety of the patient.

It is hard to believe that back at the beginning of our history a little group of immigrant merchants and tradesmen pledged their paltry contributions of twenty-five cents each to open a tiny infirmary.

At their first meeting in 1889 they framed a resolution addressed to the "dear public and Jewish brethren":

"This gathering is to discuss the horrible conditions in the downtown area for those who wait indefinitely for medical attention at hospitals.

"We must heed the complaints of the sick, the old and the poor.

"Something must be done to wash away this sin and to ignore the needy no further.

"We here resolve that a hospital will be built and its name shall be Beth Israel."

That was what they said eighty years ago—and that was what they did.

If you feel proud, as I do, of their vision and foresight . . . you may imagine how proud I am to be standing here with you in the lengthened shadow of their great resolve, knowing that together we have seen it fulfilled beyond the range of their most ambitious plans.

They never could have conceived Beth Israel's ever-widening involvement in community education, public health, teaching, research and treatment.

But the bitter struggle they faced against misery, poverty and disease has not changed.

Human needs do not change. Human want remains. Human distress and neglect still exist.

These things require the healing hands of the men and women in white who breathe life and meaning into the walls we are lifting again and again as we work today to build the new and greater Beth Israel of tomorrow.

We manufacture nothing. We have no product to sell except one precious merchandise beyond price . . . man's concern for the health and welfare and happier existence of his fellow men.

You and I are engaged in a unique business. Profit plays no part—and we will tolerate no loss—not of a single human life, if the things we have learned and the things we can do at Beth Israel will save it.

And I say that in such an ideal and such a purpose is our blueprint for the future . . . and humanity's hope of a better world.

Eighty years is but a winking of the eye of God in the whole history and destiny of civilization. But I feel that His eye has truly been upon us, that we are doing His work and that He lives in every room, corridor and corner of our hospital.

We are the oldest and largest traditionally observant hospital in the world. And it is good at the end of eight decades to take pride in our age and our size . . . but I maintain that these are rather unimportant.

Let us be the most proud of the compassion and the quality of Beth Israel . . . and pledge ourselves that these will never change.

This is what we have worked together to build in the past and what we will forever guard as we build for the future.

Perhaps I can put it best in the gentle, moving words of Emma Lazarus . . . words which seem to herald Beth Israel's own beginnings!

"Give me your tired, your poor, your huddled masses yearning to breathe free. . . .

"I lift my lamp beside the golden door."

As long as the world needs love—as long as mankind needs hope—as long as humanity needs healing—the merciful task of our many hands must continue.

For Beth Israel's eighty years are more than a triumph. They are a challenge. They are a challenge we will work to meet proudly and tirelessly—and we will not fail.

Not for at least another eighty times eighty happy birthdays for Beth Israel!

The golden door that opens on hope and life in our Medical Center will always swing wide for all who are ill and in need of help and healing.

The golden door of Beth Israel will always be open to all people.

It is the door of life.

The hands that hold it open are the hands of love.

With the help of God—that door will never close.

BERKELEY VIOLENCE

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. EDWARDS of California. Mr. Speaker, yesterday I called for an investigation by the U.S. Attorney General of possible widespread violation of civil rights of the citizens of Berkeley. At that time I noted one man had been killed and more than 100 persons injured, while hundreds of others, including patients in a hospital, had been gassed.

Since yesterday I have examined photographs of the incident in which a young man from my district was shotgunned and fatally injured. The pictures show him with empty hands before the shooting. They also show the roof on which he stood, apparently empty of anything usable as a weapon. Anyone who would care to examine these pictures in my office is welcome to do so.

At the same time I have read the editorial comments on the Berkeley violence in the San Francisco Chronicle, the Berkeley Daily Gazette, and by a distinguished columnist in the San Francisco Examiner. I would like these comments to be entered into the RECORD following my remarks. In addition I am including the comments of members of the University of California Department of Criminology.

I ask your examination of the record of violence in Berkeley.

The above-mentioned material follows:

MAY 20, 1969.

As members of the Faculty of the School of Criminology, University of California, Berkeley, we feel obligated to express our professional concern and outrage at the recent use of excessive force by local law enforcement agencies under the direction of the Sheriff of Alameda County.

We believe that the use of shotguns against demonstrators and spectators (1) was indiscriminate; (2) was unduly harmful and dangerous; (3) was unnecessary as a crowd control tactic; and, (4) has had the anticipatible and undesirable effect of escalating the level of violence in this and possible future confrontations.

We urge the District Attorney and Grand Jury of Alameda County, and the Department of Justice, to immediately investigate the actions of the Sheriff of Alameda County, and that the Sheriff be relieved of his command pending this investigation.

We request the Sheriff of Alameda County to resign from his position on the Advisory Council to the School of Criminology. We believe that he possesses neither the professional competence required to participate in the preparation of students to become professionally qualified workers in the field of criminal justice administration, nor the qualities of leadership which are normally expected of persons associated with the University community.

SCHOOL OF CRIMINOLOGY,
May 20, 1969.

I find myself in substantial agreement with the intent of the above statement. It was my belief that the scientific criminological study of crime and criminals is impossible where political factors become totally confused with the issue of social control that was a major factor in my recent resignation, both from my position as Acting Dean of the School of Criminology and from my tenure appointment at Berkeley.

The present situation seems to be such that all local residents (including myself) attempting to continue their activities are held suspect by the various armed forces. Because of the general nature of this attitude of suspicion they can move around certain areas only at considerable risk.

One purpose of law enforcement is to safeguard the legitimate concerns of the citizen. This is not being effected. It cannot be effected while every movement a citizen may make may give rise to suspicion, particularly since "suspicion" is adequate defense for the use of force against him.

The analogy of "warfare" has already been made and it seems that all persons not in uniform are liable to be regarded as members of the guerilla forces. This is not a legitimate law enforcement viewpoint.

If this is the way the situation is perceived to be, this is the way the situation will become. The outlook is extremely serious unless very substantial measures are taken immediately to reverse the trends now developing. In particular, the death of the student must be investigated and guarantees made that appropriate legal action will be followed through.

LESLIE T. WILKINS,
Acting Dean.

[From the San Francisco (Calif.) Chronicle, May 22, 1969]

VIETNAM TACTICS IN BERKELEY

Downtown Berkeley is now a proven battleground on which volleys of gunfire have been numerous and occasionally deadly, and

the city has experienced a kind of total war in which an aerial gas attack overspread the target area to invade classrooms, private homes and a hospital.

One man is dead, scores have been wounded (many by random charges) and the citizens have been sickened by displays of force far in excess of provocation, necessity, or justification. The peace-keeping agencies, it appears, grossly overreacted to a situation that was undoubtedly troublesome but—up to the time of those displays, at least—not one requiring fusillades of bullets and a rain of gas from the skies.

In their efforts to explain their massive resort to open warfare, the involved authorities have created a vast credibility gap. Sheriff Madigan's implications that his deputies were using nothing more dangerous than birdshot was gruesomely refuted by the post-mortem discovery of buckshot pellets in the heart of young James Rector. So was the repeated assertion of police that the fatal wounds were incurred in a fall from a rooftop.

Again, the assurance that armed peace officers were opening fire only when in danger of life or injury was completely discredited by the published photograph of a deputy sheriff carefully drawing a bead on the back of a fleeing and unarmed man.

No wonder, then, that the use of a helicopter to drop gas on an assembly of students—a piece of arrant recklessness at that time and place—should have generated widely credited reports that something far more deadly than tear gas had been brought into play.

Even yesterday, National Guard commanders were offering conflicting versions of who ordered the use of gas, and for what reasons. Not entirely convincing was one explanation that gas was employed "because the troops were in danger." In danger from what, one wonders.

The responsible authorities, civil and military, from Sheriff Madigan to the governor's office and back again, have introduced a kind of storm-trooper philosophy into the Berkeley confrontation. Let them de-escalate their zapping tactics promptly. At best, they have been guilty of incredibly bad judgment. They have thereby brought needless death and injury into the arena, have created bitter hostility among thousands of previously "uncommitted" students, and have outraged public opinion.

[From the Berkeley (Calif.) Daily Gazette, May 17, 1969]

WERE THINGS THAT DESPERATE?

For the first time in Berkeley history guns have been fired by police into crowds of demonstrators.

We realize it is all too easy to second guess persons in command, but the nagging question in our mind is who gave the order and why?

There can be no doubt about the fact that innocent spectators, including newsmen, suffered injuries from guns Thursday.

We do not question that at times circumstances become so desperate that police must use guns, even at the cost of possible injury to the innocent.

Our question is, "Were things that desperate Thursday?"

The University of California Regents yesterday apologized for the injury caused to persons not responsible for the trouble.

Evidence emerged yesterday to the effect that various policemen and police jurisdictions had serious doubts as to the wisdom of the use of guns.

The Gazette wonders why, after the dangerous situations which have arisen in Berkeley's past, the decision was made to resort to guns in this incident.

We do not preach on the subject, but we do believe the press and the public have the right to the answer.

Police, can not, as is their custom, remain mute as to their motives.

The University of California administration must also fill in some blanks if anyone is ever to piece the current situation into some kind of perspective.

Chancellor Roger W. Heyns told the Berkeley Academic Senate several meetings ago he did not know how persons could continue to write off to youthful idealism what had become a "predictable pattern" of confrontation.

If the chancellor holds to this insight, why did he not immediately identify the "People's Park" as an engineered effort at confrontation and act on that insight?

Also raising questions as to the UC administration's credibility was the statement of the chancellor's second-in-command that the university would not "take any actions in the middle of the night" to reclaim its property. All was to be open and above board with specific prior announcements.

Such was not the case.

One also wonders why, if the university did not have money to develop the park at budget time, they suddenly found the funds.

Finally, the Gazette wonders why the so-called "street people" and large numbers of the college generation allow themselves to become part of power plays larger than their understanding?

Only a fool could believe the idea for a park was accidental.

There can, however, be no doubt that the spirit of most who built the park was spontaneous and without malice.

UNIVERSITY OF CALIFORNIA,
Berkeley, Calif., May 20, 1969.

Hon. RONALD REAGAN,
Governor of California.
HAROLD W. SULLIVAN,
Commissioner, California Highway Patrol.
Hon. ROBERT MONAGAN,
Speaker of the Assembly.
FRANK I. MADIGAN,
Sheriff, Alameda County.
Hon. HOWARD WAY.
Hon. THOMAS C. LYNCH,
Attorney General.
EDWIN MEESE III,
Secretary to the Governor.
ARLO SMITH,
Chief, Criminal Department,
Office of the Attorney General.
J. FRANK COAKLEY,
District Attorney, Alameda County.
Chief BAKER,
Berkeley Police.

GENTLEMEN: The signatories of this letter are members of the faculty of the University of California, School of Law, Berkeley.

The armed conflict on the Berkeley campus and in the neighboring community is too changing and confused to permit any final assessment at this time of what has taken place and who is responsible. But certain facts have been widely reported: police fired guns over the heads of demonstrating students depositing bullets or buckshot in the facade of the library; a photograph in Monday's San Francisco Chronicle shows a police officer in the act of aiming a gun at the back of a single fleeing demonstrator; bird shot discharged from shotguns was used by police last Thursday as a mode of mob dispersal. These so far unchallenged reports give us grave concern that law enforcement has resorted to the use of deadly weapons in circumstances which do not justify their use. We pass no judgment on the responsibility for the tragic death of a 25 year old man who died Monday from buckshot fired by police, because in that case there are unresolved questions of fact.

Since the Report of the President's Crime Commission, a growing consensus has been emerging within law enforcement groups over the imperative of restricting the use of deadly force except where life is at stake. The Model Firearms Use Policy, recently published in the Journal of California Criminal Law Enforcement broadly states that consensus, and the substance of that policy has been adopted by many California police departments. It provides that an officer shall not discharge firearms except when all other means have failed and it is necessary to protect himself or another against serious injury from an attacker or to arrest an adult felony suspect when the crime involves the use of deadly force or there is a substantial risk that the person to be arrested will cause serious injury to another. It provides that firearms shall not be discharged as a warning.

There is little doubt that these policies, developed by and for law enforcement personnel, have been substantially departed from in the course of dealing with the Berkeley disorders and that this departure has resulted in the infliction of serious injury and has imperiled the lives of innocent bystanders as well as demonstrators. It has fulfilled the prophecy of one professional police officer that, "Imprudent or indiscreet use of firearms will arouse public indignation and alienate public support of the police agency." (Samuel Chapman writing in Journal of California Law Enforcement, April 1968, p. 183.)

In the interests of the public welfare, of reason, of human life, of the continued acceptance of authority, including that of our agencies of law enforcement, we call upon those in charge of the law enforcement effort in Berkeley, including the Governor, the Sheriff and the police chiefs, to reassert publicly for the assurance of the public and the guidance of all law enforcement personnel, that firearms are never to be used except as stated in the Model Firearms Statement—that is to say, never except when necessary to protect against an imminent threat of serious personal injury and when all other available means have failed.

Respectfully,

Stephen R. Barnett, Barbette B. Barton, Richard Buxbaum, Jesse Choper, Robert Cole, John E. Coons, Frank O. Goodman, Edward C. Halbach, Jr., Dan Henke, W. James Hill, Sanford H. Kadish, Herma H. Kay, Stanley Lubman, John K. McNulty, Frank C. Newman, Kenneth Phillips, Stefan A. Riesenfeld, Sho Sato, Lawrence Sullivan, Justin Sweet, Jan Vetter, Ira Michael Heyman.

[From the San Francisco (Calif.) Examiner, May 22, 1969]

SHOTGUN STUPIDITY

(By Dick Nolan)

Damn all apologies and extenuations. We can't go around shooting our own kids.

Absolutely nothing else is relevant to the tragedy in which young James Rector was cut down and killed by buckshot.

If the society cannot protect itself intelligently, but must rely on the most brutal use of the most brutal firearm in the arsenal, then the society has already perished, and is a zombie ambulating only in the bodyshell of a dead democracy.

You don't defeat the instigators and the agitators with sawed-off shotguns. When you resort to sawed-off shotguns you have lost to the agitators. And the agitators know it. And everybody knows it.

It is stupidity as well as homicide. It is the idiot charge of the pricked and tormented bull against the cool and calculating matador.

How absolutely bull-stupid it is for Governor Reagan, Sheriff Madigan, and others of our deputies, to imagine that this continuing struggle is a physical one!

They can trot out every tactical weapon in the armory and win every street battle with ease. And while they are meaneuvering with a mastery of squad tactics, preoccupied, the

war of the mind in the larger theatre of ideas is being lost.

That handsome helicopter buzzing the Cal campus and spraying a noxious gas, as though the students were insects and the gas were an insecticide—what a spectacle! What a spectacle of squad level tactics and squad level efficiency!

How many recruits do you suppose that helicopter won for the "other side" in this greater struggle for the heart and the mind?

Those of us who love the Republic and love the humanist traditions of representative democracy can only be enraged by the manner in which our present representatives are misrepresenting us.

We'll never again regain the ground lost when that cruel buckshot was fired into the vitals of James Rector. It did turn out to be buckshot, you know, lethal buckshot, and not the birdshot or rock salt Sheriff Madigan was describing for us so disarmingly.

Whoever fired that deadly charge knows who he is. Presumably, if we have still a society of law, he will be discovered and required to answer to us.

But it is already too late for young Rector, and too late for us in our exertions to hold the love and the loyalties of our seedcrop young for the democracy we hold so dear.

We consistently underestimate both the extent and the depth of the rage that has come to grip our children. The rage and the fear.

There are more of them, angry and scared than so far has been imagined, and they are angrier and more frightened than we would like to believe possible.

They will never forgive us for having put the power of the atom to warlike use. That is at the root of it. We have brought them up to love the sweet green earth and all upon it; and at the same time we have invented and poised for action a doomsday device that could destroy all and everyone.

They are disgusted and terrified at the prospect, and overwhelmed by hopeless anger that there is simply nothing they can do about it. Nothing they can do but rely on our own benevolence—and how shaky does that look when we can turn buckshot and gas-copters on them?

We are in a weak position trying to argue that "we" didn't authorize or now condone Madigan's buckshot or Reagan's bayonets. We are reduced almost to pleading.

If all depends on our true benevolence and it does, we must start proving it. Nothing less than an enormous national change of direction will do. Perhaps a complete new isolationism, and crash concentration on goals and correctives at home.

A BRAVE YOUNG MAN

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. GAYDOS. Mr. Speaker, Marine Hospital Corpsman 3c. Patrick R. McNelis, a brave young man from Clairton, was recently killed serving his country in Vietnam.

I wish to honor his memory and commend his courage and valor, by placing in the RECORD the following article:

AREA MARINE KILLED IN VIETNAM: CLAIRTON PARENTS RECEIVE WORD

A Clairton Marine was killed in action while on duty in Vietnam, it was learned today. He is Hospital Corpsman Third Class Patrick R. McNelis, 22, of 116 Mendelssohn Ave.

He was the son of Mr. and Mrs. Cormack (Bud) McNelis.

Corpsman McNelis was a graduate of McKeesport Area Senior High School with the Class of 1966. He was also a resident of Auberle Memorial Home for Boys from 1959 to 1966.

The Marine enlisted in August of 1966 and was assigned to the Marine Corps shortly afterward. He was home on furlough just a month ago before being sent to Vietnam.

The corpsman was born March 17, 1947. He was employed by the G. C. Murphy Co. sign shop prior to enlisting in the service.

He was fatally wounded when struck by enemy missile fire May 15 and died the following day in Da Nang, Vietnam.

A STUDY IN DISTORTION

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. ASHBROOK. Mr. Speaker, time was when a rowdy group of students who took over a school building, vandalized the facilities, and threw the school administrator out of his office would land in jail and have the book thrown at them. Today, unfortunately, such rowdies stand a good chance of securing their demands due to wavering school officials.

The same theme of permissiveness is evident in the field of law enforcement where certain schools of thought have all but ruled out the idea of personal guilt and responsibility. One specific example is the number of repeaters who, thanks to lenient judges and parole officers, are free to roam the streets preying on law-abiding citizens.

An Eric Hoffer column in the May 24 edition of the Columbus Citizen-Journal dealt with this problem of laxity in law enforcement and some of the reasons advanced to justify this new thinking. Although this new approach to the issue of crime and punishment has been becoming more popular in some circles, it remained for the Kerner Commission report to turn the tables and place the blame—not on the culprit—but on the average lawful citizen.

I include the above-mentioned column, "Intellectuals Uneasy About Success," in the RECORD at this point:

REFLECTIONS: INTELLECTUALS UNEASY ABOUT SUCCESS

(By Eric Hoffer)

It is probably true that 60 per cent of the adult white population in this country (60 per cent of the white voters) are without a sense of guilt toward the Negro, the poor, and the disadvantaged here and elsewhere. They are ready to help their neighbors and anyone in trouble, but the impulse to help others does not stem from a feeling of guilt festering in some dark corner of their souls.

Most of the 60 per cent started to work for a living in their teens. They had no advantage of wealth or class to give them a jump ahead of their fellow men. Whatever ease, comfort, and security they may enjoy at this moment was achieved by striving and saving through the years. Their white skin did not make life easy for them—did not bring them advantages and privileges. They never felt that the world owed them anything or that they owe anybody—white, black, or yellow—anything.

It is safe to say most of the people who at present speak and write about this country's difficulties, and have a hand in shaping its policies, do not belong to the 60 per cent.

It is the fashion now among educated people to feel uneasy about success—not uneasy enough to give up the fruits of success, but enough to feel guilty about it, and emote soulfully about the grievances of the "disadvantaged," and the defects and sins of the status quo. Right now it is a mark of distinction to have a sense of guilt, and fashionable to confess our sins.

At the 1968 annual convention of the American Bar Association in Philadelphia, speaker after speaker maintained crime is caused by poverty, ignorance, and despair; that law and order cannot be maintained until social ills are first cured.

The dean of the Yale Law School and others spoke against the prosecution of lawbreakers if their cause is worthy. Someone even suggested that persons engaged in civil disobedience should be paid by the government for fighting unjust laws.

The whole tenor of the convention was that we must learn to live with disorder and crime until all ills have been cured and our faulty institutions have been reformed.

The only defender of law enforcement at this convention of American lawyers was an Englishman, John Passmore Widgery, Lord Justice of the Court of Appeals in England.

He pointed out that you cannot establish an orderly society by curing social ills and by reforming institutions. How do lawyers and judges expect to keep the peace unless they have an efficient police force? The shock troops against crime are the police. "Anyone who thinks relief of poverty will bring a decrease in crime is in for some kind of disappointment."

The greatest part of England's slums, he said, were razed by the bombings of the last war, and the reforms of the welfare state have practically eliminated poverty. But there has been a steady increase in crime. The reason is that societies throughout the Western world have lost discipline. "Can we ever rely on the worth of a cause in justifying disorder? My answer is a simple and emphatic negative. There should be no bargain, no concession to those who would have it otherwise."

BILL ROTH

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 22, 1969

Mr. SCHERLE. Mr. Speaker, when Senator JOHN WILLIAMS announced that he would not be seeking reelection to the U.S. Senate, my first reaction was to wonder who in Delaware could carry on the tremendous work done by him. In BILL ROTH, whom I have known since we both came to the Congress almost 2½ years ago, I think the State of Delaware will find a very capable replacement for Senator JOHN WILLIAMS. BILL ROTH is nationally known for his work in trying to establish a complete catalog of existing Federal programs. I have found his reports on this subject to be of great value. The taxpayers of Delaware and this country should be most grateful for his work in that area.

The citizens of the State of Delaware, which is known as the first State, can be assured that if they elect BILL ROTH to the U.S. Senate, they will be getting a first-rate Senator.

PROGRAM TO COMBAT COAL MINERS' PNEUMOCONIOSIS

HON. ROBERT H. MOLLOHAN

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. MOLLOHAN. Mr. Speaker, Mr. Charles Johnson of the Public Health Service, made a very cogent statement to the American Mining Congress 2 weeks ago at the American Mining Congress meeting at Pittsburgh, Pa. As my colleagues know, the Public Health Service has been in the forefront of Government agencies in the effort to protect the coal miner from black lung disease. They are to be commended for this and I hope that they can continue to render the individual coal miner the service that they have in the past. This is what Mr. Johnson had to say:

HEW'S EIGHT-POINT PROGRAM TO COMBAT COAL MINERS' PNEUMOCONIOSIS

(By Charles C. Johnson, Jr., Administrator, Consumer Protection and Environmental Health Service, Public Health Service, U.S. Department of Health, Education, and Welfare)

For presentation at a session on Dust Control and Health, American Mining Congress, Pittsburgh, Pennsylvania, May 5, 1969.

I appreciate this opportunity to talk with you today about coal workers' pneumoconiosis and to participate in what I hope will represent a significant step forward in our joint efforts to curtail the disease and disability caused by soft coal mining. This particular problem carries with it a sense of urgency which was not apparent when you first formulated this program in which I have the privilege of participating. The explosion at Farmington, West Virginia last November has forcefully and tragically dramatized the need for improved safety and health measures in coal mines. Hearings in Charleston and in Washington and the strike of some 40 thousand coal miners in West Virginia have also contributed importantly to a new and much needed crystallization of national public opinion on this issue.

Since the announcement of HEW's eight-point program last January, the Administration has proposed new legislation. Therefore, I believe a general discussion of the legislation as it relates to our research activities would be more helpful than discussing the program as originally proposed, point by point. But first, let me outline our structure within the Department of Health, Education, and Welfare, for it is new.

The Consumer Protection and Environmental Health Service was established last year to achieve a deeper insight into the relationship of man to his environment, to assess the total impact on the human organism caused by many separate environmental stresses, and to implement necessary action programs to help the Nation achieve needed environmental improvement. Our agency is composed of the Food and Drug Administration, the National Air Pollution Control Administration and the Environmental Control Administration.

Occupational safety and health is the responsibility of a Bureau by that name in our Environmental Control Administration, whose Commissioner is Assistant Surgeon General Chris A. Hansen.

In his recent Special Message to the Congress on Coal Mine Safety and Health, President Nixon describes death in the coal mines of this Nation as of two kinds, "sudden as an explosion" or "insidious" as "from pneumoconiosis or 'black lung' disease."

One of the most critical occupational health problems on our list of priority concerns is the disease mentioned by the President, coal miners' pneumoconiosis. There are many types of pneumoconiosis, a term for any pathological condition of the lung induced by inhalation of small particles. These particles may be of any dusty materials, as for example, silica or cotton fibers. Coal miners' pneumoconiosis is a chronic chest disease, caused by the accumulation of fine coal dust particles in the human lung. In its advanced forms, it leads to severe disability and premature death.

Coal miners' pneumoconiosis was recognized in Great Britain, as early as 1943, as a disease entity separate from silicosis. It was not generally recognized as such in the United States until the 1960's. Prevalence studies by the Pennsylvania Department of Health (1959–61) and by the Public Health Service (1963–65) confirmed the existence of the disease entity, doucumented its prevalence among coal miners, and showed that it is a widespread problem.

For over 30 years, the Public Health Service has undertaken cooperative studies with the Bureau of Mines on miners' health problems. Not until 1963, however, did the PHS first receive funds for the direct support of operations in this area.

In 1966, the Department established the Appalachian Laboratory for Occupational Respiratory Diseases (ALFORD) in Morgantown, West Virginia. Our accomplishments to date have been modest. Nevertheless, we *have* identified the scope of the problem. When the Surgeon General of the Public Health Service testified at the Department of Interior's hearings last December 10, he estimated that pneumoconiosis "conservatively affects more than 100,000 soft coal workers." That estimate was based on projections of the prevalence percentages found by the Public Health Service in the 1963–1965 study of active and inactive coal miners in Appalachia; on the Bureau of Mines' census of active coal miners nationally—namely, 144,000; and on recent information as to coal miners in Pennsylvania receiving compensation for pneumoconiosis.

As you know, the President has submitted legislative proposals, embodied now in S. 1300 and H.R. 7976 on which hearings are being held, for "a comprehensive new program to provide a vigorous and multi-faceted attack on the health and safety dangers which prevail in the coal mining industry."

Several of these proposals pertain to health of the miners. For example, the proposed legislation would:

Protect miners from concentrations of respirable dust exceeding 4.5 milligrams of dust per cubic meter of air, within 6 months. As soon as possible, this standard will be lowered to 3.0 milligrams per cubic meter of air.

Authorize the Secretary of the Interior to develop and promulgate any additional or revised standards which he deems necessary for the health and safety of the miners. Mandatory health standards proposed by the Secretary of the Interior would be based upon criteria developed and furnished by the Secretary of Health, Education, and Welfare on the basis of research, demonstrtaions, experiments and other information. This technical and public health information would be developed in consultation with appropriate representatives of the operators and miners, other interested persons, the States, advisory committees, and, where appropriate, foreign countries.

Increase substantially, by direct action, grants, and contracts, the necessary research, training, and education for the prevention and control of coal miners' pneumoconiosis, the improvement of State workmen's compensation systems, and the reduction of mine accidents.

Provide for cooperative action with the States in relation to coal mine safety and health conditions, and for grant assistance to such States for the advancement of health and safety in coal mines.

I am sure you will agree the Administration has not acted too precipitously in proposing this much-needed legislation. The United States is the only major coal-producing Nation in the world which does not have an official government standard for coal mine dust. Since Great Britain began requiring dust control efforts in the coal mines, there has been a substantial reduction there in the prevalence of coal workers' pneumoconiosis. Thus, the incidence of new cases in miners has decreased from 8.1 new cases per 1,000 miners in 1955 to 1.9 new cases per 1,000 miners in 1967; the age specific prevalence of simple coal miners pneumoconiosis has also decreased as has the overall prevalence (12.5 percent in 1959–62 as compared to 10.9 in 1964–67).

An official respirable dust standard for coal mines could, in our opinion, if properly enforced, make a significant reduction in new cases of pneumoconiosis and decrease the rate of progression of old cases. Last year, we concluded that sufficient data were available to recommend the adoption of an interim coal dust exposure standard for miners, pending further refinement of technical knowledge. After careful analysis of the British and Pennsylvania experiences, and after consultation with many authorities, we concluded that:

An interim standard should represent no more than a reasonable degree of risk to our miners, given our present technology, and be one that would significantly reduce the rate at which new cases of pneumoconiosis would develop in the future and old cases would progress.

On the basis of those conclusions, last December, the Secretary of Health, Education, and Welfare recommended to the Department of the Interior a Federal standard which could be used to lower respirable dust levels in coal mines. This standard called for a respirable dust level not to exceed 3.0 milligrams per cubic meter as measured by the Mining Research Establishment (MRE) horizontal elutriator instrument. We recommended this standard in the conviction that it could, if adopted and properly enforced throughout the coal mining industry, make a significant reduction in coal miners' pneumoconiosis. This standard, if adopted and enforced, would place the United States on a par with other major coal producing nations which have set health standards for dust exposures in the coal mining industry.

The suggested interim standard of 3.0 milligrams of respirable coal dust per cubic meter (MRE instrument) is consistent with the data from the British Pneumoconiosis Field Research Project in which dust concentrations in 24 mines ranged from 1.0 to 8.9 milligrams per cubic meter (average of 3.8) and with the standard used since about 1966 by the Pennsylvania Department of Mines and Mineral Industries to evaluate dust exposures in bituminous coal mines in that State. The standard thus used in Pennsylvania is that recommended by the American Conference of Governmental Industrial Hygienists as the threshold limit value for quartz containing dusts:

$$TLV = \frac{250}{\%\ \text{Quartz} + 5}$$ (expressed as million particles per cubic foot)

Particle count and weight equivalents of the ACGIH standard used by Pennsylvania are as follows for various percentages of quartz in the dust:

Quartz (percent)	Particle count (millions per cubic foot)	Dust weight mg/m³ (MRE)
0	50.0	5.5
3	31.2	3.45
5	25.0	2.8

When we recommended the interim dust standard last December, we recognized that dust concentrations in most American coal mines exceeded the recommended standard. We also knew, partly from our discussions with the Bureau of Mines, that it would not be feasible in all situations to achieve immediate compliance with such an interim standard and that a time-phased schedule for compliance would be necessary. Consequently, we are in full accord with the provisions of H.R. 7976 and S. 1300 which would require compliance with an initial interim standard of 4.5 milligrams per cubic meter within 6 months after enactment. We feel, however, that the industry should move toward a standard of 3.0 milligrams per cubic meter as rapidly as possible.

The best technical information available to us indicates a direct correlation between the amount of dust breathed by miners and the progression of coal miners' pneumoconiosis. Thus, we can expect that under any interim standard some new disease will develop and some old disease will become more severe. This makes it very clear, then, that a great deal remains to be learned about this disease.

The Appalachian Laboratory for Occupational Respiratory Diseases (ALFORD), which is a field station of the Bureau of Occupational Safety and Health in our Environmental Control Administration is our base for epidemiological and diagnostic studies on coal workers' pneumoconiosis. Miners admitted to the West Virginia University Hospital at Morgantown are examined by ALFORD's physicians. In their evaluations, the investigators use the latest techniques of pulmonary function testing, vector-cardiography, cardiac catheterization, and biochemical analyses. Research is currently underway there to determine more precisely the role of environmental factors in pneumoconiosis and to develop early diagnostic techniques.

Clinical characterization of the disease and definition of physiologic impairment will be achieved by the "in-house" study of 200 miners at ALFORD. So far, 106 miners have been examined in our cardiac catheterization laboratory, and the study should be completed by 1970. Several other studies relating to causation and early diagnosis of coal workers' pneumoconiosis have been prepared by ALFORD, but have not been started because of budgetary limitations.

Scheduled to begin soon at ALFORD is an epidemiological study, called the National Study of Coal Workers' Pneumoconiosis, to be made in cooperation with the Bureau of Mines, on a group of over 5,500 miners working in about 30 mines, predominantly in Appalachia. The purposes of this study are to determine the prevalence and progression of the disease and to correlate those medical aspects with dust levels in the mines.

In the course of the National Study of Coal Workers' Pneumoconiosis, about 3.5 percent of the active mining population would be examined every five years for 15 years. We hope eventually to be able to examine every miner every three to five years to detect pneumoconiosis early enough to prevent progression. At this time, the only effective method of prevention of progression is to remove the miner from dusty exposures.

The United Mine Workers of America Welfare and Retirement Fund, as you know, provides medical care for the vast majority of coal miners. We have invited the Social Rehabilitation Service of the Department of HEW to cooperate in a study of rehabilitation services available to coal miners with pneumoconiosis. The Environmental Control Administration, meanwhile, is developing guidelines for estimating pulmonary impairment in connection with disability evaluation.

We have informed the United Mine Workers of America, the United Mine Workers of America Welfare and Retirement Fund, the Bituminous Coal Operators of America, the Anthracite Institute, and the National Coal Association of our research plans and progress. Through one or more of these organizations, you will most probably be asked to help during the course of our studies. I feel confident you will assist us, for the knowledge we are seeking will benefit the entire coal mining industry.

Coal is our most abundant fuel resource. Right now, it supplies nearly a fourth of our total energy demand. Every forecast, whether by government or the private sector, indicates that coal must continue to play a significant role if this country's future energy requirements are to be satisfied. At the same time, it is clear that our society can no longer tolerate the cost in human life and human misery that is exacted in the mining of this essential fuel. We must find ways to eliminate that intolerable cost so that it does not limit our ability to make maximum use of this valuable resource.

The technology of coal mining, already complex and sophisticated, will become even more so in the years ahead. Government, industry, and labor must perform research to assure that safety and health features are designed into the coal mining equipment of the future—not merely built on as afterthoughts. As the industry goes into deeper and doubtless gassier seams for our fuel supplies, the safety and health of our miners will pose constantly greater challenges for technology. Environmental problems—such as subsidence and water pollution—also will become more serious, unless the ways in which we mine coal are carefully calculated to minimize them.

But we cannot wait until tomorrow to meet the urgent needs of today. With the technology now available, I am told that safety in our coal mines can be markedly improved. We know that there are specific segments of our coal mining industry that have injury and fatality rates much lower than the industry average. There is no defensible reason why the overall disease, injury and fatality rates should not be reduced dramatically.

In his recent message to the Congress on the Administration's proposed legislation President Nixon declared:

"These legislative proposals, together with other steps already taken or to be taken are essential to meet our obligation to the Nation's coal miners, and to accomplish our mission of eliminating the tragedies which have occurred in the mines.

"These proposals are not intended to replace the voluntary and enlightened efforts of management and labor to reduce coal mine hazards, which efforts are the touchstone to any successful health and safety program. Rather, these measures would expand and render uniform by enforceable authority the most advanced of the health and safety precautions undertaken and potentially available in the coal mining industry."

I urge you to continue and to expand your voluntary efforts. For I am sure you will agree with me that we can afford no more of the tragedies among coal miners in this country that have occurred in the past.

I speak not only of dramatic tragedies, such as that which occurred in Farmington, West Virginia, last November, but also of the quiet, unnoticed tragedy which occurs everytime a miner or ex-miner struggles in vain for one more breath through lungs exposed for too long to levels of coal dust which nature obviously never intended a man to breathe.

ISRAEL'S 21ST ANNIVERSARY

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. RIEGLE. Mr. Speaker, this month we are celebrating the 21st anniversary of the founding of the State of Israel. The first 21 years in life are usually characterized as experimental, growing years—the years when, sure of being protected and sheltered, we can afford a little self-indulgence, and trial-and-error. Israel never had the luxury of such youthful years: she was born out of turbulence and had to struggle for her very existence. She could not afford any hit-or-miss efforts nor any irresponsible acts, for the odds were clearly against her. Although burdened by centuries of oppression, handicapped by waves of immigration, lack of funds, and barren wastelands, and threatened by surrounding hostile nations, Israel has triumphed over every obstacle.

The faith, courage, perseverance, and dedication of the Israeli people have transformed their centuries-old dreams and hopes into living realities. Any nation must stand in awe of the countless Israeli achievements. Through technological innovations in land irrigation and desalination, she has been able to turn arid deserts into fertile oases and farmlands. The hard work and toil of the Israeli people have generated one of the greatest economic growth rates of modern times. Cultural achievements have brought Israeli music, art, and literature to the entire world. The traditional Jewish thirst for learning and knowledge has enabled the Israeli people to provide first-class educations to the diverse people who have emigrated to Israel. And yet, while making herself strong and independent, Israel has not forgotten other new and struggling nations. To help bridge the gap between prosperous and poor nations, Israel has sent hundreds of technicians, instructors, and builders to dozens of countries in Asia, Africa, and Latin America to share the instruments of progress.

But our respect and admiration for Israel goes far beyond her success story and her contributions in the scientific, technical, and cultural fields. Our identification with and empathy for Israel stems even more from her belief in democratic ideals which so closely parallel our own ideals. The words of Israel's Declaration of Independence are reminiscent of the words uttered by our own Founding Fathers:

". . . it will foster the development of the country for the benefit of all inhabitants; it will be based on freedom, justice, and peace; . . . it will insure complete equality of social and political rights to all its inhabitants . . . it will guarantee freedom of religion, conscience, language, education, and culture; it will safeguard the holy places of all religions;

Thus, we in the United States have a deep commitment to the ideals of freedom and democracy as does Israel. As

freedom-loving peoples, we share a common destiny. We identify with the strong pioneering spirit of a people which has transformed Israel in 21 short years from a relatively poor and struggling nation into the progressive and economically strong country she is today. We especially understand her insistence that the words "can't" and "impossible" are not in the dictionary.

Israel's achievements and ideals must not be taken for granted—her victories can only be considered temporary until a meaningful and secure peace is established in the Middle East. We, in the United States, must not be indifferent to this struggle for existence and we must do everything possible to establish an equitable and lasting peace between Israel and her Arab neighbors. Surely we must never tolerate the loss of Israel, or any other genuine democracy, to armed aggression.

The congratulatory "Mazel Tov" is not enough—our commemoration of Israel's 21st birthday must carry with it a renewed commitment to do everything we can to bring peace to this part of the world so that the Hebrew "Shalom"—peace—can become a living and enduring reality.

FEDERAL POLLUTION GRANTS FALL SHORT OF AUTHORIZATIONS

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. OBEY. Mr. Speaker, in recent years water pollution has become a subject of increasing political attention. Unfortunately, the performance of the Federal Government in the protection of our environment from the effects of water pollution has been much less impressive than its promises.

The following article from the May 23 edition of the Wausau Record Herald expresses very well the startling gap between promise and performance. I commend it to my colleagues:

FEDERAL POLLUTION GRANTS FALL SHORT OF AUTHORIZATIONS

Conservation is a popular topic of the hour and no politician is against it any more than he is against motherhood and the flag.

But what is said and what is done by our political friends are two different horses entirely.

A case in point is the federal grant program to municipalities for water pollution control.

What Congress authorized in appropriations is one horse; but what is actually appropriated isn't even a horse. For the municipalities depending upon this federal assistance program to help solve their pollution problem, it becomes a jackass and the tail is pinned on them.

Here's the frustrating story:

Fiscal 1968—$450 million authorized, $203 million appropriated.

Fiscal 1969—$700 million authorized, $214 million appropriated.

Fiscal 1970—$1 billion authorized, $214 million requested in executive budget. (Fiscal 1970 begins July 1, 1969, and ends June 30, 1970.)

Already authorized for fiscal 1971 is the grandiose sum of $1.5 billion, but what will the actual appropriation be?

The gap between what is promised and what is delivered comes to nearly $1.4 billion in the three fiscal years.

There are two glaring deficiencies which stand out like silos on a prairie.

One, of course, is that the water resources of this nation are in sad shape. The federal water pollution grant program promised to help get this deficiency remedied.

The job, to do it right, has been estimated in the $30–40 billion range, with local and federal funding sharing the cost.

Indeed, the federal program, which got under way in 1956 on a modest scale, had, as of March 31, this year, already stimulated the construction of 9,251 waste treatment plants at a total cost of $5.7 billion, the federal investment being $1.3 billion.

The other glaring deficiency has to do with municipal financing. Most cities must borrow via bonding and some have gone ahead in good faith in Uncle Sam's word that the federal grants are authorized. But then Uncle does not deliver.

Other cities, seeing the credibility gap between promises and delivery, are permitting deplorable water pollution conditions to worsen because they are reluctant to embark on waste treatment plans unless the promised federal grant is in hand.

Obviously, what is needed is less lip service to conservation and more action.

Either Congress should quit talking about cleaning up America's rivers, or else appropriate the money to get the job done.

As someone else's ironical quote puts it: "Here we are, standing knee-deep in sewage, trying to land men on the moon."

THE SOCIAL SECURITY ACT OF 1969

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. WILLIAM D. FORD. Mr. Speaker, we should be taking a good hard look at recent Consumer Price Index statistics. For April there was a six-tenths of 1 percent increase in the cost of living. The increase in March was even greater. Taking the last 3 months as a whole there was an increase of 7 percent on an annual rate basis. This rate of increase in the Consumer Price Index is greater than it has been at any time since 1951 when we were involved in the Korean war.

This rapid rate of inflation creates problems for every sector of our society; but I am especially concerned about the impact that it has on our senior citizens receiving social security payments. These are the people least able to protect themselves from inflation because they must live on fixed incomes. They have put in many years of hard work and upon reaching a stage in life when they should be able to enjoy retirement they find that rising costs of living put strains on the budget that make anything but the basic necessities become luxuries for them. Those recipients who have savings can rarely afford the risk of the type of investments that would return them earnings of 7 percent after taxes.

We have an obligation to raise social security benefits to a level where social security payments allow people to live decent lives free from need.

The reduction from a 10- to 7-percent increase for social security benefits that appears in the Nixon administration's budget requests does not face up to this obligation. Chairman WILBUR MILLS of the Ways and Means Committee, though supporting a 10-percent increase, unfortunately does not foresee hearings on such an increase until next year. This is too long for those on social security to wait. Inflation will not wait; and social security recipients are feeling its pinch right now.

Therefore, I have joined with many of my colleagues in cosponsoring a bill to amend the Social Security Act to provide a 15-percent across-the-board increase in monthly benefits with subsequent cost-of-living increases in such benefits and a minimum monthly primary benefit of $80. It is estimated that these measures would move 1.4 million persons out of poverty.

I hope, in light of these new cost-of-living statistics, that there can be a reevaluation of the need for legislation updating social security payments. Inflation calls for fiscal restraints, but not restraints on those least able to sustain them.

TRIBUTE TO SOUTHERN ILLINOIS UNIVERSITY

HON. KENNETH J. GRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. GRAY. Mr. Speaker, I am indeed proud of the great educational institution in my congressional district, Southern Illinois University. Two great campuses, one at Carbondale and one at Edwardsville, Ill., have experienced a phenomenal growth during the past 15 years that I have served in Congress. In fact, Mr. Speaker, the University is 100 years old but 75 percent of all graduates have received their degrees during my 15-year tenure in Congress. Enrollment has climbed from a small 2,000, 15 years ago to more than 31,000 this year.

I recently had the privilege of flying to Carbondale to attend a salute to Dr. Delyte Morris, the outstanding president of this great university. Dr. Morris is ably assisted by Chancellor Robert MacVicar on the Carbondale campus, and Chancellor John Rendleman on the Edwardsville campus. They, of course, are backed up by a fine university board of trustees headed by banker Lindell W. Sturgis, Mr. F. Guy Hitt, Melvin Lockard, Dr. Martin V. Brown, Harold Fischer, and Eugene T. Simonds.

Mr. Speaker, we are all perplexed, confused, and sad by some of the student behavior and the resultant unrest on many of our college campuses. I am pleased to include under authority previously granted me to list some of the positive attempts and accomplishments Southern Illinois University and its officers have made to bridge the communications gap by involving students in

university affairs. We are all conscious that it is possible for a new wave of unrest to erupt at any time on any campus, but we are proud to report some positive achievements at Carbondale, Ill.

I want to commend and thank Dr. MacVicar for supplying me with information concerning his efforts on the Carbondale campus to bridge the communications gap by involving students in university affairs.

I hope this will be of some value to my colleagues and universities who are trying desperately to provide high quality education without disruption.

The information follows:

POSITIVE ATTEMPTS BY SOUTHERN ILLINOIS UNIVERSITY—CARBONDALE CAMPUS—TO BRIDGE THE COMMUNICATIONS GAP BY INVOLVING STUDENTS IN UNIVERSITY AFFAIRS

Open Forum: Sessions are conducted by Chancellor Robert W. MacVicar, the Dean of Students, and the Student Body President. These meetings are the question and answer type with no-holds-barred. Various kinds of grievances are heard.

Student Advisory Group: Each school or college has an advisory group of students that meets with the respective dean to consider the academic program, curriculum, student relations, and faculty matters. Furthermore, there is a student representative from each of the dean's school or college that attends the joint meeting of the deans.

Black American Studies: This program was initiated in the Fall of 1969 and has the support of the Chancellor's Office. It is run by black graduate students (mostly under the program and advisory committee, including black students and faculty members). The program has its own campus office with seminar and reading rooms. The courses so far include English, Anthropology, Government, History, Music, and Sociology. A minor is anticipated by the Fall quarter and there are hopes for a bachelor's degree program at a later date.

Booklet on Student Legal Rights: The University's Legal Counsel has been assigned to assist the Student Rights and Responsibilities Committee of Student Government in the preparation of a booklet on student legal rights. The document should be ready for distribution before the end of the current academic year.

Committee on Freedom of Expression and Dissent Within the University: A Committee of the University Council substantially recommends to the President and the Board of Trustees the adoption of the "Joint Statement on Rights and Freedoms of Students" approved in 1967 by the U.S. National Student Association of University Professors. Included are:

"The involvement of students to the fullest possible extent in rule making for student behavior and in policy formulation in academic areas."

"The encouragement of dissent within the framework of the principle that 'dissent and dissenters have no monopoly on freedom; they must tolerate opposition; they must accept dissent from dissent.'" (Quote from *Concerning Dissent and Civil Disobedience,* Justice Abe Fortas.

Other Attempts to Bridge the Gap: A proposal for a campus Ombudsman to act as a pipeline for student complaints is now before the Chancellor.

Upper class women students may now determine their own hours and sophomore women with certain grade point average may self-deliberate hours.

A new Southern Illinois University student disciplinary code and judicial review procedure is being formulated by students in conjunction with the Dean of Students.

NONPROFIT SEACAMP IN FLORIDA KEYS UNIQUE SUMMER EXPERIENCE

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. FASCELL. Mr. Speaker, I wish to bring to the attention of my colleagues a unique nonprofit summer camp for children, located in the Florida Keys—a beautiful part of the congressional district which I have the privilege to represent.

Children from Seacamp, a marine science center, do not bring home the traditional case of poison ivy at the end of their camping stint, as do more mundane summer campers.

Instead, they may lug home a cannonball found imbedded in the timbers of an offshore sunken ship, a shell-encrusted musket, or even a piece of eight. It is all part of the curriculum at Seacamp, where the professors wear face masks, snorkels, and fins, and teach in a living underwater lab.

Seacamp is a nonprofit camp for children aged 13 to 18 located at Newfound Habor on Big Pine Key. Sessions begin on June 26 and run through the summer months.

Children need to have a keen interest in oceanography and a letter of recommendation from either their principal or science teacher in order to attend the 18-day sessions. There is tuition for room and board which includes all classes and fees with the exception of scuba lessons for which an additional fee is charged. The scuba gear is provided by the school.

Seacamp was begun in 1963 by the local Girl Scout troops but faltered when a hurricane blew away the buildings in 1966. Instructors, interested parents, and scientists from the University of Miami, got together shortly afterward and decided to make Seacamp a nonprofit marine science center for all kids interested in oceanography. The facility got off to a limited start in 1967 and has expanded each year since.

Now with permanent dorms, mess hall, lab, boats, and so forth, Seacamp takes 100 youngsters at each of the three sessions that run through the summer. The first session runs from June 26 to July 13; second, from July 15 to August 1; and the third, from August 3 to August 20. Interested youngsters from 28 States and four foreign countries have attended the Seacamp since it was reformed.

All instructors are licensed registered teachers. There are 40 staff members in all. The majority of youngsters are in the 14 to 16 age group and the boys outnumber the girls. In many cases, parents bring their youngsters to the camp and then vacation in the Keys, a plan which I wholeheartedly recommend to my colleagues.

A typical day might include a trip to a nearby reef in the morning for skindiving and collecting specimens, back for lunch, then a lab session with a scientist, or sailing, scuba instruction, or swimming until supper.

In the evening guest scientists drop in to speak to the group as did Jacques Piccard last year. They generally talk about their specialty and then allow a question and answer session afterward and when guest speakers are not lined up, campers plan their own evening social activities which include folk singing, square dances, costume parties, and so forth.

Campers taking scuba instruction can get their official certification from the Florida Skindivers Association and the Underwater Society of America, while at Seacamp.

I commend this outstanding program for the stimulation and opportunity it provides youngsters who have an interest in oceanography. This field of science is growing both in importance and development and it is extremely heartening to see the interest and abilities of these young people being harnessed in this direction.

MEMORIAL DAY

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. BIAGGI. Mr. Speaker, Memorial Day is the ceremonial observance that links us with those brave Americans who have died in the service of their country—with those who were once our neighbors and friends.

More than any other day in the year, it links the past and the present, opening wide for a while the floodgates of memory.

There is something wrong with the man who can stand beside his fellows at Memorial Day services honoring departed comrades, and not feel a deep and abiding sense of nearness to the Unknown.

Something is terribly wrong in the soul of a man if his thoughts do not go winging back at such times to the days when those, who are our honored dead, also breathed deep of life itself.

The observance of Memorial Day has grown year by year to have a deeper, more penetrating significance in Americans' thoughts and consciousness.

John A. Logan was the originator of Memorial Day. He conceived the idea of setting aside 1 day in the year "for the purpose of strewing with flowers or otherwise decorating the graves of comrades who died in defense of their country."

Logan was Commander in Chief of the Grand Army of the Republic at the time. From its headquarters in Washington, he issued the general order under date of May 5, 1868, designating the 30th day of May of that year as a time for paying reverent tribute to the departed comrades of the Grand Army.

Quite a lot of history has been written into America's pages since then, a history of service and sacrifice at home and on the foreign soil of all quarters of the globe.

Since that first observance, 101 years ago this May, Memorial Day has grown in scope and significance far beyond anything that John A. Logan or his Grand Army comrades might have anticipated.

Set aside in tribute to the fallen soldiers of the Union Army, May 30 now honors the men who fell on native soil and on foreign fields across the wide sweep of the world.

Some rest near at home; others sleep on foreign shores beyond the seas. For the memory of all of them, whatever their status in life, Memorial Day is a benediction—a humble prayer that some day the age-old prophecy will come true that all of mankind's swords will be beaten into plowshares.

That is why Memorial Day is so deeply meaningful to most of us. In its observance is the ever-strengthening hope that war may never engulf the world again. That, today, is our humble prayer.

POSTAL REFORM: SUPPORT FOR A POSTAL CORPORATION

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. HAMILTON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article by Richard J. Willey, which I found to have been the most concisely stated and persuasive yet on the question of establishing a Postal Corporation based on the recommendations of the Kappel Commission.

Mr. Willey correctly concludes, I believe, that the Commission recommendations will serve as a focus of public education and debate, the starting point in the process of getting sensible ideas converted into public action. I joined my colleague on the Post Office and Civil Service Committee (Mr. UDALL), today in cosponsoring the Postal Service Act of 1969, because only with bipartisan support can the bipartisan issue of postal reform through the Postal Corporation concept become law.

The article, by Richard J. Willey, department of political science, Vassar College, which appeared in the spring issue of the Public Interest, follows:

TAKING THE POST OFFICE OUT OF POLITICS

(By Richard J. Willey)

A number of signs indicate that the Nixon administration will introduce legislation to the Ninety-first Congress to implement the major recommendations of the President's Commission on Postal Organization. The Commission, chaired by Frederick Kappel of AT&T, has proposed that the Post Office Department be removed from the President's Cabinet and reorganized as a nonprofit, government-owned corporation (such as TVA). A businessman's recommendation (among the ten-man Commission were six top executives of major corporations and the Dean of the Harvard Business School), it has natural appeal to a Republican administration and special appeal to Winton M. Blount, the new Postmaster General. Blount was formerly President of the U.S. Chamber of Commerce—an organization which surveyed its several thousand members and found that over 95 per cent endorsed the Commission proposals. The administration has already taken a first step in the direction of a nonpolitical post office by announcing the intention to sever postmaster appointments from congressional patronage.

Despite the receptivity of the Nixon administration, there is also a strong sign that the Commission proposals will run into stiff, if not fatal, opposition in Congress. Not that this is a partisan issue. The government corporation was first suggested by a Democratic Postmaster General, Lawrence F. O'Brien, in April 1967. President Johnson subsequently appointed the Kappel Commission to study the question and, in his final message to Congress in January 1969, urged "enactment of legislation along the lines recommended by the Commission." Moreover, editorial opinion across the nation has heavily supported the reorganization, and from sources as diverse as *Barron's Weekly* and the *New Republic*.

The major stumbling block is organized postal labor. The postal unions have tremendous leverage in Congress, and Congress is in the habit of constructing part-way houses when serious political opposition to any measure is aroused. Ordinarily, this kind of compromise is the very essence of democracy. It is not an answer, however, to the serious deficiencies that plague the postal operation today. For these deficiencies are unavoidable without a fundamental reorganization. They inhere in the regular-agency form under which the Post Office is now organized.

POSTAL DEFICIENCIES

The single incident most responsible for the original O'Brien proposal was the Chicago breakdown of October 1966. For several weeks, the largest postal facility in the world was in a state of near paralysis. At the height of the crisis, 10 million pieces of mail remained unprocessed and undelivered in a sixty-acre building literally choking on its own product. Not difficult to explain—inadequate equipment and management authority to handle an unexpected increase in mail volume—the breakdown is significant because the conditions that caused it prevail throughout the entire postal system. Although mail volume is ballooning—over 80 billion pieces in 1968, double that of two decades ago—equipment and management practices remain largely of pre-World War II vintage. Thus, "Chicagos" can happen again, at any time and place.

Threat of service failure is the most dramatic kind of deficiency, but by no means the only one. The Post Office continues to offer the same types of service it always has, with no effective mechanism for discerning the new needs of an ever-changing society. Perhaps postal patrons would pay extra to get guaranteed next-day delivery for urgent mail? The Post Office lacks information on this and other market demands because it has never made a comprehensive market survey—a basic tool of consumer-oriented private companies. Neglect of new services not only leaves the public with unmet mailing needs, but deprives the Post Office of badly needed revenues.

The failure to modernize affects personnel as well as service. With over 700,000 employees, the Post Office has one of the largest work forces in the nation. Yet it does little to fulfill what should be a basic employer responsibility today—providing opportunity for the energetic and talented to get ahead. Because a primitive organization of "production" requires little gradation of skill, four-fifths of postal employees retire at the same grade at which they were hired. In many industries in the private sector (which have no edge on the Post Office in suitability for mechanization and new techniques), the ratio is just the reverse: only about 20 per cent retire at entrance grade. Moreover, the top job in every office—that of postmaster—has traditionally been a political appointment, usually filled from outside the career service. Consequently, politics influences career decisions in the supposedly merit ranks as well. It is not atypical, for example, for a nod from the local party committee to be the decisive factor in promotion to supervisor, nor for disciplinary action against an employee with the right connections to be quietly dropped.

The physical environment in which employees work is often appalling. Most big-city post offices were built before World War II for much less mail and fewer workers. During peak hours, their mail-processing floors look like Hollywood caricatures of the nineteenth-century factory system. Crowding, dirt, poor light, inadequate heat and ventilation, too few lockers and rest rooms—these are not exceptional conditions, but the rule.

The inefficiency of the postal operation can be substantiated with a single statistic. Whereas the productivity of the average American worker has been increasing at an annual rate of about 3.2 per cent, that of the postal employee has averaged less than a tenth as much in the last decade—0.23 per cent per year. Stagnant productivity has resulted in ever-increasing charges to mail users: the cost of a first-class stamp has doubled since 1958. But still the post office does not break even. In 1967, as a result of the largest deficit ever (about one fifth of total costs), it consumed $1.2 billion of the taxpayer's money.

Other deficiencies can be mentioned: widespread dissatisfaction with the quality of everyday mail service, a highly authoritarian mode of supervising postal employees, a rate structure that allows many mail users to avoid paying what the Post Office ascertains to be full costs. Altogether, they portray a U.S. Post Office that is threatened by large-scale breakdowns, satisfies neither its customers nor employees, and drains the public treasury of funds urgently needed for other purposes. One can only conclude that it is an organization badly in need of strong corrective action.

THE GOVERNMENT CORPORATION

The Commission found the root cause of postal deficiencies to be the fact that, as a regular governmental agency, the Post Office was too deeply involved in the political process to be managed in a fashion appropriate to its essentially business nature. What was needed was an organizational form that would give postal management the same kinds of decision-making freedom enjoyed in a more efficiently run private sector.

At first, many commissioners even spoke of private ownership as the most desirable solution. Although the long tradition of a government post office was a deterrent to this recommendation, the primary obstacle became the simple question: in its present state, who on earth would buy the Post Office? The government corporation of the O'Brien proposal provided a neat combination of public ownership with many of the management freedoms of the private sector. On the latter point, Harry Truman said in his 1948 budget message:

"Experience indicates that the corporate form of organization is peculiarly adapted to the administration of governmental programs which are predominantly of a commercial character . . . [its usefulness] lies in its ability to deal with the public in the manner employed by private business for similar work."

And the Commission had the example of TVA to draw from, with its world-renowned record of successful management under the government-corporation form.

Of course, TVA began as a government corporation. Changing the organizational form of such a vast and long-established institution as the Post Office, as Commissioner George Meany observed in a footnote to the report, is not a step to be taken lightly. The critical question is whether reforms can be made to allow business-type management without a complete reorganization. The Commission concluded that piecemeal changes would not suffice. Their judgment can be buttressed by

showing that *any* regular agency cannot be run in the fashion of a business (and quite properly so). The kind of deficiencies which the Commission observed in the Post Office are inherent in the regular agency form. Thus, postal deficiencies can only be overcome with reorganization—or with so many piecemeal reforms that the Post Office would become in fact, if not in name, akin to a government corporation. Showing postal deficiencies as intrinsically a part of organizational form has the additional merit of removing any suspicion that individuals—whether postal officials or congressmen—are somehow to blame rather than the system.

REGULAR AGENCIES AND BUSINESS OPERATION

The criteria for business as opposed to regular-agency decision-making are clearly incompatible. The businessman is concerned first and foremost with economy: for both saleability and profit, any given quality of product must be turned out at least cost. When personnel appointments are made, it is on the basis of expertise in this endeavor. In the ideal, this is an enormously beneficial process for society. It ensures the efficient expenditure of economic resources, always relatively scarce, whereas governmental regulation exists to prevent the exaction of too great a social price.

In contrast, the most important regular-agency decisions are made in Congress and the Executive Branch by individuals who must look to political as well as economic criteria. First consideration must be given to the welfare of the nation as a whole, even though the economic cost be great. In a democratic system, the differing interests of groups and individuals must also be represented, frequently with very inefficient results from an economic point of view. One need only look at the loopholes of tax legislation for vivid testimony to this point. Finally, because partisan loyalty is often at least as important as expertise in the administration of public policy, many regular-agency personnel appointments remain in the political realm.

In short, regular agencies cannot be run in the fashion of businesses because the national, group, and partisan interests often take precedence over questions of economy and expertise. Applying this general conclusion to the Post Office, we find that it explains—as a good theory should—the most important relationships that the Commission found between postal deficiencies and present organizational realities. Three of these realities of greatest consequence are the investment process, Congressional management, and political appointments.

POSTAL INVESTMENT

Because the Post Office is a regular agency, research, facilities, and equipment are financed through the normal governmental budgetary and appropriations process. Investment in these areas makes the finest kind of economic sense for the Post Office. Just to give one example: a letter-sorting machine can pay for itself in little over one year. A million dollar investment in such machinery means that, every year after the first, a million dollars is saved in the cost of postal operations. Yet letter-sorting machines are found in only thirty-nine post offices!

The paucity of these machines is but one indication that the entire postal system is undercapitalized. O'Brien estimated in 1967 that a billion dollars a year for five years would be needed to make up the insufficiency. The result of underinvestment, naturally, is the stagnant productivity and inefficiency that now characterize the postal operation.

Why the lack of investment? Under the normal governmental process, final decisions on finance are made by the Bureau of the Budget and Congress, not by postal officials. In a time of inflation, of pressure abroad on the dollar, of the political need to balance a tax bill with reduced government spending, where do these officials look to cut? There is no easier place than in the area of capital investment. It fills no immediate need; it is demanded by no powerful groups. Budget officials and congressmen, on the other hand, are under desperate pressures to reduce spending. They cannot help but grasp any opportunities that the system grants.

A perfect illustration is the budget for 1969. The Post Office began with a request for $507 million for plant and equipment. This was pared down to $313 million by the Bureau of the Budget and to $250 million by Congress—less than one half the original request. Ironically, Congress approved at the same time a $228 million increase over the last year's appropriation for postal operations (almost wholly personnel costs). A similarly large increase must be approved every year for the simple reason that if increased mail volume is not handled through capital investment, the number of employees must be increased instead—a cost, unlike investment, with no potential for savings and one that has to be borne every year thereafter.

In this manner, uneconomic and wholly irrational financial decisions are forced on the Post Office by a system that (rightly, from its point of view) places the national interest in immediately reduced spending ahead of postal investment. The answer is not to subordinate the national interest to postal modernization, but to take the Post Office out of the system. If it were a government corporation, it could follow the pattern of TVA and borrow the funds needed for modernization from the private capital market. As long as investment made economic sense, interest charges would provide no obstacle.

CONGRESSIONAL MANAGEMENT AND GROUP INTERESTS

Congressmen are in truth the top managers of the Post Office. As well as appropriating its funds, they make the final decisions on rates (and therefore determine revenues), wages (which account for four fifths of postal costs), and a large number of operating procedures. Like the managers of any enterprise, they have the responsibility to treat with parties affected by their decisions, most importantly, organized labor and the large mail users. But there is a fundamental incongruity here.

A more basic responsibility of congressmen is to represent in the political sphere these very same groups, parts of their constituencies. In fact, these groups have often had considerable influence in getting congressmen into office in the first place. The postal unions, for example, among the strongest in the country, have been generous contributors of time and money to campaigns. (Where the Hatch Act forbids campaign activities to postal employees, their wives, organized into trade-union auxiliary associations, have taken over.) The nation's press, a major user of the mails, has an intimate link with politics through its ability to influence public opinion. How can congressmen, then, deal with these groups as would the managers of an economic enterprise? The effects of this impossible situation are everywhere in evidence:

Although the Postal Policy Act of 1958 enjoins Congress periodically to adjust the rates of nonpublic-service categories of mail to cover costs, the Post Office calculated—prior to the 1967 rate bill—that regular second-class mail, mainly mass-circulation magazines, newspapers, and business publications, covered only 29 per cent of costs (estimated loss in 1967, $236 million) and regular third-class mail, mainly advertising, covered only 67 per cent of costs (estimated loss, $309 million).[1]

Congress passed a pay increase for postal workers in 1967, despite the great pressure to reduce spending that led to the slash in capital investment. This increase was both larger than that for other civil servants and larger than the President recommended (estimated cost, about $60 million for 1968 and $160 million for 1969).

The number of restrictive operating procedures forced on the Post Office as a result of group pressures on Congress is legion. For instance, in order to lessen competition from the Post Office, private express companies worked for the passage of legislation in 1951 that prohibited parcels of certain sizes from being sent through the mails. A union-inspired statute requires that mail be transported by postal employees where an airport is thirty-five miles or less from a city, even though private carriers under contract to the Post Office are covering similar ground. These same private carriers have fought legislation, wanted by the Post Office since 1958, that would enable the shipment of mail via highway common carriers to supplement the contract service based on competitive bidding it now must use.

Although congressional decisions such as these have contributed markedly to postal deficiencies, the blame cannot be placed on individual congressmen nor congresses. To interpret such decisions as a knuckling under to powerful groups entirely misconstrues the nature of the political process. Representing the interests of constituents is a vital job of congressmen, and political pressure and its consequent give and take is what democracy is all about. If uneconomic decisions on postal matters are to be avoided, the answer is to remove the Post Office from a system that requires business decisions from men who have to be responsive politically.

With the Post Office reorganized as a government corporation, congressmen would become general overseers without detailed decision-making involvement in rates, wages, and operating procedures. Annual review of corporation budgets by Congress is provided for in the Government Corporation Control Act of 1945. In practice, this device has given congressmen ample opportunity to influence important issues of policy that have arisen. Business-type decisions for a postal corporation, however, would be made by professional management and a Board of Directors appointed by the President with the consent of the Senate.

In the sensitive area of rates, the Commission has recommended that a small panel of expert rate commissioners, independent of the professional operating management of the corporation, hear the views of interested parties, assess postal needs, and advise the board as to the merits of changes proposed by management. It would be the responsibility of the board to protect the public interest, but Congress would also have a reserve power in this respect: it could veto a rate action within sixty days. This procedure was preferred to the creation of an independent agency, like the FCC, to regulate postal rates, because it avoided the anomaly of one governmental body regulating another as well as the proliferation of bureaucracy. Congress would be much less susceptible to group pressures on a veto than when directly setting rates itself. For a veto to succeed, a determined majority would be needed for action.

The Commission has recommended that wages be determined through collective bargaining between unions and the postal corporation, with continuation of the present prohibition against strikes by federal employees. Impasses would be settled by voluntary and binding arbitration, perhaps using the standard of comparability with private industry, or—if that course did not produce settlement—by a suitable mechanism determined on an *ad hoc* basis by the President, as railroad disputes have been settled in the past.

[1] If the Post Office used a business-type cost ascertainment system, these figures might very well be different. But this does not deny that on the basis of the only information available, Congress has set below-cost rates.

Postal union leaders, strangers to collective bargaining, naturally resent the rupture of their accustomed relationship with Congress, and the remembrance of Presidential involvement in the rail disputes is not a particularly pleasant one. Yet this recommendation still seems the least unattractive of the alternatives. The present relationship between the unions and Congress is an unnatural one for a business enterprise, and there would be some motivation to settle disputes without drawing in the President because neither side could be certain as to the mechanism he would choose. In any case, arbitration, whether through a panel chosen by the two sides or by the President, seems the most sensible way to settle labor conflicts today in an industry essential to the national welfare.

POLITICAL APPOINTMENTS

Business firms usually appoint top managers on the basis of expertise and wide experience, either within their own or related organizations. Only once in modern history, however, has the President appointed a man to head the Post Office who has been an experienced postal manager (Jesse Donaldson under Truman in 1947). Typically, the Postmaster General has been a top party man, more important to the President as a manager of political affairs than of the Post Office. Naturally, he picks up some experience of postal matters over time, but this tends to be of short-lived usefulness. These top managers of the Post Office generally leave after only two or three years in office.

The field managers of the postal system—the several thousand postmasters across the land—are also appointed by the President, although in the past the decision has actually been made informally by the congressman in whose district the post office is located. (If the congressman is not of the President's party, the "adviser" becomes some other state or local political figure.) As a result, only about one third of postmasters appointed in this decade have been career employees, and even these did not always include the best qualified from a management point of view: there have been cases of clerks or carriers appointed over the heads of supervisors. Thus, more often than not, that man on the supervisory staff of a post office with the most advantageous experience and greatest ability does not get the number one slot. Nor can a man who performs admirably as the postmaster of a small town ever be transferred to the more demanding position of postmaster in a large city, because of the residency requirement of political appointment.

Political appointments in the Post Office result in the strangest sort of chain-of-command for a business enterprise. Because postmasters are appointed for life and in most cases owe their positions not to postal management but to a place in the political scheme, local post offices can exist as islands unto themselves. This makes it most difficult for the Post Office to "manage" its operations in the true sense of the word. Within headquarters in Washington, political appointments also contribute to a fragmented structure. Each bureau is headed by a Presidential appointee who often has a power base independent of the Postmaster General.

The Commission has recommended that, with corporation form, postmaster appointments be taken out of politics. A nine-man board of directors would be made up of six part-time members appointed by the President and three full-time officers (including the counterpart to the present Postmaster General—a Chief Executive Officer and Chairman of the Board) named in turn by the Presidential appointees and responsible to them for the management of the Post Office.

Having these most important full-time officers appointed outside the political sphere represents a departure from normal government-corporation practice. It embodies the strong Commission feeling that what a successful Post Office needs is professional management, and management that could be released without a political row if it failed to perform. To attract the most talented managers, the Commission has also recommended that full-time officers be paid salaries competitive with private industry—and this would mean higher than the salaries now received by congressmen, Supreme Court justices, and members of the President's Cabinet. The justification is that without the prestige and power that accrue to these latter positions, financial incentive would be needed to induce the best people to leave private industry (although the challenge of making the Post Office work might intrigue the more daring.)

THE POST OFFICE: A BUSINESS?

The burden of the argument to this point has been to show that the Post Office is seriously deficient in many respects and that these deficiencies cannot be overcome without reorganizing for a business type of operation. The key question remaining to be explored, however, is one of value rather than fact: *should* the Post Office be run as a business? The Commission thinks so, but its background—predominantly in private enterprise—hardly makes this judgment surprising. If the Commission is mistaken and the Post Office does not perform essentially a business function, then regular-agency form is the right one, despite inherent deficiencies. In fact, many supposed deficiencies take on a different light when seen from a nonbusinessman's point of view. Billion-dollar "deficits," for example, are accepted features of most regular agencies, and political appointments make sense when there are politically sensitive policies to administer.

Does a crucial distinction exist, then, between the Post Office and normal agencies of government? If it is proper that the most important decisions for regular agencies be made in Congress and the Executive Branch, according to other than strictly economic criteria, why should the Post Office under a different form be allowed more business-type freedoms?

The answer has to be that the Post Office receives a payment from the recipients of its service and is potentially self-supporting. Although almost all regular agencies have to be financed wholly through tax revenues, only a small part of postal costs—averaging 15 per cent over the years—has to be covered in this way. At times in the past, the Post Office has even operated in the black. The need for tax revenues explains political controls and the consequent measure of economic inefficiency built into all regular agencies. Because tax revenues come from the people and belong to the nation as a whole, they must be expended in the best national interest and, in a democracy, as the people dictate through their representatives. But the converse is then true for the Post Office, which does not necessarily require tax revenues.

If the Post Office had always been completely self-supporting, and had never been used for the kind of public policy program financed through tax revenues, it would be difficult to object to this line of reasoning. As it is, however, arguments based on these grounds do have to be answered.

THE DEFICIT AND THE GENERAL WELFARE

Because a portion of tax revenues has been needed in most years to cover a deficit, one could argue that the Post Office should be controlled in the same political fashion as any other agency spending the people's money. The flaw in this argument is that the postal deficit is brought on by the very organizational form it is used to justify. Change that form to eliminate inherent deficiencies and no more deficit! The Commission estimates that, in time, a minimum of 20 per cent of present costs could be saved with the more business-oriented operation it recommends. If those savings had been effected in 1967, the deficit would have been erased, and with no rate increase.

Another argument sees mail communication as so indispensable to the general welfare of the country that the Post Office should receive at least some financial support from tax revenues (whose expenditure, of course, would require regular-agency political controls). Congress shared in this philosophy when, in the Postal Policy Act of 1958, it determined that a percentage of the costs of rural operations should be paid out of tax revenues, on the assumption that rural services were unprofitable but had to be maintained for the public good.

Functioning for the public good, however, cannot be the sole criterion for tax support and regular-agency status. Otherwise, most of society would be so organized. A whole host of organizations are indispensable to the national welfare and are not regular agencies—in the private sector, for example, telephone companies, electric utilities, the entire system for the provision of foodstuffs. Further, to think that a tax subsidy should be paid for rural service is to misunderstand the nature of the postal enterprise. Providing nationwide coverage is just as much a service to urban as to rural America. Who benefits when an urban business sends a catalogue to the country, or when young people who have moved to the city receive a letter from home? The costs of nationwide coverage cannot be separated into urban and rural components, but must be borne by the system as a whole.

A corollary to the general welfare argument is that tax support permits low rates, thereby stimulating commerce and the dissemination of information. Many publications and direct mail advertisers even claim that to pay what the Post Office ascertains to be full costs would drive them out of business. This might not upset too many people with regard to advertising in the mail, but some of the highest quality magazines and journals are financially very marginal operations, and the widest possible dissemination of the press is vital to the democratic process. Does tax support really permit low rates, however? Pointing to the steadily climbing rates of past years, one could argue that the inefficiencies resulting from the regular-agency form more than cancel out any beneficial effects of tax support. A better way to maintain low rates for all types of mail would be through a more business-like operation. Moreover, the Post Office now allocates its very extensive (almost half) fixed or institutional costs proportionately among all classes of mail in determining rates. A business-like operation would realize that having marginal users pay only a small share of fixed costs would be more profitable for the Post Office than driving them out of business. Thus publications and other "below-cost" commercial mailers are likely to fare better in the long run under corporate form than with the present system, and will escape at the same time any charge of "subsidy."

SUBSIDIES

Congress might wish, however, to continue subsidies through preferential rates to certain types of mail user, such as educational institutions, religious orders, and other nonprofit organizations. No different from any other public policy program, one could maintain that such subsidies should properly be funded from tax revenues.

Yes, they should—properly. But if the objective of an efficient Post Office is to be achieved, at this point a compromise with logic may be desirable. At present, the cost of this kind of subsidy calculated by the Commission according to economic standards, is less than 4 per cent of total postal costs. It is reasonable that such a small percentage should justify an organizational

form that costs the Post Office so much more through inherent inefficiencies?

To avoid this anomaly, the Commission has recommended that the postal corporation itself cover the 4 per cent subsidy, with the proviso that the subsidy be kept within the general range of that figure. The corporation would thus be paying a kind of income tax, such as those assumed by private and even other government corporations. TVA, for example, makes a contribution in lieu of taxes to states and localities, in its area of operation, of 5 per cent of gross power proceeds (excluding sales to the U.S. government). Of course, mail users would eventually end up paying the costs through postal rates. Because the mails are so generally used by the public, however, and in rough proportion to income, this method would not differ greatly from the present method of the general public paying the costs through taxes. The significant difference is that the Post Office would not have to go to Congress for any funds at all.

EMPLOYER OF LAST RESORT?

The postal corporation would not be able, however, to cover by itself the costs of one major kind of public policy program advocated for the Post Office: that it be used to provide jobs for surplus labor, a vast employer of last resort. It might deliberately be kept inefficient in order to employ greater numbers (as it does unintentionally today), or it might be used to provide additional labor-consuming services which really are not needed. Daniel P. Moynihan has suggested, for example, the creation of 50,000 jobs by reinstituting two mail deliveries per day in residential areas—a service, it seems, most of the nation has gotten along well enough without.

If there were no other jobs in the nation that needed to be done, one might agree with this line of reasoning. Every able-bodied citizen should be able to work. But there are slums to be cleared, children to be taught streets to be policed, sick people to be cared for. With so many tasks waiting to be done, the Post Office does not need to be used in what would be a highly demoralizing, make-work fashion. What is needed, instead, to fund some of these urgent tasks is the $1.2 billion in tax revenues now squandered on an inefficient postal operation.

PROSPECTS

Because the Post Office has the potential to be self-supporting and because its public policy functions are relatively unimportant compared to the advantages of a more efficient operation, the Post Office can be considered essentially a business enterprise. There is nothing in the nature of what it does to prevent conversion to a government corporation. On the contrary, this is impelled by the serious deficiencies in the postal operation that are unavoidable with regular-agency form. Despite the reasonableness of the case for reorganization, however, prospects for implementing legislation in the near future do not look particularly bright.

Traditionally, Congress has been a defensive, conservative body, requiring a great deal of pressure to secure action and very much less to stop it, and the influential postal unions are generally hostile to the Commission recommendations. Endorsed by only one of the twelve postal employee organizations (General Services and Maintenance Employees), the recommendations have been savagely attacked by the letter carriers, the largest and most powerful union of them all. Their president sees the corporation proposal as "the most serious situation that has arisen in the Postal Establishment in the past century" and has called upon all postal unions to mount a "militant offensive" against it.

The grounds for union hostility are not difficult to discern. The promise of improved career opportunities and better working conditions for employees has not been enough to motivate union leaders to exchange their special relationship with Congress ("the best and most consistent friend we have ever had") for collective bargaining in which the leaders are inexperienced. Nor can the rank and file be won over against a relationship that produces tangible rewards in the important bread-and-butter issues (in the nation as a whole, postal wages and benefits are above those of such industries as general manufacturing and telephone communication). Moreover, no matter how evident it may be that present postal employees will not lose their jobs, organized postal labor will tend not to look favorably on a reorganization that can only increase productivity by retarding growth in employment.

Union hostility might be enough by itself to head off reorganization. As it is, significant bases for opposition also exist within Congress. The campaigns of many congressmen benefit from contributions, in time and money, from organized postal labor. If congressmen no longer made decisions about wages and operating procedures, there would be no grounds for such assistance. Those congressmen, too, who have seniority in the committees and appropriations subcommittees concerned with postal affairs will not want to see their bases of power swept away. And many congressmen have been able to use postal patronage to their political advantage back home. Despite the introduction of a number of bills to take postmaster appointments out of politics, one has yet to pass the House.

In addition to these grounds for individual opposition, Congress as a whole has not been moved by some of the more compelling arguments for reorganization. One argument, outside the postal sphere altogether, is that relief from the minutiae of routine business management will allow congressmen more time to master the truly important complexities of governmental concern today. The failure to keep up with the technical expertise of the Executive Branch has meant a drift of power away from Congress in today's complicated world. But most congressmen do not feel that postal matters take up an inordinate amount of time. In fact, some are probably glad to have a subject to grapple with that appears familiar and easily comprehensible. There has also been no indication of alarm about the postal deficit, only a drop among other tens of billions being spent. And Congress generally still retains the feeling that its guardianship is demanded over an industry so important to the national welfare and that its ministrations result in lower rates and better service rather than the reverse.

Congress does sense the need for some change in the Post Office. The Commission Report and editorial response have at least created this awareness. But the reaction has been the traditional seeking of a happy medium. For example, the Chairman of the House Post Office and Civil Service Committee, Thaddeus J. Dulski, introduced in January a comprehensive Postal Reform Act (H.R. 4) which, among other things, would take postal investment out of the normal budgetary and appropriations process. Yet, the bill would still allow congressional control over wages, and thus 80 percent of postal costs; it would still necessitate congressional appropriations to make up deficits (for the Post Office in the bill is not envisaged as self-supporting); Congress would still be very substantially involved in rate-setting; postmasters would still be appointed by the President, and because of a residence requirement, talented postmasters could not be transferred to more demanding offices; in fact, the bill would retain almost the entire panoply of fragmentation and political responsiveness in management that has made the Post Office in the past such a failure as an economic enterprise.

Piecemeal reform will not suffice to remove deficiencies that inhere in regular-agency form, nor will the habit—fashioned over a century and a half—of thinking and acting in terms of a political post office ever be modified except by a dramatic break with the past. The principal beneficiary of reorganization, however, the mail-using, tax-paying general public, has not yet been stirred to make the kind of general outcry that alone will move Congress in the face of opposition. The outlook, therefore, is for the Post Office (in the words of the Commission describing the price of inaction) "to jog along in its rickety fashion for years before it collapses." The collapse might well come in the form of another Chicago-type breakdown, or a series of them, which would finally stimulate public outrage and congressional action. In the meantime, the Commission recommendations will serve as a focus of public education and debate, the starting point in the long and painstaking process of getting sensible ideas converted into public action.

BALTIMORE MAGAZINE SALES COMPANY NAMED IN NEW JERSEY LEGAL PROCEEDINGS AGAINST DECEPTIVE SALES PRACTICES

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, I am pleased to report to my colleagues that the State of New Jersey yesterday initiated court proceedings to seek an injunction against deceptive sales practices of the International Magazine Service of the Mid-Atlantic, Inc., a Baltimore-based magazine subscription sales company.

Acting on the complaints of 19 New Jersey consumers, Deputy Attorney General Douglas J. Harper of New Jersey, filed the formal complaint in superior court in Warren County.

The deceptive and fraudulent practices which I have repeatedly stated in this Chamber are being used to dupe American consumers into costly and unwanted magazine subscription purchases are the same practices described in the complaint filed against International Magazine Service of the Mid-Atlantic, Inc.

Offers of free magazines, misrepresented or unstated contract terms, representations that reader interest surveys are being conducted, representations that the consumer is a winner or eligible to win substantial prizes in a contest—practices named in the New Jersey complaint—are typical of the sales practices being utilized by International Magazine Service of the Mid-Atlantic and numerous other magazine subscription sales companies all across the country.

Consumer fraud of this or any other kind must be stamped out where it thrives, where it profits, and where it seeks to conceal itself—in interstate commerce. Decisive Federal Government action, either by the Federal Trade Commission or by Congress, can stamp out this kind of consumer fraud.

The sales abuses identified in New Jersey are not merely isolated instances of misrepresentation which can be traced to one or two unscrupulous sales personnel. They are but one small bit of a vast pattern of fraud which typifies the sales tactics of a number of multimillion-dollar magazine subscription sales operations owned by or affiliated with some of the best known publishing houses in the Nation.

I want to point out that this action by the New Jersey attorney general and other legal proceedings begun by the attorney general of Pennsylvania against magazine subscription sales abuses are the direct result of attention focused on deceptive and fraudulent practices by the Easton, Pa., Express newspaper's public service column, "Action! Express."

Mr. Speaker, for the information of my colleagues, many of whom are contacting my office for information regarding magazine sales abuses, I insert in the RECORD a copy of the complaint filed in the Superior Court of New Jersey yesterday.

ARTHUR J. SILLS, ATTORNEY GENERAL OF NEW JERSEY, PLAINTIFF, *v.* INTERNATIONAL MAGAZINE SERVICE, A CORPORATION OF THE STATE OF MARYLAND, DEFENDANT

SUPERIOR COURT OF NEW JERSEY, CHANCERY DIVISION, WARREN COUNTY, DOCKET NO. — CIVIL ACTION COMPLAINT

Plaintiff, Arthur J. Sills, Attorney General of New Jersey who resides at 1100 Raymond Boulevard, Room 504 Newark, New Jersey states as follows:

Count I

1. The Attorney General is charged with the responsibility of administering the N.J. Consumer Protection Act N.J.S.A. 56:8–1 *et seq.*

2. Defendant, International Magazine Service is a Delaware Corporation engaging in the business of soliciting magazine subscriptions within the State of New Jersey. Said defendant is not registered with the Secretary of State as a non-resident corporation doing business in New Jersey.

3. Defendant, through its agents and employees, Stanley Bernstein, Frank Gigliotti and Harry Stubbs and through sub-employees of the stated individuals, actively solicits the purchase of subscriptions to magazines and periodicals from the residents of the State of New Jersey.

4. Between the dates of August 28, 1967 and the present defendant, through its agents and employees, solicited magazine subscriptions from those New Jersey consumers set forth in Schedule A. Said schedule is attached to and made a part of this complaint. Said solicitations resulted in the execution of written contracts obligating New Jersey consumers to purchase subscriptions in diverse magazines and other periodical publications.

5. Said solicitations were initiated through telephone inquiries made by defendant's agents and employees wherein the stated consumers were led to believe by representations made by defendant's agents and employees that free magazine subscriptions were available to them.

6. As a result of said representations the stated consumers allowed defendant to visit their private homes.

7. While in the homes of the stated New Jersey consumers defendant through its agents and employees actively employed certain unlawful sales solicitation practices. Said unlawful practices included, but are not limited to the following:

(A) Representations that subscriptions to certain periodicals were free when in fact the total contract prices paid were substantially equivalent to or greater than direct subscription prices with the publishers of the individual magazines subscribed to.

(B) Representations that monthly payments were to be certain stated amounts and for certain stated durations where in fact upon receipt of payment booklets both the amount and duration were materially different from the terms verbally represented by defendant through its agents and employees.

Said representations made in the course of soliciting the purchase of merchandise constitutes the use and employment of false promises, false pretenses, deception and misrepresentation all in violation of N.J.S.A. 56:8–2.

Count II

1. Plaintiff repeats and reiterates each and every allegation of the first count of the complaint as if the same were recited herein at length or incorporated herein by reference.

2. During both the above stated dates and at present defendant through its agents and employees employ a sales technique known as the "International Hotline."

3. Said sales technique is initiated by a telephone call to a prospective customer wherein it is represented that the customer "may" win a color television set, an all expense vacation to Hawaii or Puerto Rico, a new Mustang convertible, "plus hundreds of other prizes". Final selection of winners is indicated as being by "random drawing."

4. As a condition for the customer's winning any of the above stated prizes the consumer is requested to give his name and address.

5. In addition to the solicitation of the consumers name and address, a request is made that the consumers "without obligation" assist defendant International Magazine Service in its "readership inquiry" by naming two magazines which are presently not subscribed to by the consumer.

6. At no point in the sales technique is it revealed to the consumer that International Magazine Service is soliciting or is about to solicit magazine subscriptions from the consumer.

7. In those cases where names and addresses are given, defendant dispatches sales personnel to the homes of consumer for the express purpose of soliciting subscription contracts. Said solicitations are made within several hours after the inquiry from "International Hotline" and are directly related to the representations contained therein.

8. Defendant's use of the above stated sales technique constitutes the use and employment of false pretense, misrepresentation and deception in violation of N.J.S.A. 56:8–2 in that said technique is in fact a reuse employed for the single purpose of gaining entry into the private residences of the consuming public for the purpose of inducing subscription contracts.

Count III

1. Plaintiff repeats and reiterates each and every allegation of the first and second counts of the complaint as if the same were recited herein at length or incorporated herein by reference.

2. In the course of soliciting the contracts with those consumers set forth in the schedule annexed hereto and made a part hereof, defendant through its agents and employees, represented the total dollar obligations under the stated contracts in terms of monthly payments.

3. Defendant at no time in the course of soliciting the stated contracts revealed the total obligations owing from the stated consumers in terms of the total dollars due and owing for the subscriptions contracted for.

4. Defendant's failure to clearly state the total dollar obligations embodied in the stated contracts prior to the executing thereof constitutes the knowing concealment; suppression and omission of a material fact relating to the stated sales transactions with the intent that the stated consumers rely upon such concealment, suppression and omission, all in violation of N.J.S.A. 56:8–2.

Wherefore, Plaintiff demands the following:

1. An order enjoining defendant from engaging in the use and/or employment of those specific acts and practices herein alleged and found to be violative of N.J.S.A. 56:8–2.

2. An order enjoining defendant, International Magazine Service, from engaging in business in the State of New Jersey until such time that said defendant secures the certificate of authority required of non-resident corporations by N.J.S.A. 14:15–3.

3. An order in accordance with N.J.S.A. 56:8–8 rescinding the contracts executed by those consumers set forth in the attached schedule and directing defendant to return any and all monies and property to those consumers set forth in the annexed schedule where such monies have been acquired by practices herein alleged and found to be prescribed by N.J.S.A. 56:8–2.

4. An order pursuant to N.J.S.A. 56:8–13 assessing monetary penalties in the amount of $100 for each transaction found to be violative of N.J.S.A. 56:8–2.

ARTHUR J. SILLS,
Attorney General of New Jersey.
(By) DOUGLAS J. HARPER,
Deputy Attorney General.

SCHEDULE "A"

CONSUMER'S NAME AND ADDRESS

Mrs. Sandra L. Berger, Greenwich Street, Stewartsville, N.J.

Alice C. Claxton, Washington Street, Phillipsburg, N.J.

Mrs. Claire Conway, 267 W. Warren Street, Washington, N.J.

Mrs. Francis Faltinosky, Box 36, Route 2, Milford, N.J.

Mrs. Nancy Gouger, Route 1, Box 298, Stewartsville, N.J.

Mrs. Melva J. Lewis, 60 New Jersey Avenue, Blackwood, N.J.

Mrs. Olga Mohr, 106 North Riverview Road, Phillipsburg, N.J.

Mrs. Harold Parry, 159 Belt Road, Phillipsburg, N.J.

Miss Kathleen Penna, 749 Linden Avenue, Elizabeth, N.J.

Mrs. Virginia Pursell, 774½ South Main Street, Phillipsburg, N.J.

Mrs. Elmer Ramsey, 103 Fairview Avenue, High Bridge, N.J.

Mrs. Grace Rossi, 562 Roseberry Street, Phillipsburg, N.J.

Mrs. Rodger L. Smith, 228–6th Street, Morris Park, Phillipsburg, N.J.

Mrs. Martin Stoken, 5 Henshaw Court, Phillipsburg, N.J.

Mrs. Arlene Taylor, 137 Cedar Alley, Phillipsburg, N.J.

Raymond Usignol, 1536 Good Intent Road, Deptford, N.J.

Sarah Wene, 314 Somerset St., Alpha, N.J.

Stella Young, R.D. #2, Box 382, Phillipsburg, N.J.

Josephine Yukna, 776½ So. Main Street, Phillipsburg, N.J.

ARTHUR J. SILLS, ATTORNEY GENERAL OF NEW JERSEY, PLAINTIFF, *v.* INTERNATIONAL MAGAZINE SERVICE, A CORPORATION OF THE STATE OF MARYLAND, DEFENDANT.

AFFIDAVIT OF VERIFICATION

STATE OF NEW JERSEY,
County of Essex, ss:

Douglas J. Harper being duly sworn according to law deposes and says:

1. I am a Deputy Attorney General of the State of New Jersey and discharge my duties as co-counsel to the N.J. Office of Consumer Protection.

2. The Attorney General of New Jersey is charged with the responsibility of administering the New Jersey Consumer Protection Act, N.J.S.A. 56:6–1 *et seq.*

3. In accordance with the above-stated directive, the Office of Consumer Protection exists within the Department of Law and Public Safety.

4. I have read the complaint filed herewith and the facts stated therein are true to the best of my knowledge, information and belief. Said facts are taken from the investigative files of the New Jersey Office of Consumer Protection.

5. Given the truth of said facts it appears to me that the defendant named in the complaint herein has engaged in and is presently engaging in acts violative of N.J.S.A. 56:8–2.

ARTHUR J. SILLS,
Attorney General of New Jersey.

By DOUGLAS J. HARPER,
Deputy Attorney General.

ARTHUR J. SILLS, ATTORNEY GENERAL OF NEW JERSEY, PLAINTIFF, *v.* INTERNATIONAL MAGAZINE SERVICE, A CORPORATION OF THE STATE OF MARYLAND, DEFENDANT

SUPERIOR COURT OF NEW JERSEY, CHANCERY DIVISION, WARREN COUNTY, DOCKET NO. — CIVIL ACTION: ORDER TO SHOW CAUSE

This matter being opened to the Court by Arthur J. Sills, Attorney General of the State of New Jersey, Plaintiff, by Douglas J. Harper, Deputy Attorney General attorney for Plaintiff and it appearing to the Court upon a reading of the duly verified Complaint that the defendant is in violation of N.J.S.A. 56:8–2 in that he did perform certain acts contrary to the above stated statutory Section, to wit:

a. Representations that subscriptions to certain periodicals were free when in fact the total contract prices paid were substantially equivalent to or greater than direct subscription prices with the publishers of the individual magazines subscribed to.

b. Representations that monthly payments were to be certain stated amounts and for certain stated durations where in fact upon receipt of payment booklets both the amount and duration were materially different from the terms verbally represented by defendant though its agents and employees.

c. The use and employment of a sales practice wherein the total dollar obligation arising out of the contract obligating said consumers is not revealed in clear and express terms prior to the execution of said contracts.

It is on this — day of ——, 1969 ordered that the defendant show cause before the Superior Court of New Jersey, Chancery Division, Warren County, in the Morris County Courthouse, (Judge Alexander P. Waugh) Morristown, New Jersey on the — day of ——, 1969 at 9:30 o'clock in the forenoon or as soon thereafter as counsel may be heard why an interlocutory injunction prohibiting defendant from engaging in the above stated acts should not be granted pending final disposition of plaintiff's claim for the relief set forth in the Complaint to be served herewith.

It is further ordered that a copy of this Order to Show Cause and of the Complaint and affidavits annexed thereto, all certified to be true copies by Deputy Attorney General Douglas J. Harper, be served on the defendant within ( ) days from the date hereof by personally serving the said certified copy of the Complaint, affidavits and Order as provided by the rules of Court.

ALEXANDER P. WAUGH, J.S.C.

MONEY FOR MASS TRANSIT—LET US GET MOVING

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. MOORHEAD. Mr. Speaker, the gravity of the transportation situation in our cities demands prompt Federal action to help cities and States build modern mass transportation systems to meet tomorrow's needs.

The fact of the matter is that there is just not enough Federal money available for mass transit programs. When you consider that $37 of Federal money is spent for highways for each $1 spent on mass transportation, this amounts to what I consider "highway robbery."

Those of us who have introduced legislation to provide a capital investment to build a better and more balanced transportation system through the establishment of a mass transportation trust fund were heartened by a general endorsement of this idea by Secretary Volpe at the Fourth International Conference on Urban Transportation, held in my city of Pittsburgh last March. However, since that time there have been conflicting reports concerning what he considered the Department's priorities to be, and no official word from the Secretary or the administration.

I believe the United States needs to establish a national goal for urban mass transportation as we have done for defense and space.

The Wall Street Journal of May 22 carried an excellent article in which it is reported that the Secretary does consider public transportation his top priority, and plans to request money for a program to upgrade our existing systems, develop new transit systems and establish an innovative long-range planning program.

If this is true, he will be verbalizing what many of us in the House Banking and Currency Committee have been advocating for some time, and we would be delighted to lend our support.

Your move, Mr. Secretary.

I include the Wall Street Journal article for the attention of my colleagues.

UNCLOGGING THE JAM—ADMINISTRATION STRESSES MASS TRANSIT AS CURE FOR URBAN TRAFFIC ILLS—EMPHASIS IS SHIFTING FROM HIGHWAYS; AID FOR PRESENT SYSTEMS, RESEARCH PLANNED—BARRIERS TO A SPENDING BOOST

(By Ronald G. Shafer)

WASHINGTON.—To the surprise of some early critics, President Nixon's transportation chiefs plan to promote mass public transportation, not more highways, as the best way to untangle urban traffic jams.

Though the Budget Bureau has opposed a Transportation Department proposal for a special trust fund to mass transit aid to cities, officials say an expanded public transportation program remains a top goal this year. They're planning sharply increased Federal aid aimed at improving the speed, convenience and comfort of travel by bus, subway or surface rail line. The planners hope their efforts will lure more travelers out of the autos that often choke city streets.

It's possible that some problems with safety implications, such as air congestion, may get more immediate attention. But fundamentally, "if I have to set a priority, the number one priority is public transportation," says John A. Volpe, Secretary of Transportation.

That surprises some observers because Mr. Volpe came to his new post with the label of highway backer. Supporters of the former Massachusetts governor insist that label wasn't completely accurate. The Transportation Department naturally isn't going to stop highway-building, but officials say it will push to give localities as a realistic alternative to Federal highway aid for alleviating urban transportation problems.

RISING TO $600 MILLION A YEAR

To provide that alternative, officials are aiming for annual mass transit aid starting at about $200 million and rising to $600 million by 1974. These outlays now run about $170 million a year. But Mr. Volpe would actually prefer to spend as much as $1 billion annually for mass transit within two or three years. He's now seeking Presidential approval for such an ambitious plan. His success or failure will become known when the Administration unveils its mass transit program, probably next week.

Whatever sum is chosen, the money would go toward three objectives. One would be an immediate upgrading of existing transit systems, particularly by helping to finance new buses or rail cars. A second goal would be a start on development of new transit systems for use in five or 10 years, possibly including high-speed vehicles propelled on cushions of air. A third phase would involve long-range planning for even more advanced transit innovations; these might include "gravitrains," which would be propelled by their own weight through inclined underground tunnels and then would roll upward to surface stations on their own momentum and pneumatic pressure.

"Our feeling is that we've got to act now on the immediate problems but still recognize what the needs will be in the next decades," says Charles Baker, Deputy Under Secretary of Transportation.

A further idea of what the planners have in mind can be gleaned from a sampling of the Volpe team's recent aid grants for mass transit projects. They include $200,000 for study of a system of moving sidewalks in Boston, a $245,000 initial allocation for a planned demonstration of pollution-free steam-powered buses in San Francisco and a $25.2 million grant to a Chicago public agency for the purchase of 130 new commuter cars for the Illinois Central Railroad.

TOO LITTLE TOO LATE?

It remains to be seen how much the department actually can do to unsnarl urban congestion. Some critics contend its mass transit program represents too little too late. And it's still uncertain how big a program it will be able to push through the Budget Bureau and Congress; ardent highway advocates may oppose any steep rise in spending for mass public transportation if it seems to raise a threat to road-building.

Mass-transit supporters, for their part, are worried that the Transportation Department will scale down its plans. "If the department backs out now, it could frustrate growing support to move ahead on public transportation," says Donald Alexander, a legislative assistant for the National League of Cities.

Urban and transit officials say increased—and long-term—Federal support is needed for mass transit if the financially strapped cities are to cope with congestion. Without such a commitment, "we'll just continue to

hobble along until somebody does something about it," says Thomas B. O'Connor, general manager of the Institute for Rail Transit.

Transportation Department officials insist they will press hard for their expanded mass transit program. "Anybody who thinks Gov. Volpe won't fight for his programs doesn't know him," says one long-time aide. They note that President Nixon has specified mass transit as one of his top priorities.

THE COMMUTING ORDEAL

Almost everyone agrees something has to be done about the traffic congestion that threatens to choke many city centers. Automobiles are proliferating while public transit systems deteriorate. Among the cities suffering most are New York, Boston and Washington. The Transportation Department estimates that the average auto-commuter in some large cities spends 13% of his waking hours in traffic each workday. In some cities—notably New York—commuters who use outdated public transportation fare no better as far as time goes. Officials also say that inner-city residents, many of whom don't own cars, can't reach jobs on many present transit systems without numerous transfers and long delays.

To date, the Federal Government's solution for urban congestion has been more highways—a solution that has recently run into opposition in New York, Chicago, Philadelphia, Baltimore, Washington and other cities. While $170 million annually now goes for mass transit, Federal highway aid runs between $4 billion and $5 billion a year (though much of that money goes for roads outside urban areas). Moreover, Uncle Sam pays 90% of the highway costs and only two-thirds of the bill for Federally aided mass transit projects. States and cities thus have had little real choice, transportation planners say.

What's needed, officials contend, is a more realistic view of both private autos and public transit. Indeed, "the key to the entire passenger transport network is the automobile," says James Beggs, Under Secretary of Transportation. "No solution to our other problems can be complete unless we learn to control it."

While hoping to lure auto riders to public transportation, officials say tougher restrictions on autos may be needed eventually if cities aren't to be inundated by cars. Among the possibilities: A tax on auto-commuters entering cities during rush hours or even the complete banning of cars in city centers.

As for mass transit, "we ought to get rid of the idea once and for all that public transportation must make a profit," Secretary Volpe has said. "Public transportation is so important that we must look at its financing much like any other public service. We don't expect the Army to make a profit."

While private operation of mass transit is preferred, Transportation Department officials add, such intracity transit is increasingly difficult to run at a profit. Here in Washington, one of the largest cities still served by privately owned transportation lines, the D.C. Transit System has continued to run in the red despite a series of fare increases; there are proposals for the local government to take over.

AID FOR ROCHESTER, N.Y.

The Volpe team has already approved a $3 million grant to help the city of Rochester, N.Y., purchase the local bus lines, as well as buy 27 new buses. If necessary, officials say, local governments should take on the responsibility of operating public transit even at a loss, just as they support schools or police services.

The Federal Government can chip in with some aid but probably wouldn't provide direct operating subsidies. "That's a bottomless pit," says Paul Cherington, Assistant Transportation Secretary for Policy and International Affairs.

Under the department's current plan, the Federal Government would provide loans to localities primarily for mass transit improvements or to pay the interest on long-term financing for transportation. For major projects, the localities—generally metropolitan areas including suburbs, as opposed to cities alone—first would have to come up with a comprehensive, long-range plan for all types of transportation.

Department officials maintain they aren't wedded to the trust fund plan to finance their plans but are hopeful of obtaining some sort of long-term Federal financing commitment. "What we've got to have is a program that allows a locality to make plans with the assurance the money will be there 10 years from now," says James D. Braman, Assistant Transportation Secretary for Urban Systems and Environment.

NEW BUS ROUTES

Whatever the financing, the initial emphasis will be on fast first-aid for today's transit systems—plain old buses, subways and trains—rather than exotic schemes for monorails or electronic highways.

This means providing Federal money to help buy air-conditioned rail cars or new buses. It also means aid to cities that want to redraw bus routes to make them more convenient for commuters to get to jobs in the city and for ghetto residents who want to travel to job openings in the suburbs. Cleveland Mayor Carl Stokes is among those interested in laying out new routes.

Meanwhile, the department would begin the study of bolder transportation innovations. "If we just patch up the kind of subways and buses you find today, patronage will continue to drop," warns Secretary Volpe.

These innovations could range from automated rapid transit systems such as the one currently being built in the San Francisco bay area to air-cushion vehicles that could carry 100 people at speeds up to 300 miles an hour on routes extending from cities to the suburbs or beyond. The Transportation Department hopes to have an air-cushion test under way by 1972 possibly running between Miami and a new air-port proposed near the Everglades.

THE ROBERTS CASE—JUSTICE ON TRIAL

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. RARICK. Mr. Speaker, the Supreme Court in another of its remarkable decisions has held that in a case on appeal a Justice who is in business with the judges who heard the case below cannot be recused for cause by one of the litigants.

The unique situation involves Dr. William H. Roberts in a case involving Catholic University. The circuit court of appeals had ruled against Dr. Roberts, and one of the questions to be resolved by the Supreme Court involves the credibility of Chief Judge David L. Bazelon, of the U.S. Court of Appeals for the District of Columbia Circuit.

Chief Judge Bazelon and Associate Justice William J. Brennan are business partners in the recently exposed tax shelters, Concord Associates and Wilson Associates. See my remarks, RECORD of May 15, 1969, page 12687.

In a question of the credibility of a witness, can there be any question as to whom Brennan will believe? He must choose between David Bazelon, his financial partner, and Roberts, who is unknown to him and who has shown the courage to bare Brennan's financial entanglement with Bazelon, Wright, and Fortas, and to ask in the name of justice that Brennan step aside and not take part in reviewing of his partner's decision.

Despite the court's arbitrary ruling, Dr. Roberts' case remains undecided. All will watch to see if Justice Brennan will demonstrate the honor and the absolute impartiality hitherto expected of a Justice of our Supreme Court by voluntarily recusing himself and declining to participate in the case. I include a news clipping as follows:

[From the Washington (D.C.) Evening Star, May 26, 1969]

COURT WON'T BAR BRENNAN IN CU CASE

The Supreme Court today refused to order one of its members, William J. Brennan, to disqualify himself from handling a case involving Catholic University.

Brennan's recent tie with the university's law school and his business connections with lower court judges, who had heard the case, had been challenged by the law professor who filed the lawsuit.

Prof. William H. Roberts has been seeking a court ruling to restore a school of international law he formerly headed on the campus. It was merged with another department two years ago.

Failing in lower courts, Roberts is seeking to appeal to the highest court. But he filed a motion to disqualify Brennan from any part in handling the appeal.

Without giving its reasons, the court today refused to disqualify Brennan. It did not act on Roberts' appeal. When it does, Brennan could, if he wishes, disqualify himself.

DRUG ABUSE POSES DEADLY THREAT

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. NELSEN. Mr. Speaker, drug abuse is a prime cause of crime and domestic chaos and a greater Federal effort to educate citizens about dangerous drugs is obviously called for.

As ranking Republican on the Public Health and Welfare Subcommittee of the House Interstate and Foreign Commerce Committee, I am convinced there is no greater threat to the people of this country than in the abusive use of harmful drugs. If we ignore this threat, the future cost to society will be immense in terms of crime, illegitimacy, and human degradation.

It has been estimated that more than 100,000 Americans are already narcotics addicts, whose annual cost to society amounts to $541 million. And all the evidence points to a massive increase in nonnarcotic drug abusers. About 40 tons of amphetamine tablets are being produced each year, enough to provide everyone in the country with 35 doses. About half these tablets are reported to have gone into illicit channels of dis-

tribution. At least 5 million Americans have been estimated to have used marihuana at least once.

Most alarming is the "drug tug" craze among young people. From slum schools to college campuses, it has become tragically fashionable to experiment with LSD, marihuana, and other kinds of dope. A recent study showed that the use of marihuana on five California campuses tripled in 18 months. More than 50 percent of the students admitted to smoking pot. In one Washington, D.C., high school, it has been reported that nearly a full one-third of the student body has become heroin addicts.

It is obvious more must be done to acquaint the public, particularly young people, with the step-by-step descent into hopeless addiction which seems to accompany the indiscriminate use of drugs.

I am, therefore, today joining in the cosponsorship of legislation to amend the Public Health Service Act by adding a new section dealing with drug abuse education and information. It would provide the Department of Health, Education, and Welfare with authority to assist public or private nonprofit projects devoted to educating the public about drug abuse problems.

POSTAL REFORM: DANGER AND OPPORTUNITY

HON. WILEY MAYNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1969

Mr. MAYNE. Mr. Speaker, the word "crisis" in Chinese is represented by the juxtaposition of two word pictures—the word picture for "danger" and the word picture for "opportunity." Today America faces a crisis in mail communication. But although we are confronted by the danger of a breakdown in our mail service, we also have the opportunity to do something about it.

It is about time, for it certainly is a paradox that just when we are close to landing a man on the moon, we still cannot seem to deliver a letter on time. Such a spectacle would be laughable if it were not so serious.

Delays and breakdowns constantly threaten the mails. In fact, one of our largest cities in 1966 did have such a breakdown and such a recurrence could happen any day in one of our metropolitan post office operations. But if there is the ever-present danger of late mail, lost letters, and even postal operation collapse, we now have an opportunity to bring about a major modernization program.

President Nixon has proposed a plan that would take the Post Office out of politics and make it an independent Government-owned operation run like a modern business enterprise. This new U.S. Postal Service will be self-supporting with the regulation of postal increases decided by expert rate commissioners just as in any public utility.

If we seize this opportunity to introduce these reforms, gone will be the days of bigger deficits and mounting postage costs along with slower delivery and poorer service.

RICHARD KING MELLON FOUNDATION

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. FULTON of Pennsylvania, Mr. Speaker, I insert the following in the Extensions of Remarks:

[Telegram]

Hon. RICHARD K. MELLON,
Pittsburgh, Pa:

Thank you so much for sending me the report for the years 1966–68 of the Richard King Mellon Foundation. We in Pittsburgh and Western Pennsylvania are proud and pleased with the fine progress and civic and cultural development that you have been able to assist so well. In the United States Navy the phrase is "well done!"

As I believe that in this day of general attacks on foundations the excellent report of your trustees shows what can be accomplished through well run foundations. I am placing this report in the Congressional Record for today. We must not permit hue and cry to destroy constructive good works, but must support good civic assets as your fine organization.

My compliments to you for your generosity and foresight in advancing Pittsburgh's progress and civic and cultural improvements, and my compliments to the Board of Trustees, officers, and consultants of the Richard King Mellon Foundation for their broad vision.

With my personal regards,

Sincerely,

Congressman JIM FULTON,
Pennsylvania.

RICHARD KING MELLON FOUNDATION REPORT OF THE TRUSTEES, 1966–68, PITTSBURGH, PA.

During the period covered by this Report, the Richard King Mellon Foundation observed its twentieth year of activity. The anniversary occurred on November 14, 1967, two decades from the date on which the Foundation was created by deed of trust. Since that founding date, the trustees have approved 1,092 grants to 535 recipients, for a total authorized disbursement of $43,373,533.

The year 1967 was more than a twentieth anniversary. It was also a year in which the Foundation significantly increased the scope and number of programs extending the social function of the Pittsburgh Renaissance into the poor and run-down neighborhoods of the City. The trustees made grants totaling $11,720,818 in the three Report years 1966–1968. Of that amount, $2,562,500 was awarded to programs whose goal is to help people and communities at the lowest level of income and opportunity.

Some of these grants continued the Foundation's traditional support of programs for helping the young, the old, the sick and the troubled. Others were for new programs whose purpose is to educate, train and employ disadvantaged members of the community. These new programs have been added within the framework of the Foundation's long established principles. They represent an extension of our aims rather than a change of our direction.

Increased effort by the Foundation to help remove the causes and to alleviate the effects of poverty, bad housing, under-education, chronic unemployment and racial alienation grew out of our continuing, supporting participation in the program of renewal and rebuilding that Pittsburgh began in the year the Foundation was created.

THE REBIRTH OF A CITY

For nearly a century and a half, Pittsburgh had been growing into an industrial slum. In 1947, it was a blighted city, especially in the 330 acres of the downtown business area. There was danger of more costly and disastrous floods. Several hundred communities were dumping raw sewage into the rivers. No major expressway had been built or designed. Major corporations were talking of leaving, and some had leased space in other cities. George Sessions Perry, in his series on American cities, said of Pittsburgh: "The multiple scuttles of soot one must devour per annum as part of the price of living in Pittsburgh is no laughing matter. Instead, they are a hellish, tormenting, disease-abetting and spirit-wilting thing."

The soot lay over the spirit of the city, and its citizens suffered under a long accumulation of civic ills. But a new spirit emerged to give hope and direction to the renaissance of Pittsburgh.

A legend has grown up about the "Pittsburgh Renaissance." It tells how Lieutenant General Richard K. Mellon returned to Pittsburgh in 1945, at the end of World War II, to find a shabby, blighted community beset by problems, and made a sudden decision to help his city rebuild itself.

The story is a dramatic one, and perhaps for that reason it has persisted; but the facts are somewhat different. General Mellon had worked for some years before the war with civic leaders and with other Pittsburgh industrialists to plan such civic improvements as economic conditions and the state of public opinion would support. He served on the board of the Pittsburgh Regional Planning Association (which his father had help to found) and became its president in 1941. In 1943, while in the Army, he created and helped to finance the Allegheny Conference on Postwar Planning, which had the mission of drawing up a redevelopment program for Pittsburgh for the years after World War II.

It is apparent, therefore, that General Mellon had, long before his return to Pittsburgh at the end of the war, a knowledge of the city's needs, a grounding in the mechanics of civic action, and a strong desire to do what he could, as soon as he could, to make the city a better place in which to live and work. It was always his intention during the war to return to Pittsburgh and help to put into action the planned programs for the city.

He had, moreover, a clear realization of the added community responsibilities of business management in a mid-Twentieth Century economy. He expressed his views in 1953 in an address at the University of Pennsylvania's Wharton School of Finance and Commerce, when he said:

"The corporation is proceeding from the stage of living within legal rights and powers to a new stage of recognition of corporate responsibilities and duties from which those rights are received.

"Top industrial leadership today is raising its sights to include a feeling of responsibility toward the social and political problems of our modern industrialized society. . . . The businessman has an unavoidable duty toward the entire environment in which he lives, moves and has his being. . . . It is impossible to separate business from the social and personal tides of our economy."

General Mellon was joined by industrial, civic, labor and political leaders of Pittsburgh who wanted to rescue their city. A dedicated team was formed. The Conference

on Post-War Planning became the Allegheny Conference on Community Development. Incorporated in 1943, it found unprecedented cooperation from elected city and county officials. So began the renaissance of Pittsburgh—a rebirth that became the model for scores of communities across the country.

Pittsburgh used the Allegheny Conference as the over-all civic organization to marshal the community's full energies and resources on a non-partisan basis. The Conference researched the needs of the city, planned for action, and then began to coordinate the complex parts of the programs that were created to give new life to the Pittsburgh area.

Effective legislation cleaned the smoke from the skies. New buildings rose as slums came down. The Golden Triangle was renewed in beauty. Various bodies, public, quasi-public and private, built flood control dams, a sewage disposal system, express highways, a jet-age airport, downtown parking facilities, city parks, and a downtown museum.

The Foundation joined with other groups in giving financial support to the Allegheny Conference and to three other private civic agencies that played key roles in rebuilding Pittsburgh. They are:

The Pittsburgh Regional Planning Association: a body that encourages long-range physical planning in the Southwestern Pennsylvania area and prepares and implements master plans as a service for municipalities regions and urban renewal programs.

The Pennsylvania Economy League: a fact-finding body conducting research in methods of government administration of the state and its various political sub-divisions.

Action-housing, Inc.: a private non-profit civic organization established by the Allegheny Conference to improve the condition of housing for the people of Allegheny County.

The Foundation has been privileged to participate in many other ways in the resurgence of new life in the Pittsburgh and Western Pennsylvania area, in programs that are described in these pages. Of the Foundation's $40,378,216 in grants paid between the founding date in 1947 and December 31, 1968, approximately 64 per cent has been given to organizations in Pittsburgh 85 per cent to organizations in Western Pennsylvania (including Pittsburgh), and 15 per cent outside of Western Pennsylvania.

A CHANGING PATTERN OF GROWTH

Over the years, Pittsburgh has experienced a changing pattern of industrial and business growth. New scientific and technological developments, together with increases in the capabilities of human resources that have been attracted here, keep adding new perspectives to the economy. Research and development, for example, has now become Pittsburgh's third largest industry, with more than 170 laboratories in the area.

Thus Pittsburgh has built the physical base for an improved environment. From that base, it is now possible to direct further attention toward those parts of the community where the force of the Renaissance has not yet fully penetrated. Certainly it would be impossible to take this next step without first having rebuilt the city and strengthened its institutions. It would be difficult to aid the disadvantaged segments of the community if Pittsburgh were now a decaying community, if industries were leaving instead of coming in, if jobs were scarce and confidence was impaired. In this sense, the disadvantaged have shared in the benefits of the Pittsburgh Renaissance. But more is needed.

A city is a living thing, and the projection of the Renaissance has not been merely to create wealth from which nothing proceeds, nor beauty toward which nothing moves, nor social and cultural opportunities that cannot be appropriated. The fruits of the Renaissance are for all the people of the area to use and enjoy. Therefore, while the Foundation continues to support those institutions and organizations that will sustain the improvements already begun, it is at the same time making a number of additional grants for the specific purpose of aiding disadvantaged members of the community. The programs range from remedial tutoring to training of hard-core unemployed; from recreational and cultural programs in the inner city to a mobile library that tours the slum areas with books, records and films.

These programs complement the continuing thrust of the Pittsburgh Renaissance, which today has more projects in progress than ever before. The programs are helping to prove that our latter-day problems are manageable and that our city can and must extend its increasing economic, educational and cultural advantages to all its citizens.

The trustees recognize the privilege they have enjoyed in sharing in the many undertakings that have led to the renewal and betterment of Greater Pittsburgh and its institutions. They are deeply aware of their responsibility to use the resources of the Richard King Mellon Foundation in ways that will give the greatest benefit to the greatest number of people.

This Report details the Foundation's activities in the years 1966 through 1968. In scope and purpose, the grants reflect the purposes of the founder as set forth in 1947, and they reaffirm the principles that have guided the trustees through the first twenty-one years of service.

THE BOARD OF TRUSTEES,
RICHARD KING MELLON FOUNDATION

GEN. H. MILLER AINSWORTH

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. PICKLE. Mr. Speaker, on May 7, Texas and our country lost a great American and one of our most dedicated and outstanding sons.

Lt. Gen. H. Miller Ainsworth was cut from a cloth no longer seen, and he truly represented one of the finest examples of the free and aggressive spirit so important to our country.

General Ainsworth excelled in many fields and in many ways. The scope of his endeavors ranged from military command to oil field speculation, and he was one of the most colorful figures ever to come from our central Texas area.

Probably more than any other individual I have known, he always was able to maintain a balanced perspective in the most trying circumstances, and perhaps it was for this reason that interests were so varied and successful.

As a young man born in Austin, he soon moved with his family to Gonzales, where he spent his boyhood years. He entered Texas A. & M., but left in 1917, to enroll in the first class of officer's school at Leon Springs. It was this training school which supplied our first offerings of new officers in the first war, and it is significant, I believe, that he led the times even then.

He was commissioned a second lieutenant in August of that year, and assigned to the 159th Infantry of the 40th Division.

At the outbreak of World War II, he returned to Federal service, was promoted to lieutenant colonel, and transferred to the 142d Infantry, 36th Division. It was in September of 1943 that the 36th—the famous T-patch Texas division—began the tough softening-up operations in the invasion of Italy, and General Ainsworth was the executive officer for the 142d Infantry at the Salerno Beach landing. For his conduct and gallantry there, he was awarded the Silver Star.

At the end of the war, Miller Ainsworth returned to central Texas and pursued his activities as a successful banker and oilman. Some of the highlights of his many years in Luling, Tex., include serving as chairman of the board of the First National Bank of Luling, chairman of the board of the Luling Foundation; and active memberships in the American Legion and the Church of the Annunciation.

At the same time, he pursued his activities in the Texas National Guard. During these years, he played a large role in the reorganization of the 36th National Guard Division, and he soon became commanding general of the 36th. He was promoted to lieutenant general on retirement.

It is significant, I believe, that General Ainsworth took all of his responsibilities so seriously. He was an ideal citizen-soldier, strong and capable in both aspects of that term, and he has given us an example which serves us well.

When his country called, he never hesitated to answer.

His sweet wife, Annie Francis, was always a strength to the general, and I also personally know and respect his son, H. Miller Ainsworth, Jr., of Luling.

Mr. Speaker, it is rare that our country sees a man of the caliber of Gen. Miller Ainsworth.

He was a general and a leader for us in Texas; he was a leader and an example for the entire Nation. He truly was an outstanding American.

FILTH FLOWS FREELY THROUGH THE U.S. MAILS

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, my congressional district—and judging from what I have been reading and hearing, most congressional districts are similarly confronted—is being flooded with the filthiest, most prurient samples of pure smut I have ever encountered.

Each day's mail contains more letters from constituents who have been shocked and angered by the filth being disseminated under the guise of sex education literature.

This material, in the form of advertisements for smutty books and magazines, is being sent through the U.S. postal system to youngsters and adults alike.

I am personally appalled that Supreme Court decisions have opened the dike to

permit the mailing of smut into American homes. Nevertheless, I cannot accept some of the Post Office Department's weak-kneed excuses for failing to halt the mailing of such scum.

The filing of a personal demand to be removed from a mailing list is not enough. The flow of filth through the mail should be stopped and stopped promptly, even if a special postage rate must be established—perhaps a dollar an ounce or higher—to nip sex racketeering in the bud.

Mr. Speaker, I regret that the CONGRESSIONAL RECORD does not reproduce photographs because perhaps if some of these photos were published, we could convince Justice Department and Post Office Department officials to find a few legal loopholes which in this instance would protect the American citizen rather than abuse or misuse him.

President Nixon several weeks ago proposed three specific legislative actions to slow down the flow of filth through the mails. I state here and now that I will support all three. And the stiffer the fines and jail sentences, the better I'll like the legislation.

In the meantime, however, I am asking Postmaster General Winton Blount to take another look at existing postal regulations and investigative procedures to determine whether it is not possible for postal authorities to reject these mailings immediately.

THE POSTAL SERVICE ACT

HON. GILBERT GUDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. GUDE. Mr. Speaker, one of the truly creative features of the Postal Service Act is its proposal for the settlement of disputes arising during collective bargaining negotiations between the Postal Service and the employees' bargaining agents.

The bill would first leave it up to the parties to adopt by mutual agreement any procedure for resolution of disputes or impasses arising in the negotiation of an agreement. If the Postal Service and the bargaining agent do not adopt procedures for the resolution of disputes or impasses, or if the procedures adopted do not result in the resolution of a dispute, the entire matter upon demand of either party would be referred to a panel of experts to be known as the Postal Disputes Panel.

The Postal Disputes Panel would be an independent agency in the executive branch of the Government composed of nine members, of whom three would be named by the Director, Federal Mediation and Conciliation Service, three by the American Arbitration Association, and three by the six members so selected. This Panel would be empowered to fact-find, to mediate and make recommendations, or to turn back to the parties any or all issues and disputes, and thus to have great flexibility in inducing the parties to reach agreement. If the parties still fail to reach agreement, the Panel may relinquish control over these issues and refer any such issue to final and binding arbitration by an impartial board of arbitration.

Such a procedure insures bona fide negotiations and, most important, provides a creative mechanism to fairly handle disputes which inevitably arise during the course of contract negotiations. The procedure is both imaginative and practical. It heralds great improvements in the working conditions of 720,000 postal employees.

A NEW ERA FOR THE COURT

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. CHAMBERLAIN. Mr. Speaker, the appointment of Warren E. Burger as our country's 15th Chief Justice, has signaled the beginning of a new era for the Supreme Court. The choice of a man with substantial experience on the bench, a legal philosophy of judicial restraint, a demonstrated concern over the problems of law enforcement in the wake of recent court decisions, and a reputation of "unquestioned integrity throughout his private and public life," the President has moved to restore both balance and confidence to our highest court. This was a good appointment and it has been well received. Clear evidence of this is provided by the concurring opinions of the daily newspapers servicing the Sixth Congressional District, of Michigan, and I am pleased to make available the editorial comments of the Jackson Citizen Patriot of May 23, 1969, the State Journal of Lansing, May 24, 1969, and the Owosso Argus-Press of May 23, 1969, so that they may be included in the RECORD of this important time in the history of the Supreme Court and the Nation:

[From the Jackson (Mich.) Citizen Patriot, May 23, 1969]

BURGER NOMINATION A COMFORTING ONE

Chief Justice Warren E. Burger!

In his first appointment to the United States Supreme Court, President Nixon has produced a name which is not particularly familiar to the American people, although the nominee is a veteran of public service, both in the Justice Department and on the federal bench. He is one of the many capable men who were brought into the government by the late President Dwight D. Eisenhower.

Initial reaction in the circles where he is known indicate that President Nixon has chosen well in naming a successor to the controversial Chief Justice Earl Warren, who is retiring at the end of the court's present term.

The selection is pleasing to conservatives, but has aroused no resistance from Senate liberals who apparently see him as a competent, experienced and fair jurist. His fellow judges speak well of his integrity and his ability.

If he is a shade more conservative than the present members of the court, that is to be expected. American Presidents traditionally use their power of appointment to the court to put their own philosophical stamp on it.

President Franklin D. Roosevelt did that to the extreme. He even tried to change the make-up of the court to shape it to suit his philosophies. The court-packing attempt failed, but time gave President Roosevelt the opportunity to create a court to his liking.

Despite the opportunity it gives him to influence the only truly independent branch of the federal government, no more awesome duty faces a President than that of selecting members of the court.

The temptation to pay off political debts or to exercise the maximum influence on the bench not always is resisted by Chief Executives. If the court presently is sagging in the public eye, it is due to this factor. Warren was a political appointment (Eisenhower); Abe Fortas a political crony (Johnson), and Justice William O. Douglas, who now is coming under increasing fire, was named by Roosevelt for his extremely liberal views.

The circumstances thus make President Nixon's responsibility for court appointments all the heavier. He already is faced with a second choice for the bench (to replace Fortas). The age and state of health of senior Justices indicate that he will have the opportunity to appoint additional members of the court before his first term ends.

His clear duty is to select experienced jurists instead of political figures or philosophers; to pick men of unquestioned integrity and judgment and with dignity in keeping with the popular image of the Supreme Court. The President has no margin for error. Each choice must be no less than magnificent.

Apparently he has made a good start with the election of Warren E. Burger. The precedent is comforting.

[From the Lansing (Mich.) State Journal, May 24, 1969]

U.S. SUPREME COURT GETS A NEW BALANCE

President Nixon's appointment of federal appeals Judge Warren E. Burger as new chief justice of the U.S. Supreme Court is a move which will be welcomed by most Americans.

The decision came at a crucial time in the history of the nation's highest legal body, a time when the court is under heavy criticism from many directions.

Bringing in a man of superb legal qualifications from the outside is a wise step which should do much to help heal some deep wounds caused by the unfortunate problems of former associate Justice Abe Fortas.

The arrival of Judge Burger may upset a few on the far left who seem to regard the court as a legislative branch of the federal government since the new chief justice has the reputation of being a strict constitutionalist.

He is known as a tough law and order man but also a liberal on civil rights issues. This is balance that is needed in our troubled times.

In connection with the appointment, President Nixon hinted he may follow a policy of naming future justices from among the best qualified persons now serving in the lower federal courts.

It is clearly a move to avoid any taint of pure politics in court selections and should go a long way toward shoring up the Supreme Court.

[From the Owosso (Mich.) Argus-Press, May 23, 1969]

COURT NOMINEE A FINE START

With the resignation of Supreme Court Associate Justice Abe Fortas and the impending retirement of Chief Justice Earl Warren, President Nixon in his first half-year in office will be privileged to exercise what has become over the decades one of the most important functions of the presidency—the nomination of men to sit on the nation's highest tribunal.

In all, 32 presidents out of 35 (counting Grover Cleveland, who served two nonconsecutive terms, as one president) have made, and the Senate has approved, 100 appointments to the Supreme Court. Not that many individuals have served, however. Four were either promoted from associate justice to chief justice or left the bench and were subsequently reappointed.

Only 24 other presidents have had the opportunity to appoint as many as two justices. Only 12 have appointed chief justices. Before his first term of office is over, it is possible that Nixon may join an even more select group—the six presidents who have appointed as many as five justices. They were Washington (10), Jackson (5), Lincoln (5), Taft (6), Franklin Roosevelt (9) and Eisenhower (5).

Justice Hugo M. Black is 83 years old. John Marshall Harlan is 70 and suffers from seriously deteriorating vision. William O. Douglas is 70 and wears an electric heart pacer and, in the backfire of the Fortas affair, is coming under increasing criticism for receiving a $12,000-a-year stipend from a private foundation which at one time had connections with Las Vegas gambling interests.

It is not the quantity of justices that a president appoints that is important, of course, but their quality, and also the tenor of the times in which they serve—whether the nation is in a period of relative calm or whether great social currents are welling up to the surface in the form of landmark test cases.

It seems evident that Nixon's appointment of Warren E. Burger to be chief justice will be well received by the Senate. The Supreme Court can well use Burger's conservative approach after bending over backwards in a spree of liberalism over the past few years.

It is also heartening to find that Nixon resisted the urge to appoint a "layman" to the high post, but instead selected an outstanding jurist of proven ability on the bench.

Washington, as first president, appointed 10 justices to the high court, including two chief justices. But the court had a very tiny docket in its early years and few questions of great constitutional moment came to its attention during his two terms.

Lesser presidents, by virtue of their prerogative to appoint to the Supreme Court, have left monuments to themselves far overshadowing whatever else they may have accomplished during their administrations.

Washington's successor, John Adams, appointed only three justices, but one of them was the greatest of all—Chief Justice John Marshall, who established the power of the Supreme Court to nullify acts of Congress and, over a long tenure of 34 years, profoundly influenced the development of the nation.

"My gift of John Marshall to the people of the United States was the proudest act of my life," said Adams long after he left office.

There has been much talk that Richard Nixon has a unique opportunity to alter the nature of the Supreme Court for years to come by appointing "conservatives" who will reverse the court's present, narrow "liberal" majority.

This is not necessarily so. Even if this were the President's aim, each justice is his own man and none can be classified in iron-bound ideological categories. Each, moreover, changes and develops over the years.

For example, Justice Black, who was appointed by F. D. Roosevelt in 1938 as a "liberal" or "loose constructionist" (interpreter) of the Constitution, has in recent years tended more and more toward a "conservative" or "strict constructionist" philosophy, at least on certain issues.

On the other hand, we can be sure that Dwight Eisenhower never foresaw that Earl Warren would turn out to be Public Enemy No. 1 in the eyes of the political right.

The Warren court era is ending and we may in the future see a less active court, one more inclined to follow public opinion that lead it. But no matter how many or what kind of justices Richard Nixon appoints, the history of the past 12 years is not going to be rewritten.

While there is dissatisfaction with some of the court's decisions, there has always been dissatisfaction with every court. But there is no sign that the American people have the desire to make any significant departures from the directions upon which the Warren court has set them.

MISUSE OF PUBLIC FUNDS

HON. CHARLES H. GRIFFIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. GRIFFIN. Mr. Speaker, I believe that each Member of Congress sympathizes with and has compassion for the poor. I believe we all are willing to help poor people in every reasonable and responsible manner.

Nevertheless, because of the war in Vietnam, and other pressing needs, we do not have resources to waste on worthless projects even when advertised as help for the poor. One of the most flagrant misuses of public funds is an OEO grant which I recently protested to President Nixon.

Under leave to extend my remarks, I include for the information of the House, OEO's grant announcement, my letter to the President, and his reply through his Assistant Bryce N. Harlow, and a letter I have today written Mr. Harlow:

GRANT ANNOUNCEMENT: OFFICE OF ECONOMIC OPPORTUNITY

APRIL 8, 1969.

1. Type of grant: Legal services.
2. Amount of grant (Federal Share): $283,561 ($183,066 new Federal funds) ($100,495 reprogrammed funds).
3. Grantee: Mary Holmes Junior College (Grantee No. 3211 D/3).
4. Location: West Point, Mississippi.
5. Delegate agency: North Mississippi rural legal services.
6. Project director: Mr. Donovan Smucker (601/948–6513).
7. Areas served: Panola County.
8. Length of program: 12 months.
9. Beneficiaries: Low income residents.
10. Purpose of programs: To provide legal advice and representation to low income residents in the county and to litigate cases which have an impact on large numbers of poor people.
11. Number of nonprofessionals: 10.
12. Additional information: Local share: $30,000.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 1, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I recently learned that the Office of Economic Opportunity has approved a grant of $283,561 to Mary Holmes Junior College of West Point, Mississippi, for the operation of a legal services program through October 31, 1969. The program is designated North Mississippi Rural Legal Services.

After reviewing the administrative provisions and expenditure requirements of the program, I am convinced that the grant represents a deplorable misuse of our taxpayers dollars.

This seven month legal program costing $283,561 is $90,000 more than the annual budget of the Attorney General's office in the State of New Hampshire; is approximately the same as the annual budget of the Attorney General's office in Vermont; and, at an annual rate, essentially the same as the cost of the Attorney General's office in Rhode Island and in Mississippi.

The program does not afford representation in any felony or other criminal case in which the State of Mississippi is constitutionally required to provide counsel or in which counsel is now afforded under State or local statutes, rule of court or practice. It is therefore obvious that the results of this program would be unlawful intermeddling and the promotion of litigation. I doubt that many taxpayers approve of this type of expenditure of public funds.

Most respectfully, I suggest you cancel this program inasmuch as it is a fraudulent scheme to raid the Treasury of the United States.

Sincerely,

CHARLES H. GRIFFIN.

THE WHITE HOUSE,
Washington, May 20, 1969.

Hon. CHARLES H. GRIFFIN,
House of Representatives,
Washington, D.C.

DEAR MR. GRIFFIN: I am responding to your May 1 letter expressing your concern about an Office of Economic Opportunity grant to North Mississippi Rural Services at Mary Holmes Junior College.

I now have information from OEO about this grant. It is designed to provide legal assistance to the rural indigent in Mississippi. Until very recently, efforts have been concentrated principally in a five-county area of North Mississippi where OEO says the need is the greatest.

I learn that this program operates three offices from which services radiate to the surrounding area. The office locations are: Holly Springs, Oxford, and Batesville. The central office is in Oxford at 108½ South Lamar Street.

The problems I understand this program deals with include domestic realtions, consumer credit, welfare and permissible criminal representation. The objectives are to funish advice and representation to the eligible indigent; to litigate cases which have an impact on large numbers of poor persons; to conduct educational programs for the poor; and to conduct research into the legal problems of the poor.

OEO advises that the program is staffed by the following professionals: a Director at an annual salary of $15,500; an Assistant Director at a salary of $14,000; five staff lawyers at salaries of from $9,600 to $11,247; and two social workers at annual salaries of $6,000 and $6,500 respectively. The names of the top professional staff are: Mr. Michael B. Trister, Director, and Mr. Kent Spriggs, Assistant Director.

The non-professional staff covers the following positions and salaries: a bookkeeper at a salary of $6,000; ten community workers at salaries up to $4,420; seven secretaries at salaries from $2,700 to $3,504; and an indefinite number of law students to be employed at a rate of $2.00 to $2.50 per hour.

Mr. Robert Perrin, Acting Deputy Director of the Office of Economic Opportunity, advises me that OEO welcomes your counsel as to ways in which this program might be strengthened. OEO's authorizing legislation provides for the funding of Legal Services Programs "to further the cause of justice among persons living in poverty by mobilizing the assistance of lawyers and legal institutions and by providing legal advice, legal representation, counseling, education, and other appropriate services." This Congressional declaration is what supports this grant.

Mr. Perrin has requested OEO's Southeast Regional Office to forward to your office a copy of the entire grant package for North Mississippi Rural Services, for your further information.

I hope this information will be useful and that as time moves along all such programs will find increasing approval under the direction of the new Administration.

Sincerely,

BRYCE N. HARLOW,
Assistant to the President.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 28, 1968.

Hon. BRYCE N. HARLOW,
Assistant to the President,
The White House,
Washington, D.C.

DEAR MR. HARLOW: Thank you for your letter of May 20, 1969, responding to my May 1 letter protesting a grant of $283,561 to North Mississippi Rural Services at Mary Holmes Junior College.

Your letter of explanation is at variance with the information announced by the Office of Economic Opportunity. For instance, you state that the grant "is designed to provide legal assistance to the rural indigent in Mississippi." Then you state that "until very recently, efforts have been concentrated principally in a five-county area of North Mississippi where OEO says the need is the greatest." It would appear that you have been informed that North Mississippi Rural Legal Services intends to operate under the new grant in an area encompassing more than five counties. However, the grant announcement (a copy of which is enclosed) states that the $283,561 program will operate only in Panola County.

For your information, Panola County had 28,791 residents in 1960 according to the United States Bureau of Census. Additionally, you might be interested in knowing that it is an area of 704 square miles.

Mr. Harlow, it appears that OEO has mislead either you or me.

I think it is incumbent upon you to find out the truth about this expenditure of more than a quarter of a million dollars of the taxpayers money. While you are looking into it, I would suggest that you find out why the project director has a telephone number in Jackson, Mississippi, a distance of approximately 125 miles from Panola County.

Also, I think you should find out why the grant was made through Mary Holmes Junior College, located in Clay County, Mississippi, a distance of about 75 miles from Panola County.

I think you should also find out why $19,800 of the taxpayers money will be spent for travel. Remember, Panola County has an area of only 704 square miles.

It would be interesting to know why there are three office locations as stated in your letter, two of which are located outside Panola County. Since OEO told me that this program is for only Panola County, why is there an office located in Marshall County and in Lafayette County?

There is one item in the budget which I think makes sense. $800 is provided for malpractice insurance.

You stated in your letter that the program deals with domestic relations, among other things. Do you and President Nixon really think it proper for the taxpayers to pay attorney's fees for divorce cases?

This program provides for more than 30 employees at an annual rate. I do not know how many indigent (your term) or low income (OEO's term) residents there are in Panola County. However, it would appear to me that enough Federal funds are being provided to interview every person in Panola County several times to find out whether he or she need legal services. Do you really believe this is a proper function of the Federal government?

I would greatly appreciate your immediate response and, particularly, I want your comments on why you tell me that this $283,561 grant is "designed to provide legal assistance to the rural indigent in Mississippi", and why OEO tells me that it is for only 28,791 persons residing in Panola County, most of whom are not indigent.

Sincerely yours,

CHARLES H. GRIFFIN.

PEERLESS WATCHDOG

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. GROSS. Mr. Speaker, one of the finest tributes yet paid to U.S. Senator JOHN J. WILLIAMS, of Delaware, has been written by Mr. Paul Hope of the staff of the Washington Evening Star, and appeared Monday evening, May 26, in that newspaper.

Senator WILLIAMS has announced his retirement from Congress at the end of his term next year. He says the announcement of his retirement is irrevocable.

There is not a great deal more to be said in tribute to Senator WILLIAMS than has been set forth by Mr. Hope and the Senator's colleagues. I can only add that I know of no man in public life who has given more honest, fearless, and dedicated public service than has this man from Delaware and his retirement will truly be an inestimable loss to all the citizens of this Nation.

I would be remiss in these few remarks if I failed to include a word of tribute to Mrs. Williams, the Senator's good wife. No man in public life could pursue the course Senator WILLIAMS elected, with the pressures and often unpleasantness that attends such a course, without the unfailing support of his wife. Elsie Williams has given that loyalty and support in full measure.

The article by Mr. Hope follows:

WILLIAMS PEERLESS AS A WATCHDOG

(By Paul Hope)

Sen. John J. Williams is, by virtue of the alphabet, at the bottom when the roll is called on the Senate floor. But when the roll of the Senate great is called up yonder, the soft-spoken chicken-feed merchant will be near the top of the list.

There have been great orators in the Senate, but Williams is not one of them. There have been great intellects, but this simple, homey man from Delaware would not claim to be one of them, either.

But when it comes to integrity, persistence and ability to root out waste and corruption, Williams is unchallenged.

In a city where a jackass mentality is not uncommon, Williams' possession of an uncommonly large amount of horse sense has stood out.

It was with a sense of loss that senators arose on the floor the other day to take cognizance of Williams' 65th birthday (on May 17), for Williams has said he's getting too old to serve and plans to retire when his term is up at the end of 1970.

The details of Williams' accomplishments need no recounting. His pursuit of wrongdoers—from bribe takers in the Internal Revenue Service to the free-wheeling Senate aide, Bobby Baker—is well known. His pursuit of wasteful government spending is less well known to the public, but it is recognized by his colleagues and others who follow government.

Said Senate Republican Leader Everett M. Dirksen of the work Williams has done as senior Republican on the Finance Committee:

"I should observe that he has faithfully done his homework in a field which is abstruse at times and which others do not freely like to tackle, and that is the question of ceilings on expenditures, ceilings on employment, fair and equitable tax systems and all the other things to which a person can give a lifetime of attention without also being encumbered with any other public responsibility."

Senate Democratic Leader Mike Mansfield called Williams a "giant" whose place will be hard to fill.

"I must say, speaking non partisantly, that I am not happy that the senator has seen fit not to run for re-election," said Mansfield.

Senator Republican Whip Hugh Scott called him the "watchdog" of government, not only of the other branches but of the legislative branch in which he serves—"a watchdog with teeth, I might add."

"It would be difficult," said Wyoming Republican Sen. Clifford P. Hansen, "for anyone to attempt to put a dollar sign on the contributions John Williams has made through his never-ending search for an end to wastefulness and graft and for economy, or to assess how much he has contributed to this country."

Democrat Russell B. Long of Louisiana, chairman of the Finance Committee, said that Williams "has failed to convince me . . . that he is doing the nation a favor by insisting on retiring . . ."

And Sen. William Proxmire, Wisconsin Democrat, said he hoped "this remarkable man will reconsider his decision to retire."

But Williams, who believes that no man should serve in the legislative or judicial branches of government beyond the age of 70 (he would be nearly 72 at the end of another term), says there's no room for argument about his decision.

"I am a firm believer that a man should live by the rules he lays down for others," he said. But he said that while his decision to leave the Senate is final, it does not mean he is retiring from an active interest in public affairs.

He recalled that before he was elected to the Senate in 1946, he and his brothers had an active business career together for 24 years. When he leaves the Senate, he will have served 24 years there.

"I am going to start one more career," he said. "I shall not go into details now, but I plan on one more career of 24 years of active duty, following which, and only then, will I retire and take life easy."

Those who have watched Williams at work in Washington know he will never take life easy.

POSTAL REFORM

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. RIEGLE. Mr. Speaker, today I am cosponsoring legislation to implement President Nixon's recent proposal for postal reform. I believe these new concepts for postal reorganization mark an important step forward for the postal service in this country. The present anti-

quated facilities, methods, and procedures in use will, at long last, be checked and, hopefully, corrected.

Under this proposed system, the Post Office will be removed from its present Cabinet-level position and replaced by a Government-owned postal corporation. Employees will retain all of their present civil service annuity rights and other benefits; however, in addition, they will gain extensive collective-bargaining rights, similar to those enjoyed by workers in private industry and other Federal agencies. A nine-member board will be responsible for the overall administration of the new U.S. Postal Service—with Congress retaining veto power over proposed postage rate changes.

Mr. Speaker, it is imperative that we work together on a nonpartisan basis to correct the existing crisis the Post Office faces today. Each year, despite increased postal rates, the Post Office continues to operate at a huge financial loss—a loss which has to be covered by the taxpayers' dollars. This new system will enable the Post Office to keep pace with the rest of our economy—in service, in efficiency, and in meeting its responsibiilty as an employer.

President Nixon and Postmaster General Blount are to be congratulated on their efforts in seeking to remove the roadblocks and clear the way for this much needed reform.

I strongly urge my colleagues in both the House and Senate to carefully review this legislation and lend their support.

ANATOMY OF A ROAD

HON. JACK H. McDONALD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. McDONALD of Michigan. Mr. Speaker, on Monday I was privileged to join with highway officials and representatives of industries deeply involved in highway safety in previewing a film, "Anatomy of a Road."

This is a 27-minute 16-millimeter color film sponsored by the Detroit Diesel Division of the General Motors Corp., and produced by CRS Production in Detroit. It will be distributed through General Motors film libraries and Modern Talking Pictures, Inc., throughout the Nation.

Its aim is to foster public appreciation of the value of good roads by helping the layman to understand what is involved in roadbuilding.

As "Anatomy of a Road" makes abundantly clear roadbuilding is a complex, difficult process required substantial capital investment, legislative action, legal due process, engineering skill, and hard work.

Many people today are appalled at the cost of modern highways and many have even wondered whether they are worth that cost. "Anatomy of a Road" endeavors to set that record straight by showing the public where its dollars go.

The film also covers such controversial areas as funding, land acquisition, and beautification.

"Anatomy of a Road" explains and illustrates each of the major steps in highway construction from preliminary planning through completion and maintenance.

Mr. Speaker, this is a most informative and important film. I am hopeful every Member of this body will have the opportunity of viewing it. I am also hopeful each Member will advise schools, service clubs, and television stations in his district of its availability.

COMMUNITY RALLY AGAINST THE ABM

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. ROSENTHAL. Mr. Speaker, one of the most reassuring aspects of the ABM controversy is the renewed interest—in cities and communities across the country—in local discussions on issues of national policy. This development started, I believe, with the popular opposition to the Vietnam war. It continues with the ABM. It will be carried forward as citizens reexamine the military budget and our international commitments in a critical examination of our national priorities.

I was fortunate in being invited to speak at a recent community rally against the ABM at St. John's University, Queens, N.Y. Over 800 persons at that meeting endorsed the following petition, which I include, along with my remarks at the meeting:

To the President and All Members of Congress:

We, citizens of Queens County in a public meeting held Monday, May 5, 1969 at St. John's University do hereby state our opposition to the deployment of the ABM.

ABM will not work reliably and will not provide significant protection against nuclear attack.

ABM threatens to escalate the arms race.

It is expensive and unnecessary.

We urge that you give voice and vote against appropriations for the ineffective, dangerous and wasteful ABM systems.

Our country must instead look for ways of ending the arms race and of meeting the urgent social needs of our society.

REMARKS OF CONGRESSMAN BENJAMIN S. ROSENTHAL, OF NEW YORK, AT ST. JOHN'S UNIVERSITY, MAY 5, 1969

The principal reason we are here tonight is to determine whether the ABM is really an Edsel. If it is, why are the resources of the United States Government, resources essential to coping with our domestic needs, being committed to a system that the vast majority of our leading scientists say won't work?

The answer is really quite simple.

Today we operate in a contract state. The contract state is one in which the Assistant Secretary of Defense for procurement leaves that job and becomes a Vice President of Litton Industries, a conglomerate whose defense contracts increased more than 250 per cent from 1967 to 1968. This same man in his Defense Department role supervised the 45 billion dollar a year program of contracting with private industry, including Litton, for supplies, services, and equipment. At the same time, the Assistant Secretary of Defense for Systems Analysis, the man who computerized the Pentagon's decision making, became Vice President for Economic Planning at, of all places, Litton Industries.

It is in this context that we have to examine the reliability, the credibility, the integrity, the honesty, the objectivity of those who urge on us the construction of a costly, unworkable, provocative military defense system.

HOW DOES WEAPONS PLANNING WORK?

It starts with an idea for a new weapons system in a laboratory or "think tank" or in some research and development corporation. This idea soon becomes the property of a contractor and a group of men committed to that idea. Then, careers of defense planners, both civilian and military, become attached to the idea. The idea is developed into hardware, in which tax dollars are invested for further development and perfection. More careers are created and committed to it.

Next, the hardware demands the building of a new defense plant. It now means jobs for managers and wages for workers. It means taxes for a new school in a marginal community. It means children whose fathers have to earn a living. The weapons idea is now a part of the social structure. Towns and even cities depend on it.

Objective criticism cannot succeed because outside critics are shouted down and military and corporate competitors are quieted by trading support for their weapons systems.

The ABM is an excellent example of such trading among defense competitors. The ABM belongs to the Army, by a Defense Department decision made a dozen years ago. No other service can venture into that area. To abandon the ABM now means, for the Army, not only a sharp budget reduction, but also military careers left hanging in space. It means contractors and defense contractors without visible means of support. It means towns without factories and factories without jobs.

When a weapons system reaches this point, it becomes a decisive influence on defense policy. The weapon—in this case, the ABM—becomes part of our overall strategy. Other services count on it. Congressmen on the committees get to know the system. They become part of its constituency. Their prestige is committed to it. Outsiders, including other Congressmen, are told "You don't understand this system"; or "You don't have all the facts."

When the ABM and a dozen other systems like it become part of our defense strategy we are really in trouble. Our foreign policy is determined by the available defense strategies. The defense hardware offers certain possibilities which become the policy options which the State Department then anoints as the key to protection of our national interests.

Foreign policy is no longer made by the President or by the State Department. Policy is made by a hundred small decisions which, collectively, become our defense strategy. These decisions sometimes are made on the basis of whose congressional district shall get which contract. Or whose sub-contractor needs help in dealing with a local community. Or which branch of the Pentagon needs a little more help in building its budgetary posture before Congress. We don't even ask the State Department anymore about how we became involved in Vietnam. We ask the Pentagon.

This process of giving the maximum number of people a stake in the defense system leads slowly but surely to the militarization of our society. Then, to make it work properly, the international tension must be kept up to an acceptable level. No longer neighbors in a world community, we become its police force. Talk of disarmament is discouraged. In-

ternational accords on weapons testing are dangerous. Air bases around the world become necessary. Intervention in foreign countries becomes a proper expression of American concern.

Soon we have a landing in the Dominican Republic. Next, we have advisors in Vietnam. Soon they need more advice. Then defense planners see a testing ground for weapons. Optimistic reports are then delivered from the battlefield like: "We'll have this mess cleaned up in six months." When six months pass, we start seeing the lights at the end of the tunnels. Then we prepare to start turning the corners toward victory. But the armies grow, more men are drafted, more and more money goes for their weapons. More jobs are created and more defense planners hired.

In this whole dismal picture, the great majority of Americans are taken in. Partly, it is because we tend to accept the judgments of defense "experts," whose explanations are obscured by guarded references to "intelligence reports", and classified information. Partly because it was, for a long time, considered unpatriotic to question defense expenditures.

How did this happen to a country which used to pride itself on anti-militarism?

The period after World War II was a dangerous one. But we responded to the Cold War by institutionalizing it. We drew the people away from examining international affairs by trying to make the subject obscure, complicated or dependent on classified information.

After seven years in Congress, I am more convinced than ever that people cannot only understand foreign affairs but they can also make valid judgments about them. People today recognize that we were sold a grossly defective product when we bought American participation in the Vietnam war. That judgment should have been made five years and 30,000 American lives ago.

Most of us cannot understand the details of the ABM system. We do not have to. We can understand that an expensive defense system that cannot defend us can nonetheless provoke actions by our potential enemies which in turn are very dangerous for us. This is what arms escalation means.

We know an ABM system won't work. But the Russians might wonder why the Americans would invest $5 or $7 or $40 billion if the system doesn't have some value. Their confusion would prompt fear. So they try to overcome our ABM system. In strategic terms, this is not hard to do. You can simply build many more nuclear tipped missiles and decoys to overpower any ABM system. We end up facing an augmented Soviet arsenal.

In turn, we will respond to that new threat by either building a "thicker" ABM system or by building more offensive missiles, or both. We are back where we started.

We know that reason and reconciliation must become our guide in international affairs. Yet our present defense policy challenges that truth. Since 1945 we spent $1.4 trillion dollars for defense systems, now mostly obsolete, which gave us no real security. We sought in arms a security which the machinery of war cannot achieve.

Although we do not yet know exactly how to undo what we have done, we know we must start. Tonight is a step in that direction. Another step was taken several weeks ago when Senator Nelson and I sponsored, with many House and Senate colleagues, a Congressional Conference on the Military Budget and National Priorities. Right now we are working on plans to keep that Conference in permanent existence to develop a rational system of making and reviewing defense plans.

But unless average citizens begin to control the machinery which makes the basic decisions in our society, there can be no real democracy. We are beginning tonight to assert that control over the machinery of war.

BURKE RECEIVES SERVICE TO ISRAEL AWARD

HON. ROBERT TAFT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. TAFT. Mr. Speaker, it has just been brought to my attention that one of our colleagues, Representative J. HERBERT BURKE of Florida's 10th District, was recently awarded the Zionist Organization of America's "Service to Israel Award" for his outstanding work in Congress on behalf of peace in the Middle East.

I would like to applaud my colleague, HERB BURKE, on achieving this fine honor. I have followed his actions in this regard since the Middle East has flared into a world tinderbox, and I feel that the recognition is well deserved.

HERB was one of the first House Members to speak out on the dangers of the Soviet Union moving into the Middle East with arms, technical aid, and even military personnel, and he early joined several of us in demanding that the administration concentrate its efforts on assisting Israel in her hour of need.

I have just read the speech which HERB delivered in accepting the award and feel that it should be brought to the attention of the House. I submit it as follows:

I am most grateful for this award and the honor you have bestowed upon me. I accept this with deep humility . . . for anything I have done, or have said, on behalf of the State of Israel has been, because I am convinced of the cause of the people of Israel and further I feel it is my duty as a United States citizen, and U.S. Representative, to give the full support of our country to Israel and to insure her a fair peace in the Middle East—one which will guarantee her safety and security in the future. I am convinced that unless we keep Israel strong, communism will gain a dominant hold in one of the most vital economic and resourceful areas of the world and will further jeapordize our own future security. I further believe that peace should come from talks held between the officials of the Israeli government and those of the hostile Arab states, without interference from England, France, Russia or our own County, in deciding the terms for peace in the Middle East.

Let's review these so-called peace talks, as they are held under the supervision of the four big powers. Let's not forget, that the idea for such method is predominantly Russian.

First, the Soviet Union is a major cause for continued hostilities in the Middle East because it has totally rearmed the Arab States with the most modern of equipment, and are even supplying Soviet technicians and army officers to train the Arab armies and pilots.

Secondly, we have the French government sitting at the peace table. This is the same government that after selling and receiving payment from Israel for Mirage planes, reneged on its contract to deliver the planes and refused even to deliver replacement parts for the old planes it had previously sold to Israel.

I am sure, that you are as convinced as I, that the Soviet Union will never give an inch in the Middle East, or anywhere else on this earth for that matter, without first gaining one more step in their road to world conquest. They work externally as well as internally to promote disunity among nations through their stooges, they gnaw and gnaw at the innards of a nation until they are completely in charge, and then the people of that country find that they are at the mercy of the Soviets: sans freedom; sans initiative; sans hope.

We need only to look at Czechoslovakia, and Hungary for proof of how heavy is the boot of Communism.

Communism is the base of evil in this world and until the leadership in our government and those political figures of other nations in the world face this fact, we will have no peace.

The disunity that has been promoted in the United States may, or may not, have been promoted and engineered by the Communists, but, it certainly plays into their hands all over the world and certainly dulls the blade of our defensive sword.

Such disunity was written into the Stalin Plan of world conquest decades ago, and throughout the 1930's and 1940's racial and religious unrest were the goals of the Communists in this country and their foreign henchmen and overseers.

Never before, in our history has our foreign, military or internal policy been so at the mercy of malcontents, on campuses, in our public buildings, on our streets and now even our places of worship, the communist conspiracy can indeed be insidious, though the vast majority of the people apparently do not wish to see Communism for the danger it is.

Take for instance today's student unrest . . . the militant, rebellious mood that pervades our campuses and our big cities. Who and what is behind this movement?

Isn't it becoming more and more apparent that there is a movement which has now fused together the dissidents, militants, the anarchists and the terrorists for the sole purpose of undermining our form of government and the ideals for which it stands.

Some of today's more outspoken radicals openly call today's events the third world movement. . . . And I believe its specific aim is the destruction of the capitalistic and free nations of the world, with the direct intent of converting them to socialism or communism of either the Soviet or Sino form, under the guise of liberalism.

The reactionaries that have been terrorizing our high school and college campuses are, from what I can determine, divided into three distinct groups. Namely . . the Black Militants; the White Militants, usually under the heading of Students for a Democratic Society, and more recently the fanatical supporters of Al Fatah, the anti-Semitic terrorist organization dedicated to the destruction of Israel and all pro-western nations.

These groups do seem to have different leaders, yet it appears they are united together with the single aim of changing our basic institutions and ultimately destroying the United States of America and other smaller countries, such as Israel who have struggled so hard for freedom and who have thus far resisted suppression and dictatorship which is communism.

How is it possible for these small, seemingly disunited groups to destroy a mighty nation like the United States, or other nations that are our allies? Simply by planting fear of war from the outside, but with subversion and disunity from within. In other words, with dissension and terrorism that can disrupt our lives and bring destruction to our morals, our economic fiber and sabotage our basic institutions.

Let's look at the dissension in this country today . . .

The Black Militants are more and more following the line of hate, preaching anti-white and anti-semitic lines, and calling for the destruction, among other things, of Israel as a nation. We also see these groups linking up with some of the students in our country and with foreign students who are

dedicated to the terrorism of Al Fatah, or the teachings of Mao Tse Tung.

What is the ultimate goal of this so-called third world movement? President S. I. Hayakawa of the beleaguered San Francisco State College may have had the best answer when he said before a House Subcommittee on Education recently:

"Some militants in our country are genuine in their desire to improve the education system, but there are others, especially those in the Black Student Union, who are more concerned with personal power than with education. The Black Student Union leaders keep saying they want absolute control with no accountability to anyone except their own members . . . members ruled by force, intimidation and gangster terrorist tactics."

He further stated in his description of these radicals:

"The White Militants are now as explicit as the Blacks. Their story is now familiar on every major campus. They believe our society is so corrupt that there is no hope except to destroy the entire structure and rebuild from the ground up."

In looking at these militants, whether they be the followers of the anti-semitic or the power hungry or the surly campus anarchists, one theme rings loud and clear in their cause. That is communism.

They support Ho Chi Minh in southeast Asia, who is a communist puppet . . . They pay homage to the slain Cuban communist revolutionary Che Gueverra . . . They are constantly calling for the destruction of our government charging us with being capitalistic imperialists, and at the same time they are promoting Communist ideologies of Marx, Lenin and Mao . . . They support the Arab cause in the Middle East, which also has strong Communist backing.

If you do not believe they are supporting the Arab cause . . . look at the most recent report put forth by the Anti-Defamation League of B'nai B'rith, an excellent report that details item after item where S.D.S. members are raising money for Al Fatah on our college campuses. Where Black Militants are openly preaching anti-Zionist tirades in their publications and at their rallies.

Some time ago, I requested the Justice Department to investigate the activities of the possible link between the Arab terrorists, the campus militants, and other radicals in our country.

As a result the Attorney General's office informed me that in accordance with my request they have directed the Federal Bureau of Investigation to probe into this most dangerous situation and to prosecute anyone who may, because of their activities, be violating Federal laws.

I further requested the State and Justice Department to investigate any foreign students, who may belong to Al Fatah or other militant or terrorist organizations, with the purpose of revoking their visas and deporting these radicals as persona non grata if they are found to be engaged in activities contrary to the best interest of our country and our people.

I honestly feel that it is time for all Americans to wake up to the reality that our nation is in grave danger, and we are facing the most serious, planned internal subversion that we have ever been confronted with.

We must wake up to this reality and stop taking dose by dose the subversive poison that is being fed to us bit by bit on humanitarian and liberal grounds.

Many of us in the government recognize the danger signs, but we alone cannot curb this movement. We need the backing and support of all of our American citizens.

Each of us who are here knows our country is not perfect, but we also know how our form of government, and our way of life, has given to the people more of the good things in life, and yet we are allowed to live with dignity as free men.

As sure as we are here tonight . . . if America falters . . . the Soviet Union is already standing ready to fill the void.

Remember when Britain moved from the Mediterranean? Who was ready, and took over the ports of Algeria, ready to man the bases in Egypt and other hostile Arab states? You guessed it. It was the Soviet Union with its arms, its fleet and its phony peace suggestions.

This is why we, as a nation must be alert, firm and strong today and stop subversion at home . . . But we must also assist and stand by our true allies overseas, not with words, but with arms when it is necessary so as to give them the strength, the courage and the will to fight for their freedom.

One ally, that needs every ounce of support we can give to her today is *Israel.*

We as a matter of conscience: as a matter of right; and as a matter of self protection must give to Israel all the help she needs to protect and defend herself from any possible attack by the red trained Arab nations.

I am happy that we are now training Israeli pilots and crews, for the Phantom jet fighters we have sold to her. But we must also make it clear to Russia and to the world that Israel is our ally, and there will be no forced peace in the Mideast, unless it is the result of conferences between Israel and the Middle East nations, and with the firm understanding that the Arab States will recognize and guarantee the sovereignty and territorial rights of Israel: rights she deserves as a free nation.

We must help to solve the serious refuge problem. One which multiplies with each day the war continues.

We must clarify our foreign policy and our foreign commitments, not only to our own people but to the world as well.

We must stop appeasing the Communists, whether they be Soviet or Sino, and this means that we should make it clear that we will not be pushed into appeasement in the Middle East.

Last, but surely not least . . . It is imperative that we keep our own country strong internally, otherwise we cannot assist our allies.

Today's anarchists and terrorists, whether they be from without or from within, are not fighting to liberate the American people or those of any other free nation . . . instead they intend to bring about world communism.

Like you, I want peace . . . I want to be able to pick up a newspaper or listen to a news report and not hear . . . another flare up has occurred in South Vietnam or Korea . . . or that an Arab Terrorist Group has just killed some Israeli soldiers or innocent people . . . or that three Cleveland policemen were shot and killed by a militant group . . . or that an innocent man was killed in a riot . . .

But to have peace in this world, whether it be in South Vietnam . . . the Middle East . . . or even our own streets, or campuses the great powers of the world must desire peace.

President Nixon has said time and again, his aim is to bring peace to all parts of the world, and he is willing to discuss peace with the Russians . . . yet the Kremlin has remained very quiet.

When was the last time you heard the Soviet leaders offer to cutback their military might in Czechoslovakia . . . in North Vietnam . . . in the Middle East? or when have they honestly indicated by action that they want peace in the world?

In truth and fact, the Soviet Union has continuously . . . year after year . . . increased her arms budget, while we sit and talk about stopping the arms race. The Soviet Union will continue to do this until we have capitulated to all her demands, including maybe even giving up our own sovereignty.

We in our country want peace, but I for one do not favor peace at any price . . . In the past, peace dictated by the communists has so often resulted in the enslavement of more and more people under communism.

Until Russia then can offer the Dove of peace without a grenade attached to her leg . . . our country must remain strong economically and militarily, and so long as we remain strong as a nation and strong as an international power the people of Israel and our other allied nations, will no longer need to fear the constant threats of mortar fire on its borders and within its cities or the death of its innocent people.

But as I indicated earlier, the need in our country for the people's support of their government at all levels, is the thing that is so sorely needed today . . .

The need for confidence in law, order, in our police, and of our basic American system of democracy.

And for those who would like to destroy our country or tear it to pieces for the small faults we do have, I ask this:

Where, in this world of ours, is there a better system of representative government, a higher standard of living, fewer people hungry, and medically neglected than in our own America.

Show me a nation of 200 million, that even comes close in comparison to us in such things and gives to its people at the same time the freedoms and the opportunities that America offers to its citizens, and I will say to them they have something to talk about.

Since they cannot show us, however, then as Americans let us drown out the voices of the dissidents and the anarchists who should be thankful to God that they are living in a free country . . . By showing our faith in our God and in our country and our friends.

ADDRESS OF U.N. SECRETARY GENERAL U THANT

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. BINGHAM. Mr. Speaker, on May 9, the Secretary General of the United Nations, U Thant, made a speech at the opening session of a conference at the United Nations on "The Second United Nations Development Decade: A Challenge for Rich and Poor Countries." I commend this thoughtful address to my colleagues and other readers of the RECORD.

Speaking eloquently of his concern that support for international development programs is diminishing within the richer nations, U Thant made this telling point, among others:

It is ironic that many people who have suddenly awakened to the costs and injustices of neglecting poverty at home, seem unable to apply the lessons of their domestic experience to the shrinking world in which they live.

He called for greater public understanding and support for the economic work of the United Nations, pointing out that "some 80 percent of the manpower and budget of the United Nations system is devoted to economic work—yet this receives less than 20 percent of United Nations coverage in the mass media."

Some 20 years ago, the British historian Arnold Toynbee wrote that the 20th century would be remembered most of all in the future because it was during this century that mankind, through

technology, developed the capacity to eradicate poverty from the face of the earth and dared to aspire to that goal. Following the same thought, U Thant said:

We cannot accept the conclusion that the eradication of poverty is politically unfeasible:

The text of the Secretary General's address follows:

TEXT OF STATEMENT BY SECRETARY GENERAL AT OPENING SESSION OF CONFERENCE ON SECOND UNITED NATIONS DEVELOPMENT DECADE

Your Excellencies, Ladies and Gentlemen: I am very glad to have this opportunity to welcome you all to the United Nations, and to make a few remarks at the opening session of your conference on "The Second United Nations Development Decade: A Challenge to Rich and Poor Countries," sponsored by the Institute on Man and Science and its distinguished President, my old friend Dr. Everett Clinchy.

You know only too well that we are going through a difficult and dangerous period of international relations. Mankind is divided by deep national, racial, social and ideological antagonisms. Material and intellectual resources that are desperately needed to further common interests in peace and welfare are being diverted to the pursuit of fratricidal conflicts within the family of man.

Witnessing the ominous trend of international events I cannot but recall something Adlai Stevenson said in these halls just a few years ago:

"We, the human race, are fellow travellers on a tiny spaceship, spinning through infinite space. We can wreck our ship, we can blow the human experiment into nothingness; and by every analogy of practical life, a quarrelsome ship's company and many hands on the steering gear is a good recipe for disaster."

Adlai Stevenson's metaphor of Spaceship Earth seems more appropriate with every passing year. Like it or not, we are all traveling together on a common planet. We have no rational alternative but to work together to make it an environment in which we and our children can live full and peaceful lives.

Yet—while we waste our substance in war and in the increasingly dangerous arms race—we are neglecting threats to our civilization which should have first priority on our attention. I have in mind such urgent problem as the advancing menace of environmental pollution, the uncontrolled explosion of world population, and the vast and growing inequality in living standards between rich and poor nations.

Surely the time has come to extend our concept of solidarity to embrace the entire human race. Surely the time has come to confront through a global partnership these common threats to the survival and welfare of all. This is no Utopian dream to be realized in some distant future. It is a matter of human survival that demands immediate action.

I do not wish to seem overdramatic, but I can only conclude from the information that is available to me as Secretary-General that the Members of the United Nations have perhaps 10 years left in which to subordinate their ancient quarrels and launch a global partnership to curb the arms race, to improve the human environment, to defuse the population explosion, and to supply the required momentum to world development efforts.

If such a global partnership is not forged within the next decade, then I very much fear that the problems I have mentioned will have reached such staggering proportions that they will be beyond our capacity to control.

It is the last of these problems—world development—that you have chosen as the theme of your conference today. Your choice is a timely one. We will soon reach the end of the first Development Decade—a decade in which the Members of the United Nations pledged to "intensify efforts to mobilize and sustain support for the measures required on the part of both developed and developing countries to accelerate progress toward self-sustaining growth."

While much has been done in this first Decade of Development, I am bound to say in all honesty that the efforts of rich and poor countries alike are still inadequate when measured against our proclaimed objective—the achievement of living standards in the less developed countries compatible with minimum human dignity.

I have read with interest the questions which have been prepared for your discussion by my good friend Professor Richard Gardner. There are three main headings on your agenda—how to get better aid policies from the rich countries, how to get better development policies from the poor countries, and how to get a better system of multilateral co-operation. These are, in fact, the principal questions which we are asking ourselves at the United Nations as we prepare for the Second Development Decade. Your agenda lists many important questions under each of these three main issues. I should like to draw attention to a few of them that seem to me of particular importance.

The basic question under the first heading, it seems to me, is how to strengthen the faltering political will that is all too evident in the advanced countries in the field of international aid. It is tragic that, at the very moment in history when assistance efforts are beginning to yield results, public and official support in the aid-giving countries appears to be weakening.

It is not for me to diagnose all of the reasons for this disappointing state of affairs. Certainly one factor in many advanced countries is the growing preoccupation with domestic concerns. It is ironic that many people who have suddenly awakened to the costs and injustices of neglecting poverty at home, seem unable to apply the lessons of their domestic experience to the shrinking world in which they live.

How can we explain this apparent anomaly? How can we help people to see that the domestic war on poverty and injustice cannot be won if the international one is neglected?

How can we channel the idealism of our young people on behalf of a war on poverty that is not merely national but global in scope? How can we reach their parents—many of whom now seem cynical or indifferent to international assistance efforts?

We used to hear it said that the greatest obstacle to development lay in the less developed countries themselves—in the reluctance of their governments to undertake proper policies and the unwillingness of backward peoples to adopt new ways. But now the greatest obstacle to development may be our inability to move governments and people in the rich nations.

The truth is that now, for the first time, a number of the less developed countries are able to change and grow at a rate faster than the advanced countries are prepared to support. If you can help us find an answer to this dilemma, you will have made a great contribution to one of our central concerns at the United Nations and to one of the most fundamental problems of mankind.

We shall also be deeply interested in your advice on the second subject on your agenda—how to get better development policies from the poor. We need to know much more than we know now about the nature of the development process.

Some years ago there was a tendency to regard the problem of development of the less developed countries as but an extension of the problem of European reconstruction. A certain amount of capital investment or technical assistance was thought likely to be sufficient.

We learned early in our development efforts that the European analogy did not work. Disappointed by past failures, policymakers and scholars have turned to a succession of different remedies—stimulating the private sector, undertaking tax and land reform, closing the trade gap, raising agricultural productivity, developing human resources and family planning.

All of these things are important. Yet I do not think we yet have a coherent development strategy or a clear sense of development priorities in most of the less-developed countries with which we are concerned.

One thing, however, is clear: Development means more than redistributing world income. It means internalizing the wealth-creating processes within the developing countries. And this in turn means profound political, economic, social and cultural transformations within most of these countries.

In the past we have focused much attention on the economic aspects of development. Perhaps now we need to think more about political modernization and socio-cultural change—about the measures that can be taken to increase local initiative and local responsibility for formulating and executing local development plans—about strengthening those modernizing forces within developing countries which will work for the changes in attitudes and institutions necessary for effective development.

Here again, we will look with interest to any insights you can give us.

I turn now to the last of the three headings on your agenda—how to improve our institutions for multilateral co-operation.

I welcome the inclusion of this subject on your agenda. The institutions set up within and outside the United Nations for promoting economic development need not be regarded as sacrosanct. Arrangements that were adequate to channel the modest levels of activity of the past may not be adequate to cope with the expanded efforts of the future.

I have had occasion in recent years to express concern about our proliferating conference schedule, our mounting load of documentation and the complex problems of coordination between the United Nations, its semi-autonomous units, affiliated programmes and specialized agencies.

I note that you intend to consider these questions and also the relation between global and regional organizations. Here again we shall await your report with interest.

As we in the United Nations approach the Second Development Decade, we have taken steps to increase public understanding and support for the economic work of the United Nations. As all of you know, some eighty per cent of the manpower and budget of the United Nations system is devoted to economic work—yet this receives less than twenty per cent of United Nations coverage in the mass media.

I hope you will consider how this situation can be corrected—how we can stimulate broader public understanding and support for our efforts in the economic field, possibly making use of new instruments of mass communication which technology is making available.

As I look toward the second Decade of Development, I am struck by the magnitude of the changes that will be necessary in the aid policies of the rich and the development policies of the poor. Perhaps we will need to consider a series of inter-related commitments—commitments to increased assistance from the aid-giving countries matched by commitments to more effective self-help by those receiving aid. How successfully the United Nations and other international agencies assist in the negotiation and the implementation of such a set of inter-related

commitments will do much to determine the fate of the second Development Decade.

Permit me to offer one final thought. As you confront these and other problems on your agenda, there may be those who raise the familiar objection that a particular solution is not "politically feasible". Of course, we cannot ignore political considerations. But words like "political feasibility" must not be allowed to disguise what may really be failures in the hearts and minds of men in countries on both sides of the great economic divide.

We cannot accept the conclusion that the eradication of poverty is politically unfeasible—any more than we can accept that conclusion with respect to the responses that are necessary to meet the other dangers that threaten the survival and welfare of mankind—the arms race, the destruction of the human environment and the population explosion. On the other hand I firmly believe that what man must do to prevail, he can do.

I wish you all a fruitful discussion and a successful meeting.

THE LATE HONORABLE FRED A. HARTLEY, JR.

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. GALLAGHER. Mr. Speaker, today I would like to say a few words in memory of one of our former colleagues, Mr. Fred A. Hartley, Jr. For nearly two decades he represented New Jersey's 10th District which embraced Newark and Bayonne. When he was first elected to Congress in 1928 at the young age of 26, he was the youngest man to sit in the House of Representatives at that time.

Most of the people today remember Fred because he was cosponsor of the very controversial Taft-Hartley Labor Act of 1947. The New York Times obituary about Fred devoted most of its columns to this subject. Mr. Hartley himself gave up his seat in the House in 1949 to undertake an extensive lecture tour in support of his controversial bill. He spent the remainder of his life defending the bill from its opponents like myself.

Mr. Speaker, I would like to say a few words about the other Fred Hartley, the Fred Hartley no one has mentioned. This was Fred Hartley, the humanitarian.

Fred Hartley was a personal friend of mine. We both came from towns in New Jersey separated by only a few miles from one another. Today my 13th District embraces what used to be a part of Fred's old 10th District.

I remember Fred when I was a very young boy. When my father died during the depression from wounds compounded by a severe gassing he received in France during World War I, Fred was the Representative from my hometown of Bayonne, N.J., to whom we looked for help. He did everything he could to help my family as he did for thousands of others.

Fred gave me my first glimpse of how a Congressman can personally help a constituent from his district. The kindness and understanding with which he treated my family has made a lasting impression on me.

He held office during the critical years when Americans were starving; when a job offering even 1 day a week's pay meant the difference in a family eating or not. To all of these people he sought tirelessly to offer and obtain help and hope. These were the post-World War I days when large numbers of veterans and their families had nowhere to turn for help. But in the 10th District of New Jersey, when the poor, the hopeless, and the veterans turned to Fred Hartley for help, he never turned them away.

It is with a heavy heart that I address these words of praise to the memory of Fred A. Hartley, Jr. Though a member of the opposite party, he held a respect from me that transcended politics. He was an outstanding American who had courage and compassion.

No one tried to serve his country and the people he represented in a better fashion than did Fred A. Hartley, Jr. He was a great deep man. America will miss him.

THE NEW CONSUMER MILITANCY

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. O'HARA. Mr. Speaker, on May 22, 1969, Walker Sandbach, executive director of Consumers Union, carried the message of consumer militancy to the Association of Home Appliance Manufacturers during its meeting here in Washington.

Mr. Sandbach, whose organization publishes Consumer Reports, warned the manufacturers that the consumer dissatisfaction will not subside with more consumer legislation and that the present unrest among consumers is indirectly related to the products on the marketplace today. He warned the manufacturers:

It is important for us to realize that we are only at the beginning of what will probably be a long period of consumer militancy.

I agree with Mr. Sandbach's appraisal of the situation.

I would point out, however, that the consumers' demands can be met by reputable manufacturers who charge a fair price for a product which is safe to use, free of defects, and performs as advertised.

Mr. Speaker, I ask that Mr. Sandbach's speech, "The New Consumer Militancy," be printed in the RECORD:

THE NEW CONSUMER MILITANCY

At Consumers Union, perhaps our greatest contribution to the welfare of the consumer is in the testing of products and reporting the results in our magazine, Consumer Reports. We test household items as small as thermometers and as large as refrigerators. We test products as inexpensive as a can of orange juice and as expensive as a Cadillac automobile. We test products as varied and as interesting as contraceptives and liquor.

As you can imagine, we have had many amusing incidents with regard to our testing and reporting on contraceptives. One letter received from a subscriber goes as follows:

"Some weeks ago I filled out a blank establishing my eligibility to receive your pamphlet, 'A Report on Contraceptive Materials,' and enclosed 25 cents. Yesterday I received a form post card informing me that instructions on how to attain high fidelity reproduction would be ready in about three weeks. While I appreciate the language being in the open mail would necessarily have to be *somewhat* guarded, I wonder whether there has not been some misunderstanding. Please let me again make my needs and wishes clear. I do not in this instance want high fidelity reproduction; in fact, it is my wish to avoid reproduction altogether."

What had happened of course was that her order for the contraceptive report had by mistake been acknowledged as an order for our instructions on how to build a high-fidelity radio-phonograph combination.

In our testing we have found over and over again that well-known brands, or price, are very seldom an accurate guide on which the consumer can depend in choosing the best product for his intended use.

When we take action by testing a product and publishing the results, a reaction is inevitable because of the fact that our magazine goes into more than one and one-half million homes each month. If we rate a product favorably, the manufacturer of that product loves us and is frequently inclined to brag about our ratings in his advertising, which we do not allow. If he does not heed our request to cease and desist from such advertising, we take him to court and seek damages under the copyright law. The reaction of the manufacturer is not so predictable when we give his product a poor rating, or rate it unacceptable. Some then say, in the words of one manufacturer: "Consumers Union is biased, unfair, and incompetent." Others have responded by improving their products, which we believe is the best response for the consumer, the manufacturer, and the retailer.

Donald Turner, the former Assistant Attorney General in charge of the Antitrust Division, U.S. Department of Justice, in looking for remedies to counteract the adverse effects he felt advertising had on competition, suggested the possible use of government funds to support the work done by organizations such as Consumers Union. I have been asked many times what my reaction would be if such funds were offered to us. As you know, Consumers Union is a nonprofit, *independent*, organization. I have discussed this possibility with our Board of Directors. We have decided we would not be adverse to receiving such government funds if they could be channeled in such a way that we would retain our complete independence of government and industry. Our allegiance has always been, and I hope it always will be, to one group—consumers Turner is right in saying that we would need more money if we were to make our information more current and more widely available.

Is there any doubt that Mr. Turner is also right when he says that the average consumer is in great need for more information about many products than is presently, or is likely to be made available by advertising. Mr. Turner feels this would make for more competition, which is important for our economy. But also important is the fact that such information can have a substantial effect on improving the consumer's standard of living. Let me give you two examples from many.

Liquor is a potentially noxious product, the advertising of which, in my opinion, should be under even more stringent federal regulation and control than is now the case. Although many of us enjoy a drink at the right time and place, I firmly believe that liquor should not be glamorized and thus tempt our youngsters to start drinking at an early age. Misuse of alcohol can bring too much tragedy.

In our report on our tests of Canadian Imports and Domestic blends of whiskey, we said:

"A recent advertisement for Seagram's Crown Royal comments that "A man needs a good excuse to buy a bottle of $9 whiskey for himself." Our reply was, "True." And after having a panel of professional tasters evaluate 31 brands of Canadian and American blended whiskies, we'd say that a good enough excuse may be mighty hard to come by. All the products were judged both good and remarkably similar to each other in quality and character, though the prices our shoppers paid for them ranged from $3.99 a fifth to $8.80."

You know and I know that many people buy Seagram's Crown Royal and other prestigious name whiskies in part for status reasons. Many of us like to impress our friends. But if we knew it was costing us $5 extra per fifth for a product in which one cannot distinguish the expensive whiskey from the cheap one, *perhaps* we would achieve our status, and save a lot of money, by buying one bottle of Seagram's Crown Royal—and a funnel.

Last year CU reported on a major testing of automobile tires. We found that the lack of reliable indicators of tire quality is very nearly total. You'd be as well off, in our opinion, to believe a Ouija board as to give faith and credit to the advertised claims of labeled grades ("Premium," "first-line," "second-line" and the like) or replacement tires on the market today.

A look at the ratings in our August report will give some notion of the very wide range of cost and performance we found. For example: Relative tread life ranged from about 15,000 miles to about 40,000 miles. Cost per 10,000 miles of driving on a set of four tires could range from $40 to $127, depending on which tires you bought and what you paid for them.

Isn't this the kind of information that all consumers should have and shouldn't they be able to get it without having to subscribe to Consumer Reports? Certainly CU's tests demonstrate the crying need for the quality grading system that the Secretary of Transportation was supposed, by law, to propose by September 8, 1968.

I am a member of the Secretary's National Motor Vehicle Safety Council, and I can tell you that we are a long way from getting a quality grading system on tires. None was proposed by September 8th, and it may be a long time before one is proposed. Most of the tire industry is dragging its feet at every turn—saying again and again that a quality grading system is more likely to mislead the consumer than to assist him. We at CU believe that our tests give ample evidence that it will be possible to develop a quality grading system which will be of tremendous help to the tire buying consumer, I am pleased to report that there has been a major breakthrough. At least one of the major tire companies now agrees with us and is publicly supporting a grading system. A Washington newspaper reported this startling news as follows:

"As news, a man biting a dog isn't a patch on a corporation executive calling for government grade-labeling of the product his company makes. This has now happened.

"George R. Vila, board chairman and president of Uniroyal, has announced that America's tire buyers have a right to demand some standards to help them buy intelligently from among more than 1000 tire lines and descriptions offered—even if the federal government has to set the standards.

"Vila concedes that not all of his competitors may share his views, but believes 'that it is in our enlightened self-interest not only to endorse the concept of grade-labeling and uniform testing but to cooperate in making certain that the system adopted is a help, not a hindrance, to the consumer. Let us be leaders, not reluctant dragons, in the wave of 'consumerism' that is sweeping the country. Let us adopt as our basic marketing philosophy an attitude of *'cognoscat emptor'* (let the buyer be informed')."

The newspaper article concluded with an editorial comment: "Amen, brother, and hallelujah!"

Perhaps some of you should take the lead in your own industries in calling for some form of grade labeling of your products. It is going to take that kind of leadership to convince consumers that business is in truth willing to make the consumer's welfare its No. 1 priority.

AHAM has already shown admirable leadership in securing the adoption of BTU standards for air conditioners. Why not expand that small beginning by establishing standards for other qualities which consumers consider important—for example—noise level and the ability of air conditioners to dehumidify?

Or with regard to washing machines, why not establish industry-wide standards on capacity and a grade labeling system with regard to washability. We think that consumers would like to know how well a washing machine will wash clothes. If that is too difficult, and I realize it is very difficult, you could first tackle something easy, such as a grade labeling system for spin-drying ability of washing machines. Recently one of the major washing machine manufacturers started putting an information tag on its washing machines. The tag tells many things about the machines which consumers would like to know—except how well they perform.

At CU our interest is not limited to just testing of new products. We also are concerned as to how these products stand up in service and in the kind of problems consumers must face when a household item needs repair.

In 1967 we were involved with the New York CBS–TV affiliate in a TV repair study. We placed 20 TV sets in homes and checked them to make sure there was nothing wrong with the sets except for one small tube, which retails at $1.95. We marked every part in the set with invisible ink so that we could check if parts were replaced. Only four repairmen out of 20 charged what would be within reason in the New York area for the cost of a service call and the replacement of a $1.95 tube. The other 16 overcharged for the necessary repairs in one way or another, with several charging for parts which were not replaced. Some charged over $25, with the largest bill $34.95.

Is something like what he found with regard to TV repair in New York City happening with regard to the servicing of other home appliances? I hope not, but the letters we receive and the responses to our Annual Questionnaire, which is answered by over a quarter million subscribers would lead me to believe that your industries, to put it mildly, do have some service problems. I know you are aware of these problems and are making major efforts to find solutions to them. Perhaps you are already looking at possible innovative solutions. Such as appliances that would be much easier to repair. As you may have noted, one of the selling points of the new Ford Maverick is that a reasonably handy person can do his own repairs. Wouldn't that be possible with many appliances?

I doubt if I have to tell you that business is in trouble with consumers in many areas. This was confirmed by a confidential nationwide survey conducted by the Opinion Research Corporation which found that seven out of ten Americans think that present Federal Legislation is inadequate to protect their health and safety. Also in this survey a majority were found to believe that more Federal laws are needed to give shoppers full value for their money.

Will the present consumer malaise or unrest disappear if we have more consumer legislation? I personally doubt it. I am convinced that the present malaise has its roots in areas only indirectly related to products.

I can illustrate from a personal experience. My wife and I spent our honeymoon in a tent on the shores of Lake Erie. At that time, just 30 years ago, Lake Erie was a beautiful body of water magnificent for swimming and boating.

I don't need to tell you what has happened in those 30 years, this great natural resource has been destroyed, largely due to industrial pollution. I read recently that if all pollution into Lake Erie were to be stopped today, it would be 400 years before Lake Erie would again be pure water. So we have destroyed for ourselves, for our children, and for many succeeding generations this magnificent natural resource.

What does this do to the confidence of consumers in the business community? Or take the recent oil leak catastrophe in the Santa Barbara Channel off the coast of California. Do you agree with me that these disasters, which are only two examples from among many, have played a role in leading consumers to believe that business cannot be trusted to look out for their best interests?

It is important for us to realize that we are only at the beginning of what will probably be a long period of consumer militancy. The next generation of consumers is likely to be even more difficult to convince that businessmen have their best interests at heart than has been the case with the present generation. *Fortune* magazine recently carried an article in which the editors attempted to synthesize the views of student critics of U.S. society. In capsule form, this is what *Fortune* says these students are saying: "Our most wrenching problem is that of finding a place for ourselves in society. By all indexes we should have no anxiety about our future. We are told that we are the best prepared, best educated, most talented crop of students ever produced in this country. What we fear is not that society will reject us; we fear that we cannot accept society.

From what I read, from what I hear from my own boys—17-year-old twins—and what I hear from college students as I speak to them on campuses, the statement I have quoted to you from *Fortune* rings true for a large number of idealistic students—not just the militants—but a large number of the moderate students as well all around the world. As Margaret Mead said recently: "Never has there been as wide a generation gap as exists at the present time."

It *is* true, as Stephen K. Bailey of Syracuse University has said, that, "We have so many advantages over (the young): the cops, the Army, the registrar's records, the keys to the library. We can beat them in a fight. But they have a life to live and the best of them are trying to tell us something."

I am convinced that what these idealistic youngsters are trying to tell us is that in an America where we have the ability and the resources to send astronauts to the moon, we can't be satisfied with destroying our natural resources, we can't be satisfied with shoddy products, we can't be satisfied with misleading advertising, and we can't be satisfied with anything less than making an all-out effort to do away with poverty, racism and war.

Further, I am convinced that it is the hypocrisy of our society that seems most of all to affect our youth—in and out of the ghetto. This hypocrisy has resulted in literally thousands of students participating in demonstrations, dropping out of school, using drugs, rioting, and, shouting, "Hell no, I won't go!"

Many of our young people think of us as phonies just because of the kind of behavior so well illustrated by our handling of cigarettes. On the one hand our medical experts give us the facts about the danger, but on the other hand, the right to advertise and make millions off their sale must not be interferred with. It is an incredible fact that we are spending millions of dollars to point

out the dangers of smoking while at the same time we spend millions to subsidize the production of tobacco.

I realize that many of the problems facing us seem so enormous that we are inclined to say, "What is the use of trying to do anything, and turn away." But I can't turn away and I hope that you can't either. Recently I read some words that buoyed my spirits and gave me new hope for the future:

"Each time a man stands for an ideal, or acts to improve the lot of others, or strikes out against injustice, he sends forth a tiny ripple of hope.

"And crossing each other from a million different centers of energy and daring, those ripples build a current that can sweep down the mightiest walls of oppression and resistance. Few are willing to brave the disapproval of their fellows, the censure of their colleagues, the wrath of their society. Moral courage is a rarer commodity than bravery in battle or great intelligence. Yet it is the one essential vital quality for those who seek to change a world that yields most painfully to change.

"And I believe that in this generation those with the courage to enter the moral conflict will find themselves with companions in every corner of the globe.

"For the fortunate among us there is the temptation to follow the easy and familiar paths of personal ambition and financial success so grandly spread before those who enjoy the privilege of education. But that is not the road history has marked out for us.

"Like it or not, we live in times of danger and uncertainty. But they are also more open to the creative energy of men than any other time in history. All of us will ultimately be judged and as the years pass, we will surely judge ourselves, on the effort we have contributed to building a new world society and the extent to which our ideals and goals have shaped that event.

"Our future may lie beyond our vision, but it is not completely beyond our control. It is the shaping impulse of America that neither faith nor nature nor the irresistible tides of history but the work of our own hands matched to reason and principle will determine our destiny."

Don't those last few words sum it up as to what we must do? ". . . The work of our own hands matched to reason and principle will determine our destiny."

ELI LILLY & CO. OF INDIANAPOLIS CONTINUES TO STEP UP RESEARCH IN FIELD OF DIABETICS

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. BRAY. Mr. Speaker, Eli Lilly & Co., the great pharmaceutical house of Indianapolis, was the first drug company to manufacture insulin, and continues to accelerate its research in diabetes.

It is a common but mistaken impression that once a drug is discovered no more work or research is necessary. This is simply not so. For instance, in the case of insulin, further research by Lilly and others has succeeded in reducing the number of times the drug has to be taken. Purity has been increased; newer forms of the drug make it easier for patients to adapt to it, and, most important of all, the price has been drastically reduced. Insulin now costs less than 5 percent of what it cost when first developed.

There is no real substitute for insulin. Continued work on this drug by the Lilly Co. is discussed in the following story from the May 25, 1969, Indianapolis Star:

LILLY JOINS ACCELERATION IN INSULIN RESEARCH

(By Leila Holmes Clowes)

Scientists throughout the world, including several at Eli Lilly & Co., Indianapolis, are accelerating their research into insulin—activity that could lead to knowledge about the causes of diabetes and other associated disorders.

Hopefully, the findings could lead to a prevention of conditions causing the diseases.

Insulin, discovered in 1921, has been studied ever since as a model protein, and has played an important role in the treatment of diabetes. The Lilly company is one of the world's leading manufacturers of insulin.

Although the chemical structure of insulin was elucidated in 1955 by the Nobel prize-winning work of Dr. F. Sanger at Cambridge University, the manner in which insulin is synthesized in the body has been uncertain. In recent years, chemists from several laboratories have synthesized the two chains of insulin and combined them to make insulin.

Yet many scientists doubted that insulin is made this way by the pancreas since many other body proteins are known to be formed from larger single-chain forerunner proteins and then converted by enzymes to the active biological proteins.

Although a forerunner or precursor form of insulin has often been suggested, the proof for such a substance was only recently provided. Two years ago, Dr. D. F. Steiner of the University of Chicago isolated a single-chain "proinsulin" from a tumor of the pancreas of man. He observed that the single-chain proinsulin could be converted to insulin with the enzyme, trypsin. This released the connecting link which joined the two insulin chains together.

Steiner suggested that this inactive single-chain protein is the forerunner or precursor of the double-chain active insulin, which then regulates the use of sugar by fat and muscle in the body.

The proinsulin breakthrough has provided new impetus for scientists to try to understand both insulin production and diabetes. Some laboratories have reported more proinsulin circulating in the blood of diabetics than in normal people. They are wondering if the conversion mechanism of proinsulin to insulin is faulty in certain forms of diabetes.

Perhaps, the scientists reason, diabetics may lack sufficient enzymes to break the link in the chain to convert proinsulin to insulin. The result may be an excess of protein existing in a less active state which could cause an imbalance in blood sugar regulation.

Genetic or family differences in enzyme systems now are being studied since a tendency for diabetes is inherent in some families. Maybe the detection of pro-insulin in the circulation could be a screening tool for predetermining diabetes or could serve as an indicator of diabetes.

Steiner's discovery of proinsulin has been confirmed and extended by numerous investigations at the Lilly Research Laboratories. Dr. R. E. Chance, R. M. Ellis and Dr. W. W. Bromer have isolated pork proinsulin and have determined the chemical composition of the connecting link between the two insulin chains. In further studies, Dr. B. Frank found that the insulin portion of proinsulin is in about the same three dimensional shape as insulin existing alone.

"We found, says Dr. Chance, "that while the insulin part of the protein is very similar in pork, beef and human proinsulins, the connecting link in each case contains a different variety, number, and arrangement of amino acids."

Unfortunately this means that the readily obtainable pork or beef proinsulins will not be useful standards in a test for human proinsulin in the blood. This has been verified in immunological studies by Dr. Mary Root, who is currently developing specific methods for testing in each species for proinsulin.

Drs. W. N. Shaw, R. E. Toomey, and J. A. Galloway also from the Lilly Research Laboratories, are interested in the biological action of proinsulin. Their findings indicate that pronsulin mimice insulin actions but is far less potent. Insulin is 8 to 10 times more active, biologically, than proinsulin.

Dr. D. R. Challoner, assistant professor of medicine and biochemistry at the I.U. School of Medicine, is collaborating with Lilly researchers on proinsulin, studying its effects on fat cells. Dr. Challoner hopes someday to be able "to easily measure circulating proinsulin in normal individuals vs. diabetics."

Research on proinsulin is still in the early stages of development, and much more knowledge must be obtained before the full significance of proinsulin in relation to diabetes is understood. As proinsulin researchers share new ideas and discoveries through frequent conferences and publications, they hope the future for diabetes and associated diseases may be revolutionized.

REA ADMINISTRATOR SPEAKS

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. SCHWENGEL. Mr. Speaker, Mr. David A. Hamil, Administrator of the Rural Electrification Administration, recently addressed the North Central Generation and Transmission Conference. His remarks are most enlightening. Of particular interest are his remarks with respect to the outstanding efforts of the Eastern Iowa Light & Power Cooperative at Wilton Junction. This cooperative, and its general manager, Mr. F. E. Fair, are to be commended for their efforts to hold down the cost of electric power.

Mr. Hamil's remarks follow:

EXCERPTS FROM REMARKS OF DAVID A. HAMIL ADMINISTRATOR, RURAL ELECTRIFICATION ADMINISTRATION, BEFORE NORTH CENTRAL GENERATION AND TRANSMISSION CONFERENCE, MINNEAPOLIS, MINN., MAY 14, 1969

One day last week the New York Times had this head over a story in its Business and Finance section: "Con Ed Chief Cites Cost-Crunch Woes."

In the second paragraph the Times reported that Charles F. Luce, chairman of the Consolidated Edison Company of New York, said that technology has reached its limit in fighting inflation and there appeared to be no relief in sight.

This is the story of almost any business today, but it has particular significance for power supply cooperatives which have been following the trail of technology and scale to lower cost operations. While the trail has not disappeared completely, it has narrowed considerably and become difficult for most of our G & T borrowers as it has for other power suppliers. The cost-crunch is a reality, not just a catch phrase.

The question, then, is where do we go from here? Do we take the easy way out, toward higher consumer costs, or do we look for ways to reduce costs further? Are there

places where costs can be trimmed, or do we crank up a campaign to increase sales so as to spread fixed costs over a greater number of kilowatt-hours?

Inflation has become such a flood, sweeping everything movable before it, that it is possible to lose one's perspective and balance, winding up in the torrent. But the chances are just as good, perhaps better, that a critical search will turn up desirable alternatives to floating along for a while and then sinking.

What are some of these alternatives?

Certain costs are called fixed costs, but they are not so immovable or sacred as to be beyond question. If you have any flexibility—meaning that the next unit is still on the drawing boards or not fully loaded—put that flexibility to the stretch test. Can you stretch out your schedule—defer the next unit for a few years while you buy power from a neighbor with reserve capacity—so that you can move up to a larger unit offering lower costs?

This is what your hosts from Eastern Iowa Light and Power Cooperative did to get extra savings from REA-financed generation. When we approved the loan originally, the plan was to build a second 22,000-kw unit for service in late 1963. Through its arrangements with the City of Muscatine and other power suppliers, Eastern Iowa was able to postpone the installation of its second unit. Better yet, the cooperative stretched the size of its second unit to 33,000-kilowatts—fifty percent larger than originally planned. By getting more kilowatts for the same amount of loan funds, Eastern Iowa has a saving of four mills per kilowatt-hour, or double the estimated saving of two mills over previous power costs.

The story would have been different if Eastern Iowa had tried to go it alone, independent of other power suppliers in self-generation. But Eastern Iowa faced the facts of life in the power generation business and worked with its neighbors and area power pools.

On a larger and different scale, two other REA-financed power supply cooperatives are working with larger neighbors toward a joint venture in nuclear generation in which they will have an ownership interest.

This arrangement will be an extension of an established joint venture—originating in 1946—between Iowa Electric Light and Power Company and the Central Iowa Power Cooperative. This venture, as I have said on other occasions, has provided proof that there can be great advantages when neighboring power systems work together closely, despite basic organizational differences.

Last month I attended meetings in Cedar Rapids where a new dimension is being added to this beneficial partnership, and the partnership enlarged. The directors and operating officers of Iowa Electric Light and Power, CIPCO and Corn Belt Cooperative, were present to work out arrangements for a combined venture in nuclear generation. The plan under consideration then called for the two power cooperatives to share in the benefits of the company's first 550-megawatt nuclear unit through each having a 10 percent ownership in the unit and its generating capacity. The three systems would be intertied through bulk transmission facilities which will enhance the reliability of the individual systems and bring the advantages of larger scale generation than each could have operating independently.

These meetings were spread over an afternoon and evening of one day and most of the following day. The most remarkable aspect of these meetings, these negotiations, to me, at least, was the representatives of Iowa Electric Light and Power were just as enthusiastic about working with cooperatives in this nuclear venture as the cooperatives were in developing a working interest with a larger operating utility system with all the advantages that association will bring.

Since that meeting the Iowa people have raised their sights somewhat. As I have been told, they are now thinking in terms of an 800-mw plant with other Iowa electric companies taking part. The expanded arrangement would bring still greater economies of scale associated with nuclear units of 800-mw and above to the joint benefit of cooperative members and company consumers.

I know that other cooperatives represented here today have also learned that working together is good business—good for each system individually, good for the areas it serves, and productive of mutual benefits for all participants.

Possibly no other region has gone farther in its approach to coordination of power planning and pooling of power resources than the group of states represented here today. This approach has led to creation in recent years of Associated in Missouri, United in Minnesota, Basin Power in North Dakota, Cooperative Power in Minnesota, and the strengthening of older power cooperatives such as Dairyland and Minnkota.

The trend toward group action and participation—with the potential benefits to be realized—will grow as the power business becomes more complex, and as the price tags go up.

In just one new area—air and water pollution—we can expect the emergency of new controls at city, state and Federal levels. To meet this, economically and effectively, it may be better to concentrate the problem at a large, more efficient generating plant, than to deal with it more expensively and less effectively in several smaller power stations.

This is one of the reasons REA is interested in the wise step taken by the cooperatives which are members of the Upper Mississippi Valley Power Pool to study the possibilities of meeting power deficiencies in the 1970's. Out of this study may come a formal group to purchase power or to build new generating capacity.

This brings me to money—and eventually to REA policy on loans for generation and transmission.

Right now we are faced with loan requests far in excess of lending authority—more than $440 million in loan applications, with about $50 million of lending authority available for the remainder of the fiscal year. We expect to start the fiscal year 1970 with about $415 million of applications on hand. The proposed budget is $345 million. Whatever is made available will be used according to our best judgment to meet the most pressing needs of borrowers, both distribution and power type.

In the light of this set of facts and the amount of funds that may be available from the Treasury next year, we will need the cooperation of borrowers and all existing power suppliers in finding ways and means for meeting the power needs of REA borrowers with a minimum of Federal investment. This and the possibility of supplemental private financing will be the main planks in our long-range plans.

I have brought with me copies of REA Bulletin 20–6, "Loans for Generation and Transmission," which is being put in the mail today. This and a press release announcing issuance of the loan policy bulletin will be available after this session.

I think the policy speaks for itself, and its merit will be determined more by subsequent events than anything I might say here. Our purpose has been to state REA policy as simply and realistically as possible, and to bring it into line with present realities and trends in power supply. In the revision, Paragraph II C of the previous version, adopted May 31, 1961, has been omitted. This was the so-called third criterion.

* * * * *

Now let's get back to the ranch—and the crunch.

I am sure you are concerned, as we are, at the ability of operating expenses to keep up or run ahead of year-to-year growth in income—operating revenues. When this happens consistently, then it is time to look for places to trim the budget and the actual expenditures.

In the days when money was in generally better supply and the terms were easier, some of us may have gotten somewhat slack in watching costs and where the money goes. Now there is good reason to check and to tighten the reins.

This is particularly true in the REA programs which are dependent on 2 percent loan funds. There is a heavy obligation to live frugally and to treat all cooperative funds as if they were public funds.

What it comes down to is this: is it more important to have money to do our jobs—getting power out to the farms—or a few extra frills? This is the question that you as managers and directors face each time you meet to hear a new financial report and approve a budget. And it is roughly the same question I have to face in REA in making decisions on loan priorities and loan requests.

* * * * *

I have talked here today, and on many other occasions, about the need to work with other segments of the electric power industry in matters of common interest and mutual advantage.

We also need to work together—REA with its borrowers and borrowers with borrowers—in the rural electrification family. We can make greater progress and use our resources more effectively through cooperation than in competition with one another.

I hope this will be the spirit and the outcome of this conference. You can count on my full cooperation.

CONGRESSMAN MOORHEAD UNCOVERS RUNAWAY COSTS FOR NEW TRANSPORT

HON. FRED B. ROONEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. ROONEY of Pennsylvania. Mr. Speaker, recently, syndicated columnists Frank Mankiewicz and Tom Braden focused attention on the C–5A transport scandal uncovered by our colleague, Representative WILLIAM MOORHEAD of Pennsylvania.

Waste of tax dollars within the Defense Establishment is a serious matter which cannot be overemphasized. Within the past year, I have found unbelievably shoddy procurement practices being utilized by the Department of the Navy in awarding contracts for spare parts for the Mark–12 20-millimeter aircraft cannon.

The General Accounting Office, on July 1 will begin a Defense-wide investigation of so-called "sole source" procurements as the result of the GAO's investigation of Mark–12 gunpart contracts. These sole source procurements—contracts awarded specific firms who are regarded by the Defense agencies as the sole producers of certain parts and equipment—account for $5 billion worth of defense spending annually.

Sole source procurements presuppose noncompetition. Undoubtedly the Navy was stunned early this year to learn that the 1968 "sole source" supplier of the

Mark-12 breechblock lock now has encountered competition from 11 other prospective suppliers in a competitive procurement. And competitive bidding cut the cost of the breechblock lock to less than one-third the price paid last year.

Congressman MOORHEAD's discoveries regarding the fantastic cost escalation of the C-5A transport underscore the critical need for vastly improved spending controls within the Defense agencies. I include the Mankiewicz-Braden column in the RECORD at this point because I believe every Member of the Congress is concerned about the continuing series of revelations regarding waste in defense spending.

[From the Allentown (Pa.) Evening Chronicle, May 6, 1969]

PENTAGON IN DEEP TROUBLE IN C-5A CONTRACT

(By Frank Mankiewicz and Tom Braden)

WASHINGTON.—A memo by Defense Secretary Melvin Laird and an exasperated speech by Sen. Harry Byrd, Jr., to point up the mounting crisis facing the Pentagon.

Both involve the major scandal unearthed this week by Rep. William Moorhead, D-Pa., concerning the Air Force's huge C-5A transport. The contract will cost some $2 billion more than estimated, and the Air Force, it seems, covered this up for more than two years, at least in part over concern for the financial position of Lockheed Aircraft, the prime contractor.

In March, Laird sent a memo to his top assistants.

"I am increasingly concerned," he wrote, "about the allusions in the press and elsewhere to 'runaway' costs on such key or major programs as the C-5A." He asked which studies and reviews were under way on program costs. He also asked, significantly, "What can and-or should be said publicly about these costs?" And finally, "What sorts of actions on DOD's (Defense's) part can be taken to thwart or ameliorate the continuing adverse commentary on program costs and suspect technical effectiveness."

At the time he wrote the memo, Laird must have known the fantastic cost overrun had been apparent for two years and that Air Force reports had been changed to conceal this fact for more than one year. The cost, in fact, had gone from $2.9 billion to over 5.2 billion, with the end not in sight.

Sen. Byrd took another tack. "The entire military establishment," he said, "has the responsibility to handle tax funds as a public trust—and drive hard bargains with the manufacturers."

It is, alas, an empty wish, as Sen. Byrd, perhaps the Senate's leading advocate of both economy in government and defense preparedness, must know. The unfortunate fact, as the C-5A flap and others reveal most clearly, is that the Pentagon cannot drive hard bargains with the manufacturers—it is the manufacturers who drive the hard bargains.

For example, an assistant secretary of the Air Force wrote his chief on March 15, 1967, expressing concern that Lockheed's trouble with the C-5A might damage its standing in the financial community. Lockheed was about to issue $125 million of convertible debentures. People might think, he said, that the C-5A contract was "in serious trouble," since by this time the Air Force had sent Lockheed a "cure notice," a device by which the Pentagon hints that a contract may even be terminated if deficiencies are not corrected.

This is, in fact, precisely what is meant by "the military-industrial complex." It is a complex in which buyers and sellers move easily back and forth across the lines, in which each is intimately involved in the financial and public relations welfare of the other and in which arms-length bargaining is quite impossible.

Rep. Otis Pike, D-N.Y., has also been doing some digging. The contract with Lockheed for the ill-starred Cheyenne helicopter, he says, was entered into by the Army at a time when the assistant secretary of the Army for research and development was a former vice president of Lockheed—who has since returned to the corporation. That contract, for 375 helicopters, had an original cost estimate of less than $1 million per helicopter. The cost is now estimated at more than $2.8 million each, and a spare-parts contract has yet to be negotiated.

It is a bad season for the men who now will try to cap these triumphs with an ABM system. No one here has ever talked about a "Labor Department-poor complex" or an "Agriculture Department-hungry complex" or, for that matter, a "HEW-dependent child complex" for a very good reason: they do not exist. In those areas, as is right and proper, bargains are hard and dollars are watched. But if you are a defense manufacturer and you run over a few billion dollars, or the thing won't work, your friends will cover up and the extra cost can be added to the next contract. Elsewhere in the federal budget the law is a terrible, swift sword.

PARENT POWER—AN AMERICAN TRADITION

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. RARICK. Mr. Speaker, once again some of the American people, asserting themselves at the polls in a typically American manner, have eliminated what they regarded as a threat to the safety and well-being of their children. By a landslide vote they replaced two school board members who were obviously not representing them to their satisfaction. In their places they elected two men who campaigned for the wishes of the great majority of the electorate.

The lesson is plain—that the American people will not be perpetually conned into school policies, whether it be in the guise of "balance," of "sex education," or any other do-gooder gimmick, which they know to be dangerous to their children.

I insert a clipping from Time magazine for May 30, 1969, as follows:

INTEGRATION—THE DREAM IS OVER

Because they regard the city as an ideal mirror of U.S. tastes, dozens of companies use Denver to test-market new products. If the same holds true of racial attitudes, then a key election in Denver last week suggests that Americans oppose school integration (at least via bussing) by 2½ to one.

The vast majority of Denver's elementary schools are *de facto* segregated. Almost two-thirds of the white pupils attend schools that are more than 85% white; in predominantly black schools, the pupils are rapidly falling behind in their studies. Goaded by the murder of Martin Luther King last year, the Denver school board sought a drastic remedy: make each Denver school reflect the overall ethnic composition of the city's 96,000 pupils—65% white, 20% Mexican-American and 15% Negro.

By a vote of 5 to 2, the board approved a bussing plan, due to start next fall, that would have sent more than 500 whites to predominantly black schools and guaranteed, that no minority-area school would be less than 70% white. The plan was less than satisfactory to the Rev. Jesse R. Wagner, co-chairman of a black-white group called Citizens for One Community that wanted fuller integration. Still, he worked hard for the bussing scheme—in contrast to Denver's black separatists, who told Wagner, in effect: "Do your things and you'll see."

What he and other Negro integrationists saw was a strong backlash by anti-bussing whites. Last week the whites got a chance to express their feelings when a record 50% of Denvers registered voters turned out for the schoolboard election. At issue were two six-year seats on the seven-member board. In seeking those seats, Lawyer James C. Perrill and Frank K. Southworth, a real estate man, ran primarily "against forced bussing and for neighborhood schools." They won by a landslide, switching the board majority to 4 to 3 against integration.

In Negro precincts, the pro-integration vote ran as high as 10 to 1; the heaviest vote against it came from white precincts that were totally unaffected by bussing now but fearful of it in the future. As a result, bussing is highly unlikely in Denver. Said Jesse Wagner: "The dream is over. The white majority is not willing to take on the commitment and make our country one."

SENATE—*Thursday, May 29, 1969*

The Senate met at 12 o'clock noon, and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal God, Father of our spirits, we give Thee thanks for the blessed memories and enduring hopes which bind us to the unseen world of the heroic dead who encompass us now like a cloud of witnesses. We thank Thee for all who have nobly lived, bravely died, and kept the faith. May we who have entered into the heritage of their heroism and self-sacrifice so honor their memory and so preserve and further their high purposes that the Nation they served may stand evermore for righteousness and peace.

We remember before Thee all whom war has left weakened in body, mind, and spirit and pray that they may live brave, cheerful, and useful lives amid grateful regard and deserved honor.

Bless the work of the peacemakers and by Thy grace put down the pride and anger that turn man against man and nation against nation, so that Thy kingdom may come and Thy will be done on earth.

In the name of the Prince of Peace. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, May 27, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

FOREIGN AID—MESSAGE FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT (H. DOC. NO. 91–122)

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, received on May 28, 1969, under authority of the order of the Senate of May 27, 1969, which was referred to the Committee on Foreign Relations:

To the Congress of the United States:

Americans have for many years debated the issues of foreign aid largely in terms of our own national self-interest.

Certainly our efforts to help nations feed millions of their poor help avert violence and upheaval that would be dangerous to peace.

Certainly our military assistance to allies helps maintain a world in which we ourselves are more secure.

Certainly our economic aid to developing nations helps develop our own potential markets overseas.

And certainly our technical assistance puts down roots of respect and friendship for the United States in the court of world opinion.

These are all sound, practical reasons for our foreign aid programs.

But they do not do justice to our fundamental character and purpose. There is a moral quality in this Nation that will not permit us to close our eyes to the want in this world, or to remain indifferent when the freedom and security of others are in danger.

We should not be self-conscious about this. Our record of generosity and concern for our fellow men, expressed in concrete terms unparalleled in the world's history, has helped make the American experience unique. We have shown the world that a great nation must also be a good nation. We are doing what is right to do.

A FRESH APPROACH

This administration has intensively examined our programs of foreign aid. We have measured them against the goals of our policy and the goad of our conscience. Our review is continuing, but we have come to this central conclusion:

U.S. assistance is essential to express and achieve our national goals in the international community—a world order of peace and justice.

But no single government, no matter how wealthy or well-intentioned, can by itself hope to cope with the challenge of raising the standard of living of two-thirds of the world's people. This reality must not cause us to retreat into helpless, sullen isolation. On the contrary, this reality must cause us to redirect our efforts in four main ways:

We must enlist the energies of private enterprise, here and abroad, in the cause of economic development. We must do so by stimulating additional investment through businesslike channels, rather than offering ringing exhortations.

We must emphasize innovative technical assistance, to ensure that our dollars for all forms of aid go further, and to plant the seeds that will enable other nations to grow their own capabilities for the future.

We must induce other advanced nations to join in bearing their fair share—by contributing jointly to multilateral banks and the United Nations, by consultation and by the force of our example, and by effective coordination of national and multilateral programs in individual countries.

We must build on recent successes in furthering food production and family planning.

To accomplish these goals, this Administration's foreign aid proposals will be submitted to the Congress today. In essence, these are the new approaches:

1. ENLISTING PRIVATE ENTERPRISE

I propose the establishment of the Overseas Private Investment Corporation.

The purpose of the Corporation is to provide businesslike management of investment incentives now in our laws so as to contribute to the economic and social progress of developing nations.

The majority of the Board of Directors, including its President, will be drawn from private life and have business experience.

Venture capital seeks profit not adventure. To guide this capital to higher-risk areas, the Federal Government presently offers a system of insurance and guaranties. Like the Federal Housing Administration in the housing field here at home, the Overseas Private Investment Corporation will be able to place the credit of the United States Government behind the insurance and guaranties which the Corporation would sell to U.S. private investors.

The Corporation will also have a small direct lending program for private developmental projects. It will carry out investment survey and development activities. And it will undertake for A.I.D. some of the technical assistance required to strengthen private enterprise abroad. The financial performance of OPIC will be measurable: It is expected to break even or to show a small profit.

The Overseas Private Investment Corporation will give new direction to U.S. private investment abroad. As such, it will provide new focus to our foreign assistance effort.

Simultaneously, I propose a mandate for the Agency for International Development to direct a growing part of its capital, technical and advisory assistance to improving opportunities for local private enterprise in developing countries—on farms as well as in commerce and industry.

We do not insist that developing countries imitate the American system. Each nation must fashion its own institutions to its own needs. But progress has been greatest where governments have encouraged private enterprise, released bureaucratic controls, stimulated competition and allowed maximum opportunity for individual initiative. A.I.D.'s mandate will be directed to this end.

2. EXPANDING TECHNICAL ASSISTANCE

I propose a strong new emphasis on technical assistance.

Over one-fifth of the funds requested for fiscal year 1970 are for technical assistance activities. Imaginative use of these funds at the points where change is beginning can have a gradual but pervasive impact on the economic growth of developing nations. It can make our dollars for all forms of aid go further.

Technical assistance takes many forms. It includes the adaptation of U.S. technical knowledge to the special needs of poor countries, the training of their people in modern skills, and the strengthening of institutions which will have lives and influence of their own. The main emphases of technical assistance must be in agriculture, education, and in family planning. But needs must also be met in health, public administration, community action, public safety, and other areas. In all of these fields, our aim must be to raise the quality of our advisory, training and research services.

Technical assistance is an important way for private U.S. organizations to participate in development. U.S. technical assistance personnel serving abroad must increasingly come from private firms, universities and colleges, and nonprofit service groups. We will seek to expand this broad use of the best of our American talent.

A.I.D. is preparing plans to reorganize and revitalize U.S. technical assistance activities. A new Technical Assistance Bureau headed by an Assistant Administrator will be created within A.I.D. to focus on technical assistance needs and ensure effective administration of these activities. The bureau will devise new techniques, evaluate effectiveness of programs, and seek out the best qualified people in our universities and other private groups.

To make it possible to carry through these plans most effectively, I am requesting a two-year funding authorization for this part of the A.I.D. program.

3. SHARING THE ASSISTANCE EFFORT

I propose that we channel more of our assistance in ways that encourage other advanced nations to fairly share the burden of international development.

This can be done by:

—Increasing jointly our contributions to international development banks.

—Increasing jointly our contributions to the United Nations technical assistance program.

—Acting in concert with other advanced countries to share the cost of aid to individual developing countries.

Most development assistance—from other advanced nations as well as the United States—is provided directly from one country to another. That is understandable. Such bilateral programs provide assistance in accordance with each country's own standards, make the source more visible to the recipient's people and can reflect historical political ties.

But assistance through international

development banks and the United Nations is approaching a fifth of total world-wide aid for development and should be expanded. Multilateral programs cushion political frictions between donors and recipients and bring the experience of many nations to bear on the development problems. Moreover, they explicitly require shared contributions among the advanced nations. This calls for funds in addition to those which I am proposing today.

I appreciate the prompt response by the Congress to my earlier proposal authorizing the United States to join with others in the second replenishment of the International Development Association. I urge early passage of appropriations for this contribution so that we may meet our pledge.

I reaffirm my request for appropriations in Fiscal 1970 of $20 million for the ordinary capital of the Asian Development Bank, and $300 million for our scheduled contribution to the Fund for Special Operations of the Inter-American Development Bank.

In separate legislation I will submit a new proposal for a U.S. contribution of $25 million to the Special Fund of the Asian Development Bank in FY 1970. I am convinced that a fairly-shared Special Fund, to enable the Bank to provide concessional financing for priority needs, is a necessary supplement to the Bank's ordinary lending facilities. The United States should join with other donor countries in establishing this Special Fund, and strengthen the Bank so that it can better deal with Asia's current development problems and future needs.

The United States will consult with the management of the African Development Bank and with other potential donors, to identify the most appropriate way we can support the objectives of African development and assist in meeting the needs of that continent.

Today's proposed legislation includes a 43 per cent increase in the U.S. contribution to multilateral technical assistance through the United Nations Development Program. Our contribution will be on the same sharing basis as in the past.

4. FURTHERING FOOD PRODUCTION AND FAMILY PLANNING

This Administration, while moving in the new directions I have outlined, will apply the lessons of experience in our foreign aid programs.

One basic lesson is the critical importance of releasing the brakes on development caused by low agricultural productivity. A few years ago, mass starvation within a decade seemed clearly possible in many poor nations. Today they stand at least on the threshold of a dramatic breakthrough in food production. The combination of the new "miracle" seeds for wheat and rice, aid-financed fertilizer, improved cultivation practices, and constructive agricultural policies shows what is possible. They also demonstrate the potential for success when foreign aid, foreign private investment and domestic resources in developing countries join together in a concerted attack on poverty.

The experience of this decade has also shown that lower rates of population growth can be critical for speeding up economic development and social progress. An increasing number of countries have adopted national family planning programs to attack the problem. At least another decade of sustained hard work will be needed if we are to win the battle between economic development and population. But our assistance to voluntary family planning programs and support for the work of the United Nations and other international organizations in this field must continue to have high priority, as will our support of efforts to increase food production.

Another important lesson is that our aid programs need better means of continuous management inspection. We are creating a new position of Auditor-General in the Agency for International Development. His job will be to make sure that A.I.D.'s funds are used for their intended purpose and that A.I.D.'s operations are managed as tightly and efficiently as possible. He will report directly to the A.I.D. Administrator.

LEGISLATIVE AND BUDGET REQUESTS

The proposed legislation revises that part of the present Foreign Assistance Act which deals with economic aid, to reflect the priorities of this Administration. The proposals are designed to accomplish the following:

—Create the Overseas Private Investment Corporation and authorize its programs for an initial five years.

—Strengthen A.I.D.'s mandate to use official aid to stimulate private initiative in development.

—Expand the role of technical assistance under consolidated legislation and a two-year authorization.

The proposed budget includes new appropriation of $2,210 million for A.I.D., $138 million below the January budget request of the previous Administration. In addition, the budget includes $75 million to augment existing reserves for guaranties to be issued by the proposed Overseas Private Investment Corporation.

The appropriation request for economic assistance will support these regional programs:

—For Latin America, $605 million.

—For the Near East and South Asia, $625 million.

—For Africa, $186 million.

—For East Asia, $234 million.

—And for Vietnam, $440 million.

In order to protect the U.S. balance of payments at the same time we are providing assistance abroad, goods and services will be purchased in the United States wherever practicable. Over 90 percent of all A.I.D. expenditures and virtually all purchases of goods will be made in the United States. The remaining funds that are spent abroad are mainly for living expenses of U.S. personnel and for other local expenditures in support of technical assistance programs.

For military assistance, the proposed budget includes $375 million, the same as in the January budget. Maintenance of a climate of international security still calls for military strength sufficient to deter aggression. Seventy-seven percent of the total amount available for the military assistance program will be allocated to four of our long-standing allies—Korea, the Republic of China, Turkey and Greece. The balance of the request will be used to provide modest amounts of training and equipment to 44 other countries where our security and foreign policy interests are partially met by this form of assistance. We are negotiating a renewal of our base agreement with Spain. If these negotiations succeed, we shall then need to request an amendment to this authorization asking for additional funds to cover our year's needs for Spain.

The United States will continue to provide military assistance from the U.S. Armed Services budget to Vietnam, Laos and Thailand.

I am also asking in separate legislation for $275 million for credit necessary to facilitate the purchase of essential military equipment by countries now able to buy all or a growing part of their defense requirements. These funds will be returned to the United States during the next few years as the purchasing countries meet their repayment obligations.

PLANNING FOR THE 1970'S

I believe these proposals for fiscal year 1970 are sound—and necessary to make clearly desirable improvements in our foreign aid program.

But we need to learn more about the role which foreign assistance can play in the development process, and the relationship between development and overall U.S. foreign policy.

I am therefore establishing a task force of private citizens to make a comprehensive review of the entire range of U.S. aid activities, to consider proposals of the United Nations bodies and international commissions, and to help me determine what our national policies should be toward the developing countries in the decade of the 1970's. I will look to the task force's report in developing the program next year, in my response to the Javits Amendment to the Foreign Assistance Act, and in considering the recommendations of the internationally-sponsored Pearson Commission report to be published in the fall.

TOWARD A WORLD OF ORDER

Foreign aid cannot be viewed in isolation. That is a statement with a double meaning, each side of which is true.

If we turn inward, if we adopt an attitude of letting the underdeveloped nations shift for themselves, we would soon see them shift away from the values so necessary to international stability. Moreover, we would lose the traditional concern for humanity which is so vital a part of the American spirit.

In another sense, foreign aid must be viewed as an integral part of our overall effort to achieve a world order of peace and justice. That order combines our sense of responsibility for helping those determined to defend their freedom; our sensible understanding of the mutual benefits that flow from cooperation between nations; and our sensitivity to the desires of our fellow men to improve their lot in the world.

In this time of stringent budgetary restraint, we must stimulate private investment and the cooperation of other governments to share with us in meeting

the most urgent needs of those just beginning to climb the economic ladder. And we must continue to minimize the immediate impact on our balance of payments.

This request for foreign economic and military assistance is the lowest proposed since the program began. But it is about 900 million dollars more than was appropriated last year. I consider it necessary to meet essential requirements now, and to maintain a base for future action.

The support by the Congress of these programs will help enable us to press forward in new ways toward the building of respect for the United States, security for our people and dignity for human beings in every corner of the globe.

RICHARD NIXON.

THE WHITE HOUSE, *May 28, 1969.*

REPORT OF THE OFFICE OF ECONOMIC OPPORTUNITY—MESSAGE FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT (H. DOC. NO. 91-128)

The VICE PRESIDENT laid before the Senate the following message from the President of the United States received on May 28, 1969, under authority of the order of the Senate of May 27, 1969, which, with the accompanying report, was referred to the Committee on Labor and Public Welfare:

To the Congress of the United States:

I am transmitting herewith the fourth annual report of the Office of Economic Opportunity, covering that office's activities during Fiscal Year 1968.

RICHARD NIXON.

THE WHITE HOUSE, *May 28, 1969.*

REPORT OF THE RAILROAD RETIREMENT BOARD—MESSAGE FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

The VICE PRESIDENT laid before the Senate the following message from the President of the United States received on May 28, 1969, under authority of the order of the Senate of May 27, 1969, which, with the accompanying report, was referred to the Committee on Labor and Public Welfare:

To the Congress of the United States:

I am pleased to transmit to you the Annual Report of the Railroad Retirement Board for fiscal year 1968. During that year, retirement and survivor benefit payments totaled $1,403 million and were paid to over one million beneficiaries. Unemployment and sickness benefits provided by the Railroad Unemployment Insurance Act amounted to $76 million and were paid to almost 300,000 beneficiaries. I commend this report to your attention.

RICHARD NIXON.

THE WHITE HOUSE, *May 28, 1969.*

MESSAGES FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT—NOMINATIONS

Under authority of the order of the Senate of May 27, 1969, the Secretary of the Senate, on May 28, 1969, received messages in writing from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received on May 28, 1969, see the end of proceedings of today, March 7, 1969.)

MESSAGE FROM THE HOUSE RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of May 27, 1969, the Secretary of the Senate on May 28, 1969, received a message from the House of Representatives which announced that the House had agreed to the amendments of the Senate to the amendments of the House to the bill (S. 408) to modify eligibility requirements governing the grant of assistance in acquiring specially adapted housing to include loss or loss of use of a lower extremity and other service-connected neurological or orthopedic disability which impairs locomotion to the extent that a wheelchair is regularly required.

PROPOSED LEGISLATION TO REVISE THE LAWS RELATING TO POST OFFICES AND POST ROADS AND FOR OTHER PURPOSES

Under authority of the order of the Senate of May 27, 1969, the Secretary of the Senate, on May 28, 1969, received a communication from the President of the United States, transmitting a draft of proposed legislation to revise the laws relating to post offices and post roads and for other purposes which, with the accompanying papers, was referred to the Committee on Post Office and Civil Service.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 4204. An act to amend section 6 of the War Claims Act of 1948 to include prisoners of war captured during the Vietnam conflict, and for other purposes;

H.R. 11582. An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1970, and for other purposes; and

H.R. 11612. An act making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Vice President:

S. 278. An act to consent to the New Hampshire-Vermont Interstate School Compact; and

S. 408. An act to liberalize the eligibility requirements governing the grant of assistance in acquiring specially adapted housing for certain service-connected disabled veterans, to increase the amount of such grant, to raise the limit on the amount of direct housing loans made by the Veterans' Administration, and for other purposes.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred, as indicated:

H.R. 4204. An act to amend section 6 of the War Claims Act of 1948 to include prisoners of war captured during the Vietnam conflict, and for other purposes; to the Committee on the Judiciary.

H.R. 11582. An act making appropriations for the Treasury and Post Office Departments, the Executive Office of the President, and certain independent agencies, for the fiscal year ending June 30, 1970, and for other purposes; and

H.R. 11612. An act making appropriations for the Department of Agriculture and related agencies for the fiscal year ending June 30, 1970, and for other purposes; to the Committee on Appropriations.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL MONDAY, JUNE 2, 1969

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business this afternoon, it stand in adjournment until 12 o'clock noon on Monday next.

The VICE PRESIDENT. Without objection, it is so ordered.

AUTHORITY TO RECEIVE MESSAGES AND FILE REPORTS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, during the adjournment of the Senate from today until noon on Monday next, all committees be authorized to file their reports, including any minority, individual, or additional views; that during the same period, the Secretary of the Senate be authorized to receive messages from the President of the United States and from the House of Representatives, and that they may be appropriately referred.

The VICE PRESIDENT. Without objection, it is so ordered.

MILITARY DICTATORSHIP IN SAIGON

Mr. YOUNG of Ohio. Mr. President, it is startling to read in the Washington Post of May 29, 1969, that Truong Dinh Dzu, who ran second to Thieu in the September 1967 elections in Saigon, is still serving time in jail at hard labor. We remember that President Johnson proudly asserted "one man, one vote" as the principle to be followed by the rulers of the Saigon government, which we were and still are supporting with our Armed Forces.

In that election, Truong Dinh Dzu, the peace candidate, ran second of some seven candidates. The ticket headed by Thieu and Ky received but 34 percent of the vote. We now know that this election was rigged. We know that Thieu and Ky denied the right to vote to many thousands of men and women they termed neutralists. They denied the right to vote to all men and women they termed Communists. They denied a place on the presidential ticket to "Big Minh" the popular former President of South Vietnam. His civilian government was overthrown by the midnight coup in June 1965 led by 10 generals, nine of whom, including Thieu and Air Marshal Ky, were born in North Vietnam; and these men, including Ky, fought along with the French Armed Forces against their fellow countrymen seeking national liberation. They arrested Big Minh, and he was exiled to Thailand. Fearing his popularity, they barred him from becoming a candidate in the 1967 election.

The regime in Saigon is a military dictatorship maintained in office by our Armed Forces and CIA, and despised by 80 percent of the people of South Vietnam. It is notoriously corrupt. Freedom of speech is suppressed. The number of political prisoners languishing in Saigon jails is unknown, but is certainly in the thousands. It includes many of South Vietnam's leading intellectuals, religious leaders, lawyers, students, newspaper editors, and anyone who has dared to advocate measures to end the war. The militarist leaders of the Saigon government represent an old and vanished order. It is a certainty that they will be ousted the moment the South Vietnamese people again regain control of their own affairs.

We Americans support a militarist dictatorial government in South Vietnam where the runner-up for president lands in jail. Truong Dinh Dzu advocated negotiations with leaders of the National Liberation Front of South Vietnam to form a coalition government in Saigon. For this "crime" he was arrested. After a trial of 5 hours, he was immediately found guilty by the military judges and sentenced to 5 years at hard labor in an island prison. Now "generous" leaders of the Saigon government our GI's are maintaining in power have transferred him from that island prison to the Saigon jail as he had suffered a severe heart attack and no doctor was available there to treat a prisoner seriously ill with heart disease.

Mr. President, I ask unanimous consent that the news item in the Washington Post referring to this matter be printed in the RECORD at this point.

There being no objection, the news item was ordered to be printed in the RECORD, as follows:

VIETNAM PEACE CANDIDATE DZU TO BE MOVED FROM ISLAND JAIL

SAIGON, May 28.—Truong Dinh Dzu, runner-up to President Thieu in the 1967 elections, is being transferred from an island prison to Saigon for treatment for a heart disease, a government spokesman said today.

Dzu was sentenced to five years at hard labor in July, 1968, for advocating negotiations with the National Liberation Front. Five months later, Saigon's representatives at Paris entered into the peace talks with NLF delegates, but Dzu remained confined on Conson, 65 miles off the southeast coast of Vietnam.

The spokesman, questioned on this today, replied that Dzu had proposed recognition of the NLF and "we would never recognize the NLF."

The spokesman told newsmen Dzu's transfer had been requested by the prison doctor and approved by Prime Minister Tan Van Huong. He said Dzu will be flown from Conson to Chihoa jail in Saigon as soon as a plane is available.

U.S. officials are believed to have been pressing Thieu's government to release Dzu, whose imprisonment has been the subject of criticism in Saigon and abroad.

South Vietnamese sources connected Dzu's removal from his island prison with the impending arrival of an American delegation of religious figures and civil libertarians to investigate political and religious prisoners here.

This group, the U.S. Study Team on Religious and Political Freedom in Vietnam, is scheduled to arrive on Thursday, and already has indicated an interest in Dzu's case.

THE STORY BEHIND THE PERU SITUATION

Mr. CHURCH. Mr. President, international problems, as a rule, do not flare into the newspaper headlines until they reach the point of severe crisis. When this happens, reporting naturally focuses on the immediate drama, and less attention is given to essential background information, to the history of the problem, and to its root causes.

This, however, is not the case with the current crisis in our relations with Peru, thanks to a timely and penetrating article by Richard N. Goodwin, which appeared in the May 17 issue of the New Yorker magazine. I commend it to all of my colleagues as a comprehensive review of how the present crisis developed between the American and Peruvian Governments.

Mr. Goodwin finds errors of judgment on both sides of the question, but—more than most interpreters—he has tried to understand the Peruvian viewpoint. This was expressed to him by a prominent newspaper editor, Don Luis Miro Quesada, who said:

I am a nationalist. That doesn't mean I am against other countries, but I am for my own country. There is nothing wrong with that.

Mr. Goodwin concentrates on the troubled relationship that existed between the American-owned International Petroleum Co. and Peru's volatile political climate, prior to last year's military takeover and the company's seizure.

Now the principal difficulty, of course, involves the Hickenlooper amendment to the U.S. Foreign Assistance Act. As Mr. Goodwin observes:

The amendment gives the President no power he did not already have to cut off or suspend aid. It does, however, strip him of flexibility.

I ask unanimous consent, Mr. President, to have this important article printed in its entirety at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LETTER FROM PERU

Early in the morning of October 3, 1968, the armed forces of Peru overthrew that country's government. Six days later, a thousand troops of the New Revolutionary Government seized the oil complex surrounding the northern city of Talara. Within a few months, the junta had taken over that complex and all other assets of the International Petroleum Company (or I.P.C.), a wholly owned subsidiary of Standard Oil of New Jersey The United States government now has until early August to decide whether to reply with economic sanctions that might seriously undermine the Peruvian economy in an effort to force the junta to pay for what it has seized. "We told them we would apply sanctions if they took I.P.C.," explains a high U.S. official in Peru. "Now the deterrent has failed. Our credibility is involved, and if we don't do what we said, it might have harmful consequences, and nationalist forces might start after other companies. On the other hand, if we do act, our relations with Peru will deteriorate. It could strengthen nationalist forces and jeopardize other American interests." Far less ambivalently, another U.S. official complains, "The trouble with American business is they don't stick together. That's what happened in Cuba, and they all went down one by one." Yet the government of Peru is made up of officers who have defeated two Communist guerrilla movements, and they have pledged that they will not nationalize any other foreign company. The Foreign Minister, General Edgaro Mercado Jarrín, a lean, intense officer trained in U.S. military schools, whose friendship for the United States is matched by his hatred of Communism, explains, "We are not acting against the people of the United States. We are not acting against the government of the United States. We are not acting against any other company. Just a single company, which has claimed sovereignty over the soil, refused to pay taxes, corrupted government, and acted as a law unto itself. If you apply sanctions, the people will be uncontrollable. Anything could happen, and not only against America but against all the structures. We will fight against it, but I do not know if we can really stop it."

It is helpful to understand how small and poor a country now awaits, with growing apprehension, the outcome of its clash with the dominant power of the Western Hemisphere. Sprawled along the western coast of South America, Peru can be roughly pictured as an upright rectangle about twelve hundred miles high and eight hundred miles at its widest point, similar in shape to California, although about three times as large. It is not one country but three. Nature has divided this rectangle from top to bottom, or north to south, into three distinct and unequal segments. Along the coast is a narrow ribbon of desert, broken by fifty small rivers on their way from the Andes to the sea. To the east, the desert yields to the great sierra, seat of the Inca Empire, a land of deep valleys and high plateaus bounded by the two great ranges of the Andes. And on the other side of the Andes turbulent rivers rush toward a huge and almost empty land of dense tropical forest—the westernmost demesne of the Amazon, whose jungle basin, stretching from Peru across Brazil, covers an area almost as large as the United States. Peru has a population of about twelve million—a few more than that of New York City's metropolitan area. About a third of the Peruvians are Andean Indians who live outside the national economy and society and many of whom speak only their ancient Indian languages. Peru is one of Latin America's poorer countries. The average yearly income is about two hundred and eighty dollars per person, and the total national production is worth approximately four billion dollars; that makes the nation of Peru a little more than a fourth as productive as

Standard Oil of New Jersey, whose total revenues last year were more than fourteen billion dollars.

In 1914, Robert Lansing, then Counselor for the Department of State and soon to be Wilson's Secretary of State, worrying about the possibility that European powers might undermine the Monroe Doctrine through economic imperialism, wrote, "A . . . power whose subjects own the public debt of an American state and have invested there large amounts of capital may control the government of the state as completely as if it had acquired sovereign rights over the territory through occupation, conquest, or concession." Today, in Peru, United States interests own, *inter alia*, nearly all of the copper, probably the country's most valuable natural resource; about a quarter of the sugar and fishing industries; nearly all of the shipping; much of the oil; the telephone company; and many of the major retail establishments, including Sears, Roebuck and Coca-Cola—although the more popular Inca Cola is owned by a Peruvian family. Moreover, Peru is almost totally dependent on the American government and private banks for the refinancing of its large external debt and for the funds necessary to expand its mining.

The present Peruvian government is ready to admit the self-evident—that Peru cannot develop without the continued infusion of private capital from the United States. Still, the sheer weight of the American presence undoubtedly heightens Peruvian sensitivity to our every act and proclamation. "We want to be friends and we want American investment," the head of one of Peru's oldest and most powerful families told me. "But we cannot have *'paternalismo.'* You are big enough to be the father, but we are too old to be a son."[1]

Peru is no banana republic carved from the wilderness by Spanish conquerors. The road from Lima to the oil fields passes only a hundred miles from the plaza at Cajamarca, where, on the evening of November 16, 1532, Pizarro the Conqueror ambushed and captured the chief of the Incas and in a single stroke destroyed the power of the vast Inca civilization, whose roots reached back into still older societies that were building temples and organizing society in the eighth century B.C.

After four hundred years of Westernization, of foreign aid and private investment, of the Good Neighbor Policy and the Alliance for Progress, Peru is far less developed in many respects than it was during the Inca rule. Today, there are rocks and brush where an efficient net of roads once united an empire; desert has reclaimed large stretches of land that were once fruitfully irrigated; and the sierra is populated by the scattered and impoverished descendants of a civilization that was highly organized for productivity and common action. The sense of this great past, the mingled blood of conquered and their heroic conquerors, is a source of strengthening pride for the educated Peruvians. Long before American blacks discovered the need for black studies, Peruvians had turned to their Indian past to help them heighten and assert their dignity.

From this past derives another experience that helps illuminate the intensities of feeling behind the present dispute. The history of Peru is, in large measure, the history of the soil and its riches. For centuries the Indians mined and worked the gold that lured their conquerors to Peru. In 1534, a poster in Lyons announced an exhibition of "much inestimable wealth of gold and silver and precious stones found in that province and brought here from that country." The Peruvians' economy has nearly always rested on mineral wealth—gold and silver, copper and nitrates, pitch and oil—although in recent years they have also uncovered the riches that lie beneath the seas in the great fishing grounds of the Humboldt Current. Much of this wealth is still untouched. The copper companies plan a six-hundred-million-dollar expansion of their mining facilities. The jungle lands east of the Andes are thought to conceal enormous and diverse riches. And the oil companies know that Peru contains one of the largest unexplored sedimentary beds in the world. The sense that minerals were the foundation of the state helps explain why under the Incas, the Spanish, and under the Republic of Peru, the state alone could own the Peruvian subsoil and what it contained. Individuals and private companies could secure the right to explore and often received sweeping concessions to mine and refine, and to profit from sales and commerce. But in Peru, as in most of Latin America, no private person could own the subsoil rights. To this traditional law, for almost a century and a half, there was one exception: the La Brea y Pariñas oil field of Standard Oil of New Jersey. That exception has now been ended by the Revolutionary Government of Peru.

Now the United States must decide whether to retaliate by invoking the Hickenlooper Amendment to the Foreign Assistance Act, which directs the President to cut off all foreign aid to any country that expropriates a United States company without taking "appropriate steps" toward "speedy compensation" within six months. The amendment was enacted in 1962 over the opposition of the Kennedy Administration and has never been applied in Latin America. The original deadline was April 9th, six months after the seizure of Talara. But as that date approached without progress toward settlement, the Nixon Administration averted a clash by deciding that Peru's willingness to permit I.P.C. an administrative appeal constituted "appropriate steps" within the meaning of the Hickenlooper Amendment. Thus, the new deadline for decision is early August, when the appeal will be decided not by the courts but by Peruvian administrators, and ultimately by the President of Peru.

The Peruvian government freely admits the company's right to compensation for its seized assets, and has offered to pay a fair amount as soon as the company pays its own alleged debt to Peru. However, this claim of debt—which is the subject of the I.P.C. appeal—is based on the theory that the company had been operating the La Brea field illegally for forty-four years and therefore owes Peru the value of everything produced by that field, which amounts to a good deal more than the value of the assets. Thus, in fact, I.P.C. would get nothing. Imposition of the Hickenlooper Amendment and allied legislation would have serious and perhaps crippling consequences for the entire Peruvian economy. Formally, it would cut off aid and halt United States purchases of Peruvian sugar, which are a major source of foreign exchange. In practice, it would dry up American financing, public and private, of badly needed industrial expansion as well as the refinancing of present debts. An Inter-American Bank expert has estimated that the amendment could cost Peru a hundred and eighty million dollars in a year—an amount roughly equivalent to all of the country's financial reserves and about two-thirds as much as the total aid Peru has received since the Alliance for Progress began, in 1961.

Almost inevitably, such Draconian strokes would provoke some form of economic retaliation, perhaps against other American companies, and bright young colonels of the Presidential staff are preparing contingency plans to halt the flight of foreign currency and assets. Even more serious are the potential political consequences. The justice of the seizure is probably the only conviction that unites the historically divided and fragmented parties and classes of Peru. Peace Corps volunteers report that for the first time they hear hostile mutterings about the "gringos" as they walk through the streets of Lima slums or ride the rickety buses of the poor. Applying the Hickenlooper Amendment "would probably increase nationalistic and anti-American feeling," says the American Ambassador, John Wesley Jones. "Blood will flow in the streets," gloomily predicts President Juan Velasco Alvarado. "Peru could become another Cuba," says a high official of the exiled civilian government. Apocalyptic prophecies about Latin America are usually wrong. Still, there is little doubt that application of Hickenlooper would damage our relationships with Peru and with other countries of Latin America. Beyond that, the outcome is highly speculative, but the risks are there. And for President Nixon the choice must have especially ironic overtones. It was in Peru, in May, 1958, that angry, shouting crowds transformed Vice-President Nixon's good-will tour into a dramatic display of rising anti-Americanism that shocked the United States and became one of John F. Kennedy's campaign issues in 1960. When I tried to explain to a Peruvian official that the new Administration had just taken office and probably needed time to study the dispute, he replied unsmilingly, "That's not necessary. Mr. Nixon is very well informed about Peru." In 1958, Mr. Nixon was only a symbol. Now, as President, he faces a decision that could well bring the same mobs into the same streets, shouting his name again.

Over the years, few nations have been friendlier to American investment than Peru, and the present government proclaims its intention to continue that friendship. Why, then, did a government that is fundamentally pro-American and anti-Communist seize this company at this time? "In my six years," Ambassador Jones says, "the company has been totally generous and reasonable in trying to reach a settlement with Peru." "If you want to know what I think," another American told me, "Velasco just saw this was a good nationalistic issue and grabbed it to stay in power." On February 6, 1969, President Velasco himself declared, "The case of the International Petroleum Company is the problem of a company that has transgressed and offended our laws, usurped our rights by using all available means, and one that is determined to create conflict between two friendly governments. The case of the International Petroleum Company is unique. It is a singular case." The Foreign Minister, General Mercado, asks, "How can you apply the amendment on behalf of a company that is so bad?" And then, in the soft tones of submerged fury, he said, "The story of I.P.C., is a black chapter in the history of my country."

The story starts long before the International Petroleum Company came to Peru, and long before men knew of petroleum and the

---

[1] Some cautions for the reader. Facts in Latin America, historical and otherwise, are often elusive. In some cases, the best one can do is make a reasoned judgment. In others, it is enough to show that uncertainty exists and that the evidence is not clearly and irrefutably in favor of one side or the other. It is also necessary to be aware that a sentence in an American publication can become a banner headline in Lima and an instrument of political purpose or of vengeance. Therefore, it is sometimes necessary to conceal the precise source of information and attitudes. In this exploration, I talked with the President and high officials of the present government, the President and supporters of the deposed government, the principal civilian allies of the military coup, and with the top officers of Standard Oil, its I.P.C. subsidiary, and the United States Embassy, along with many other concerned citizens of the United States and Peru. Where there is no name given, the individual has been judged well informed or a qualified representative of attitudes and convictions.

riches it would bring. Some six hundred years ago, a group of pre-Inca Indians in the remote northern reaches of Peru discovered at the foot of the Amotape Mountains, about thirteen miles from the Pacific, a cluster of small pools filled with a dark, heavy liquid that seemed to ooze mysteriously from the center of the earth. They skimmed the oil from the surface and used it to line clay jars and to mummify the dead. After the Conquest, the Spanish dug trenches, and as the oil seeped into the excavations they combined boiling with natural evaporation to leave a thick, scummy black residue known as *brea*, or pitch. Transported down the coast, the pitch was used to caulk the hulls and tar the rigging of the Spanish fleet. During this period, the pitch mine, like all the mineral properties in Spanish America, remained the property of the crown, which granted often sweeping concessions to favored individuals and companies. In 1821, after declaring its independence of Spain, Peru reconfirmed the colonial mining ordinances, which provided that ownership of the subsoil rights to all minerals, and to other substances in the earth, belonged to the state. And in 1824 Bolívar drove the last Spanish troops from the country. Like revolutionaries before and since, Bolívar needed money to finance his struggle. One of those who helped him was Don José de Quintana.

In 1826, to discharge its debt to de Quintana, the new Peruvian government deeded him the pitch mine at Amotape. The deed declares that the agents of the Peruvian government "abdicate, strip, and separate from the state which they represent all right, title, and dominion held by or appertaining to it over the said mine of 'pitch,' and they cede, renounce, and transfer the same to the purchaser." It is on the basis of this 1826 deed that successive owners have claimed a unique ownership of the subsoil rights, and for forty-five years the deed has been the legal basis of I.P.C.'s claim to title. Peru's denial of that title is the legal foundation of the claim against I.P.C., which is the principal issue of the current crisis. Peruvian experts argue that even if the deed did grant ownership to subsoil rights in the pitch mine—which they do not admit—it could not have included ownership of petroleum, a substance whose use and value were then unknown. However one interprets the deed itself, the history of this claim is entangled with the entire history of Peru and illuminates both the tenacity of its holders and the resistance of many Peruvians to an assertion of private dominion that they have found deeply offensive to their concept of national sovereignty. As Peru became more nationalistic and more sensitive about its independent sovereignty, that resistance increased.

By 1830, Don José de Lama had merged ownership of the mine—which he had acquired in 1827—with the huge estate on which it was situated, thus creating the property known from then on as La Brea y Pariñas.

Thirty-eight years later, only a decade after the world's first oil well was drilled in Pennsylvania, his daughter struck oil on the La Brea property. Shortly afterward, the Peruvian government took a new interest in this distant northern province. In the eighteen-seventies, Peru passed its first mining laws since independence. They required, *inter alia*, that all "owners of mining claims . . . of coal or petroleum . . . present their title . . . for revalidation" and registration within four months or the claims would be declared void. The laws also set up a new system of taxation. With some exceptions, all mines were to be divided into arbitrary sections of ten acres each, known as *pertenencias*, and a flat tax would be imposed on each *pertenencia*. The then owner of La Brea, Don Genaro Helguero, neither registered his title nor paid any tax, presumably on the ground that as the absolute owner of the subsoil rights he was immune from the new national mining legislation. However, in the next decade a British group became interested in buying the oil field, and we can reasonably conjecture that before making the purchase they wanted some official confirmation of Helguero's special rights and tax status other than the 1826 deed. In any event, Helguero, after a decade of indifference to the law, petitioned a local court for judicial confirmation of his title. What happened next is obscured by time and the baffling intricacy of nineteenth-century Peruvian bureaucracy. Although the judge said that Helguero was indeed the absolute owner of the subsoil, the decree of a local magistrate was clearly not enough protection. Therefore, in 1887, Helguero petitioned the Department of Mines of Peru to recognize that no tax or mining law could apply to his property, since it came to him by the "real and perpetual sale" of Bolívar's government. After the Department reported in his favor, a higher official, the Attorney General of the Supreme Court, found that "the government cannot and should not admit in the Republic rights over mines other than those stipulated by the law." There then followed a series of petitions and official decrees that registered the mining claims in Helguero's name and divided the entire property into ten *pertenencias* for purposes of taxation.

None of the official acts or decrees refers to Helguero as the absolute owner of subsoil rights, and, in fact, the final decree of 1888 calls him "the concession holder." Moreover, if he was the owner there was no need for him to register his claim or pay any tax at all, since those requirements of the mining law depended on the legal proposition that the state, as owner of the subsoil, was regulating the concessionaires. Later proprietors of La Brea have argued that Helguero accepted all these conditions because he was in a hurry to sell the property.

However, to the outside observer this episode would seem to provide the strongest legal argument against later claims to ownership of the subsoil, although it is hardly mentioned in the lengthy Peruvian accounts. It could be strongly argued, at least before an American court, that even if Helguero had been the owner he had exchanged that ownership for official recognition of his rights and for a special tax status. For even though the standard *pertenencia* was ten acres, Helguero had managed to have his huge estate, of over four hundred thousand acres, divided into only ten *pertenencias*, which meant that for the next thirty-four years the annual tax on the oil field was about a hundred and fifty dollars. One could even maintain that it was then, in 1888, that the state exercised its legal right to expropriate the subsoil rights. In any event, five days after Helguero received the government's final decree he sold the property to two British citizens—a Mr. Tweddle and a Mr. Keswick—who, a year later, leased it to the London & Pacific Petroleum Co. for ninety-nine years. It may help us to guess at the atmosphere surrounding these intricate machinations to know that this was a period in Peruvian history when an American soldier of fortune named Henry Meiggs took over the construction of railroads for the entire nation, bribing politicians and importing coolie labor until his empire collapsed, leaving him to die a penniless derelict. The atmosphere of the time has been described somewhat harshly by the nineteenth-century Peruvian political leader Gonzalez Prada: "Riches served as an element of corruption, not of material progress. . . . No means of acquisition seemed illicit. The people would have thrown themselves into a sewer if at the bottom they had glimpsed a golden sol. Husbands sold their wives, fathers their daughters, brothers their sisters."

The next serious eruption of the now historic problem of La Brea began in the early nineteen-hundreds when an official mining engineer reported to the Peruvian government that somehow a serious mistake had been made in measuring the property: it appeared to be far larger than the figure of ten *pertenencias* would indicate. The government agreed, and on March 31, 1911, decreed that the owners "of the said mine do not pay the amount of taxes . . . corresponding to the number of lawful *pertenencias*" because of an "error" made in measurement. The London & Pacific Petroleum Co. protested the decree, and matters took their customary leisurely course until April of 1914, when Peru rejected the protest and ordered surveyors to remeasure the property. The argument might have dragged on for years, except that by this time London & Pacific had urgent reasons to press for a settlement. For in 1914 the International Petroleum Company had taken over the oil field, intending to buy the property. But even Mr. Herbert Hoover, then the consulting engineer and chief negotiator for the British interests, could not persuade I.P.C. to complete the purchase until there had been a final settlement of the legal and tax status of La Brea y Pariñas. By early 1915, the surveyors had remeasured the property, and in March a Peruvian decree specifically rejected British protests that the sale to de Quintana in 1826 had given absolute ownership of the subsoil and thus exempted the old field from mining taxes. The decree asserted that "the rights acquired by that sale could not be other those conferred by the Mining Ordinances in force when the . . . contract was made . . . nor did it confer any greater rights . . . than those which any private individual could grant, nor was there any declaration that the absolute ownership thereof was granted." Therefore, as the remeasurement showed, the tax should be paid not on ten *pertenencias* but on 41,614. Once again the Peruvian government had denied the special and unique claim to private ownership of the subsoil rights of La Brea y Pariñas.

London & Pacific, however, had resources not available to previous Peruvian owners, and for the first time the La Brea y Pariñas problem evoked the concern and pressure of a foreign government. The British Ambassador in Lima, acting on instructions from London, delivered a note to the Peruvian Foreign Office protesting the decree. The dispute dragged on for years, with neither side willing to yield, although there is no record that the higher taxes were ever paid. Suddenly the prospects for the oil company brightened when, in 1919, dictatorial power was seized by Augusto B. Leguía y Salcedo, whose rule was to bring a large expansion of American private investment into every sector of the Peruvian economy. Two years later, the long-smoldering dispute was submitted to a three-man arbitral tribunal consisting of representatives of Peru and Great Britain and the president of the Swiss Federal Court, Dr. Fritz Ostertag. For almost half a century, this arbitration has been the subject of debate and agitation. Lawyers and politicians have built reputations and careers analyzing, attacking, and defending the award of the tribunal. It has continually antagonized the many Peruvians who have firmly believed that a specially privileged oil company was forced on them by illegal and coercive pressures from abroad. Much of the present dispute revolves around the Peruvians' contention that the award was illegal and thus I.P.C. owes them the profits of its entire operation since the time it bought the field in 1924.

And the Peruvian government points out that the arbitration took place at about the time that Harding's Secretary of the Interior, Albert B. Fall, was accepting the bribes from American oil interests that later sent him to prison. Even a high official of the deposed civilian government, which was attacked for its supposed generosity to I.P.C., says that "everyone knew that the arbitration was no good." I.P.C., of course, denies this, and

claims that in any event it acquired its ownership of La Brea y Pariñas not through the award but by virtue of the deed of 1826. At this point in time, no one can evaluate the charges of fraud and corruption, but the actual decisions of the arbitration are another matter. Even before the tribunal met, the representatives of Peru and Great Britain had worked out their own private agreement, which, in 1922, was dutifully incorporated by Dr. Ostertag into an international decree. One of the most important and puzzling aspects of this decree is what it failed to decide. Although the ancient issue of subsoil ownership had helped to evoke the controversy, it is left unresolved by the final document. The most probable conclusion is that the arbitrators could find no way to resolve the question. Nor did it seem necessary. For the decree recognized the British right to La Brea y Pariñas and provided that for fifty years—until 1972—virtually the only tax the oil company had to pay (with some slight exceptions) was about fifteen dollars a year for each of the 41,614 *pertenencias* it was actually exploiting and about fifty cents for those it was not working. This special tax status, with its exemption from all other levies, inevitably was to become a source of increasing discontent. Ten years later, after the dictator Leguía had been driven from office, the new Peruvian government attacked the award and made a futile effort to bring the matter before the World Court. As late as 1959, only the appearance of the Peruvian Foreign Minister before a secret session persuaded Peru's Congress to reject a resolution annulling the arbitration.

And on November 6, 1963, that Congress finally enacted a law providing that "the so-called . . . Award (arbitral) on La Brea y Pariñas for having violated the pertinent legal requirements [is] null *ipso jure* and [does] not obligate the Republic." But by this time Fernando Belaúnde Terry had been elected President of Peru and had begun the five-year effort to reach an accommodation with I.P.C. that ended only when the armed forces overthrew his government and seized the oil field.

No formal historical sketch can fully explain the clashing passions and interests that shaped and colored the negotiations of the Belaúnde period. For by then I.P.C. had come to occupy a special position in Peruvian life, and one seen very differently by I.P.C., the American government, and Peruvian nationalists. "We were the largest taxpayer in Peru and our labor practices were a model for the country," accurately reports an official of I.P.C., while the American Embassy asserts that over the last several years "I.P.C. was always very generous, and honestly worked hard to reach a settlement." Yet on December 4, 1968, the Peruvian general who seized I.P.C. summed up the feelings of many Peruvians when he said, "No people can live in dignity and with respect for its sovereignty . . . when it tolerates the insolent arrogance of another state within its own frontiers." It is not that the truth lies somewhere in between. Rather, it is a case of parties whose assumptions, needs, and habits of action were so divergent that a conflict seemed almost inevitable. Perhaps I.P.C. did not act wisely, but it acted as an oil company might be expected to act, pressing every advantage and withholding every concession within the limits of its power and the sometimes sordid possibilities of Peruvian politics and intrigue. If at the end overconfidence and shortsightedness helped undo I.P.C., it must be remembered that the company had prospered and maintained its special privileges amid growing agitation for almost half a century. And it has not lost everything yet. Peru, on the other hand, is not a business but a country and a people. The mass of Peruvians hardly knew of I.P.C.'s existence. Yet among many of those most sensitive to the dignity and independence of their country the activities of I.P.C., combined with its unique claim to a part of the Peruvian dominion, planted seeds of hatred which the years were to nourish.

Only United States policy could have reconciled these diverging perceptions, for only the United States could command the respectful attention of both I.P.C. and the Peruvian government. This force was not brought to bear, and today's crisis is in large measure a result of that failure.

In the decades preceding the crucial 1963 election of Belaúnde, I.P.C. steadily expanded its operations. By the time of the seizure, the company's interests in Peru extended far beyond the La Brea y Pariñas field near Talara. It also owned a half interest in the more productive Lobitos field. It had a refinery in operation at Talara and controlled fifty-five per cent of the marketing and sale of gasoline in Peru. In addition, I.P.C. had reasonable expectations of obtaining concessions to explore for oil in the potentially rich jungle lands east of the Andes. (Mobil Oil has already invested twenty million dollars in the search.) Obviously, I.P.C.'s other assets were far more valuable than the increasingly less productive La Brea y Pariñas field (now producing at about half its former peak), yet only La Brea claimed exemption from the normal requirements of Peruvian law. Moreover, history was reshaping traditional attitudes. Throughout the nineteen-fifties, poor nations asserted with increasing intensity their right to be independent of the historical domination of the Western powers. This was the decade that brought the final disintegration of the great colonial empires, the Bandung Conference, Algeria, the retreat from Suez, and Castro. Peru, like much of Latin America, was touched by this global surge, and a mounting nationalism was combined with an anger at the United States that erupted dramatically during the Nixon trip. There was some justice to the specific grievances that fed anti-Americanism, but equally important was the fact that Latin America, alone among the underdeveloped continents, was not made up of colonies and could only assert its nationalism against the historically dominant, if noncolonial, power of the Western Hemisphere. I.P.C. was presumably aware that in such a changing environment the privileged position of La Brea y Pariñas endangered the company's whole position in Peru. In 1951, the company submitted to the regular fifty-per-cent income tax on profits, a tax it had protested, with limited success, since 1934.

In 1957, for the first time, I.P.C. offered to "assign" its subsoil ownership to the state in return for an "exploitation concession" covering the same field along with expanded concessions for its other activities. The company did this, the official I.P.C. history reports, because it realized that "ownership of the petroleum property was a cause of resentment in Peru [and] inconsistent with the general pattern of petroleum legislation . . . in South America." The offer was rejected, apparently because by 1957 the Peruvian government felt it could not afford to grant further concessions for rights that many Peruvians believed to be already theirs. In this period, not only had I.P.C. made some gesture toward relinquishing its subsoil ownership but it had become an exemplary employer. Housing and working conditions at Talara were the best in the country, and the company paid excellent wages and benefits. Still, as Peru entered the nineteen-sixties the accumulated grievances of decades were steadily building.

It is not difficult to find illustrations of the process that transformed these grievances into personal convictions and a political weapon. One can leave the heart of Lima, emerge from the nest of tourist shops stocked with trinkets of copper from American-owned mines, and drive past neon Coca-Cola and Esso signs before entering the pleasant suburbs of Miraflores and San Isidro. From there, as the city thins, the road widens to four lanes, cutting through occasional *barriadas*—fields of houses huddled around dirt streets and open sewage, where six hundred thousand migrants and children of migrants from the distant mountains live in poverty. Ahead are the hills of the gray, barren coastal desert, which stretches two thousand miles from northern Chile to Ecuador relieved only by an occasional stand of trees—the fruits of experimental irrigation systems that are only a miniature replica of the great Inca waterways that once conquered much of the desert. Shortly after passing an American satellite-tracking station, the road moves down a long hill to the town of Ancón, where layered cooperative apartments overlook a small beach on which thin strips of gray-black sand can barely be glimpsed among the thousands of outstretched Peruvians who come here each summer weekend.

Here, on the concrete patio of a twelfth-story apartment thrust out over the crowded Ancón beach, sits Don Luis Miro Quesada, a slight man in his eighties, with light skin like a fragile, roughened parchment, who heads one of the oldest families in Peru. He also directs the powerful newspaper *El Commercio*, which has led the attack on I.P.C. for more than thirty years, and whose violent assaults in 1968 were to precipitate the military coup and the seizure. "I know America well and I have many friends there," he told me, "but there is a difference between your country and the State Department—which cares mostly about the welfare of American companies. It is a great country, but"—he smiled—"that is not the same thing as I.P.C., is it? I first became interested in I.P.C. about forty years ago, when I came back from a trip to Europe on a Grace ship. We landed at Talara, where the refinery is, and the landing papers said 'Talara-Puerto Norteamericano.' I crossed out 'Norteamericano' and wrote in 'Peruano.' When we landed, they had separate dining rooms for Peruvians and North Americans. So when I got home, I began to read about I.P.C. It's not enough for an oil company to pay taxes and salaries. Peru should get a share of the profits. Once minerals are taken, they are gone. They don't grow—not like trees. I am a nationalist. That doesn't mean I am against other countries, but I am *for* my own country. There is nothing wrong with that. I am anti-Communist. They have some good criticisms, but they do not have liberty, and that is the most important thing to men. Especially to journalists. A journalist is nothing without the ability to write freely." Later, he said, "Our people are terribly poor. I don't think the United States will apply Hickenlooper."

However distorted by time and anger, similar recollections, usually vageuly documented, can be elicited throughout Peruvian society. At the home of an American Embassy official, a successful Peruvian lawyer listened politely to his host's prediction of a settlement and then, when the official had moved on, related a transaction between one of his clients and I.P.C. "They didn't even want to talk," he said. "They just told me, 'This is the way it is,' and walked out." Indeed, it is difficult to hear a good word spoken for the company anywhere. Even many officers of other substantial American businesses grumble privately about I.P.C. and claim that its conduct has endangered all foreign investment in Peru. "They got what was coming to them," said one American businessman, while another, with a genius for understatement, said, "They had bad public relations." An I.P.C. official recalled a visit twenty or more years ago by a young Colombian, Alberto Lleras Camargo, who was later to be President of Colombia and host to President Kennedy's triumphant visit in 1962. "Lleras looked at all our installations and had long talks with our managers. As he left, we asked him how he liked it. 'It's a wonderful, progressive place,' he said, 'but I didn't meet any Peruvians.' "

In evaluating the stories told by Peruvians to illustrate I.P.C. misdeeds and arrogance,

one must remember that the oil company, in most cases, was behaving no differently from many large foreign enterprises at various periods in Peruvian history. "Why don't you like I.P.C.?" I asked a Peruvian general who is now an important official. He replied angrily, "They bribed ministers, corrupted governments, and promoted revolutions." Yet even if this is true, it takes two to make a bribe and you cannot corrupt the incorruptible. Certainly, to the mass of Peruvians, I.P.C. was just another company. But in the present period of emerging nationalism these tales and complaints fueled the resentments created by the economic power of the company and its claim to special status for La Brea.

Only two years ago, there was an incident that illustrates the inevitable clash between the logical business practices of the company and Peruvian pride. It was an event, moreover, that was to have a special impact on the present crisis. In 1967, a serious inflation had forced the government to cut the value of Peruvian money almost in half. I.P.C. then applied for an increase in the government-fixed price of gasoline. "Because of the change in the value of currency, we were actually losing money on each gallon we sold—not much, but a little," explains a company official. The government refused the increase, and I.P.C. threatened to stop importing the gasoline needed to make up the difference between the country's own production and its needs. Why, the company asked, should it import gasoline to sell at a loss? Finally, the general manager of I.P.C. was summoned to a meeting with the Minister of War, General Julio Doig Sanchez, and angrily told that if importation stopped the company would be seized. When the I.P.C. manager proposed to fly to the company's Florida headquarters for consultation, he was ominously told that such a trip was not necessary, that he could use the telephone. After the Florida headquarters became convinced that the generals were indeed "serious," I.P.C. withdrew its threat, and a few months later it was allowed to raise its prices. However, sitting beside General Doig throughout the meeting, in sullen fury, was General Juan Velasco Alvarado, now the President of Peru, who later explained that this event helped fortify his resolve to bring I.P.C. under national control. To Velasco and others, it was intolerable that Peru should be vulnerable to the acts of a foreign company acting under the partial protection of a foreign government. To I.P.C., on the other hand, a price rise was economically necessary, and an interruption in imports was a logical and just response to Peruvian unfairness. Perhaps the gap in understanding is best summed up in lines from a ballad of student dissent:

"Please don't burn that limousine,
Don't throw tomatoes at the submarine.
Think of all we've done for you.
You've just got those exploitation blues."

Yet despite these resentments—which were shared, one must remember, by only a small, but influential, group of Peruvians—it is probable that the government and I.P.C. could have resolved their dispute peacefully any time between the election of Belaúnde, in 1963, and the decline of his political strength, which began in late 1966. In retrospect, the failure to do so seems like some Harvard Business School version of a Greek drama, with all parties steadfastly honoring their prescribed duties while rushing toward a foreseeable fate. Except, of course, since modern man is more given to wishful thinking, they did not foresee it. That story began in July of 1962, when elements of the Peruvian armed forces crossed the broad Plaza de Armas, in the heart of Lima, entered the Presidential Palace, and took over the country. An extremely close three-cornered Presidential election had just taken place, and although none of the candidates had received the necessary plurality, it was clear that the two candidates least acceptable to the armed forces—one a historic enemy and the other a former dictator—had agreed to combine forces in order to keep the military's favorite, Fernando Belaúnde Terry, the candidate of the Popular Action Party, from winning. Under great pressure from the United States to resume constitutional government, the military leaders scheduled a new election for June, 1963. This time, Belaúnde won a clear-cut victory, and on July 28th he took office for a six-year term.

An architect and politician, a man of the people who can trace his family back fourteen generations to the first mayor of Lima, Belaúnde had campaigned on a liberal and progressive platform of economic development and social reform. Although many later criticized his abilities as a leader, there is no doubt about his personal belief in the principles of the Alliance for Progress. A visionary, he nurtured farflung plans to build a great highway to unite the lands on the far side of the Andes and open the rich interior to settlement. Recently, in a Lima drawing room, a guest began to criticize Belaúnde in the presence of General Velasco, the man who drove him from office. "Don't talk that way," said the General. "He was a great man. Only he was a dreamer." Dreamer or not, Belaúnde was just the sort of national leader that the United States was hoping for in Latin America, and a logical recipient of generous American assistance.

Therefore, immediately after Belaúnde's inauguration, Teodoro Moscoso, President Kennedy's Coördinator for the Alliance for Progress, flew to Peru with offers of immediate and substantial United States aid. There was only one problem. On taking office Belaúnde had promised to resolve the La Brea y Pariñas question within ninety days. Moscoso realized that even the most reasonable settlement would create political difficulties for Belaúnde, so he decided to withhold action until the ninety days were up. Thus, the announcement of aid could be used by the Peruvian government to help blunt any opposition. No effort was made to pressure Belaúnde, and the aid was to flow whatever the outcome might be. Negotiations between Peru and I.P.C. began in early August, and by the end of October they had broken down. As a result, on November 6, 1963, the Peruvian Congress passed the law declaring that the arbitration award of 1922 was null and void and did "not obligate the Republic." Meanwhile, changes were occurring in the United States that were to have a profound impact in Peru. After President Kennedy's death, Latin-American affairs came under the direction of Assistant Secretary of State Thomas C. Mann, a former Ambassador to Mexico. Mann decided to suspend all foreign aid to Peru until Belaúnde reached an agreement with I.P.C., but to do so without delivering an ultimatum or even telling Peru that aid had been stopped. "The idea," one U.S. aid official has explained, "was to put on a freeze, talk about red tape and bureaucracy, and they'd soon get the message. Unfortunately, they believed we were as inefficient as we said, and it took about a year for them to get the message." In fact, virtually no aid went to Peru for two full years as negotiations with I.P.C. dragged on, broke down, and began again. (A few token loans were made, in an effort to insulate the State Department from the charge that it had frozen aid to Peru; but the freeze was real and intentional.)

No provision of United States law and no principle of foreign policy required us to suspend aid in order to compel a Latin-American country to negotiate an agreement with a private American company. Nor is there any evidence that I.P.C. ever asked that any such measure be taken. Throughout this whole period, the oil-and-gas business in Peru continued as usual, and none of the company's operations were disturbed. The negotiations themselves were complicated by Peruvian claims for back taxes and alleged debts, along with a host of technical details.

On the surface, the major point at issue concerned the way in which the profits should be split between the company and the government—that difference amounted, at most to a few million dollars a year, and no other I.P.C. operations in Peru were affected. Yet during this period of discussion Peru lost up to a hundred and fifty million dollars in aid because of its failure to agree with the company. However, behind the price dispute—and probably far more important—there was the ancient question of who owned La Brea y Pariñas. The company offered to cede its ownership rights, but it insisted on retaining operating control of the field and receiving a cancellation of all alleged debts. This was obviously a sticking point with a government that had promised to "recover La Brea y Pariñas" for the nation. The manager of I.P.C. saw President Belaúnde sixty times, and each time the President said, "Just cede me your rights and assets in La Brea, and you'll see that everything will be all right." Finally, in 1968, the company offered to do just that, but it was too late.

Toward the end of 1965, the United States began to reconsider its policy. It was obvious that the aid cutoff was not forcing an agreement; nor was it advancing the broader interests of the United States. Economic development was virtually at a standstill in Peru, and although there were other reasons for this, the aid cutoff was clearly a factor. In village after village, one could see children crowded into a single dim room where a teacher struggled to keep order, while, outside, a half-finished schoolhouse stood open to the dry sierra winds. In these villages, the end of aid had meant no education, or no pure water, or a half-built road. Moreover, extremist attacks were increasing against a Belaúnde administration that had proved unexpectedly conservative in office. And Communist guerrilla movements, soon to be crushed by the U.S.-trained counterinsurgency forces of the Peruvian military, had sprung up in the Andes. "We knew we had a losing aid policy," said a high U.S. official. "But we'd said we couldn't give them loans unless they settled, and so we couldn't back down."

By early 1966, however, Lincoln Gordon had become Assistant Secretary for Inter-American Affairs, and in March the State Department sent Walt Rostow to Peru. Rostow told Belaúnde that if he was not going to confiscate the company we would go ahead with aid. A surprised Belaúnde responded that he had never intended to take the company. So aid was resumed, but not for long. However, this time oil was not the reason. In 1967, the Peruvian Air Force decided that it needed supersonic jet fighters, and, after the United States turned down the request, it contracted with the French for Mirages. (At one point, United States officials told the Peruvians that if they insisted on jets they could buy some cheaper American-made F–5s.) First in order to try and prevent the purchase and later as punishment for having gone ahead anyway, the United States reversed a decision to make program loans to Peru during 1967 and 1968 (which probably cut our aid to about half of the total we expected to give). "We just didn't think the Latins were ready for supersonics," a United States official explained. The cost of the Mirages was about twenty million dollars. The loss in aid was probably about sixty million dollars. Thus, because of our oil policy and our "supersonic" policy, Belaúnde faced a complete or partial suspension of United States aid for four of his five full years in office—a fact that certainly did not lessen his economic problems and did nothing to enhance Peruvian confidence in Amer-

ican dedication to the goal of strengthening progressive and democratic governments.

For a while in 1966, the I.P.C. problem receded, as Belaúnde seemed to tire of the effort to reach a settlement. In August, he even concurred in an I.P.C. plan to expand its refinery at Talara, but protest from opposition political parties and newspapers compelled a cancellation. Sporadic discussions continued as the company diligently examined various proposals for tax and profit splits. In the background, however, was the unyielding issue of ownership and control. By the summer of 1967, the deterioration of the Peruvian economy had seriously weakened Belaúnde's general political position. And criticism of his delay in solving the La Brea y Pariñas problem became part of a general assault on his leadership.

Once more, in meetings with the company, the President returned to his earlier demand that the field be ceded outright to Peru, and once more the company refused. And although another year of debate and negotiation lay ahead, the stage was now set for the final act. For in the pleasant suburbs of Lima a small group of military officers and their civilian friends were beginning to plan the overthrow of the Belaúnde government and the establishment of long-term military rule. And when the revolution came, the principal actors would be the same armed forces and the same newspaper, *El Commercio*, that had fought so effectively to help install Belaúnde in the Presidential Palace five years before. Oil was among the least of their motives, but oil was to give them their opportunity to strike.

No one knows exactly when specific plans for a *golpe* (the Spanish term for "coup") began to precipitate out of the vague mist of military power that necessarily enshrouds any civilian government in Peru. One of the best-qualified U.S. observers says that it was early in 1968 when a group of officers around Minister of War Doig started to prepare contingency plans for a takeover. One of the closest advisers to the new government has said the decision began to take shape in a private conversation between General Velasco and a Colonel Rodriguez, who is one of the most brilliant and influential members of the Palace staff. However the revolutionary plans began, two of the motives were the same as those that had led the military to support Belaúnde in the first place: the desire to modernize the country and hatred of the APRA Party.

For decades, the Peruvian armed forces have nourished a deep and furious hostility toward one of Peru's most distinguished leaders, Victor Raúl Haya de la Torre, founder of the APRA Party, and Belaúnde's chief opponent in the 1962 and 1963 Presidential elections. As the disciple of a Peruvian poet whose slogan, "Old men to the tomb, young men to work," was the ultimate expression of the generation gap, Haya was exiled to Mexico in 1923 after leading a protest meeting of students and workers against an alliance between the Peruvian dictatorship and the Catholic Church. There he founded the American Popular Revolutionary Alliance, or APRA, whose adherents were known as *Apristas*. Although APRA disavowed Communism, it called for an overthrow of feudal structures, adopted an anti-imperialist policy, and was the first party to identify itself with the desires of the miserably oppressed Indian masses. As a result, APRA was hated and feared by the governing classes of Peru, and its history was scarred by repeated and often bloody clashes with the Peruvian military. "I want to see the point of each bayonet red with *Aprista* blood," ordered the dictator Luis M. Sánchez Cerro, before a 1932 massacre of *Aprista* rebels in the city of Trujillo. Because of this hostility, Haya has spent much of his life in exile, and at one time lived for five years in the Colombian Embassy in Lima while Peruvian troops constantly aimed rifles at the windows across a trench they had dug around the building. Yet the size and ardor of his popular following persuaded occasional Peruvian governments to let him come home. And when he did return, Indians and workers poured from the hills to crowd the roads to Lima, waving white handkerchiefs as Haya conducted a triumphant procession from the place of landing to downtown Lima, where crowds of a quarter of a million and more waited to cheer his eloquence. His APRA Party was the principal source of the entire popular democratic movement in Latin America, and most observers would agree with Robert Alexander that "Haya de la Torre remains the most significant single spokesman for the social revolution in Latin America during the first half of the twentieth century."

Yet although his ideas are now widely accepted, even by the Peruvian armed forces, the anger and resentment bred of those earlier clashes make the thought of an APRA government—especially under Haya, who is seventy-four and vigorous—intolerable to the military. This hatred of APRA has been shared by *El Commercio*, which has warred against APRA ever since Don Luis's brother and his brother's wife were slain by a young *Aprista* assassin on a street in downtown Lima. In order to understand the depth of such feelings—whether against APRA or I.P.C.—it is important to realize that Lima is a small and ancient city, more like nineteenth-century Boston than modern New York or Washington. The number of influential families is small, and the lines of hostility, clashing interests, or diverging beliefs, once drawn, are likely to persist for generations. Opposing factions representing opposing economic interests are often referred to by family names, and certain names recur with great frequency in positions of commercial and political leadership. This is not to say that the country is dominated by an unchanging oligarchy. Peru is more complicated than that, and, as has been frequently demonstrated, the military represents a distinct and powerful force. Still, ancient attitudes persist, including an often violent animosity toward APRA.

The other reason for military support of the liberal Belaúnde was the change in the convictions and the nature of the armed forces. Until the late nineteen-fifties, the Peruvian armed forces, in the historic pattern of most Latin-American countries, represented a static or reactionary social force. They were, in the words of a young Peruvian colonel, "the strong right arm of the oligarchy." But in recent years a quiet shift has taken place in some Latin-American military establishments which may have profound consequences for the future of the hemisphere. In Peru, the unexpected focus of this potentially revolutionary change is a sprawling complex of brick buildings on the outskirts of Lima known as the Center of Higher Military Studies. There, and in other military schools, officers spend two years in advanced study.

For a decade, the course material has given increasing emphasis to social and economic systems taught by civilian experts, some of whom are far to the left, and most of whom are disciples of a liberal, and highly technocratic, brand of development economics. In these schools, the importance of the military role in "social and economic progress" is constantly stressed—an approach that is fully in accord with the emphasis that the United States and its influential military missions have given to "civic action." Most officers have also received American training in doctrines of counter-insurgency. From the irrefutable thesis that guerrillas are fish that swim in the sea of people, they have drawn the inexorable conclusion: if they are to suppress guerrillas, they must win the support of the people. Most Latin-American officers, at one time or another, attend United States military schools and often develop close relationships with officers of our overseas missions. In recent years, it has been American policy to stress the role of the Latin-American military in economic progress. This has undoubtedly been a liberalizing influence, but it has also led many officers to believe that the job of modernization can only be accomplished under their own rule. The officers themselves are rarely oligarchs. For the most part, they are drawn from lower-middle-class families, or even from among the poor. And they believe, as one general explained, that they "are the only people who really have lived in all parts of Peru during their career, the only ones who know the country."

The emerging conviction that traditional, conservative thinking has been a source of explosive inequalities is coupled with a growing contempt for the inefficiency or corruption of civilian leadership and a mounting belief that it is the mission of the armed forces to take their country in a new direction. Although the new military leadership is fundamentally nationalistic and anti-Communist, many officers are coming to share Lenin's belief that "no revolution of the masses can triumph without the help of a portion of the armed forces that sustained the old regime." It was natural, therefore, that the military had been drawn to support Belaúnde, with his liberal and reformist beliefs and his emphasis on technology and construction.

Many of these same convictions and expectations that had attracted the military and other powerful supporters to Belaúnde in 1963 were transformed by the events of 1967 and 1968 into the motive for his overthrow. Even before 1967, many of Belaúnde's efforts to bring about moderate reform, especially land reform, had been blocked by the opposition parties, which, having more than a majority in Congress, could exercise control whenever they agreed. This opposition grew in strength and determination throughout 1967, as Peru entered a period of economic crisis. By November, the weakening position of the Peruvian sol, which had been stable for a decade, compelled a drastic devaluation. From a rate of twenty-seven to the dollar, the sol tumbled to forty-eight before stabilizing at about forty-two to forty-four in the middle of 1968. The result was a sudden and drastic increase in prices affecting every sector of the economy. The poor were especially hard hit as food prices soared. Business dropped, unemployment rose, and public discontent mounted. In 1968, the hard-pressed Belaúnde was further beset by a series of scandals involving smuggling and bribery. Though the scandals did not touch him or his top officials (some members of the military were involved), they further weakened public confidence. Some of these difficulties were undoubtedly due to bad management, as the President's opponents charged, but many also flowed from circumstances beyond his control. Also, by the fall of 1968 a new austerity program had apparently set the country on the way to financial stability, and a record volume of exports, along with the anticipation of a billion dollars in foreign private investment, strengthened hopes for better times. However, many of the military and important elements of the civilian population felt that Belaúnde had failed to fulfill their expectations. In their view, civilian politics had once again paralyzed the needed modernization of Peru, and, justly or unjustly, they believed that Belaúnde had lost his grip on the country and on his own government.

Moreover, growing dissension and functional splits within the Belaúnde party made it likely that the unacceptable APRA would win the Presidential election scheduled for the middle of 1969. To this explosive mixture of discontent was added an incalculable amount of personal ambition and a growing sense that the time had come for the armed forces to assume their predestined mission to create a "new" Peru. By the middle of 1968, the restaurants and clubs of Lima

were filled with talk of a *golpe*. It was widely known that the plans were ready and that the generals were anxious. But the moment never seemed right. The military, lacking popular support, hesitated to move arbitrarily against an elected President who still commanded a large following. They needed—depending upon your point of view—an event, a pretext, or a cause. It came when, after five years of negotiation, I.P.C. reached an agreement with Belaúnde.

In July, 1967, a restless Peruvian Congress passed a law declaring that the La Brea y Pariñas oil field belonged to the nation, and authorized the expropriation of the oil-field installation and the establishment of a "regime most consistent with the national interest." (The wording left open the possibility that I.P.C. might continue to operate the installation if that arrangement seemed "most consistent with the national interest.") Belaúnde was undoubedly reminded, as he had been before, that any expropriation would mean the application of the Hickenlooper Amendment, and the effort to reach an agreement continued throughout 1967 without any changes at La Brea. In that same year, however, the Peruvian Tax Court found that I.P.C. owed a hundred and forty-four million dollars to Peru. This figure was based on a judicial calculation of I.P.C.'s net profits for the previous fifteen years, on the theory that the company had been operating under the illegal and invalid award of an international arbitration. This money was never collected, and judicial appeals and counterclaims mounted in complexity.

Then, at the beginning of 1968, as General Doig and his staff were laying their plans for a *golpe*, President Belaúnde designated the Peruvian state oil company, Empresa Petrolera Fiscal, or E.P.F., "to represent the state in all acts related to the operation of the La Brea y Pariñas oil field, which belongs to the nation." The president of E.P.F., and from then on one of the chief Peruvian negotiators, was Carlos Loret de Mola. Technician and businessman, mild-mannered and never actively engaged in politics, Loret de Mola had been placed in charge of the state-owned company early in Belaúnde's administration. His knowledge of the oil business would strengthen the government in negotiations, while it could be expected that on any important issue he would yield to the President's wishes. Yet this routine appointment had unexpected consequences, for Loret de Mola was to prove unexpectedly stubborn, and eventually his public attack on the final agreement was to bring on the revolution. Shortly after the negotiations had been turned over to E.P.F., they broke down again. The issue was the same as that which had brought about previous failures: Peru insisted that I.P.C. turn over the oil field, while the company refused to do so unless it was allowed to operate the field as before. Thus, as I.P.C.'s official account reports, "at mid-April of 1968, there were no negotiations in progress with the Government's representatives."

Events in Peru were moving too fast to permit the impasse to continue. Belaúnde's economic and political problems were still acute, political attacks were mounting, and talk of a military *golpe* was in the air. On July 28th, Belaúnde was scheduled to make his annual address to Congress on the State of the Republic, and it was inconceivable that he should appear without announcing some solution of the La Brea y Pariñas problem. At the same time, and more ominously, a regularly scheduled change of command was being carried out in the Peruvian Army. The Minister of War, General Doig, reached retirement and lost his chance to lead a revolution.

Velasco, widely thought to be a candidate for the Cabinet position, did not get it. "Belaúnde did offer it to him, but he wouldn't take it," claims a Velasco associate. "The other officers said he didn't have the ability," says a high official of the deposed government. In any event, having failed to assume a Cabinet post that would have removed him from the command of troops, Velasco was now Commander-in-Chief of the Army and the senior general on active duty. Within a couple of months, he had placed officers loyal to him in charge of the Lima Military District and the Lima Armored Division, both of which would be essential to the success of a revolution. Then Velasco waited, although, with his own retirement scheduled for early 1969, he didn't have much time.

Amid the unmistakable signs of crisis, I.P.C. suddenly changed the position it had steadfastly clung to for years. On July 25, 1968, it sent Belaúnde a memorandum offering to transfer to the state "the surface area of La Brea y Pariñas and the installations" and to renounce "any rights it could allege over the subsoil or mineralized zone of La Brea y Pariñas." This memorandum, or proposal, was, with some modifications, the basis of the final agreement between Belaúnde and I.P.C. That agreement, in turn, was to precipitate the military *golpe* and the seizure of I.P.C. Few doubt that several years earlier the same terms would have been accepted, after some grumbling, and I.P.C. would have stayed and prospered in Peru. "It was an incredibly generous offer," says officials of the United States Embassy. "In fact," says one of our chief diplomats, "when the manager of I.P.C. told me about it I was so astonished I asked him, 'But what do you get out of it?'" And I.P.C. itself claims that it "gave Belaúnde everything he was asking for." Yet within a few weeks after its proclamation the agreement was assailed as a sell-out, a giveaway, and a fraud.

Undoubtedly, these assaults were greatly magnified by political passion, yet an examination of the terms of the agreement does not support a conclusion that I.P.C. was making a sacrifice. In return for La Brea y Pariñas, I.P.C. was to be allowed to expand and modernize its refinery, thus increasing the production of oil and gas. It would continue, on a regular business basis, all its other activities in Peru, including the marketing of fifty-five per cent of all gasoline sold there. (This monopolistic position seems less impressive when we know that there are only about two hundred and fifty thousand registered vehicles in Peru.) There would also be at least a "moral commitment" that I.P.C. could join Mobil Oil and Gulf in exploring for oil on the jungle slopes of the eastern Andes. And all claims for back debts would be cancelled, including the hundred and forty-four million dollars assessed by the Tax Court. In addition, I.P.C. could reasonably expect that the agreement would free it from most of the continual agitation and hostility that had often threatened, although it rarely interfered with, its activities. Certainly these terms were not onerous for I.P.C., and the refinery expansion, especially, was, in the company's words, "a consideration of value." Of course, Peru would receive all the benefits that flow to an undeveloped country from the investment and skill of a large modern enterprise, something Peruvians may miss in the days ahead. If we compare this offer, which would almost surely have been accepted by Belaúnde in 1964, with the proposals that were in fact rejected in 1964 and 1965, the difference appears so slight that the company's stubborn, and fatal, insistence on keeping control of the La Brea field baffles analysis. In earlier negotiations, I.P.C. had offered to give up its ownership rights but had insisted on operating the field. Now I.P.C. offered to give the field to E.P.F., which would then sell the crude oil to I.P.C., which would refine it and market the product.

Yet, as one plows through the elaborate maze of figures, it seems that the difference in cost for I.P.C. between operating the field itself (and paying a fifty-per-cent income tax on profits) and letting E.P.F. operate the field was about ten to fifteen cents a barrel. Since La Brea y Pariñas had been steadily running down and was producing only six or seven million barrels a year, the total increase in the cost of crude oil to I.P.C. would probably have been not much more than half a million dollars a year.[2]

Looking at this difference, which is all that separates the hopeful days of 1964, when Belaúnde was at the height of his strength, from the disaster of 1968, one can take some comfort in knowing that even at Standard Oil irrational convictions, bureaucratic inertia, or sheer delight in the exercise of power can override the logical conclusions of economic analysis.

On July 28th, three days after receiving I.P.C.'s confidential and unsigned memorandum, Belaúnde went before Congress and the nation to announce triumphantly that he had solved the ancient problem of La Brea y Pariñas. The oil field would now belong to Peru. He did not elaborate on the other elements of the proposal, and, intentionally or not, he left the impression that the take-

[2] The key fact in the calculation is that much of the company's operation was "vertically integrated;" i.e., the crude oil from La Brea y Pariñas was sold to the company's refinery at Talara, which then sold the gas and oil to the I.P.C. distributors and gas stations, which, in turn, sold them to the public at prices largely fixed by the government. I.P.C. was basically concerned with the total profit from the entire operation. In determining this profit, the important thing was not who owned the oil field but the cost to the company of each barrel of crude oil from La Brea y Pariñas, for its final profit depended on the price it received for gasoline minus the cost of producing the gasoline. Therefore, a comparison of the earlier offers with the 1968 settlement should be made in terms of the cost of crude oil to I.P.C. In 1964, the company offered to cede ownership of La Brea to Peru but insisted on operating control and splitting the profits. Under this offer, it would sell each barrel to the refinery at about $2.50. The cost of producing each barrel, was $1.50, leaving a profit of $1.00. Out of this, the company would receive a fee of twenty per cent of the price ($2.50), or $.50. The rest of the $1.00 profit would be split fifty-fifty, or $.25 to Peru and $.25 to the company. Thus, the company would receive $.75 of the $1.00 profit. However, it would have to pay a fifty-per-cent income tax on its profit, or $.375. So the Peruvian government would receive its $.25 share of the profits plus $.375 in taxes, for a total of $.625. The cost to the company, therefore, was the $1.50 in production costs plus the $.625 that went to the government, a total of $2.125 a barrel. This is roughly equivalent to a sixty-forty profit split. In 1968, the company offered to give the oil field to Peru and buy the crude oil for its refinery. It would pay, after certain discounts, $1.97 a barrel. However, since the refinery would be paying $.53 less for each barrel ($1.97 instead of $2.50), its cost would be less and so it could deduct less when it paid the fifty-per-cent income tax. Thus, it would have to pay $.265 more in taxes per barrel (or fifty per cent of the $.53 difference). This made the total cost to I.P.C. $1.97 plus $.265 in additional taxes, or $2.235 per barrel. The calculation is somewhat inexact, because of the difficulty in pinning down precise figures, but it can safely be assumed that the difference between the 1964 and 1968 offer was about ten to fifteen cents a barrel. Even this relatively small gap has to be computed on the assumption that I.P.C. could not find other ways to absorb some of this cost in its accounting, and does not take into account the intricate possibility that Standard Oil could decrease the amount even further by additional deductions or credits on its tax returns in the United States.

ver was almost unconditional. To almost nanimous acclaim, the negotiators then sat own to hammer out the complex series of ontracts necessary to transform the new roposal into an agreement. The pressure for wift action was intense, for in June the ongress had given Belaúnde extraordinary owers for sixty days that would permit him o solve the problem by executive decree. hen this period expired, it would be necesary to submit any agreement to an increasngly hostile Congress. Belaúnde could not fford to wait, and he told the negotiators hat he intended to fly to the oil city of alara on the morning of August 13th and roclaim the final and definitive solution.

For two weeks, as August 13th neared, awyers, businessmen, and politicians crowdd around tables in the Presidential Palace truggling to construct a new framework for he largest oil and gas enterprise in Peru. Beaúnde's Prime Minister as well as his Minster of Development continually joined ther government officials in the discussions. he chief negotiator for I.P.C. was the comany's gentle and dignified general manager, ernando J. Espinosa, who, after working s an economist for the New Deal, had spent wenty-three years with Standard Oil.

His principal adversary was the head of .P.F., Carlos Loret de Mola. Toward the nd, the negotiations kept breaking down ver one crucial point: whether I.P.C. was o guarantee a minimum price for the crude il it was to buy from La Brea. It was durng one of these breakdowns that an incient is said to have occurred that, true or ot, undoubtedly contributed to the difficulties of the days ahead, since it is widely elieved in Peru. Loret de Mola says that, sked by President Belaúnde to renew the alks, he went to the I.P.C. offices at about 0 p.m. Loret de Mola claims that, after ofering him a drink, a company executive (not spinosa) told him, "Standard Oil never gets ut of any place without getting all its oney, and the same is going to happen ere." The executive then handed him a copy f the confidential memorandum, saying, Here are our conditions. Your President houldn't have gone before Congress the way e did, because he deceived the people." What could I do?" asks Loret de Mola. "I ad to believe the word of my President beore an unsigned memorandum by a comany." Even if his story is true, the subtantive terms of the memorandum could not ave been a surprise, since those were preisely the subjects under negotiation. Howver, the suspicion that all the conditions f settlement had been laid down in adance might have had a stiffening effect on oret de Mola's attitude. In any event, the tory has added to the armory of anecdotes sed to justify the seizure.

Finally, at about 2 a.m. on August 13th, hinking that final agreement had been eached on the price to be paid by I.P.C. or the crude oil from La Brea, Espinosa went ome to prepare for the scheduled dawn flight o Talara. Soon afterward, Espinosa received call from the Peruvian Prime Minister, at he Palace, who told him there was still o agreement, and then, according to an mbassy official, said, in tones of mounting gitation, "If you don't come back, there'll e an expropriation," and hung up. Peruvian fficials then awakened Ambassador Jones, who called Espinosa and persuaded him to eturn to the Palace, where discussion reumed on the price to be paid for crude oil. s dawn approached, both Espinosa and oret de Mola, sitting in different rooms, igned the last of a series of contracts, and he entire group drove through the quiet treets to the Presidential airplane.

The problem was that each man had igned a very different contract, or so they ater claimed. Within a month, this differnce was to erupt as "the page 11 scandal," and that storm was to tumble the last flimsy barrier to a military *golpe* and the seizure of I.P.C.

The existing copies of the contract governing I.P.C.'s purchase of the crude oil to be produced by E.P.F. at its newly acquired La Brea y Pariñas field are ten pages long. If there was an eleventh page—and that is what the dispute is about—it contained the final disposition of the one problem that had seemed insoluble until the final hours: the price to be paid for the crude oil. Under the contract as it now exists, I.P.C. agrees to pay, after discounts, $1.97 a barrel for the crude oil. However, the contract also requires I.P.C. to provide certain essential services to the oil-field operation, such as water and gas, but leaves the details, including the costs of these services, to be worked out later. "You see," explains Loret de Mola, "since we didn't know what the services would cost, we couldn't tell how much they would pay for the oil. That's why I wanted a guaranteed minimum price, one they would pay no matter what they deducted for the services." An I.P.C. representative responds that "we couldn't possibly agree to a guaranteed price without knowing about the services." Therefore, as the hours wore on during that last night of negotiations, I.P.C. adamantly resisted Loret de Mola's demand for a guaranteed minimum of $1.0835 a barrel, although the company negotiators did agree to a clause allowing E.P.F. to cancel the contract after six months' notice in case the price fell below that amount. "What good was that?" asks Loret de Mola. "What would we do with the oil? They owned the refinery at Talara. We'd have to ship it down the coast." I.P.C.'s representatives recall that Loret de Mola bent and then yielded to the intense arguments of government officials desperate to reach an agreement as evening stretched into morning. Loret de Mola, on the other hand, says that it was I.P.C. that finally yielded. Neither Espinosa nor Loret de Mola can recall an explicit admission of defeat by the other.

Then, as the chief negotiators joined their aides in different rooms to go over the final documents, the crude-oil contract was brought to them for signature. The two men agree that the original contract was eleven pages long and that the text ended at the bottom of the tenth page. The eleventh page was bare except for a typed dateline—"Lima, August 12, 1968"—and had room for signatures.

According to Loret de Mola, when the contract came to him he wrote across the top of the eleventh page, "In any event, the price for crude oil shall be no less than $1.0835," and then signed. Two Xerox copies were made, and Loret de Mola was asked to initial or sign every page of these Xerox copies "for purposes of identification." The identifying initials or signatures are in the margin of each page. He did not sign either Xerox copy at the end of the contract, as he claims to have done on the eleventh page of the original. The documents were then taken from him, and the scene shifted to the room where Espinosa was waiting to sign the agreement. He says that he was brought only the two Xerox copies, and that they were only ten pages long. The eleventh page was no longer part of the contract, and Espinosa explains that when he asked about this "the lawyer said there was too much white space above the dateline on the eleventh page and the contract could be altered later." (Of course, a few lines drawn across the page would have prevented anyone from writing above the dateline.) Espinosa signed both contracts at the bottom of the tenth page, and wrote the date and place beside his signature. Within a month, Loret de Mola's accusation that the vital eleventh page had been removed and that I.P.C. and the government had conspired to defraud the Peruvian nation was to enlarge discontent to a critical mass which swiftly exploded into a military *golpe* and the consequent seizure of all the properties of the International Petroleum Company.

Was there a page 11? The American Embassy maintains flatly that there were only ten pages, and that Loret de Mola was lying for political purposes. This is, of course, possible, and yet—at least up until the time I asked about the matter, a couple of weeks ago—the Embassy had neither studied the documents nor discussed the matter with Loret de Mola, although he is more than willing to tell his story to any who ask. If you examine the documents, one thing is clear. On both Xerox copies of the contract, the only signature that appears at the bottom of page 10 is that of Fernando Espinosa. (Loret de Mola's signature or initial is in the side margin of every page.)

It is hardly conceivable that diligent lawyers should not have made sure that both parties signed so critical a contract, as they did in the case of other, far less controversial documents on that frenzied night—unless, of course, Loret de Mola had in fact signed an eleventh page. Meanwhile, the original has mysteriously disappeared. Unless there are other facts to be disclosed, one conclusion is clear: either there was an eleven-page contract or there was no agreement at all, since few courts would enforce a contract signed by only one party. This leaves open the question whether the "page 11" controversy flows from fraud, misunderstanding, or mistake. The accounts of Loret de Mola and Espinosa are consistent with perfect good faith by each of them, and in discussing the episode each of them gives an almost overwhelming impression of sincerity and honorable intent. Nor is there the slightest evidence that President Belaúnde was aware of any of this, although it might prove interesting to interrogate some of the lawyers who were keeping watch on the evening's transactions. A number of people were anxious to reach agreement before dawn, and the most likely possibility is that in the face of Loret de Mola's stubborn insistence on a clearly defined minimum price the eleventh page was removed as the contract went from one principal to the other. Whatever the facts, Peruvians were quick to believe the accusations of fraud by I.P.C. and the Peruvian government, and the American Embassy did not make the kind of investigation that might have convinced them otherwise. When asked what happened to the original, an Embassy official first responded that "there was no original." When it was pointed out that even Xerox's marvelous technology had not developed to this extent, he said that the original was too messy. But making a page neater while copying it is another feat that Xerox has not yet accomplished. If there were only ten pages, why didn't Loret de Mola sign at the bottom of the tenth page? "There was no room," it was explained. Yet one has only to glance at the page to see that there was plenty of room for an additional signature. None of this proves anything about "page 11," but perhaps it does illustrate some of the attitudes that have led many Peruvians to believe that the American Embassy is the faithful representative of Standard Oil.

As the dawn of August 13th approached, the weary group of negotiators rose from the table to join the President and congressional leaders for the flight to Talara. But there was, according to some of the Peruvian participants, one more ceremony to come. No formal agreement had been signed granting I.P.C. the right to explore the potentially rich jungle lands to the east. At the request of the oil company, therefore, the highest officials of the Peruvian government raised their right hands and gave a solemn oath to the representative of Standard Oil of New Jersey that a million hectares of Peru (about two and a half million acres) would be open to their exploration. Did it happen? Two

Peruvian eyewitnesses swear to it. I.P.C. says only, "We did get a moral commitment, but we never thought we could count on that." In any event, Peruvians believe the story.

On its flight north to Talara, the Presidential plane passed close to the city and plains where a few hundred Spaniards strangled the Emperor and plundered the gold of the Incas. Now, after a century-long dispute, Belaúnde was about to recover for Peru a more modern but equally legendary treasure. That morning, in the Act of Talara, he proclaimed that the oil field and its installations belonged to the nation, once again omitting any description of the rest of the agreement. However, it did not take long for the nation's applause to die out as details of the settlement began to emerge. In an effort to head off opposition, Belaúnde had previously secured the agreement of his APRA opposition to the compact with I.P.C., but unexpectedly the attack was to come instead from his former friends—the armed forces, *El Commercio,* and Loret de Mola.

Since E.P.F. could not take over the operations of La Brea y Pariñas immediately, the Act of Talara was followed by a rather vague decree permitting I.P.C. to continue operations during a transition period. Shortly thereafter, Loret de Mola wrote I.P.C. that since the oil now belonged to Peru, the total profits from its sale—about half a million dollars a month—should be turned over to E.P.F. On September 3rd, I.P.C. replied in a letter that, whatever its legal justification, could only worsen an already deteriorating situation. "We are in agreement [that La Brea y Pariñas is now] the property of the state [but until E.P.F. actually takes over, we intend to] operate the deposits . . . in the same way and with the same obligations which have governed our activities . . . up to the present time." On September 7th, the Peruvian government confirmed the resignation of Loret de Mola and the entire board of directors of E.P.F., and the next day Loret de Mola, according to an account in *El Commercio,* said that since I.P.C., "refused to pay E.P.F. the agreed-upon price of $1.0835 per barrel . . . the Act of Talara was an event of no consequence." That same week, the new Minister of War, Major General Roberto Dianderas Chumbianca, made the ominous announcement that "the Army was awaiting the official publication of all the annexes of the Act of Talara in order to study them and see if it should issue a statement on the matter."

Agitation grew as it became apparent that far more was involved in the Act of Talara than the recovery of La Brea y Pariñas, and that I.P.C. would continue to expand its activities in Peru freed of all claims for past debts. On September 8th, *El Commercio,* knowing of the plans for a *golpe,* began an editorial attack on the agreement, almost certainly intending to bring down the government. And a few days later Loret de Mola went on national television to make public his charges about the missing page 11. From this point on, the attacks mounted in intensity.

Thirty-six generals held a secret meeting, and a pleased General Velasco called the editor of *El Commercio* to report that the vote was "twenty-nine against the agreement and seven traitors." "For a little while," reports an observer, "there didn't seem there would be a coup, but there was no way to bring the thing to rest." Then, in the last week of September, the left wing of the President's own party rebelled against the agreement and demanded the resignation of the entire Cabinet, and APRA, reluctantly yielding to mounting political pressure, withdrew its support of the Act of Talara. On October 2nd, the Cabinet resigned and a new group of ministers was appointed. They stayed in office less than twenty-four hours. Following the long-prepared scenario, at about two o'clock on the morning of October 3rd a column of troops led by tanks of the Lima Armored Division moved across the Plaza de Armas and entered the Presidential Palace. President Belaúnde was roused and taken to the airport, where a large Peruvian jet was waiting to carry its solitary passenger to exile in Buenos Aires. General Velasco was the new President of Peru, and, except for some minor street skirmishing, the takeover was swift and peaceful. A revolutionary manifesto explained that "history will record . . . the loyalty and unquestioned support by the armed forces of the deposed government." However, it went on, the Belaúnde government had disappointed its followers and "these things are evidence of this: the indecision, conspiracy, immorality, surrender, bungling, improvisation, the absence of social sensitivity," culminating in "the false surrender solution given to the La Brea y Pariñas problem, which evidences that moral decomposition in the country had reached extremes so great that its consequences for Peru are unforeseeable."

The consequences for Peru are still unforeseeable, but the consequences for I.P.C. were, even then, quite predictable. A few days later, on October 9th, to the almost universal applause of press and political leaders, Peruvian troops took over the entire oil complex at Talara: the refinery, installations, and the La Brea y Pariñas oil field. "The revolution is on the march," said Velasco. When I.P.C. went to court to lodge a protest, hecklers threw coins at the feet of their lawyers. Of course, since only Talara had been taken, I.P.C. was still Peru's largest supplier of petroleum products, although it was now receiving gas and oil from a refinery that had been taken over by the government. In January, when I.P.C. protested a bill of eleven million dollars for petroleum products from Talara, the government moved to "attach" most of I.P.C.s remaining assets as "security" for this debt. Fruitless discussions continued until February 6th, when General Alberto Maldonado Yanez, Minister of Development and Public Works of the Revolutionary Government of Peru, summoned the manager of I.P.C. to his office and handed him a bill of slightly over six hundred and ninety million dollars: the total value, as calculated by the Peruvians, the I.P.C.'s production at La Brea y Pariñas since the company bought the field in 1924. All of I.P.C.'s assets, the General said, would be held as security. Most of I.P.C.'s top officials were already out of the country, many of them pursued by criminal warrants for fraud and tax evasion. That afternoon, General Velasco announced that "Peru has taken the final step to close definitely and forever this ignominous phase in its history." The long battle between I.P.C. and the Peruvian nation was now over. The dispute was now between Peru and the government of the United States.

The Revolutionary Government of Peru has said that it will be glad to pay compensation for the expropriation of I.P.C. but that I.P.C. must first pay its debt to Peru—an amount that comes to a great deal more than the value of the seized assets. A special Presidential emissary recently completed a mission to Peru in which he held discussions with the top officials of the Revolutionary Government. As a result, President Nixon postponed application of the Hickenlooper Amendment until August while I.P.C. appeals the claim of debt through the administrative machinery of the Peruvian government. Meanwhile, the nationalistic impulses behind that government have led to other changes in Peruvian policy. Peru has recognized the Soviet Union and begun to trade with it (but so have many Latin-American countries); and it has seized some American fishing boats to enforce its claim to sovereignty over the sea two hundred miles from its shores (but that dispute is an old one, and the same claim is made by Chile and Ecuador). These actions flow not so much from hostility to the United States as from the deeply felt nationalism of the armed forces, which have decided that they alone can unite the necessary talent for leadership with the power to reshape social structures. "This is not an interim government," one Minister-General told me. "We intend to remain in power until we have created the conditions for development." Asked how long that would be, he shrugged.

These convictions and expectations are fervently shared by the dark, compact President of Peru, Juan Velasco. A career soldier born into the lower middle classes—for whom the Army has been almost the only route to influence and power in a rigid society—Velasco moved slowly up the ladder through the formal hierarchy of the Army for decades, until, by 1967, he was the third or fourth general in seniority and could look forward to a dignified retirement in January of 1969. While stationed in Lima, and aided by a sophisticated wife, he began to mingle with members of old and wealthy families, many of whom had summer homes at Ancón. Their views and their growing discontent with Belaúnde undoubtedly influenced Velasco, along with other officers, whose appearance in Lima society in recent years had signalled an erosion of the social and personal barriers that had traditionally made strangers of the armed forces and most of civilian society.

This regular and leisurely rise was suddenly accelerated when he became Commander-in-Chief of the Army and then President of Peru, not so much by virtue of his personal qualities as because at the moment of revolution he was at the top of an institution traditionally deferential to formal organization and hierarchy. He is much more than that now. The I.P.C. seizure has made him a hero to many, and has—for the moment at least—paralyzed potential rivals and adversaries. "I didn't care about being President," he told me as he strode restlessly back and forth across the carpeted floor of the Presidential offices, pausing only to take an occasional message from one of the many uniformed aides who crowded an adjoining office. "I really wanted to go home and retire. Now I'm going to stay and work hard for the country, and when they want me to go I'll go." Then, slapping his desk, he said, "And I won't make any money while I'm here!" Waiving a thin green pamphlet, he explained, "We prepared plans in the military school, and we must develop the country. We are going to stay in office until there have been reforms, until we have created the conditions for development. You can read it." The document contains a generally unexceptionable program for social reform and economic development, reflecting liberal thought and the general philosophy of the Alliance for Progress.

When he was asked if he really hoped to accomplish what all previous civilian governments had failed to do, he replied sternly, "We will die trying. But we can do nothing until we end the I.P.C. matter. We are going to cooperate, and we have a commission to report on compensation. Why doesn't the United States send a group—a group of clean, fresh people without any ties to I.P.C.? I will open every door. They can see everything."

What about negotiations, he was asked. "This is an internal matter, and it must be soived internally. It is not between Peru and the United States. It is between Peru and a private company. We can't solve it in the O.A.S."—presumably because he shares the widespread, if distorted, view that the Organization of American States is a creature of the United States. "A lot of people thought that I.P.C. would overthrow this government, as it had in the past," he continued, "but it can't, because this revolution is in the minds and hearts of the people.

And we will be absolutely incorruptible, because that is the only way to fight Communism."

When asked if the coup had been prepared before the Act of Talara, Velasco said abruptly, "Of course." Then he asked, "But why does the Hickenlooper Amendment protect a company which corrupted the government and officials? If you apply Hickenlooper, the armed forces might not be able to control the nationalism of the people. We will try, but it will be very dangerous. You can be sure that there will be no other nationalization after this. This is a unique case." Then, nearing the door, he said passionately, "We cannot give in. We are not a colony. We cannot be a colony."

For a more academic approach to the hopes of the Revolutionary Government, one must go to a civilian—the young, intense editor of *El Commercio,* Augusto Zimmerman, whose editorials helped bring on the revolution. "You have to know," he explained to me, "that in Peru there are four major sectors: the military, the intellectuals, the economic power, and the people. If you have any three, you can make reforms, and we have three against the economic sector. I thought the same when Belaúnde took power and the military backed him, but he didn't have the courage. We need great structural changes that are still opposed by the privileged classes, but we do not need Communism. I believe in liberty."

Is there any solution to the oil crisis, he was asked.

"We could find a formula, but not compensation. We cannot compensate I.P.C., not even if you give us the money under the table for us to give them. We don't want Hickenlooper—it would be very bad, and we don't want to fight with the United States—but if you apply it, it might make reforms easier in the atmosphere of national unity that would be created. The Alliance for Progress was a great thing, but when Kennedy died the soul went out of it. It is gone. We have to re-create that spirit ourselves, here in Latin America. We all loved Kennedy."

What about Velasco personally, he was asked—can he do all this?

"He is not an expert," Zimmerman replied, "but he is strong and determined and"—he spoke tenderly—"he loves his country."

Similar convictions about the need to modernize Peru pervade every level of the government, and they are often coupled with a passionate anti-Communism. "The only way to fight Communism is through reform and development," a Minister-General patiently explained. "That's why we have a new organization for the *barriadas.* We fought the guerrillas in the Andes, and we know. We saw men so desperate that they faced certain death to fight for us, and we asked ourselves what made them so brave. Then, look at Vietnam. You can't win against guerrillas unless you have the support of the people."

General Velasco's government does not yet have the support of the people. Last January, in the midst of the crisis, the aging Haya de la Torre returned to Lima from Europe and was greeted by a huge and tumultuous crowd. The effort to mount a similar popular rally for Velasco, despite intense publicity, drew only a few thousand people. "In the *barriadas,*" a Peace Corps volunteer explained, "the people don't believe that any government will help them. They know they have to do it themselves." Still, this government is making some effort to win the support of the poor, and uniformed officers are descending on the crowded *barriadas.* "I have never been here," one colonel told a puzzled group, "and I don't know your problems, but maybe we can help." Among Velasco's supporters can also be found individuals who are more extreme and groups that are more conservative. There are, for example, some members of the extreme left among the small group of lawyers summoned for advice on the legal intricacies of La Brea y Pariñas. However, their influence does not seem to extend beyond the legal complexities of the oil problem. At the other end of the political spectrum, Velasco has found support among the conservative banking and commercial families, who see his accession as a way to increase their wealth and have encouraged him to place new restrictions on their foreign banking competitors. And even those who do not favor the Revolutionary Government support the action against I.P.C. To do otherwise publicly would mean political suicide, for few issues in Peruvian history have generated such unanimity of feeling.

Thus, it is virtually impossible for Velasco to back down or compromise. Should he do so, the passions that this issue has engendered could sunder his support and end his rule. For even within the ranks of the armed forces other ambitious officers are waiting for Velasco to falter, and if we do apply Hickenlooper, once the unity generated by shared resentment begins to fade the consequent distress will undoubtedly turn many elements of the "economic power" and some of the workers against him. "What will happen?" said a leading political rival. "Well, life is full of surprises. You've heard of Heisenberg and the uncertainty principle. That's the principle of Peru." In addition, there is always APRA, the only organized popular force in the country, still led by the eternally patient Haya de la Torre, who waits quietly in his simple house on the outskirts of Lima unshaken in his belief that democracy is the only road for men who wish both progress and freedom. There are even rumors in Lima that the C.I.A. is trying to overthrow Velasco. Although it is inherently incredible that we should promote a revolution on behalf of Standard Oil, the recent history of Latin America makes the rumors believable to many Peruvians. Thus, President Velasco is treading a fragile and uncertain path. Where it will lead him and Peru is largely in the hands of the United States government, which must bear the considerable burden of its past policies while seeking to resolve the present crisis.

On a recent cover of a leading Peruvian magazine was a picture of the American Ambassador to Peru, with the caption "The Ambassador from I.P.C." Undoubtedly, this is unfair to the Iowa-born John Wesley Jones, who has headed our Embassy since the beginning of the Belaúnde government. The dignified, slightly stiff, and soft-spoken Jones, serving in Latin America for the first time since 1930, was, in many instances, simply carrying out instructions from Washington.

Yet the caption reflects the almost universal opinion of knowledgeable Peruvians. Businessmen and politicians, military leaders and intellectuals, whether they support Velasco or doubt the wisdom of the seizure (none seem to doubt its justice), all believe that the dominant goal of United States policy was to advance the interests and desires of Standard Oil of New Jersey as embodied in its Peruvian subsidiary. The truth, as usual, is more complex. Yet the chronicle of the last five years does not make it easy to refute the Peruvian contentions. As we have seen, during the first two years of the Belaúnde government the United States suspended virtually all aid to Peru in an effort to compel an agreement between the country and the company. Although top Embassy officials had misgivings about this unprecedented and rather startling policy, there is no evidence that they fought it very vigorously. When asked what terms we had in mind, an Embassy official replied, somewhat righteously, "We never involved ourselves in the substance of negotiations—that was between I.P.C. and the Peruvian government." Yet the United States had staked its national policy toward Peru on the outcome of these negotiations. By failing to become "involved," the United States virtually entrusted the future of that policy to the negotiators for I.P.C. If they did not agree with the Peruvian government, Peru would receive virtually no aid from the United States. Even after 1966, when aid was resumed, there is no evidence that the United States even tried to persuade I.P.C. to modify its terms, although, on the other hand, we constantly reminded Belaúnde that any action resembling expropriation would call down the wrath and retaliation of the United States in the form of the Hickenlooper Amendment. When I.P.C. offered, in 1968, to turn over La Brea y Pariñas—a proposal that would probably have ended the entire dispute a few years earlier—a high Embassy official reports, he was "astonished at their generosity" when he was "told" of their intention. I.P.C.'s natural and warranted impression that it was backed by the full weight of the United States undoubtedly stiffened the company's attitude, just as it restrained, and perhaps intimidated, the Peruvians.

Ironically, this impression may have actually been a disservice to the oil company, leading it to an unjustified belief in its safety from arbitrary action. Throughout this whole period, many outside observers and some U.S. officials knew that a serious clash was always a possibility. Perhaps if the United States had acted as a neutral and actively influential mediator, an earlier agreement might have forestalled the present crisis. Certainly we could have tried, as we have done successfully in reconciling disputes between American enterprises and other countries of Latin America. I.P.C., after all, was a business, and it behaved as a business. On the other hand, it was the State Department's job to examine questions of wisdom and justice, and to measure the strengths and hazards of Peruvian nationalism against the clear American interest in a friendly and developing Peru. Signs of the failure to do this are everywhere. Even though the two top Embassy officials have given more time to this question than to any other aspect of U.S.-Peruvian relatoinships, up to a few weeks ago there was no United States government study of the complex legal and economic questions involved. When asked about the background of the La Brea problem, the best-informed Embassy officer produced a booklet written and published by I.P.C. (although he later uncovered a sketchy historical summary written almost a decade ago). On almost every issue, from "the page 11 scandal" to the I.P.C. debt, one found not an independent investigation but a flat undocumented statement of I.P.C.'s position. And despite the critical importance of the negotiations leading to the Act of Talara, U.S. "experts" were both hazy and inaccurate about the basic economic issues. Perhaps it makes little difference, and perhaps I.P.C. was mostly right, but the interests of the United States were so deeply involved that surely there was some responsibility to examine the issues with detachment and independence.

In talks with many Embassy officials, the interested American observer is told confidently that "there is a lot of *golpe* talk around," although it is hard to find anyone in Lima who talks seriously about the possibility of overthrowing Velasco at this time. Constantly, the motives of those who supported the seizure are referred to as "political," or worse, and their methods attacked as lying or demagogic. Each point of the dispute is presented not as I.P.C. itself presents it, for company officials can discuss the matter with a great deal of helpful calm and detachment, but as a lawyer for I.P.C. might present the case to a suspicious court. Some of this response undoubtedly flows from distrust of a journalistic observer. Most of it, however, is believed, just as the advocate

of a difficult legal case may come to believe in the absolute justice of his cause. "The worst lawyers," said Supreme Court Justice Felix Frankfurter, "not only want to win their case, they want to be told that they're right."

Some critics view our policy in Peru as just another and expectable example of an "immoral" dollar diplomacy or economic imperialism. Many of those who conducted that policy defend it as the "realistic" pursuit of self-interest. Thus, adversaries and advocates alike would agree on what is, in fact, the most doubtful proposition of all: that the United States was pursuing its national interest. In 1963, Peru had just elected its first progressive democratic government. Communist guerrillas were helpless against the Peruvian armed forces, I.P.C. was the largest producer of oil and gasoline, and other American enterprises were looking forward to large-scale expansion. For the next four and a half years, the dominant concern of our Peruvian policy was to protect the position of I.P.C.; and the threat of the Hickenlooper Amendment was one of the principal instruments of that policy. At least partly as a result, I.P.C. has been driven from Peru and its assets seized; Belaúnde's government was able to make little progress toward reform; democratic government has now been ended; Peruvian nationalists—including the armed forces—have concluded that their own national interest requires both increased defiance of the United States and more extensive relations with the Soviet Union; and other American investments in Peru are in danger of retaliatory measures in response to U.S. economic pressures. Throughout the hemisphere, the episode has somewhat fortified those who claim that the United States is more concerned with its business interests than with the welfare and freedom of its sister republics. Many events and forces contributed to these results, but our policy toward Peru was among them. It was, therefore, a policy damaging to our self-interest and harmful even to American investments.

It didn't work, and if it had succeeded the price would have been high. For we have interests in Peru far more significant than protection of the relatively small investment of Standard Oil. Among them are the social and economic progress of the Peruvian people, the strengthening of democracy, and the encouragement of political forces congenial—but not submissive—to the United States. Yet for half a decade United States policy in Peru, conducted at a level far below the President and Secretary of State, has allowed the interests of a private oil company to dominate pursuit of these vital long-range goals. And it was for that very reason that even I.P.C. was hurt. For it should be clear by now that foreign investment will be most secure in developing societies whose growing strength and self-confidence reduces the popular discontent and national distress that will often find a target in the activities of a foreign enterprise. Moreover, in an atmosphere of growing nationalism, political leaders find it difficult to yield the same concessions under pressure that they might readily grant to a business that had gracefully become part of the local economy, subject to the same terms and conditions that govern all enterprise in the country. It is difficult to explain such a policy except in terms of ignorance and timidity: ignorance of the true interests of the United States and timidity in pursuing long-range goals when confronted with more immediate pressures. There is also—among a, fortunately, dwindling number of diplomats—a certain disdain for Latin-American countries: a belief that we know what is best for them, and a misplaced confidence that others will yield to our will and power if we are stern enough. "You have to understand the Spanish mentality as I do," I was told by Frank Ortiz, of the American Embassy. "The conquerors came here, and they created a whole new breed of people, the kind of people who appreciate strong leadership." That appreciation, however, would seem to have diminishing relevance when applied to relations between the United States and the sovereign republics of Latin America in 1969.

Although President Nixon has postponed the deadline for applying the Hickenlooper Amendment until August, the crisis is far from resolved. Both parties continue to maintain their original positions—the United States demanding compensation and Peru insisting that I.P.C.'s debt to Peru far exceeds any possible payment for the seized properties. A special Peruvian delegation has arrived in the United States to continue discussions. Meanwhile, Peru will receive almost no aid, for, even without sanction of Hickenlooper, nearly all assistance has been halted since the seizure. Private sources of financing for Peru have virtually dried up pending the final action of the United States. Some are hopeful that this mounting economic pressure will compel Peru to change its mind before the deadline, while others suspect that increasing distress will only strengthen nationalist and anti-American forces. President Nixon has shown considerable reluctance to apply the Hickenlooper Amendment, and may yet find a way to avoid a dramatic clash regardless of the outcome of the present negotiations. From President Velasco down, Peruvian officials have expressed the hope that Hickenlooper will not be invoked, while affirming that they will take the consequences rather than yield to pressure. Only the extreme left is anxious for a clash that both U.S. and Peruvian officials know could have a serious, even revolutionary, impact. "The job of Peru is development," the Peruvian Foreign Minister told me, "but the job of the United States is world security. This is against the security of the hemisphere and of the United States, so why should you act in such a way?" Asking some of the same questions, a Senate subcommittee recently held hearings on Peru which questioned the wisdom of the Hickenlooper Amendment. The case of Peru should demonstrate that such a law can help defeat its own purpose—the protection of American enterprise. The threat of the amendment undoubtedly made it more difficult for Belaúnde and I.P.C. to reach agreement, since it made the company feel more secure and thus less willing to compromise. Now the amendment makes it extremely difficut for the Peruvian government to make any accommodation, since it would appear to be acting from fear of economic sanctions.

Moreover, the amendment gives the President no power he did not already have to cut off or suspend aid. It does, however, strip him of flexibility. After all, the United States has a large array of economic and political weapons that it can use to protect its interests, and they have proved adequate to deal with past expropriations. More often than not, the only effect of the Hickenlooper Amendment will be, as in the Peruvian case, to escalate a relatively minor matter into a major diplomatic crisis. Nor does the law permit the President to guide his actions by the manifold considerations of history and justice which make this case far more than a simple, arbitrary seizure of an American company.

If we do apply the amendment, Peru may well wish it had never heard of the Alliance for Progress. Stopping aid and sugar purchases is a hard blow, but one that Peru can probably sustain. Eliminating these benefits in such a dramatic and formal way, however, will deter other public and private financing institutions from investing in Peru. The consequent crisis and distress will affect not the United States and I.P.C.—and not even the Peruvian armed forces—but the workers, the slum dwellers, and the Indians of the countryside, who will have no comprehension of the issues or motives that have loosed upon them the wrath of their great and powerful neighbor to the north.

RICHARD N. GOODWIN.

UNTRUTHFUL ADVERTISING PROPAGANDA IN SUPPORT OF ABM

Mr. YOUNG of Ohio. Mr. President, it is really startling to read a full-page advertisement in the Washington Evening Star paid for allegedly by a Malcolm E. Smith, Jr., 527 Lexington Avenue, New York, N.Y. It is reported to me that he operates WLAX Radio on Long Island, and that he has been publicly identified with extreme rightwing fringe organizations. The author of this advertisement captioned it:

The Real Truth About How Many U.S. Senators Are Being Tricked By Russia.

The author had the effrontery to headline:

Every Citizen In America Will Be Told These Facts.

It is to be noted there is this further statement:

This Advertisement Is Going To Every Important Newspaper In America with special emphasis on those states where Senators are opposed to, or undecided on, the Safeguard anti-missile system.

Mr. President, this is a lying advertisement. If Malcolm E. Smith, Jr., wrote it, he is a liar, and he is guilty of seeking to mislead the general public. If not, it would be of interest to know who is paying for this lying propaganda. The trickster who wrote this is guilty of writing blatantly false statements which I am fearful will be accepted as true and cause concern in the minds of many good people throughout our Nation. An example of the falsity of statements in this advertisement is the following:

It is clear that America is in danger! The McNamara idea that Russia wanted "parity" is wrong! Russia is *racing* ahead of us! Khrushchev gave the reason: We will bury you.

So this liar, Malcolm E. Smith, Jr., publishes again this old statement attributing to Premier Khrushchev, who by the way was a guest of the late President Eisenhower, that he threatened war against the United States.

This fellow, Smith, Junior, is guilty of repeating false propaganda of rightwing splinter groups such as the Liberty Lobby and the John Birch Society. Some of our top generals have also been duped by reading propaganda issued by these extremist rightwing fringe organizations. Two top generals, highly respected leaders of our Armed Forces, accepted rightwing propaganda regarding former Premier Khrushchev's famous statement and ignored historic facts. They recently again quoted Khrushchev and stated that the Soviet Union is still seeking to bury us. They denied that danger of war with the Soviet Union is less now than when Stalin was dictator. In testimony before the Senate Armed Services Committee, one high-ranking general said that Premier Khrushchev threatened hostile action by his statement, "We will bury you." The truth is that of many remarks and wisecracks of

Russian Premier Khrushchev the one which most Americans remember best is "We will bury you." Taken in full context Khrushchev made it crystal clear at the time that he did not mean war. He said:

I do not mean war. I mean competition. You say your system is best. We say our system is the best. Let's compete and see which is best.

At that time the United States had a nuclear superiority of 3 to 1 over the Soviet Union. Now our supremacy is 5 to 1. If our generals sound off on matters pertaining to foreign policy, they should not distort historic facts. Former Premier Khrushchev and the present Premier represent the new order of Russians. Khrushchev was ousted from office to affluent retirement instead of being "liquidated." Indeed, the Communist world is breaking up. The Soviet Union, now a "have" nation, is increasingly hostile to Communist China, and veering toward capitalism.

Daily, we read in newspapers of hostilities between Chinese soldiers and Russian troops along the 6,500-mile common border separating the Soviet Union and Communist China. In fact, the Soviet Union months ago brought two divisions from Eastern Europe, and these divisions with other Russian soldiers are apparently occupying some territory from time to time claimed by Communist China. Very definitely, there is no monolithic conspiracy against the free world as some right-wing extremists have been claiming. The Communist world is breaking up as indicated by the invasion of Czechoslovakia and by hostilities between the Soviet Union and Communist China.

Malcolm E. Smith, Jr., and others of his ilk are doing a disservice to their country in distorting facts in their efforts to gain support for the Safeguard ABM boondoggle. If these are the best arguments that proponents of the ABM can muster, then this project is in even more trouble than heretofore suspected.

Smith's advertisement states:

It is clear that America is in danger!

Then he adds:

Khrushchev gave the reason: "We will bury you!"

This slick fellow Smith, Jr., omitted that part of Khrushchev's statement:

I do not mean war. I mean competition.

This fellow Smith, Jr., should be subpenaed before a Senate committee and compelled to state who actually paid for the advertisement published in various newspapers for which he alleges he paid. In other words, whose money was it that paid the cost of these false statements in full-page newspaper advertisements?

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may proceed for not to exceed 7 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

VIETNAM

Mr. MANSFIELD. Mr. President, Memorial Day holiday has become a time of exodus from place and pressure, even though it began as a day of quiet homage to those who paid the cost of war with their lives. It might be well for us to remember, then, at the "getting away," this year, those Americans who cannot join in the general escape. There are those who have already left their lives—in the tens of thousands in Vietnam and those whose lives—in the hundreds of thousands—are still being risked in that distant conflict.

The continuance of our involvement in Vietnam is a responsibility which the Senate shares with the President. Members of this body who are deeply concerned over the course of the war, therefore, have not only the right but the duty to seek out and to propose and to propound alternatives whether they are applicable to the diplomatic tables in Paris or to the battlefields in Vietnam. In my judgment, it is a mark not of disrespect but of the most profound appreciation for the fallen in battle to try to forestall the loss of additional American lives in Vietnam. Areas are won and lost many times on a temporary basis. Lives are lost but once and on a permanent basis.

When any Senator speaks out of his mind and heart on any aspect of this barbaric struggle, his words are not to be dismissed as irrelevant or less by others in this Government. Indeed, it would be the better part of wisdom to heed them carefully. They may be words which are not only in unison with the surge of sentiment throughout the Nation, they may also contain a basis for a more effective policy of peace.

Certainly one cannot say at this late date that the course we have followed in Vietnam—militarily or politically—has been a paragon of wisdom. At this late date, it ought to be obvious that there is no infallibility of ideas anywhere with respect to that course. We have had generals urging the bombing of Vietnam into the stone age—as though it had very far to go—and others urging extension of the war into Cambodia or wherever in Southeast Asia. Still others have asked that U.S. forces be concentrated into coastal areas, if not withdrawn from Vietnam entirely and without further delay.

Insofar as our Vietnamese policies are concerned, if Senators are fallible—and we are—so too is the Department of State, the Department of Defense, the National Security Council, and the Saigon Command.

I should add that while the military have been the recipient of late of much of the criticism for Vietnam, I think it only proper to put this criticism in context. The policy of "keeping the pressure on" so to speak, was ordained not by the men in the field, but here in Washington in the highest military and civilian circles of the executive branch. It is not even an original policy of the present administration, but rather a carry-over from one administration to the next. It has brought no curb in casualties and given no tangible indication of bringing the war closer to a conclusion.

It may well be that what we need is something of the courage which has been displayed on the battlefields to face up to our responsibilities here in Washington. It is time to consider adjusting these continuing policies—military and diplomatic—to the end that the loss of life and the hideous devastation may be reduced in Vietnam and the ground laid for a new effort of negotiations to terminate the conflict.

Speaking of courage, we might well note the birthday of one who possessed it in full measure, for the purposes of peace no less than for war, the 35th President of the United States, John Fitzgerald Kennedy. He would have been 52 years old, today, had not the shots which echoed out of another conflict—out of the conflict within this Nation—cut him down. Since his death—a death in the service of his country—this iceberg of inner dissension has emerged in its enormity to spread violence on campus and in city and town throughout the Nation. The disquiet deepens and the need to find solutions grows more urgent. As in Vietnam, there is no infallibility in any part of the Government with respect to a course which will lead to solutions. It is in order, however, for the Senate, no less than any other branch of the Government, to probe, to seek, and to urge rational alternatives.

Until a way is found to curb the violence within this Nation and to end it in Vietnam, there may be escape but there will be no surcease for any of us on this weekend or any other.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HARRIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDING OFFICER (Mr. ALLEN in the chair) laid before the Senate the following letters, which were referred as indicated:

REPORT ON CERTAIN CONSTRUCTION PROJECTS PROPOSED TO BE UNDERTAKEN FOR THE NAVAL AND MARINE CORPS RESERVE

A letter from the Deputy Assistant Secretary of Defense (Properties and Installations), reporting pursuant to law, certain construction projects proposed to be undertaken for the Naval and Marine Corps Reserve within the uncommitted balance of lump sum authorization provided by section 701(2) of Public Law 88-390; to the Committee on Armed Services.

REPORT ON THE LOCATION, NATURE, AND ESTIMATED COST OF FACILITIES PROJECT PROPOSED TO BE UNDERTAKEN FOR THE AIR NATIONAL GUARD

A letter from the Deputy Assistant Secretary of Defense (Properties and Installations), reporting, pursuant to law, the location, nature, and estimated cost of facilities project proposed to be undertaken for the Air National Guard within the uncommitted balance of lump sum authorization provided by the Reserve Forces Facilities Acts; to the Committee on Armed Services.

REPORT OF DEFENSE PROCUREMENT FROM SMALL AND OTHER BUSINESS FIRMS

A letter from the Deputy Assistant Secretary of Defense (Installations and Logistics), transmitting, pursuant to law, a report on Department of Defense procurement from small and other business firms for July 1968-February 1969 (with an accompanying report); to the Committee on Banking and Currency.

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the audit of the Federal Deposit Insurance Corporation for the year ended June 30, 1968; to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the administration by the Small Business Administration of the disaster loan program in connection with the 1964 Alaska earthquake (with an accompanying report); to the Committee on Government Operations.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. LONG, from the Committee on Finance:

Murray L. Weidenbaum of Missouri, to be an Assistant Secretary of the Treasury.

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Arkansas (Mr. MCCLELLAN), I file a report on the nomination of Otto F. Otepka, of Maryland, to be a member of the Subversive Activities Control Board, and ask that this report from the Committee on the Judiciary, together with minority views by Mr. KENNEDY and Mr. TYDINGS, and individual views by Mr. BAYH and Mr. BURDICK, be printed.

The PRESIDING OFFICER. Without objection, it is so ordered.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDING OFFICER:

A concurrent resolution of the Legislature of the State of Minnesota; to the Committee on Finance:

"RESOLUTION 7

"A concurrent resolution memorializing Congress and the President to abolish an age requirement in the aid to the permanently and totally disabled public assistance program

"Whereas the United States has appropriated substantial money to the several states for programs to assist the rehabilitation and aid in the support of disabled persons; and

"Whereas federal law has restricted eligibility to persons 18 years of ago and older, and

"Whereas the several states must comply with the federal age requirements; and

"Whereas it would be of great value to persons otherwise qualified for assistance and to the public at large that eligible citizens of any age have rehabilitation and aid benefits under this program: Now, therefore, be it

"Resolved, by the Legislature of the State of Minnesota, That Congress amend the Social Security Act, Title XIV, Aid to the Permanently and Totally Disabled, by deleting an age requirement as an eligibility factor, be it further

"Resolved, That the Secretary of State of the State of Minnesota be instructed to transmit copies of this resolution to the President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, and to the Minnesota Senators and Representatives in Congress.

"JAMES B. GOETZ,
"President of the Senate.

"L. L. DUXBURY,
"Speaker of the House of Representatives.

"Passed the Senate April 29, 1969.

"H. Y. TORREY,
"Secretary of the Senate.

"Passed the House of Representatives May 16, 1969.

"EDWARD A. BURDICK,
"Chief Clerk, House of Representatives.

"Approved May 23, 1969.

"HAROLD LEVANDER,
"Governor of the State of Minnesota.

"Filed May 23, 1969.

"JOSEPH L. DONOVAN,
"Secretary of State."

A resolution adopted by the Ashtabula County Commissioners, County of Ashtabula, Jefferson, Ohio, requesting the Congress of the United States to refrain from enacting legislation that will directly or indirectly remove the tax exempt status of bonds and notes of Ashtabula County, Ohio; to the Committee on Finance.

A letter in the nature of a petition, from Clayton Dismas Knepfler, of Leavenworth, Kans., praying for a redress of grievances; to the Committee on the Judiciary.

A letter from Jon V. McNail, in the nature of a petition concerning a record which he felt should not be allowed to corrupt our American society and suggesting it should be censored; to the Committee on the Judiciary.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. METCALF, from the Committee on Interior and Insular Affairs, without amendment:

S. 412. A bill to authorize and direct the Secretary of Agriculture to classify as wilderness the national forest lands known as the Lincoln Back Country, and parts of the Lewis and Clark and Lolo National Forests, in Montana, and for other purposes (Rept. No. 91-207).

By Mr. LONG, from the Committee on Finance, without amendment:

H.R. 684. An act to amend title 38 of the United States Code in order to make certain technical corrections therein, and for other purposes (Rept. No. 91-217);

H.R. 2718. An act to extend for an additional temporary period the existing suspension of duties on certain classifications of yarn of silk (Rept. No. 91-218);

H.R. 4622. An act to amend section 110 of title 38, United States Code, to insure preservation of all disability compensation evaluations in effect for 20 or more years (Rept. No. 91-219);

H.R. 10015. An act to extend through December 31, 1970, the suspension of duty on electrodes for use in producing aluminum (Rept. No. 91-220); and

H.R. 10016. An act to continue until the close of June 30, 1971, the existing suspension of duties for metal scrap (Rept. No. 91-221).

By Mr. LONG, from the Committee on Finance, with an amendment:

H.R. 5833. An act to continue until the close of June 30, 1972, the existing suspension of duty on certain copying shoe lathes (Rept. No. 91-222); and

H.R. 8644. An act to make permanent the existing temporary suspension of duty on crude chicory roots (Rept. No. 91-223).

By Mr. MCCLELLAN, from the Committee on the Judiciary, without amendment:

S. 83. A bill for the relief of certain civilian employees and former civilian employees of the Bureau of Reclamation (Rept. No. 91-208);

S. 275. A bill for the relief of the village of Orleans, Vt. (Rept. No. 91-209);

S. 499. A bill for the relief of Ludger J. Cossette (Rept. No. 91-244);

S. 868. A bill for the relief of the New Bedford Storage Warehouse Co. (Rept. No. 91-210);

S. 901. A bill for the relief of William D. Pender (Rept. No. 91-211);

S. 1010. A bill for the relief of Mrs. Alli Kallio (Rept. No. 91-212);

S. 1236. A bill for the relief of Homer T. Williamson, Sr. (Rept. No. 91-213); and

H.R. 2940. An act for the relief of Henry E. Dooley (Rept. No. 91-214).

By Mr. MCCLELLAN, from the Committee on the Judiciary, with an amendment:

S. 728. A bill for the relief of Capt. Richard L. Schumaker, U.S. Army (Rept. No. 91-215); and

S. 757. A bill for the relief of Yvonne Davis (Rept. No. 91-216).

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MONTOYA:

S. 2285. A bill for the relief of Dr. Y. O. Amer; to the Committee on the Judiciary.

By Mr. INOUYE:

S. 2286. A bill to include Guam within the purview of the Federal Unemployment Tax Act and related provisions of the Social Security Act, to the Committee on Finance;

S. 2287. A bill to provide that the unincorporated territory of Guam shall be represented in Congress by a Territorial Deputy to the House of Representatives, to the Committee on Interior and Insular Affairs; and

S. 2288. A bill to require the payment of prevailing rates of wages on Federal public works on Guam, to the Committee on Labor and Public Welfare.

(See the remarks of Mr. INOUYE when he introduced the above bills, which appear under a separate heading.)

By Mr. MAGNUSON (for himself, Mr. HARTKE, Mr. HART, Mr. MOSS, Mr. INOUYE and Mr. PROUTY):

S. 2289. A bill to amend the Interstate Commerce Act, as amended, in order to make unlawful, as unreasonable and unjust discrimination against and an undue burden upon interstate commerce, certain property tax assessments of common and contract carrier property, and for other purposes; to the Committee on Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. HARRIS (for himself, Mr. BAYH, Mr. CANNON, Mr. HART, Mr. INOUYE, Mr. MANSFIELD, Mr. MONDALE, Mr. RANDOLPH, Mr. RIBICOFF, Mr. TYDINGS, and Mr. YARBOROUGH):

S. 2290. A bill to provide opportunities for American youth to serve in policymaking positions and to participate in national, State, and local programs of social and economic benefit to the country; to the Committee on Government Operations.

(See the remarks of Mr. HARRIS when he introduced the above bill, which appear under a separate heading.)

By Mr. CRANSTON:

S. 2291. A bill to authorize the Secretary of the Interior to establish a national wildlife refuge in the south San Francisco Bay area; to the Committee on Commerce.

By Mr. McCLELLAN (for himself and Mr. HRUSKA):

S. 2292. A bill to amend chapter 223, title 18, United States Code, to regulate litigation concerning source of evidence, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. McCLELLAN, which appear under a separate heading.)

By Mr. PELL (for himself, Mr. MAGNUSON, Mr. PASTORE, and Mr. FONG):

S. 2293. A bill to amend the National Sea Grant College and Program Act of 1966 in order to extend the authorizations for the purposes of such act; to the Committee on Labor and Public Welfare (by unanimous consent), and if and when reported, referred to the Committee on Commerce (by unanimous consent).

(See the remarks of Mr. PELL when he introduced the above bill, which appear under a separate heading.)

By Mr. MATHIAS:

S. 2294. A bill for the relief of Li Kam Lin; and

S. 2295. A bill for the relief of Chan Chung Sau; to the Committee on the Judiciary.

By Mr. CANNON (for himself and Mr. BIBLE):

S. 2296. A bill to authorize the Secretary of the Interior to grant easements with respect to public lands for certain purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. CANNON when he introduced the above bill, which appear under a separate heading.)

By Mr. BYRD of West Virginia (for Mr. DODD):

S. 2297. A bill for the relief of Maria Lynch; to the Committee on the Judiciary.

By Mr. BYRD of West Virginia (for Mr. SPARKMAN):

S. 2298. A bill to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes; to the Committee on Banking and Currency.

(See the remarks of Mr. BYRD of West Virginia when he introduced the above bill, which appear under a separate heading.)

By Mr. HART:

S. 2299. A bill granting jurisdiction to the Court of Claims to render judgment on certain claims of the Algonac Manufacturing Co. and John A. Maxwell against the United States; and

S. 2300. A bill for the relief of Betty J. Neil; to the Committee on the Judiciary.

By Mr. HART (for himself, Mr. BURDICK, Mr. HATFIELD, Mr. INOUYE, Mr. JAVITS, Mr. MCCARTHY, Mr. MONDALE, Mr. NELSON, Mr. PROXMIRE, Mr. WILLIAMS of New Jersey, and Mr. YOUNG of Ohio):

S. 2301. A bill to abolish the death penalty under all laws of the United States, and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. HART when he introduced the above bill, which appear under a separate heading.)

By Mr. CRANSTON:

S.J. Res. 114. A joint resolution to honor the citizen-juror and the modern jury system; to the Committee on the Judiciary.

(See the remarks of Mr. CRANSTON when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. MAGNUSON (for himself and Mr. JACKSON):

S.J. Res. 115. A joint resolution to authorize the President to designate the period beginning November 2, 1969, and ending November 8, 1969, as "National Executive Housekeepers Week"; to the Committee on the Judiciary.

S. 2286, S. 2287, AND S. 2288—INTRODUCTION OF BILLS CORRECTING INEQUITIES AGAINST GUAM

Mr. INOUYE. Mr. President, Guam has been a possession of the United States since December 1898 and achieved territorial status in 1950. However, despite the increasing assistance given to the Territory of Guam and its citizens, Guam has not been included under the provisions or benefits of a number of laws that other citizens of the United States enjoy. We in Hawaii fully understand the difficulties and peculiar status that the citizens of Guam must bear and, therefore, I am today introducing several bills to correct a number of inequities Guam's citizens face.

One measure would extend to Guam the provisions of the Davis-Bacon Act. The Davis-Bacon Act provides that laborers and mechanics employed on the construction or repair of public buildings of the United States and the District of Columbia be paid what is known as the "prevailing wage" in the area. My bill would include the Territory of Guam under the coverage of this act.

When both Hawaii and Alaska had territorial status, the provisions of the Davis-Bacon Act were extended to them in June of 1940. I am hopeful that my measure to include Guam under the coverage of this act will receive speedy consideration by the Congress.

Another measure I am introducing today would include Guam under the national unemployment compensation program that is administered by the Federal Government. Hawaii and Alaska were covered under the provisions of this act at the start of the program. The 10th Guam Legislature has petitioned the Congress to have Guam included under the benefits of this program. Enactment of this measure would be of minimal cost to the Federal Government since the employers and employees on Guam would pay into the fund and benefits would not be received until 2 years from the date the payments were first collected.

The PRESIDING OFFICER. The bills will be received and appropriately referred.

The bill (S. 2286), to include Guam within the purview of the Federal Unemployment Tax Act and related provisions of the Social Security Act, introduced by Mr. INOUYE, was received, read twice by its title and referred to the Committee on Finance;

The bill (S. 2287), to provide that the unincorporated territory of Guam shall be represented in Congress by a Territorial Deputy to the House of Representatives, introduced by Mr. INOUYE, was received, read twice by its title and referred to the Committee on Interior and Insular Affairs; and

The bill (S. 2288) to require the payment of prevailing rates of wages on Federal public works on Guam, introduced by Mr. INOUYE, was received, read twice by its title and referred to the Committee on Labor and Public Welfare.

S. 2289—INTRODUCTION OF A BILL TO ELIMINATE DISCRIMINATION TAXATION OF COMMON CARRIER PROPERTY

Mr. MAGNUSON. Mr. President, I introduce on behalf of myself and Senators HARTKE, HART, Moss, INOUYE, and PROUTY, for appropriate reference, a bill to amend the Interstate Commerce Act to provide a means to eliminate discriminatory taxation of common carrier property. The purpose of this bill is to eliminate the longstanding burden on our national transportation system arising out of discriminatory State and local taxation of interstate carrier property.

This proposed legislation contains two parts. The first part, to briefly summarize, makes it unlawful as a burden against interstate commerce for a State or locality to assess, collect, or impose a higher rate of property tax on interstate carriers than on other taxpayers. Unfortunately, interstate carriers, especially railroads, are easy prey for State and local tax assessors. They cannot just pull up their lines and terminals and leave a State when they are oppressively taxed. There is precedent for this provision in the language of section 13(4) of the Interstate Commerce Act, which declares unlawful a State's requiring a carrier to charge intrastate rates so low as to be unfair or to discriminate against, or to place a burden on interstate commerce.

The second part of the bill allows an aggrieved interstate carrier to bring suit in a Federal district court to challenge the excessive portion of a State or local transportation property tax. In such a suit, the carrier challenging any State or local tax would have the burden of proof.

In the past, I was reluctant to urge enactment of similar legislation because I believed the State taxing agencies and State courts should be given every opportunity to correct their outdated procedures which result in discriminatory taxation of carriers. But this problem is not a new one, and year after year has gone by without corrective State action. Some 9 years ago, pursuant to Senate Resolutions 29, 151, and 244 of the 86th Congress, the Senate authorized the establishment of a special study group on transportation policies in the United States. This study group submitted its national policy study report 8 years ago, including recommendations on means to eliminate State and local discriminatory taxation of carriers. This study group confirmed that there was a "studied and deliberate practice of assessing railroad property at a proportion of full value substantially higher than other property subject to the same tax rates." The study group favorably recommended a bill to eliminate this discriminatory state taxation.

Last year the Senate Commerce Com-

mittee favorably reported a bill, S. 927, identical to the one I introduce today. At the Commerce Committee hearings held during the 90th Congress on S. 927, States asked that they be given just a little more time to take care of this matter themselves. The committee agreed and amended S. 927 to allow the States 3 more years, after enactment, to correct this matter. Certainly if the States are ready and willing to provide equal justice in taxation to all their taxpayers, another 3 years should be sufficient for them to adjust their practices and laws.

As the Department of Transportation said in favorably commenting on legislation to eliminate discriminatory taxation:

> Reform in these aspects of property tax administration which affect interstate commerce should be accelerated. The present system in addition to its discriminatory aspect, results in the added burden of increased transportation costs to the consumer.

During the last Congress the Department of Transportation and the Interstate Commerce Commission expressed support for the objectives of this legislation to eliminate discriminatory State tax practices which weaken our national transportation system and burden our Nation's consumers.

I want to emphasize that this bill would in no way alter the freedom of a State to tax its taxpayers so long as interstate carriers are accorded equal tax treatment with other taxpayers. In the majority of States that now grant equal tax justice to all taxpayers, State property tax assessments and rates would in no way be touched by this bill. In the remaining States, 3 years would be provided by this measure for the States to adjust their tax practices. Even at the end of 3 years, no change would be required of any State unless and until an affected carrier could prove in court that State discriminatory tax practices exist. Only when a carrier proves in court that a State is discriminatorily taxing carrier property, would this statute have an effect on State tax practices.

Ultimately, the shipper and consumer pay the bill for discriminatory taxation of transportation. Not only are such taxes reflected in the transportation costs of goods purchased by the consumer, but also the consumers of States which do not discriminate are forced to share the cost of these burdensome tolls.

Mr. President, I ask unanimous consent that the text of the bill be printed at the close of my remarks on this proposed legislation.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2289) to amend the Interstate Commerce Act, as amended, in order to make unlawful, as unreasonable and unjust discrimination against and an undue burden upon interstate commerce, certain property tax assessments of common and contract carrier property, and for other purposes, introduced by Mr. MAGNUSON (for himself and other Senators), was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 2289

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Interstate Commerce Act, as amended, is amended by inserting after section 25 thereof a new section 25a as follows:

"SEC. 25a. (1) Notwithstanding the provisions of section 202(b), the following action by any State, or subdivision or agency thereof, whether such action be taken pursuant to a constitutional provision, statute, or administrative order or practice, or otherwise, is hereby declared to constitute an unreasonable and unjust discrimination against and an undue burden upon interstate commerce and is hereby forbidden and declared to be unlawful: (a) the assessment (but only to the extent of any portion based on excessive values as hereinafter described), for purposes of a property tax levied by any taxing district, of transportation property pursuant to a constitutional provision, statute, or administrative order or practice, or otherwise, is hereby declared to constitute an unreasonable and unjust discrimination against and an undue burden upon interstate commerce and is hereby forbidden and declared to be unlawful; (a) the assessment (but only to the extent of any portion based on excessive values as hereinafter described), for purposes of a property tax levied by any taxing district, of transportation property owned or used by any common or contract carrier subject to economic regulation pursuant to the provisions of the Interstate Commerce Act at a value which bears a higher ratio to the true market value of such transportation property than the assessed value of all other property in the taxing district subject to a property tax levy bears to the true market vaue of all such other property; (b) the collection of any tax on the portion of said assessment so declared to be unlawful; or (c) the collection of any ad valorem property tax on such transportation property at a tax rate higher than tax rates applicable to any other property in the taxing district.

"(2) Notwithstanding the provisions of section 1341, title 28, United States Code, or of the constitution or laws of any State, the district courts of the United States shall have jurisdiction, upon complaint and after hearing, to issue such writs of injunction or other property process, mandatory or otherwise, as may be necessary to restrain any State, or subdivision or agency thereof, or any person from doing anything or performing any act declared by paragraph (1) hereof to be unlawful: *Provided, however,* That such jurisdiction shall not be exclusive of that which any Federal or State court may otherwise have: *And provided further,* That the provisions of this paragraph (2) shall not become effective until three years after the date of enactment."

Mr. HARTKE. Mr. President, I am pleased to join as a cosponsor of the bill to amend the Interstate Commerce Act to provide a means to eliminate discriminatory taxation of common carrier property.

The bill has both a substantive and a procedural aspect. First, it would amend the Interstate Commerce Act to declare unlawful, as an unreasonable and unjust discrimination against and an undue burden upon interstate commerce, the assessment of property of any common carrier which bears a higher ratio to its true market value than the assessed value of other property in the taxing district subject to the same property tax levy. Second, it would provide a remedy in the Federal courts for such carriers against the collection of any tax based on such unlawful assessments.

Like Senator MAGNUSON I hesitate to endorse any legislation that imposes Federal restrictions on State taxation policies. But in this case too many States have failed to take action to correct a manifestly inequitable taxation policy. By allowing the States 3 years within which to act after the legislation becomes law, this bill is eminently fair. It would be grossly unfair to the railroads and other carriers as well as to citizens of nondiscriminating States to allow the existing situation to continue unabated.

S. 2290—INTRODUCTION OF THE YOUTH PARTICIPATION ACT OF 1969

Mr. HARRIS. Mr. President, I introduce for appropriate reference the Youth Participation Act of 1969, a bill to provide increased opportunities for young people to serve and participate in the institutions which direct our society and control its quality.

The bill is cosponsored by Senators BAYH, CANNON, HART, INOUYE, MANSFIELD, MONDALE, RANDOLPH, RIBICOFF, TYDINGS, and YARBOROUGH.

A year ago, I introduced a similar bill. Many excellent suggestions concerning the legislation have been made since then and are incorporated in the act of 1969, resulting in a more responsive and positive program.

We cannot continue to describe or discuss America's young people in the cliches of the past.

It is not totally pertinent to say that today's young people are the best we have ever had. We do not know for sure if that is true. What is pertinent is that they are the only young people we have.

We can no longer say to youth: "The future is yours." Because today youth replies: "We don't want to wait until then."

They want to participate now.

This summer, as graduation exercises take place on the Nation's campuses, these restless young people will come forward to seek a role in our social institutions. They are vocal, well informed and well educated. They have learned the ways of power and they are impatient to exercise it.

We cannot agree with all the demands this new breed will make, nor can institutions tolerate violence or unlawful intimidation. Neither can we deny legitimate requests for a share in helping shape the policies and institutions that control their lives.

One of the most compelling facts about today's youth is their number. In 1940 the percentage of our population under 25 was 40 percent; today it is 47 percent By 1972, about half of our total population will be under 25.

This fact alone should encourage us to provide a significant role for the talents and energies of this potent natural resource.

And today's young people are more aware of the world at a much earlier age than the generations which preceded them.

At the earliest ages, they are instantly linked, through the most sophisticated communications with a starving African child, a war being fought on the other

side of the globe, a riot in a city hundreds of miles away—and, soon, with the surface of the moon.

Not too long ago, college was a privilege of the Nation's elite. Today, 6 million young people are in college. That represents more than half of all high school graduates.

Today's young generation, eager to assume responsibility, is also the best prepared one we have ever had.

With a superior education, earlier maturity and a much quicker and greater awareness of the world around them, today's youth often grasp the realities of society with more perception than many of us who are older.

The framers of our Constitution had faith in young people. One is eligible for election to the House of Representatives at the age of 25, the Senate at age 30 and the Presidency at 35.

America has always been a young nation; and America's greatest promise has always been to her youth. But now a cruel irony threatens us—some young Americans view our established institutions with distrust and hostility.

Some display what Dr. Erich Fromm calls an "irrational destructiveness" that comes when hope is gone.

Some are simply apathetic and alienated.

Most are concerned about America's future and are committed to improving the quality of life for all our citizens.

But they are frustrated because of a sense of powerlessness—an inability to influence policies or events.

Certainly such programs as the Peace Corps and Vista have been so successful because they give young people a chance to participate, to effect changes. Yet, they are not enough.

Today's youth want more. They want a voice in shaping policy and in making decisions.

But the longer we wait to recognize this need, the greater the possibility that the racial minority will grow, capturing imagination and commitment of more young people. If this happens, more of the zeal and vigor of youth, which our country so desperately needs, may be dissipated.

While we must find a way to create meaningful programs for youth, we must beware of institutionalizing youth. Neither should we structure programs that are suited only to college students. Youth programs must be flexible enough to use the talents of all of our young people—rich and poor, black and white, more educated and less educated.

There is truth, but no originality, in the statement that youth is this country's greatest resource. The originality will be in what we do with it.

I believe we are ready to use this resource now.

The bill I am offering attempts to increase opportunities for young people to have a responsible and creative role in this country's future.

The Youth Participation Act of 1969 calls for the establishment of a Foundation on Youth Participation and a National Advisory Commission on Youth.

The Foundation on Youth Participation would be composed of a 12-member board of trustees. Members would be appointed by the President and confirmed by the Senate. Each member would serve for 3 years and would be required to be under 36 years old at the time of his or her appointment.

Subject to supervision and direction by the board of trustees, the Foundation programs would be carried out by a Director and Deputy Director. Both the Director and his Deputy would also be appointed by the President and confirmed by the Senate.

The Foundation, as its primary function, would make grants to public and nonprofit agencies which sponsor programs for youth under 25 years of age.

The Foundation would also encourage Government and industry to invest in youth participation programs.

Another function of the Foundation would be to offer technical assistance to those public and private agencies which contribute to the Foundation efforts.

The Foundation would maintain an information center on youth programs. There are presently 98 youth programs operating in this country. We need to assemble the facts concerning these programs in a central location where they are more readily accessible and easier for a young person to learn about.

In addition, the Foundation would facilitate a free exchange of information and ideas among existing youth organizations, resulting in a more efficient use of already established programs.

In addition to the Foundation, the act provides for a National Advisory Commission on Youth.

The Commission, composed of nine members, would be appointed by the President. At least four of the nine Commission members would be under 25 years of age at the time of appointment.

The Commission would be called upon to investigate matters of concern to youth, and to the Nation, such as campus disorders, and also would investigate youth programs to determine that the programs are in fact providing opportunities for youth.

The Commission would be directly responsible to the President and the Commission would advise the President and the Foundation as to ways of increasing participation of youth in our society.

Many other actions, such as providing for 18-year-olds to vote, must be taken. But the act of 1969, establishing a Foundation and a Commission to perform the functions just described, would be an important part of an effective effort to involve youth in a meaningful manner in the affairs of our society, recognizing the faith and strong hope that a majority of youth have in the future of this Nation.

Dr. Erich Fromm, when discussing hope, stated:

> Those whose hope is weak settle down for comfort or for violence; those whose hope is strong see and cherish all signs of new life and are ready every moment to help the birth of that which is ready to be born.

I hope that during this session of Congress we can offer a sign of new life and take prompt and favorable action on the Youth Participation Act of 1969, which is ready to be born.

Mr. President, I ask unanimous consent that a summary of the bill and the bill itself be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and summary will be printed in the RECORD.

The bill (S. 2290) to provide opportunities for American youth to serve in policymaking positions and to participate in national, State, and local programs of social and economic benefit to the country, introduced by Mr. HARRIS (for himself and other Senators), was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

S. 2290

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—GENERAL PROVISIONS

SHORT TITLE

SEC. 101. This Act may be cited as the "Youth Participation Act of 1969".

STATEMENT OF PURPOSE

SEC. 102. (a) The Congress finds that—

(1) encouragement of youth participation in national, State, and local programs of social and economic benefit to the country is an appropriate matter of concern to the Federal Government;

(2) American youth today are maturing—physically and intellectually—at earlier ages than ever before, yet technological and other advances have eliminated opportunities of work for an increasing proportion of the young, while requiring them to continue their education in order to acquire the skills and knowledge demanded by a sophisticated economy, and as a consequence, the period during which young people must wait to enter society as productive members in positions of power and responsibility lasts longer for youth today than for any previous generation;

(3) the extension of the period during which youth are waiting to enter society, the unprecedented rapidity of recent technological and social change and the emergence of huge, impersonal institutions have helped to produce social cleavages between older and younger Americans that are wider than the distances which separated past generations from one another, and these cleavages may grow unless the Nation deliberately creates a forum for a mutually respectful and meaningful exchange of opinions between old and young and develops viable means by which the young can participate more directly in American life and institutions and in decision making processes;

(4) acute problems of economic inequality, racial discrimination, and social inequity continue to burden the Nation and prevent it from achieving its full economic potential, from developing the full human resources of all of its citizens, and from fully realizing its democratic principles;

(5) in the idealism, energy, and imagination of American youth, the Nation possesses resources which can be mobilized to help relieve these problems, and are not now fully employed because the Nation lacks adequate institutions through which young people can channel their potential contribution to the national welfare; and

(6) programs at the national level, such as the Peace Corps, and programs at the State and local levels which rely heavily on the interest and participation of youth, now lack the necessary coordination to insure the maximum participation of youth.

(b) In order to implement the findings set forth in subsection (a), it is the purpose of this Act to create a new program, which will help to direct the resources of youth to the solution of critical needs of the country and encourage the fuller participation of youth in American public life, by offering young people opportunities to participate in the planning, administration, and operation of programs which benefit our society and economy, and by establishing national and State forums for the discussion and resolution of problems concerning youth.

DEFINITIONS

SEC. 103. As used in this Act—

(1) "youth program" means any program designed to provide opportunities for youth to serve or participate in projects of a social or economic benefit to the local community, the State, or the United States; and

(2) "private nonprofit organization" means any organization, including any organization owned or operated by one or more corporations, agencies, or associations, no part of the net earnings of which inures, or may lawfully inure, to the benefit of any private shareholder or individual.

TITLE II—FOUNDATION ON YOUTH PARTICIPATION

ESTABLISHMENT OF FOUNDATION ON YOUTH PARTICIPATION

SEC. 201. (a) There is hereby established in the executive branch of the Government an agency to be known as the Foundation on Youth Participation (hereinafter referred to as the "Foundation").

(b) The Foundation shall be subject to the supervision and direction of a Board of Trustees (hereinafter referred to as the "Board"). The Board shall be composed of twelve members appointed by the President by and with the advice and consent of the Senate, of whom at least eight shall be persons who at the time of their appointment have not attained thirty-six years of age. The Director of the Foundation shall be an ex officio member of the Board. In making appointments, the President shall consider recommendations from youth organizations, business and professional organizations, and from public agencies conducting or assisting programs relevant to young people.

(c) The term of office of appointed members of the Board shall be three years, except that—

(1) the members first taking office shall serve as designated by the President, four for a term of one year, four for a term of two years, and four for a term of three years; and

(2) any member appointed to fill a vacancy shall serve for the remainder of the term for which his predecessor was appointed.

(d) Members of the Board who are not regular full-time employees of the United States shall, while serving on business of the Foundation, be entitled to receive compensation at rates fixed by the President, but not exceeding $100 per diem, including travel time; and while so serving away from their homes or regular places of business. All members may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in Government service employed intermittently.

(e) The President shall call the first meeting of the Board of the Foundation at which the first order of business shall be the election of a chairman and a vice chairman who shall serve for a term of one year. The vice chairman shall perform the duties of the chairman in his absence.

(f) Any vacancy in the Board shall not affect its powers and seven members of the Board shall constitute a quorum.

DIRECTOR AND DEPUTY DIRECTOR

SEC. 202. (a) There shall be a Director and a Deputy Director of the Foundation who shall be appointed by the President, by and with the advice and consent of the Senate. In making such appointments the President is requested to give due consideration to any recommendations submitted to him by the Board. The Director shall be the chief executive officer of the Foundation. Each shall serve for a term of four years unless previously removed by the President. The Deputy Director shall perform such functions as the Director, with the approval of the Foundation, may prescribe, and be acting Director during the absence or disability of the Director or in the event of a vacancy in the office of the Director.

(b) The Director shall carry out the programs of the Foundation subject to its supervision and direction, and shall carry out such other functions as the Foundation may delegate to him consistent with the provisions of this title.

FUNCTIONS OF THE FOUNDATION

SEC. 203. (a) It shall be the function of the Foundation to—

(1) make grants to public agencies and nonprofit private organizations, upon such terms and conditions consistent with the provisions of this title as the Board deems appropriate, for—

(A) the establishment of State programs of youth participation approved by the Board;

(B) the development and operation, by public agencies and nonprofit private organizations, of programs under which young people who have not attained 25 years of age are recruited, selected, trained, and employed in social and economic programs of benefit to local communities, especially programs which concern youth generally and programs designed to reduce poverty and physical blight, improve health, education, and welfare of the people concerned, end racial discrimination, and achieve equal justice under law for all citizens; and

(C) the development of coherent plans and programs, by such public agencies and private nonprofit organizations, which ensure the meaningful participation of young people who have not attained 25 years of age in policy making positions of governmental and private organizations which administer social and economic programs, described in subparagraph (B);

(2) encourage private industry and charitable educational foundations to invest in youth participation programs;

(3) encourage State and local public agencies to develop and adequately fund youth participation programs;

(4) provide technical assistance, either directly or by way of grant or contract, to States and otherwise encourage the establishment of appropriate programs of youth participation at the State level;

(5) establish and maintain a national information center to collect, store, and analyze information with respect to youth programs and volunteer programs conducted by Federal, State, or local public agencies or private nonprofit organizations in order to disseminate appropriate materials concerning any such youth or volunteer program (including an evaluation thereof) which the Director determines is successful in carrying out the purposes for which it was established; and

(6) establish and encourage the adoption of procedures to assure the free exchange of information concerning volunteer opportunities in Volunteers in Service to America, the Peace Corps, the Job Corps, the Neighborhood Youth Corps, the Federal volunteer program established under this title and any other relevant Federal youth program, including making available streamlined application procedures for service in such programs.

(b) No payment may be made pursuant to paragraphs (1), and (5) of subsection (a) of this section, except upon application therefore, which is submitted to the Foundation in accordance with regulations and procedures established by the Board.

LIMITATION ON PAYMENTS

SEC. 204. (a) No payment shall be made pursuant to this title in excess of 90 per centum of the cost of the program, project, or activity for which an application is made.

(b) No compensation or stipend paid to any volunteer pursuant to this Act may exceed $4,000 in any fiscal year. This limitation shall not apply to medical or travel expenses and other necessary expenses as determined by the Foundation.

(c) Assistance pursuant to this Act shall not cover the cost of any land acquisition, construction, building acquisition, or acquisition of labor or equipment.

ADMINISTRATIVE PROVISIONS

SEC. 205. (a) In addition to any authority vested in it by other provisions of this title, the Foundation, in carrying out its functions, is authorized to——

(1) prescribe such regulations as it deems necessary governing the manner in which its functions shall be carried out;

(2) receive money and other property donated, bequeathed, or devised, without condition or restriction other than that it be used for the purposes of the Foundation; and to use, sell, or otherwise dispose of such property for the purpose of carrying out its functions;

(3) in the discretion of the Foundation, receive (and use, sell, or otherwise dispose of, in accordance with paragraph (2)) money and other property donated, bequeathed, or devised to the Foundation with a condition or restriction, including a condition that the Foundation use other funds of the Foundation for the purposes of the gift;

(4) appoint and fix the compensation of such personnel as may be necessary to carry out the provisions of this title;

(5) obtain the services of experts and consultants in accordance with the provisions of section 3109 of title 5, United States Code;

(6) accept and utilize the services of voluntary and noncompensated personnel and reimburse them for travel expenses, including per diem, as authorized by section 5703 of title 5, United States Code;

(7) enter into contracts, grants or other arrangements, or modifications thereof to carry out the provisions of this title, and such contracts or modifications thereof may, with the concurrence of two-thirds of the members of the Board, be entered into without performance or other bonds, and without regard to section 3709 of the Revised Statutes, as amended (41 U.S.C. 5) or any other provision of law relating to competitive bidding;

(8) make advance, progress, and other payments which the Board deems necessary under this title without regard to the provisions of section 3648 of the Revised Statutes, as amended (31 U.S.C. 529);

(9) rent office space in the District of Columbia; and

(10) perform such other duties as are necessary to carry out the provisions of this title.

(b) The Foundation shall submit to the President and to the Congress an annual report of its operations under this title which shall include a detailed statement of all public and private funds received and expended by it and such recommendations, including legislative recommendations, as the Foundation deems appropriate.

TRANSFER OF FUNCTIONS

SEC. 206. (a) The functions of the President's Council on Youth Opportunity and the Citizens Advisory Board on Youth Opportunity established pursuant to Executive Order 11330, approved March 6, 1967, are transferred to the Foundation.

(b) All personnel, assets, liabilities, property, and records as are determined by the

Director of the Bureau of the Budget to be employed, held, or used primarily in connection with any function transferred by subsection (a) are transferred to the Foundation.

COMPENSATION OF DIRECTOR AND DEPUTY DIRECTOR

SEC. 207. (a) Section 5314 of title 5, United States Code, is amended by adding at the end thereof the following new clause:

"(54) Director, Foundation on Youth Participation.".

(b) Section 5315 of such title is amended by adding at the end thereof the following new clause:

"(92) Deputy Director, Foundation on Youth Participation.".

APPROPRIATIONS AUTHORIZED

SEC. 208. There are hereby authorized to be appropriated such sums, not to exceed $20,000,000 in any fiscal year, to carry out the provisions of this title.

TITLE III—NATIONAL ADVISORY COMMISSION ON YOUTH COMMISSION ESTABLISHED

SEC. 301. (a) There is established an Advisory Commission on Youth (hereinafter referred to as the "Commission"), composed of 9 members to be appointed by the President from among persons who are recognized as specially qualified to serve on the Commission. In making such appointments the President shall give consideration to any recommendations submitted by the Board, and to the appointment of individuals who collectively will provide a broad range of experience, backgrounds, educational levels, occupations, age groups, ethnic origins, and regional representation. At least 4 members appointed to the Commission shall not have attained 25 years of age on the date of appointment.

(b) The terms of office of each member of the Commission shall be 3 years, except that—

(1) the members first taking office shall serve, as designated by the President, 3 for a term of 1 year, 3 for a term of 2 years, and 3 for a term of 3 years; and

(2) any member appointed to fill a vacancy shall serve for the remainder of the term for which his predecessor was appointed.

(c) The President shall designate one of the members of the Commission to serve as Chairman. Each Chairman shall serve for a term of two years.

(d) Any vacancy in the Commission shall not affect its powers, and 5 members of the Commission shall constitute a quorum.

FUNCTIONS OF THE COMMISSION

SEC. 302. It shall be the function of the Commission to—

(1) investigate issues of concern to youth in America, including, but not limited to, student unrest, higher educational opportunities for blue collar youth, youth working conditions, and employment opportunities for youth in government;

(2) investigate, study, and evaluate youth programs conducted or assisted under any provision of Federal law to determine if such programs are—

(A) being planned and administered so as to furnish substantial opportunities for the participation of young people;

(B) engaging volunteers in ways that permit and encourage them to assist in the planning, administration, and evaluation of policies and programs;

(C) where appropriate, assigning young volunteers to work directly with clients and beneficiaries of federally assisted or conducted programs; and

(D) providing experience which leads to careers for volunteers in the fields in which they work;

(3) investigate federally conducted or assisted programs which directly affect the lives of young people, including, but not limited to, programs under the jurisdiction of the Selective Service System, the Justice Department, the Civil Service Commission, and the Office of Economic Opportunity, and determine ways of improving such programs in order to make them more responsive to the needs and concerns of young people;

(4) advise the President, the Board, and the Foundation, after consideration of the findings of the Commission, with respect to ways of increasing the participation of youth in programs administered by the Foundation;

(5) consult with the President, Federal, State and local public agencies with respect to governmental programs affecting youth in order to recommend how such programs can be made more responsive to the needs and concerns of young people; and

(6) prepare and transmit to the President and to the Congress at least twice in each fiscal year a detailed report on the activities of the Commission during the 6-month period prior to the preparation of the report, together with such recommendations, including legislative recommendations, as the Commission deems appropriate, and may, at its discretion, prepare and transmit to the President and to the Congress such interim reports as are necessary to carry out the objectives of this title.

ADMINISTRATIVE POWERS

SEC. 303. (a) The Commission is authorized to—

(1) appoint and fix the compensation of such staff personnel, including an Executive Secretary, as it deems necessary;

(2) procure temporary and intermittent services to the same extent as is authorized by section 3109 of title 5, United States Code;

(3) conduct such hearings as may be required for the performance of the functions of the Commission, administer oaths for the purpose of taking evidence in any such hearings and issue subpenas to compel witnesses to appear and testify and to compel the production of documentary evidence in any such hearings;

(4) issue, amend, and revoke such regulations as may be necessary for the performance of the functions of the Commission;

(5) enter into contracts and other agreements with Federal, State, and local public agencies, private firms, institutions and individuals for the conduct of such research or surveys as may be required in the performance of the functions of the Commission;

(6) secure from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality of the United States Government, or of any State, or political subdivision thereof, information, estimates, and statistics required in the performance of the functions of the Commission; and

(7) delegate to any member of the Commission any of the foregoing functions.

(b) (1) Subpenas issued pursuant to paragraph (3) of subsection (a) shall bear the signature of the Chairman of the Commission and may be served by any person designated by the Chairman of the Commission for that purpose.

(2) The provisions of section 1821 of title 28, United States Code, shall apply to witnesses summoned to appear at any such hearing. The per diem and mileage allowances of witnesses so summoned under authority conferred by this section shall be paid from funds appropriated to the Commission.

(3) Any person who willfully neglects or refuses to appear, or refuses to qualify as a witness or to testify, or to produce any evidence in obedience to any subpena duly issued under authority of this section shall be fined not more than $500, or imprisoned for not more than six months, or both. Upon the certification by the Chairman of the Commission of the facts concerning any such willful disobedience by any person to the United States attorney for any judicial district in which such person resides or is found, such attorney shall proceed by information for the prosecution of such person for such offense.

(c) Each department, bureau, agency, board, Commission, office, independent establishment, or instrumentality referred to in paragraph (6) of subsection (a) is authorized and directed to furnish such information, suggestions, estimates, and statistics directly to the Commission upon written request made by the Chairman of the Commission.

COMPENSATION OF MEMBERS

SEC. 304. Members of the Commission who are not regular full-time employees of the United States shall, while serving on business of the Commission, be entitled to receive compensation at rates fixed by the President, but not exceeding $100 per diem, including travel time; and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in Government service employed intermittently.

APPROPRIATIONS AUTHORIZED

SEC. 305. There are authorized to be appropriated such sums not to exceed $5,000,000 in any fiscal year, to carry out the provisions of this title.

The material presented by Mr. HARRIS follows:

SUMMARY OF YOUTH PARTICIPATION ACT OF 1969

Section 101 provides that the act may be cited as the "Youth Participation Act of 1969."

Section 102 sets forth the purposes of the act which are primarily related to providing better opportunities for American youth to serve in policy-making positions and to participate in National, State, and local programs of social and economic benefit to the country.

Section 103 simply defines "youth programs" and "private nonprofit organization."

Section 201 establishes a Foundation on Youth Participation in the Executive Branch of the government which would be subject to the supervision and direction of a Board of Trustees composed of 12 members appointed by the President and confirmed by the Senate. Eight of the 12 members of the Board shall be persons who have not attained 36 years of age at the time of their appointment. The members of the Board are to serve for three year terms.

Section 202 provides for a Director and Deputy Director of the Foundation to be appointed by the President and confirmed by the Senate. The Director would be the Chief Executive Officer of the Foundation and would be responsible for the programs of the Foundation subject to its supervision and direction.

Section 203 lists the functions of the Foundation which are in part: to make grants to public agencies and nonprofit private organizations for programs of youth participation; to encourage private industry and charitable foundations to invest in youth programs; to provide technical assistance to those conducting youth programs; to provide an information center for youth programs; and to encourage the adoption of procedures to assure the free exchange of information between Federal agencies having programs primarily involving youth.

Section 204 limits the payment to a program or project to 90% of the cost and also limits the compensation or stipend paid to any volunteer to $4000 in any fiscal year.

Section 205 gives the Foundation the administrative powers essential to the accomplishment of its functions.

Section 206 provides for the transfer to the Foundation the functions of the President's

Council on Youth Opportunity and the Citizens Advisory Board on Youth Opportunity.

Section 207 establishes the compensation of the Director and Deputy Director.

Section 208 provides for an authorization of funds for the Foundation not to exceed $20,000,000, to carry out the provisions of this title.

Section 301 provides for a National Advisory Commission on Youth to be composed of 9 members appointed by the President. At least 4 of the members shall not have attained 25 years of age on the date of appointment. The term of office for a Commission member shall be three years.

Section 302 sets forth the functions of the Commission. These functions in part are: to investigate issues of concern to youth; to investigate and study youth programs; and to consult with and advise the President and make reports to the President.

Section 303 of the Act gives the Commission the administrative powers essential to carrying out its functions.

Section 304 of the Act provides for the compensation of the members of the Commission.

Section 305 of the Act provides for an authorization of $5,000,000 to carry out the provisions of this title.

S. 2292—INTRODUCTION OF A BILL TO REGULATE LITIGATION CONCERNING SUPPRESSION OF EVIDENCE

Mr. McCLELLAN. Mr. President, each morning, each afternoon, and each evening bring us new evidence from the streets of our cities, the campuses of our colleges, and the metropolitan strongholds of organized crime, that our system of criminal justice, as administered, is weak and needs strengthening. Muggings and robberies continue unabated, forcible rape, too frequently, is committed with impunity, criminal trespassing goes unpunished, and the hijackers of organized crime threaten to close down whole segments of our transportation industry. Few, if any, reputable commentators today seriously quarrel with those of us who suggest the need for wise and imaginative new legislation on topics touching law enforcement.

Earlier in this session of the Congress, along with several of my distinguished colleagues—men who share my concern about the quality of our law-enforcement efforts—I introduced S. 30, the Organized Crime Control Act of 1969, and S. 1861, the Corrupt Organizations Act of 1969. Those two bills are designed to deal forcefully with certain clearly defined needs of our criminal justice system. The Subcommittee on Criminal Laws and Procedures is now working to perfect these bills and to report them to this body at an early date.

Today, however, I wish to speak of a situation which has deteriorated recently, and on which the need for remedial action now is most pressing. I refer to the procedural problems surrounding the implementation of the so-called suppression sanction in our courts—a practice whereby logically relevant and manifestly probative evidence is excluded during the trial of an issue—as a technique of discipline for the allegedly unlawful manner in which such evidence was obtained.

Mr. President, on March 11, 1969, I addressed this body on the special challenge posed by organized crime. At that time, I expressed my concern that the administration of justice might be harmed by the Supreme Court's decision of the previous day in Alderman against United States, establishing a procedure for suppressing evidence derived from unlawful police conduct. I have now had the opportunity to examine that decision, to assess its implications, and to determine what courses of legislative action are open to us to mitigate its harmful effects. The remedy I propose is in this bill which I now rise to introduce, for myself and the distinguished Senator from Nebraska (Mr. HRUSKA). Mr. President, I ask that the bill be appropriately referred.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2292) to amend chapter 223, title 18, United States Code, to regulate litigation concerning sources of evidence, and for other purposes, introduced by Mr. McCLELLAN (for himself and Mr. HRUSKA), was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. McCLELLAN. In the Alderman decision, the convictions of Willie Israel Alderman and Felix Antonio Alderisio, in one case, and Igor A. Ivanov and John William Butenko, in another, were set aside and sent back to the lower courts for further proceedings, proceedings which may ultimately result in their escaping punishment for the crimes they committed. A necessary step in understanding this decision, therefore, is becoming acquainted with the backgrounds of these four defendants and their separate crimes.

I begin with Alderisio and Alderman. Alderisio, also known as "Milwaukee Phil," has been repeatedly identified before the Permanent Subcommittee on Investigations, in its examination of organized crime, and elsewhere, as a syndicate terrorist or "enforcer" and high-level leader of La Cosa Nostra in the Chicago area. He is engaged in the direction of gambling, loan sharking, and other illegal activities. His record goes back a number of years. He received a medical discharge from the U.S. Army in 1943 for "psychoneurosis, hypochondriasis, and defective ethical and moral outlook." In May 1962, he was arrested in a "hit" car—an automobile designed to be used in organized crime murders—that contained special, hidden switches connected to secret compartments for concealing shotguns, rifles, and pistols. He is, in short, a vicious hoodlum. Alderman, on the other hand, has a record of arrests dating back to 1930 for murder, robbery, and assault, but no prior convictions. In the 1940's, in association with the infamous Benjamin "Bugs" Siegel, he owned a large interest in a major Las Vegas gambling casino, and he has been employed, more recently, as a "pit boss" in another Las Vegas casino. He is said to have been responsible for at least 11 unsolved murders. He, too, is a notorious hoodlum.

In the trial court, Alderman and Alderisio were convicted of conspiring, in connection with the collection of a debt, to transmit in interstate commerce threats to commit a murder. At one point, during the course of the conspiracy, Alderiso flew from Chicago to the prospective victim's office in Denver, sat down, and said: "Ruby sent us. We came here to kill you." After a trial fair on the merits, both men were convicted with another, "Ruby" Kolod, now deceased, then an owner of the Desert Inn, a casino in Las Vegas. Alderman was sentenced to a term of 3 years and fined $5,000, while Alderisio was sentenced to 4½ years and fined $7,500.

The defendants' principal defense centered around electronic surveillance conducted by the FBI at the Desert Inn, surveillance that indicated that over a million dollars a month was being "skimmed"—taken without tax payment—from several Las Vegas casinos and distributed to organized crime figures throughout the United States.

I add here parenthetically that the scope of organized crime's Las Vegas "skim" is now being confirmed by the new profit figures reported since new owners have taken over some of the clubs, a process begun in late 1967 shortly after the FBI "bugging" became public. Reported profits have risen a staggering 40–45 percent per year and are now at an all-time high of $77.4 million in Clark County alone, where Las Vegas is located.

The trial judge examined, in camera, over 700 pages of surveillance logs of overheard conversations that the defendants claimed were relevant to the case; he found none relevant and refused to disclose them to the defense. The Government had contended that the privacy of innocent third parties and the lives of Government informants might be endangered by unnecessary disclosure. It was on this issue that appeal was taken.

I note that the crime occurred in 1959. They were indicted in 1964 and convicted in 1965. Now, almost 5 years later, the case is still on appeal—as yet unresolved.

II

Turning now to the other case, John Butenko was born in America of Russian parents. He graduated from Rutgers in 1949, with honors in electrical engineering, and in March 1960, he was employed by a subsidiary of the International Telephone and Telegraph Co. to work on a top secret project for the U.S. Air Force, a command and communication system for the Strategic Air Command. Butenko had top secret clearance.

Igor A. Ivanov, a Soviet national, was employed, in 1963, as a chauffeur at Antorg Trading Corp. in New York City.

In the trial court, Butenko and Ivanov were convicted of espionage conspiracy. They were arrested on October 29, 1963, while possessing top secret defense papers and camouflaged microfilm cameras and two-way radios. Three Soviet diplomatic personnel were, at the same time, charged as co-conspirators and declared persona non grata. Butenko was sentenced to a term of 30 years, while Ivanov was sentenced to 20 years.

As in the cases of Alderman and Alderisio, the defendants raised a defense centering around electronic surveillance conducted by the FBI. The Government

refused to turn over surveillance logs to the defense, contending they had no arguable relevance to the conspiracy for which the defendants were tried. Fear was expressed that national security interests would be prejudiced by the unnecessary revelation of the details of counter-espionage activities.

Thus, each case presented the same issue, once in an organized crime context, and once in a national security context.

III

The two cases were consolidated for decision in the Supreme Court, and one opinion, deciding both, was handed down. For purposes of the decision, the Court assumed that the surveillance was unlawful in both instances, and left open for later resolution the lawfulness of the surveillance in Butenko, an issue now in litigation in the lower courts. In an opinion authored by Mr. Justice White, in which two other Justices, the Chief Justice and Mr. Justice Brennan, concurred, the Supreme Court held that the following the traditional view, before a defendant could raise the unlawfulness of a search and seizure, he had to have standing to object, that is, "his privacy" had to be invaded; it had to be "his conversations" that were overheard or "his house" in which the overhearing occurred. Since constitutional rights were personal, they could be asserted only personally; vicarious assertion was not to be permitted. Justices Harlan and Stewart, in partial dissent, would not extend standing to any except those whose conversations were overheard. Justice Fortas and Douglas, also in dissent, would extend standing as well to those against whom the surveillance was directed, even though their conversations were not overheard or their premises invaded.

Once illegality and standing had been shown, moreover, the Court held that all materials in the Government's files had to be disclosed to the defense. It rejected the Government's contention that only material "arguably relevant" to the case need be shown to the defense, and that it was permissible for a court, through an in-camera inspection, to winnow out the "irrelevant" from the "arguably relevant," disclosing to the defense only the "arguably relevant." The majority rested its position on the need for an adversary hearing to determine the question of taint. An ex parte proceeding was felt to be too much subject to error. The Court considered that protective orders, under which the defendant and his counsel would be enjoined from making improper use of the disclosed materials, would suffice to protect other interests.

In the disclosure aspect of the majority opinion, all Justices, save two, Justices Harlan and Fortas, concurred; they drew a distinction between the usual case and the national security case, holding that an in-camera inspection procedure was permissible solely in the national security case. Mr. Justice Harlan significantly observed:

> There is, however, at least one class of cases in which the standard considerations do not apply. I refer to the situations exemplified by *Ivanov* and *Butenko*, in which the defendant is charged, under one statute or another, with spying for a foreign power. In contrast to the typical situation, here the accused may learn important new information even if the turnover is limited to conversations in which he was a participant. For example, he may learn the location of a listening devise—a fact that may be of crucial significance in espionage work. Moreover, he will be entitled to learn this fact even though a valid warrant has subsequently been issued authorizing electronic surveillance at the same location. Similarly, the accused may find out that the United States has obtained certain information that his foreign government believes is still secret, even when our Government has also received this information from an independent source in a constitutional way. And he may learn that those in whom he has been reposing confidence are in fact American undercover agents.
>
> Even more important, there is much less reason to believe that a protective court order will effectively deter the defendant in an espionage case from turning over the new information he has received to those who are not entitled to it. For in an espionage case, the defendant is someone the grand jury has found is likely to have passed secrets to a foreign power. It is one thing to believe that the normal criminal defendant will refuse to pass on information if threatened with severe penalties for unauthorized disclosure. It is quite a different thing to believe that a defendant who is probably a spy will not pass on to the foreign power any additional information he has received. . . .
>
> The Court's failure to consider the special characteristics of the *Ivanov* and *Butenko* cases is particularly surprising in the light of the reasons it gives for creating an absolute rule in favor of an automatic turnover. For the majority properly recognizes that its preference for a full adversary hearing cannot be justified by an easy reference to an absolute principle condemning *in camera* judicial decisions in all situations. . . . If, as the Court rightly states, the propriety of an *in camera* screening procedure is a "matter of judgment", . . . depending on an informed consideration of all the competing factors, I do not understand why the trial judge should not be authorized to consider whether the accused simply cannot be trusted to keep the Government's records confidential. Nor do I understand why the Government must be confronted with the choice of dismissing the indictment or disclosing the information because the accused cannot be counted on to keep faith with the Court. Moreover, it is not difficult to imagine cases in which the danger of unauthorized disclosure of important information would clearly outweigh the risk that an error may be made by the trial judge in determining whether a particular conversation is arguably relevant to the pending prosecution. It may well be, for example, that the number of conversations at issue is very small. Yet though the Court itself recognizes that "the need for adversary inquiry is increased by the complexity of the issues presented for adjudication," . . . it nevertheless leaves no room for an informed decision by the trial judge that the risk of error on the facts of a given case is insubstantial.

Mr. Justice Black dissented without reaching the merits of the case, while Mr. Justice Marshall did not participate.

IV

Eight days after the Alderman decision, the Subcommittee on Criminal Laws and Procedures began to hold hearings on S. 30 and three related bills. Attorney General John N. Mitchell, testifying in that hearing, in response to a question from me, termed the Alderman case as a "great disappointment to the Department." He indicated:

> (T)he problems are . . . numerous, but the basis of the disappointment of the Department is that not only does the court opinion provide for the disclosure of all relevant material to the defendant's rights, but it provides for the disclosure of the entire logs of the operation, and in some of these instances, national security is involved, and in some other instances the very life and existence of witnesses are involved.

Indeed, the Department of Justice was sufficiently concerned by the Court's decision that it took the extraordinary procedure of filing a petition for rehearing—a petition which was summarily denied on March 24, 1969. On the same day, in Giordano against United States, No. 28, October term 1968, the Court remanded 17 other pending cases involving surveillance back to lower courts for further hearings. It did, however, decide in Taglianetti against United States, No. 446, October term 1968, that the in camera procedure held impermissible in Alderman for use on the question of scope of taint was permissible on the question of standing—a strange turnabout. Nonetheless, Alderman stands today, on the basic disclosure issue, as the law of the land—at least until and unless this body takes action to change it.

Elaborating on the concerns expressed by the Attorney General, Mr. Will Wilson, the Assistant Attorney General in charge of the Criminal Division, in a letter to me dated April 11, 1969, observed:

> There is little doubt that the requirement for evidentiary hearings on obviously irrelevant materials will have a substantial impact on our prosecutive efforts. Our experience has shown that the ingenuity of defense counsel is unlimited in advancing specious suggestions of the relevance of material which could not conceivably have led to any evidence used at trial. Protracted hearings have ensued because, even though a defendant realizes that he has no chance of proving taint, his most precious commodity is time. I am aware of one case where several defendants, found guilty by a jury more than four years ago, have postponed commencement of their sentences for at least two of those years as the result of an unavailing lengthy hearing (and appeal) concerning one overheard conversation, and they will presumably be able to further delay incarceration as the result of another hearing (and appeal) which will now be required.
>
> . . . [W]e have yet to discover a single instance where a case claimed by the Government to have been untainted has been proven to be otherwise by the defense. Needless to say, this constitutes a most wasteful consumption of manpower, prosecutive and judicial. Since this problem will now increase as the result of the requirement for additional hearings in cases concluded long ago, our personnel, already spread thin in our current effort against organized crime, will have to be redeployed to handle these matters. It is clear, too, that the problem will not soon disappear, for under the present state of the law there is no statute of limitations on when a defendant can raise this issue. Thus, in 1980, for instance, defendants will still be demanding records of overhearings which occurred twenty or twenty-five years before, and they will still be demanding the protracted hearings which they are now allowed. Of course where an individual was accidentally overheard many years ago on a national security device which cannot be revealed, he will enjoy, in effect, immunity from prosecution, unless we can convince the courts that the surveillances involved were constitutional.

Hearings in these cases have also posed another substantial problems, that is, they have resulted in the disclosure of facts which have been pieced together by defendants in such a way as to enable them to identify sensitively placed and extremely valuable government informants, with resultant danger to the informants' lives. Some hearings in the future may also result in the revelation of overheard conversations which unjustly reflect upon the integrity of persons discussed therein. Our experience has shown that protective orders have not been effective.

Clearly, the problems posed by Alderman are formidable.

I ask unanimous consent to have the full text of Mr. Wilson's letter of April 11, to which I have referred, printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. McCLELLAN. While understandably neither the Attorney General nor Mr. Wilson commented upon the effect which Alderman might have upon specific cases, the day after that case was decided, the New York Times, under the byline of Mr. Fred P. Graham, reported that "the Justice Department (might) be forced to drop some of its most important criminal prosecutions," including the prosecutions against Cassius Clay, H. "Rap" Brown, Dr. Benjamin Spock, and the militant leaders who participated in demonstrations at the Chicago convention last August. Mr. Graham indicated that the only apparent alternative to such dismissals—dismissals that, in effect, grant the defendant immunity—was for the Government to "concede (in court) that it had been tapping the telephones of many foreign embassies and since wiretapping of foreign embassies is common, many defendants in criminal cases have been overheard while calling to discuss visas and other routine matters." The decision thus promises wide, unforeseen impact. The Solicitor General, in his petition for rehearing, noted above, put it this way:

[T]he result of the decision . . . is, in practical terms, to provide . . . [many] defendants with immunity from prosecution for all crimes past, present or future—and, we may add, to point the way for the well-advised person to obtain such immunity by simply making a telephone call.

I emphasize, too, that even where the Government does elect to make disclosure rather than to drop a prosecution, Government agents and informants may be endangered; leaks of information may occur, despite protective orders, as they have already occurred in other disclosure cases, all to the detriment of individual reputations and important investigations and prosecutions; citizens who fear the power of foreign subversive agents and cartels of criminals may be deterred from providing information and cooperation to law enforcement officials; and the fragile working relationships painstakingly and slowly developed between Federal and State law-enforcement agencies may be exposed to unnecessary stresses.

All of this, Mr. President, says little of the justice-delaying, time-consuming hearings, noted by Mr. Wilson, that will now be required to resolve farfetched claims that evidence to be introduced at trial is "fruit of a poisonous tree," litigation which will contribute in a major way to a crisis of delay in our courts. Indeed, the Supreme Court itself has acknowledged, in Desist against United States, No. 12, October term 1968, decided March 24, 1969:

. . . The determination of whether a particular instance of eavesdropping led to the introduction of evidence at trial would in most cases be a difficult and time-consuming task, which, particularly when attempted long after the event, would impose a weighty burden on any court.

Yet the Court gave no recognition to this hard fact in its Alderman decision. Our courts simply cannot tolerate, I suggest, a rule which will impose such a "time-consuming task" unnecessarily in so many cases.

Already, delay is a pressing problem in our courts—a problem which is not answered simply by allocating greater resources to the task. For a major portion of this delay is attributable to the procedural implications of the Supreme Court's revolution in creating new rights for the accused, rights which are all too often to be vindicated at the expense of swift justice.

The President's Commission on Crime in the District of Columbia has thoroughly documented the drastic character and immediacy of this problem of delay, and the contribution of suppression and other pretrial motions to that delay. The experience of the District of Columbia is especially instructive since, as a wholly Federal jurisdiction, it has felt earliest and most heavily the impact of the Court's recent criminal decisions. The Commission studied a mass of statistical data and, in 1966, published a report that concluded that the median time between indictment and disposition in district court felony cases had increased more than 25 percent from 1964 to 1966. The backlog of district court felony cases, moreover, increased by 50 percent in that period, the highest level in 15 years. Significantly, the Commission found:

The greatest increases in delay in felony cases appear[ed] to have occurred between indictment and trial . . . [M]edian time between indictment and trial court disposition exclusive of sentence nearly doubled between calendar years 1960 and 1965. . . .

From 1950 to 1965, the number of district court felony defendants filing motions increased by nearly one-half. As a result, in 1965, in cases where two or more motions were filed, time to disposition was double that in other cases. The Commission described the delays it found as "excessive," and observed:

Court decisions and legislation regulating the conduct of trials and securing the rights of defendants have undoubtedly increased the amount of time required to process a criminal case in the District Court . . . .

. . . . These developments, among others, have contributed to the substantial increases in motions and continuances as well as to the less significant increase in trial time. The desirability of these developments, of course, cannot be assessed solely, or even principally, in terms of their contributions to increased delays in the prosecution of felony cases. Their impact on delay, however, suggests that greater priority should attach to efforts aimed at accommodating these judicial and legislative requirements with the goal of expeditious handling of criminal cases.

The concluding words of the Massachusetts Supreme Judicial Court, in a recent case involving the application of the Miranda confession rule, *Commonwealth* v. *Scott*, Mass. Sup. Jud. Ct., decided March 11, 1969, authoritatively state the intolerable situation in which we find ourselves:

In this matter approximately one half the trial time which consumed over ten days was absorbed in the taking of testimony relative to the warnings given to the defendants under the *Miranda* case. This transcript, containing 1,004 pages of evidence, 500 pages of which relate to *Miranda* warnings, is amply demonstrative of the reason why there is heavy and constantly increasing congestion in the jury trials of criminal cases.

This crisis in our courts can be, with profit, compared with the situation in England, where evidence is not excluded on the ground that it was obtained illegally. The average English criminal case takes 1 month from arrest to trial and 1 or 2 months to final disposition on appeal. In contrast, the passage of 5 to 10 months from arrest to trial and 20 months to final disposition on appeal in the District of Columbia demonstrates inexcusable failure of our criminal justice system to provide swift justice. Indeed, I note that the situation is getting worse rather than better, as rates of appeal in criminal cases are climbing steeply, approaching 100 percent.

If lengthy proceedings and disclosure really were invariably necessary in the determination of valid claims, then it would be, of course, the duty of government to provide the necessary judicial and administrative facilities to avoid delay and to accept the consequences of necessary disclosure. However, the simple fact is that the very great majority of the claims that evidence is "fruit of the poisonous tree" can be found on the most cursory examination to be completely groundless.

I have just received, Mr. President, in response to an inquiry I made of the Department of Justice, a letter dated May 29, signed by Mr. Will Wilson, Assistant Attorney General.

Assistant Attorney General Wilson, in this letter to me today, summarized the results of "an extensive review . . . by the Department of Justice . . . to determine the instances in which there might have been unlawful electronic surveillance affecting a case which had been brought to trial."

He indicated that there had been approximately 6,750 inquiries made by Justice Department attorneys of the FBI, to determine if particular individuals were subjected to electronic surveillance. Yet, Mr. Wilson reports, there have been only 75 to 100 cases requiring hearings on the issue of disclosure, and only three cases, two Federal and one State, have been dismissed as tainted.

This search for needles in the haystack, according to Mr. Wilson, has consumed "an enormous amount of time" of both agents and attorneys.

I ask unanimous consent to have the complete text of Mr. Wilson's letter of

this date printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. McCLELLAN. Mr. President, our system of justice can no longer abide the sacrifice of swiftness, governmental confidentiality, effective law enforcement and Federal-State cooperation on an altar of will-o'-the-wisp police improprieties. We must provide reasonable limitations on, and reasoned procedures for, suppression proceedings.

To achieve this goal, I am today introducing a bill to amend chapter 223, title 18, United States Code, which is designed to avoid needless pretrial, trial, and appellate litigation of suppression issues and unnecessary and prejudicial disclosure, while preserving fully the right to present and support challenges to evidence obtained illegally.

I ask unanimous consent to have the text of the bill printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

V

Mr. McCLELLAN. Mr. President, there is no lack of power in the Congress to enact remedial legislation in this area. The Supreme Court itself in Alderman did not state that the ruling was required by the Constitution itself. Indeed, one of the most basic rules of Supreme Court adjudication is that the Court places its decisions upon constitutional grounds only where the absence of nonconstitutional grounds makes such a decision unavoidable. See *Peters* v. *Hobby*, 349 U.S. 331 (1955). Therefore, one must conclude that the Alderman decision states only a court-made rule premised on the supervisory jurisdiction of the Court over the Federal courts and not a constitutional interpretation. It is true, of course, that the decision is designed to enforce substantive rights guaranteed by the fourth amendment. However, it is settled constitutional doctrine that the details of implementation of constitutional guarantees often lie below the threshold of constitutional concern. See *Ker* v. *California*, 374 U.S. 23, 34 (1963). We are implementing Federal policy. Cf. *Adams* v. *Maryland*, 347 U.S. 179 (1954). I note, too, that section 5 of the 14th amendment provides that "the Congress shall have power to enforce, by appropriate legislation, the provisions of this article." Cf. *Katzenbach* v. *Morgan*, 384 U.S. 641 (1966). Our power here is plenary.

The bill which I am introducing contains two principal provisions. The first forbids consideration of a claim that evidence is "fruit of a poisonous tree" where the event which the evidence proves occurred more than 5 years after the alleged illegality. Since there is virtually no likelihood of taint in such a case, the adverse consequences of delay and disclosure discussed above are entirely unwarranted. The utility of such a time limitation, which is specific, easily administered, and established on the basis of concrete law enforcement experience, is aptly illustrated by the case of Emmanual Blaz Mrkonjic-Ruzic, which was recently remanded by the Supreme Court for further proceedings in light of Alderman. The brief of the Solicitor General describes the situation as follows:

> In this case, the petitioner, on one occasion five years before the date of the crime charged in the indictment, fell into an electronic surveillance and was overheard participating in one brief conversation. It is apparent from an examination of the one and a half line surveillance log entry reflecting that conversation that the overhearing of the conversation could not possibly have provided evidence against the petitioner. It would not take a trial judge five minutes to make that determination. Yet, it is also apparent from an examination of that log that the government could not disclose, except to a court, where his conversation was overheard.

In a footnote to the same brief, incidentally, the Solicitor General also pointed out:

> The government did in one instance advise a defendant in a criminal case that he had been overheard during the course of such a surveillance. Although the Court issued a protective order prohibiting the defendant or his counsel from disclosing that information, two weeks after the disclosure was made an article appeared in the newspapers reciting the facts of the surveillance.

Obviously, then, the protective order is not a wholly adequate guard against unwarranted disclosure.

This 5-year limitation is in part—and I emphasize in part—an analogy to a statute of limitations, such as are common in State and Federal law to limit the commencement of criminal prosecutions or civil actions. The passage of more than 5 years from the time of the allegedly illegal conduct makes it less likely that the existence or absence of any connection between the illegality and the evidence offered at trial could be reliably determined and more likely that a hearing on the question would be confusing and unduly long. Those considerations—and the extreme unlikelihood of taint—justify the establishment of such a specific time limitation. This provision is an excellent example of the type of rule which a legislature can far better declare than a court, and such a limitation is long overdue if our courts are not to be completely paralyzed and our law enforcement agencies hamstrung by endless litigation of tenuous claims.

The second provision of the bill applies to cases not resolved by the 5-year provision, and forbids the making of a disclosure order unless and until the court or agency finds that the information to be disclosed "may be relevant" and that disclosure is "in the interest of justice."

Application of this provision will ordinarily require in camera inspection of information when, according to the Government, there is a bare possibility of relevance. There is no duty at all under *Brady* v. *Maryland*, 373 U.S. 83 (1963), to disclose clearly irrelevant information to court or defendant. Occasionally circumstances may require the presentation of evidence in addition to in camera inspection, but such cases should be exceptional. For example, in *Aiuppa* v. *United States*, No. 124, October term, 1968, a subject of an organized crime electronic surveillance happened to be arrested by a forest ranger for violating migratory bird laws. In that case and in many other, in camera inspection or a brief hearing, or both, often can demonstrate beyond any doubt that disclosure need not be ordered.

This bill establishes two standards for determining when disclosure should be ordered. The first is contained in the phrase "may be relevant." That is a lower standard than the standard of "arguable relevance" suggested by the Department of Justice in its brief in the Alderman case. On the other hand, the phrase "may be relevant" requires more than mere speculation as to relevance, and is intended to act as an absolute floor preventing disclosure orders except where a likelihood of relevance appears.

Above that absolute floor the second standard, "the interest of justice," operates as a sliding scale permitting the court or agency to take into account every factor relevant to determining whether or not to order disclosure, such as the likelihood of danger to informants or agents, the likelihood of harm to the reputation of a third party, the constitutional or statutory source of the rule of law allegedly violated in obtaining the evidence, the likelihood that harm to the national security would be caused by disclosure, the amount and content of the information disclosure of which is sought, and the like. See *Roviaro* v. *United States*, 353 U.S. 53 (1959); *McCray* v. *Illinois*, 386 U.S. 300 (1967); *United States ex rel Coffey* v. *Fay*, 344 F. 2d 625 (2d Cir. 1965).

The Congress is perfectly free to enact these standards since Alderman was a supervisory decision, and the standard of "arguable relevance" which Alderman rejected was sufficiently different from that adopted by this bill.

Precedents other than Alderman are, however, ample to sustain the constitutionality and sound policy of enacting this provision. Federal district judges, according to tradition and existing practice, have discretion to decide, on ex parte in camera examination of materials, whether they are arguably relevant and require further proceedings to determine their relevancy. There are a number of situations well established in the law where it has been determined that, when some recognized interest militates against unnecessary disclosure of information which a litigant is seeking to discover, it is appropriate to submit the material to the district judge for in camera examination so that he may determine whether disclosure should be ordered. These include:

First. The scope of a subpena duces tecum. *Westinghouse Electric Corp.* v. *City of Burlington*, 351 F. 2d 762 (C.A. D.C. 1965); *Boeing Airplane Co.* v. *Coggeshall*, 280 F. 2d 654 (C.A.D.C. 1960).

Second. Various situations in the field of discovery. Rule 16 of the Federal Rules of Criminal Procedure provides that the trial court may deny a defendant pretrial discovery in a criminal case on the basis of an in camera showing of cause by the Government. See, also, *Pittsburgh Plate Glass Co.* v. *United States*, 360 U.S. 395, 401–410 (1959) (dissent of Brennan, J.).

Both the Civil and Criminal Rules of Procedure provide that pretrial discovery should be limited to "relevant" ma-

terial. They cast upon the judge, prior to trial, the burden of determining what may eventually prove to be relevant. See F.R. Civ. P. Rule 26(b); F.R. Crim. P. Rule 16; *cf.* F.R. Crim. P. Rule 17(c).

Third. The Jencks statute, 18 U.S.C., § 3500(c), which provides that:

[I]f the United States claims that any statement ordered to be produced under this section contains matter which does not relate to the subject matter of the testimony of the witness, the court shall order the United States to deliver such statement for the inspection of the court in camera. Upon such delivery the court shall excise the portions of such statement which do not relate to the subject matter of the testimony of the witness. With such material excised, the court shall then direct delivery of such statement to the defendant for his use.

The Supreme Court has expressly approved the statutory in camera procedure provided by the Jencks statute, 18 U.S.C. § 3500, as to prior statements. *Palermo* v. *United States*, 360 U.S. 343, 354 (1959).

Fourth. The discovery of prior grand jury testimony. See *Dennis* v. *United States*, 384 U.S. 855, 875 (1966).

Mr. President, this bill is as broad as the need for it. It applies to all forums and proceedings and all Federal grounds of challenge. In addition, it applies to proceedings at every stage of a case, occurring after the effective date of the act, regardless of when the proceedings were initially commenced. Application of the bill to pending proceedings is prospective and does not violate the ex post facto clause of the Constitution, since the bill governs only procedure and evidence and not the definition or punishment prescribed for crime. See *Hopt* v. *Utah*, 110 U.S. 574, 589 (1884). Furthermore, it was felt consistent with the purposes of this bill to draw a narrow exception making the 5-year limitation period inapplicable to any case pending on its effective date in which the determination of inadmissibility could be made without further evidentiary hearings or disclosure.

The bill also contains a separability clause.

The bill neither codifies nor changes present law defining illegal conduct and prescribing requirements for standing to object to such conduct. See *Taglianetti* v. *United States*, U.S. No. 466, October term 1968, decided March 24, 1969; *Giordano* v. *United States*, U.S. No. 28, October term 1968, decided March 24, 1969.

Although it ordinarily will be necessary for judges making disclosure orders to enter protective orders forbidding parties, attorneys, and any others to whom disclosure is authorized from revealing information ordered disclosed to them, no provision is made for such protective orders in this bill, for two reasons. First, many authorities which might make disclosure orders, such as Federal and State courts, already possess ample power both to make protective orders and to enforce them, despite their limited effect, in the rigorous way demanded by the confidentiality of much information relating to suppression claims. Second, the two major provisions of this bill are stated strictly in the form of prohibitions and carry no negative implication authorizing consideration of challenges to evidence which under present law would not be considered, nor authorizing disclosure orders which under present law would not be appropriate. Therefore, there is no reason to suppose that enactment of this bill would create a need for greater power to make and enforce protective orders than now exists.

VII

Mr. President, I believe that it may well be possible to develop additional provisions which could be inserted in this bill, and to change the provisions which it now contains, to make the bill more effective. I am not committed to the specific words of the bill in its present form, and would welcome such improvements. I assume that the bill will be referred to the Committee on the Judiciary, and then to the Subcommittee on Criminal Laws and Procedures, of which I am chairman. In that event, I would expect to include the bill among those measures on which the subcommittee is to hold hearings on June 3 and 4, and perhaps thereafter. I hope that the bill as presently drafted raises the most important questions in a useful way, and that we might obtain creative testimony designed to shape this bill into one which could facilitate the application of sound exclusionary rules while arresting the stagnation of our legal processes.

Mr. President, lawless behavior and disrespect for our most vital institutions have become so virulent and widespread in the United States today that Congress will be derelict in its duty if it fails promptly to take affirmative steps to improve law enforcement, such as the steps suggested in this bill. If such steps are not taken, all too often we can expect that habitual criminals will be released and protected from further prosecution after conviction of heinous crimes on reliable evidence. Officials and citizens increasingly will be misled into seeing pretrial challenges to police activity rather than trials of guilt or innocence as the battlegrounds upon which the foundations of our civilization are defended or lost. Secret Government intelligence will be furnished to the very individuals whose only use for it is to threaten not only our public agents and their work but our very institutions. The Congress must not permit the development of rules of procedure and punishment by which the freedom and security of our best citizens are surrendered to the whim and criminal greed of our worst, and by which new generations are taught that our institutions are impotent. We have a solemn duty to act, and to act now.

EXHIBIT 1

DEPARTMENT OF JUSTICE,
Washington, D.C., April 11, 1969.

Hon. JOHN L. MCCLELLAN,
Chairman, Subcomittee on Criminal Laws and Procedures of the Committee on the Judiciary, U.S. Senate, Washington, D.C.

DEAR SENATOR: This is in response to your request for the views of the Department of Justice on (1) the effects of the *Spinelli* and *Alderman* (Kolod) decisions upon the Department's criminal prosecutions, and (2) what legislative action, if any, would mitigate the possible effects of these decisions.

SPINELLI VERSUS UNITED STATES

As you are aware, the primary issue in *Spinelli* was the sufficiency of an affidavit in support of a search warrant. The Fourth Amendment requires that "no warrants shall issue but upon probable cause. . . ." The Supreme Court, by a 5 to 3 vote, held the affidavit used to obtain a warrant against Spinelli did not show probable cause.

There is no doubt that the requirements of probable cause have increased as a result of the Court's decision. The Court took notice of the fact that the affidavit in issue was more sufficient than the one in issue in *Aguilar* v. *Texas*, 378 U.S. 108. However, it was not sufficient to meet the Court's interpretation of probable cause.

The Court held that where the government relies upon information from an informant, the affidavit must disclose the basis for the belief that the information received is worthy of credibility. This may be either by a statement of how the informant obtained his information or by such specificity of detail as to make clear that the informant was not relying on general reputation. Where the information received from the informant is not of such degree of certainty then the corroborating information on which the government relies must go, not only to the credibility of the informant, but to the criminality of the activities.

In some cases the Court's decision in *Spinelli* will make necessary more thorough investigations and more complete affidavits. It is difficult to assess the effects of the added burden at this time, but it does mean an increase in the workload involved in securing any warrants to which *Spinelli* is applicable, and also fewer search warrants issued because of the greater requirements for showing probable cause.

The Department cannot envision any legislation which could alter the *Spinelli* decision's requirements. Probable cause is the specific constitutional test to be applied to the validity of a search warrant. While we may disagree with the Court's application of the facts to this test in a particular case, unless the test itself is altered, there is little that can be done to change the results. Only a constitutional amendment could change the standard to be applied.

ALDERMAN VERSUS UNITED STATES

An appreciation of the significance of the *Alderman* decision requires some background information. After the target of an electronic eavesdropping discovered a device in his office, it appeared that the overhearings so discovered might affect some important pending or contemplated cases. Inquiry resulted in the discovery that this danger did, in fact, exist. The government, under the obligation imposed on the prosecution by *Brady* v. *Maryland*, 373 U.S. 583, undertook to advise the appropriate court of electronic surveillance. The view of the government was that its obligation extended to material "arguably relevant" to the case at hand. In the initial decision in *Alderman* (then denominated *Kolod*) the Supreme Court, which had been advised of the government's policy, held that the government could not, *ex parte*, determine the relevancy of any logs of overhearings, but that relevancy had to be determined in an adversary hearing, 390 U.S. 136. On petition for rehearing, the government stated that it would accept the determination that it could not make the determination of relevancy *ex parte*, but urged that the logs which in the government's view were not arguably relevant should in the first instance be submitted to the court for its *in camera* inspection, so that it could determine whether a hearing was necessary. The Court granted the petition for rehearing in *Alderman*, and also granted certiorari in the cases of *Ivanov* and *Butenko*, involving prosecutions for espionage, where the surveillances (which were deemed by the government to

be not arguably relevant) had been conducted in the interest of national security.

The Court, in its decision of March 10, 1969, held that the records of the surveillance of any defendant who has standing to object to their use should be turned over to the defendant without a preliminary *in camera* examination by the district judge. [The majority held that a person whose conversation was overheard or one on whose premises the device was installed (whether he was present or not) has standing to suppress evidence obtained by electronic eavesdropping. Other persons, including co-conspirators, have no right to suppress such evidence.] The defendant would be afforded an opportunity to demonstrate at a hearing that the case against him was the fruit of the overhearings, with opportunity to the government to convince the trial judge that its proof had an independent origin. Disclosure to the defense under a protective order against general disclosure was deemed appropriate even if the surveillance was for national security, although the court left open for decision by the district court the question of whether such surveillance was legal. If held to be legal, there would then be no duty to disclose this type of overhearing.

The government had petitioned for rehearing in the *Ivanov* case with respect to the foreign affairs aspect of that ruling. The effect of the decision on that aspect is covered by that petition and by supplemental memoranda filed in two other cases, copies of which are annexed.

On March 24, 1969, the Court denied the government's petition in *Ivanov*. On the same day, the Court attempted to clarify its position on electronic surveillance in two *per curiam* decisions. *Giordano* v. *United States, Taglianetti* v. *United States* (copies attached).

It seems clear that *if* the District Court finds the surveillance was legal, then *no* disclosure is required. The District Court is apparently free to determine the legality of a given electronic surveillance in an *ex parte in camera* proceeding.

If the District Court finds that the surveillance was illegal, then *Alderman* requires that the defendant have access to all records of the surveillance which he has even remotely or incidentally been subjected to. Apparently this would include foreign intelligence surveillance which was found to be illegal.

However, the Court has apparently not decided whether the gathering of foreign intelligence information will be governed by a different applicable standard of reasonableness than the standard applied in domestic surveillance. (See Justice Stewart's concurring opinion in *Giordano*.)

There is little doubt that the requirement for evidentiary hearings on obviously irrelevant materials will have a substantial impact on our prospective efforts. Our experience has shown that the ingenuity of defense counsel is unlimited in advancing specious suggestions of the relevance of material which could not conceivably have led to any evidence used at trial. Protracted hearings have ensued because, even though a defendant realizes that he has no chance of proving taint, his most precious commodity is time. I am aware of one case where several defendants, found guilty by a jury more than four years ago, have postponed commencement of their sentences for at least two of those years as the result of an unavailing lengthy hearing (and appeal) concerning one overheard conversation, and they will presumably be able to further delay incarceration as the result of another hearing (and appeal) which will now be required.

While we are still in the process of compiling the facts you requested in your March 17, 1969 letter, we have yet to discover a single instance where a case claimed by the Government to have been untainted has been proven to be otherwise by the defense. Needless to say, this constitutes a most wasteful consumption of manpower, prosecutive and judicial. Since this problem will now increase as the result of the requirement for additional hearings in cases concluded long ago, our personnel, already spread thin in our current effort against organized crime, will have to be redeployed to handle these matters. It is clear, too, that the problem will not soon disappear, for under the present state of the law there is no "statute of limitations" on when a defendant can raise this issue. Thus, in 1980, for instance, defendants will still be demanding records of overhearings which occurred twenty or twenty-five years before, and they will still be demanding the protracted hearings which they are now allowed. Of course where an individual was accidentally overheard many years ago on a national security device which cannot be revealed, he will enjoy, in effect, immunity from prosecution, unless we can convince the courts that the surveillances involved were constitutional.

Hearings in these cases have also posed another substantial problem, that is, they have resulted in the disclosure of facts which have been pieced together by defendants in such a way as to enable them to identify sensitively placed and extremely valuable government informants, with resultant danger to the informants' lives. Some hearings in the future may also result in the revelation of overheard conversations which unjustly reflect upon the integrity of persons discussed therein. Our experience has shown that protective orders have not been effective.

I deeply appreciate your keen awareness of the issues presented by these decisions, your concern for their impact on our prosecutive efforts, and your recognition of the possible need for remedial legislation in this area. I have directed my staff to make recommendations in this regard, and I am hopeful that their efforts will be completed shortly.

Again, I am grateful for your interest.

Sincerely,

WILL WILSON,
Assistant Attorney General.

EXHIBIT 2

MAY 29, 1969.

Hon. JOHN L. MCCLELLAN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: Reference is made to your letter of March 17, 1969, to the Attorney General, concerning the effect of *Alderisio* v. *United States* on the Justice Department's ability to bring criminal prosecutions in the areas of national security and organized crime.

Since the receipt of your letter, we have been conferring with a member of your staff in our efforts to provide to you the most useful data available.

As you know, in *Schipani* v. *United States*, No. 504, Supreme Court, 1966 Term, the United States advised the Court that an extensive review had been undertaken by the Department of Justice in order to determine the instances in which there might have been unlawful electronic surveillance affecting a case which had been brought to trial.

Since that date, we have made approximately 6,750 inquiries of the Federal Bureau of Investigation to determine whether or not particular individuals were subjected to electronic surveillance.

Only two Federal cases have been dismissed following hearings on the effect of the electronic surveillance on those pending cases. I am advised that one state case was dismissed because of tainted evidence.

Although only three cases have been affected, we have had to spend an enormous amount of time not only in processing the 6,750 inquiries and replies, but we have been involved in perhaps 75 to 100 disclosure hearings resulting from defendants' claims that their cases were tainted by unlawful electronic surveillance.

Not only has there been enormous attorney time expended, but agent time as well in making the necessary checks. As indicated, only two cases have been affected since our pronouncement in the Schipani case.

I trust this information will be helpful to you, and you may look forward to our continued cooperation.

Sincerely,

WILL WILSON,
Assistant Attorney General.

EXHIBIT 3

A bill to amend chapter 223, title 18, United States Code, to regulate litigation concerning sources of evidence, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. That the Congress finds (1) that hearing and reviewing claims that evidence offered in proceedings is the direct or indirect product of allegedly illegal acts and is therefore inadmissible in evidence are major causes of undue expense and delay in the administration of justice and distract effort, time and emphasis of government officials and the public from fundamental issues; (2) that present rules and practices of disclosure incident to hearing and reviewing such claims can and will unduly permit parties to obtain much information unrelated to such claims and otherwise privileged, inhibit communication by government informants, endanger the lives and safety of such informants, government agents and others, cause unjustified harm to reputations of third persons, compromise national security and other criminal and civil investigations, interfere with prosecutions and civil actions, impair Federal-State cooperation in law enforcement, and endanger the security of the United States; and (3) that when such claims concern evidence of events occurring years after the allegedly illegal acts, those consequences of litigation and disclosure are aggravated and the claims seldom appear valid and often cannot reliably be determined.

SEC. 2. (a) Chapter 223, title 18, United States Code, is amended by adding at the end thereof the following new section:

"§ 3503. Litigation concerning sources of evidence

"In any trial, hearing, or other proceeding in or before any court, grand jury, department, officer, agency, regulatory body or other authority of the United States, a State, or a political subdivision thereof—

"(a) no claim shall be considered that evidence of an event is inadmissible on the ground that such evidence was come at by exploitation of an allegedly illegal act, if such event occurred more than five years after such allegedly illegal act; and

"(b) disclosure of information in connection with a claim that evidence is inadmissible because the direct product of an allegedly illegal act or come at by exploitation of such allegedly illegal act shall not be ordered unless such authority has found that such information may be relevant to determination of the admissibility of such evidence and that such disclosure is in the interest of justice.

"As used in this section 'State' means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and any territory or possession of the United States, and 'illegal act' means any act in violation of the Constitution or laws of the United States or any standard promulgated pursuant thereto."

(b) The section analysis of that chapter is amended by adding at the end thereof the following new item:

"3503. Litigation concerning sources of evidence."

SEC. 3. This Act shall apply to all proceedings, regardless of when commenced, occurring after the date of its enactment. Paragraph (a) of section 3503 shall not apply to any proceeding in which all information to be relied upon to establish inadmissibility was possessed by the party making such claim and adduced in such proceeding prior to such enactment.

SEC. 4. If the provisions of any part of this Act or the application thereof to any person or circumstances be held invalid, the provisions of the other parts and their application to other persons or circumstances shall not be affected thereby.

S. 2293—INTRODUCTION OF A BILL TO AUTHORIZE APPROPRIATIONS FOR THE NATIONAL SEA GRANT COLLEGE PROGRAM

Mr. PELL. Mr. President, the sea-grant college program, since its inauguration a little more than 2 years ago, has achieved a remarkable degree of acceptance and support. Indeed, it is not an overstatement to say that this program has been given an enthusiastic reception by the marine community in this country.

The approval of the program by the Congress was a recognition of both the opportunities and the problems in marine sciences, engineering, and technology. It was a recognition that the marine resources of this country had been too long neglected and that it was time to begin a program to realize the potential of those resources to meet the food, mineral, transportation, communications, and recreational needs of this country in the coming decades.

To achieve that goal, the sea-grant college program was modeled after one of the most successful Government programs ever undertaken—the land-grant college program. It was the land-grant college program, launched in the midst of the Civil War, that has been largely responsible for the development of the agricultural resources of this country into the most productive and efficient agricultural system in the world.

The sea-grant college program is an attempt to apply the successful techniques of the land-grant colleges to our marine resources. Thus, the sea-grant college program supports, through matching grants, programs to educate marine scientists, engineers, and technicians, programs of applied marine research and programs of field services to bring the fruits of research to bear directly on the problems of citizens engaged in marine activities.

Mr. President, during the first 2 years of operation, the sea-grant college program, administered by the National Science Foundation, has, I believe, demonstrated solid progress toward these goals.

In subject matter, the grants supported work in fisheries, aquaculture, ocean engineering, and management of estuarine areas, to name only a few. Geographically, the grants have gone to institutions in every coastal section of the country: The Atlantic, Pacific, Gulf, and Great Lakes areas.

As the coauthor of the original Sea-Grant College Act, I am proud indeed of the work already undertaken through the sea-grant college program. The only major problem encountered by this program to date has been the lack of funds to invest in the many worthwhile projects proposed by our leading marine science institutions.

In its first 2 years, the program has had just $11 million available in appropriated funds, and the budget request for fiscal 1970 is $10 million—an amount that will permit only minimal growth in the sea-grant college program during the coming year.

I think it is worth noting that, in just one of the projects conducted with sea-grant college program support, the University of Wisconsin discovered deposits of manganese nodules in the shallow waters of Green Bay which are estimated to have a value of more than $15 million—a value that exceeds the total amount appropriated thus far for the sea-grant college program.

I am cognizant of the need for restraint in Federal Government spending at this time; but looking forward to the future, I believe we must be prepared to provide for a substantial growth in this program if we are to realize the potential of this Nation's great marine resources.

Mr. President, the authorization for the sea-grant college program expires on June 30, 1970. To permit time for congressional action and budget planning, I am today introducing an amendment to the act providing authorization of $20, $25, and $30 million, respectively, for fiscal years 1971, 1972, and 1973.

I am very pleased, indeed, that several of my colleagues have joined with me as cosponsors of this legislation: The distinguished senior Senator from Washington (Mr. MAGNUSON), who has always ranked first in exercising legislative leadership in the development of our national oceanologic program; my own senior colleague from Rhode Island (Mr. PASTORE); and the senior Senator from Hawaii (Mr. FONG).

A similar measure has been introduced in the other body by Representative PAUL ROGERS, who was the sponsor in the House of Representatives of the original Sea-Grant College Act.

This bill would provide for a simple extension of the sea-grant college program with increased levels in the authorized level of appropriations. I anticipate that in the very near future I shall be introducing additional legislation to carry out the recommendations of the Marine Science Commission in regard to the sea-grant college program.

Mr. President, I introduce a bill authorizing appropriations for the national sea-grant college program and ask unanimous consent that the bill be referred to the Committee on Labor and Public Welfare, and if and when it should be reported, that it be referred to the Committee on Commerce.

The PRESIDING OFFICER. The bill will be received, and, without objection, will be referred as requested by the Senator from Rhode Island.

The bill (S. 2293) to amend the National Sea-Grant College and Program Act of 1966, in order to extend the authorizations for the purposes of such act, introduced by Mr. PELL (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare (by unanimous consent), and if and when reported, referred to the Committee on Commerce (by unanimous consent).

S. 2296—INTRODUCTION OF BILL TO AUTHORIZE THE SECRETARY OF THE INTERIOR TO GRANT EASEMENTS WITH RESPECT TO PUBLIC LANDS

Mr. CANNON. Mr. President, on behalf of Senator BIBLE and myself, I introduce, for appropriate reference, a bill to authorize the Secretary of the Interior to grant easements with respect to public lands.

The purpose of this bill is to enable citizens possessing interest in private lands surrounded by or bordering public lands to gain freer ingress and egress through public lands for access to their property.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2296) to authorize the Secretary of the Interior to grant easements with respect to public lands for certain purposes, introduced by Mr. CANNON (for himself and Mr. BIBLE), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

S. 2298—INTRODUCTION OF A BILL TO AMEND THE FEDERAL CREDIT UNION ACT

Mr. BYRD of West Virginia. Mr. President, on behalf of the senior Senator from Alabama (Mr. SPARKMAN), I introduce, for appropriate reference, a bill to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes.

Mr. President, I ask unanimous consent that the bill, as just introduced for the Senator from Alabama, be printed in full in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2298) to amend the Federal Credit Union Act so as to provide for an independent Federal agency for the supervision of federally chartered credit unions, and for other purposes, introduced by Mr. BYRD of West Virginia (for Mr. SPARKMAN), was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 2298

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Section 2 of the Federal Credit Union Act (12 U.S.C. 1752) is amended by striking out paragraphs (2) and (3) thereof and inserting:

"(2) the term 'Administrator' means the Administrator of the National Credit Union Administration;

"(3) the term 'Administration' means the National Credit Union Administration; and

"(4) the term 'Board' means the National Credit Union Board of Governors."

SEC. 2. The Federal Credit Union Act is further amended (1) by changing "Director" to read "Administrator" each place it appears therein; (2) by changing "Bureau of Federal Credit Unions" to read "National Credit Union Administration" each place it appears therein; and, (3) by changing "Bureau", each remaining place it appears, to read "Administration".

SEC. 3. Section 3 of the Federal Credit Union Act (12 U.S.C. 1752a) is amended to read:

"CREATION OF ADMINISTRATION

"SEC. 3. (a) There is hereby established in the executive branch of the Government an independent agency to be known as the National Credit Union Administration (hereinafter referred to as the 'Administration'). The Administration shall consist of a National Credit Union Board of Governors (hereinafter referred to as the 'Board'), and an Administrator.

"(b) The Board shall consist of nine members to be appointed by the President, by and with the advice and consent of the Senate. In selecting the members of the Board, the President shall designate a Chairman and a Vice Chairman who shall serve as representatives at large. In making his selection of the remaining members, one from each of the seven Federal credit union regions, the President shall receive and give special consideration to the nominations submitted by credit union organizations which are representative of a majority of the credit unions located in the reigon for which a Board member is to be appointed. The persons so appointed as members of the Board shall be selected on the basis of established records of distinguished service in the credit union movement.

"(c) The term of office of each member of the Board shall be six years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term; and (2) the terms of office of the members first taking office after the date of enactment of this Act shall expire, as designated by the President at the time of appointment, three at the end of two years; three at the end of four years; and three, including the Chairman and Vice Chairman, at the end of six years. Terms of office shall be on a calendar year basis. No member shall serve more than two full consecutive terms of office.

"(d) The President shall call the first meeting of the Board, and thereafter the Board shall meet on a quarterly basis, and at such other times as the Chairman or the Administrator may request, or whenever one-third of the members so request. The Board shall adopt such rules as it may see fit for the transaction of its business and shall keep permanent and complete records and minutes of its acts and proceedings. A majority of the voting members of the Board shall constitute a quorum. The Board shall advise, consult with, and give guidance to the Administrator on matters of policy relating to the activities and functions of the Administration under this Act. The Board shall render an annual report to the President for submission to the Congress, summarizing the activities of the Administration and making such recommendations as it may deem appropriate. Each report shall propose such legislative enactments and other actions as, in the judgment of the Board, are necessary and appropriate to carry out its recommendations. The members of the Board shall be entitled to receive compensation at the rate of $75 for each day engaged in the business of the Administration pursuant to authorization by the Chairman, and shall be allowed travel expenses including per diem in lieu of subsistence as authorized by section 5703 of title 5 of the United States Code for persons in the Government service employed intermittently.

"(e) There shall be an Administrator of the National Credit Union Administration who shall be appointed by the President, by and with the advice and consent of the Senate. The Board may make recommendations to the President with respect to the appointment of the Administrator. He shall be the chief executive officer of the Administration which shall be a full time position in the executive department at level IV of the Executive Schedule (5 U.S.C. 5315). The Administrator shall serve at the pleasure of the President."

SEC. 4. (a) All functions, property, records, and personnel of the Bureau of Federal Credit Unions are transferred to the National Credit Union Administration created by this Act.

(b) The Director of the Bureau of Federal Credit Unions in office on the date of enactment of this Act shall serve as Acting Administrator of the National Credit Union Administration pending the appointment of an Administrator in accordance with section 3 of the Federal Credit Union as amended by this Act.

S. 2301—INTRODUCTION OF A BILL TO ABOLISH THE DEATH PENALTY

Mr. HART. Mr. President, I introduce, for appropriate reference, a bill to eliminate the death penalty for any Federal crime. Joining me as cosponsors are Mr. BURDICK, Mr. HATFIELD, Mr. INOUYE, Mr. JAVITS, Mr. MCCARTHY, Mr. MONDALE, Mr. NELSON, Mr. PROXMIRE, Mr. WILLIAMS of New Jersey, and Mr. YOUNG of Ohio.

Sentences of life imprisonment would be substituted for provisions which require or authorize capital punishment.

Death sentences not executed when the bill becomes law would be changed to sentences of life imprisonment.

Mr. President, this is the third Congress in which I have introduced a bill to abolish the death penalty.

Since I first offered the proposal in 1966, the Nation has become increasingly concerned, and rightly so, about the rising crime rate. I share that concern.

There will, of course, be those who will say that, if I were concerned, I would not seek to eliminate what they consider to be a useful weapon in the war on crime.

Mr. President, I would ask those persons to examine closely the reasons why they feel the death penalty is of value and remind them that we also live at a time of growing concern about the effect on our society of a steady diet of violence on television.

An examination of those reasons and the effect executions have on the human spirit should convince them the death penalty should be abolished.

Let me start with the human spirit.

Based on my work as a member of the President's Commission on the Causes and Prevention of Violence, I have become convinced that continual exposure to television shows involving violence does have a connection with antisocial behavior.

If it is true that fiction can brutalize the human spirit, then certainly the fact of one human executing the other can have the same—if not greater—effect.

But we have long held that view in this Nation.

We have shuddered when reading about public executions during the French Revolution and their effects on the masses who watched.

We have recognized that public killings, whether sanctioned by law or not, whether in the name of aggression or defense of country, can brutalize the human spirit and we have carried out our executions in private.

Evidently we have not abolished capital punishment completely because it has been felt that on balance the penal and the nonpenal objectives of the death penalty have outweighed the effects this policy has on society.

Mr. President, if it were clear beyond doubt that capital punishment did achieve penal and nonpenal objectives, the debate over abolishing the death penalty would indeed be one of weighing pluses and minuses.

But the fact is that proponents of retaining the death penalty can only surmise that capital punishment is useful in controlling antisocial behavior, and, in fact, the strongest case against capital punishment, moral questions aside, is the lack of a case for retaining this penalty.

Mr. President, the most cited reasons for supporting capital punishment are that the death penalty:

Deters persons from committing crime punishable by death;

Precludes recidivism by convicted murderers;

Offers the public retribution for heinous crimes.

I would like to deal briefly with each of these points.

The debate over the deterrent objective of the death penalty often resolves itself into a discussion of statistics and their meaning. Statistics comparing murder rates in States with and without the death penalty support the contention that capital punishment does not deter the would-be murderer.

Proponents argue that it is impossible to estimate how many persons have been deterred from committing murder because of the death penalty, which, obviously, is true.

However, just because it is true does not make it a good argument for retaining the death penalty, because it can be argued that it deters very few persons indeed.

For example, of persons sentenced to death during the last 10 years in California, more than 40 percent were found guilty of crimes of passion. Fear of the death penalty probably has little deterrent effect on persons involved in such crimes.

Murders done while committing other crimes usually are the result of reflex decisions in which time does not permit thought of the death penalty. As a matter of fact, it could be argued that the burglar shoots someone out of fear of being imprisoned, and that fear outweighs the fear, at least for the moment, of the death penalty.

It can also be argued generally that fear of imprisonment is more real to the would-be criminal than fear of the death penalty, because the former penalty is the more understandable. The imminence of a penalty must be understood if it is

to act as a deterrent, and few men have a sense of imminency about death.

As for precluding recidivism, it would well be argued that once having committed a murder, a person, out of fear of capital punishment, might actually commit additional murders to prevent capture. These types of crime must be classified under the heading of recidivism as well as crimes committed by persons after serving jail sentences.

It can also be argued that, inasmuch as studies indicate that paroled murderers are no more and probably less likely to commit first degree murder than other paroled felons, capital punishment prisoners, and other felons should be handled in the same way.

And, of course, if the death penalty does indeed preclude recidivism, it also precludes the exercise of a prisoner's right to continue to try to prove his innocence after conviction.

I have already touched on the question of the death penalty as public retribution.

If indeed public retribution were to be sought in executions, a premise I reject out of hand, the death penalty should not only be carried out in public, but as swiftly as possible so the crime is still fresh in the public's mind.

Inasmuch as proponents of the death penalty cite the time-taking legal procedures open to a person convicted of murder as protection against the execution of an innocent man, proponents cannot argue retribution as a reason for retaining the death penalty.

Mr. President, each of these arguments in favor of capital punishment are based on conjecture impossible of substantiation.

To use such conjectures to take a man's life, to force other humans to make a final decision about the life of another, to perhaps deprive an innocent man of his life, to continue to brutalize the human spirit is to undermine, indeed to cheapen, the value of human life in these United States.

If this Nation stands for anything, it stands for the belief that the life of each individual is to be cherished, whether he is rich or poor, black or white.

Statistics show that it is the black and the poor who most often are sentenced to death, adding a new dimension to the case against the death penalty.

Many other nations and 13 of our States have abolished the death penalty.

Congress should follow suit.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2301) to abolish the death penalty under all laws of the United States, and for other purposes, introduced by Mr. HART (for himself and other Senators), was received, read twice by its title, and referred to the Committee on the Judiciary.

SENATE JOINT RESOLUTION 114—INTRODUCTION OF A JOINT RESOLUTION HONORING THE CITIZEN-JUROR AND THE MODERN JURY SYSTEM

Mr. CRANSTON. Mr. President, in London, some 300 years ago, Edward Bushell resisted an English court's pressures to change the verdict of a jury that was trying William Penn, then 25, for unlawful assembly.

In spite of threats from the bench to "set a mark" on him, regardless of a total of 2 days the jury spent locked in a room "without meat, drink, fire, and tobacco," Bushell, the leader of the jury, refused to convict young Penn for preaching to a group of Quakers.

The outraged court fined each member of the jury 40 marks—about $500 now—and when they did not pay, sent them to Newgate prison, along with Penn, who had spoken out against the "intolerable threatening" of the jury.

Bushell, a wealthy sugar importer, applied for a writ of habeas corpus and in the subsequent trial, Chief Justice Sir John Vaughn decided a jury should be independent and free from duress and punishment.

It was a landmark decision. It was the beginning of the jury system as we know it today. To be sure, there had been juries probably since the 8th century, but they had always been liable to punishment for "incorrect" verdicts.

William Penn, as we all know, came to America to found a colony. So did the benefits of that great decision come to America, and now some 200,000 times a year, our juries deliver their unfettered opinions according to constitutional guarantees. The jury system is a bulwark of our democracy, so unquestioned now that we are apt to take it for granted.

I am introducing today a joint resolution that would recognize 1970 as the tercentenary of the founding of the modern jury system and designate 1970 as "National Citizen-Juror Year."

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 114) to honor the citizen-juror and the modern jury system, introduced by Mr. CRANSTON, was received, read twice by its title, and referred to the Committee on the Judiciary.

ADDITIONAL COSPONSORS OF JOINT RESOLUTION

Mr. COOK. Mr. President, at the request of the Senator from Arizona (Mr. GOLDWATER), I ask unanimous consent that, at its next printing, the names of the senior Senator from Nevada (Mr. BIBLE), the junior Senator from Nevada (Mr. CANNON), and the Senator from South Carolina (Mr. THURMOND) be added as cosponsors of the joint resolution (S.J. Res. 85) to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week."

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE RESOLUTION 206—SUBMISSION OF A RESOLUTION AUTHORIZING THE PRINTING OF A SENATE DOCUMENT

Mr. DIRKSEN, for Mr. SPARKMAN, submitted the following resolution (S. Res. 206); which was referred to the Committee on Rules and Administration:

S. RES. 206

Resolved, That the report of the Subcommittee on Housing and Urban Affairs of the Committee on Banking and Currency entitled "Effect of Lumber Pricing and Production on the Nation's Housing Goals" be printed with an illustration as a Senate document, and that there be printed one thousand additional copies of such document for the use of that committee.

SENATE RESOLUTION 207—SUBMISSION OF A RESOLUTION AUTHORIZING THE PRINTING OF A SENATE DOCUMENT

Mr. ELLENDER submitted the following resolution (S. Res. 207); which was referred to the Committee on Rules and Administration:

S. RES. 207

Resolved, That the Annual Report of the National Forest Reservation Commission for the fiscal year ended June 30, 1968, be printed with an illustration as a Senate document.

NATIONAL ENVIRONMENTAL POLICY ACT OF 1969—AMENDMENT

AMENDMENT NO. 25

Mr. MANSFIELD, for Mr. JACKSON, submitted an amendment intended to be proposed by him to the bill (S. 1075) to authorize the Secretary of the Interior to conduct investigations, studies, surveys, and research relating to the Nation's ecological systems, natural resources, and environmental quality, and to establish a Council on Environmental Quality, which was ordered to be printed and referred to the Committee on Interior and Insular Affairs.

(See reference to the above amendment when submitted by Mr. MANSFIELD, for Mr. JACKSON, which appears under a separate heading.)

NATIONAL ENVIRONMENTAL POLICY ACT OF 1969—AMENDMENT

AMENDMENT NO. 25

Mr. MANSFIELD. Mr. President, on behalf of the Senator from Washington (Mr. JACKSON), I submit an amendment intended to be proposed by him to the bill (S. 1075) to authorize the Secretary of the Interior to conduct investigations, studies, surveys, and research relating to the Nation's ecological systems, natural resources, and environmental quality, and to establish a Council on Environmental Quality, and ask unanimous consent that a statement by him relating to the amendment be printed in the RECORD.

The PRESIDING OFFICER. The amendment will be received, printed, appropriately referred, and, without objection, the statement will be printed in the RECORD.

The amendment was referred to the Committee on Interior and Insular Affairs.

STATEMENT BY SENATOR JACKSON

Mr. JACKSON. Early in this session of the Congress, I introduced proposed legislation to establish a national policy for the environment. I introduced this measure because it is my view that our present knowledge, our established policies, and our existing institutions are not adequate to deal with the growing environmental problems and crises the nation faces.

The inadequacy of present knowledge, policies, and institutions is reflected in our nation's history, and our national attitudes, and in our contemporary life. We see this inadequacy all around us: haphazard urban growth, the loss of open spaces, strip-mining, air and water pollution, soil erosion, deforestation, faltering transportation systems, a proliferation of pesticides and chemicals, and a landscape cluttered with billboards, powerlines, and junkyards.

Traditional governmental policies and programs were not designed to achieve these conditions. But they were not designed to avoid them either. As a result, *they were not avoided.*

As a Nation, we have failed to design and implement a national environmental policy which would enable us to weigh alternatives, and to anticipate the undesirable side effects which often result from our ongoing policies, programs and actions.

Today it is clear that we cannot continue to perpetuate the mistakes of the past. We no longer have the margins for error and mistake that we once enjoyed.

It was in view of this background and these considerations that I introduced S. 1075, a bill to establish a national environmental policy.

The purpose of the proposed legislation is threefold: *First,* to establish a national policy on the environment; *Second,* to authorize expanded research and understanding of our natural resources, the environment, and human ecology; and *Third,* to establish in the Office of the President a properly staffed Council of Environmental Quality Advisors.

During the hearings on this measure on April 16, Dr. DuBridge, the President's Science Advisor, and Secretary of the Interior Hickel announced that the President is considering the establishment of an interagency environmental council composed of selected Cabinet officers. As I stated at the hearings, this indicates to me: "that the President and officials in the executive branch share the belief of many of us in Congress that some reorganization is necessary. The President apparently agrees that the existing administrative establishment is inadequate for the task we face, and that a focal point for the environmental considerations of government should be designated."

It was the initial view of the Administration's representatives that the President's proposed interagency council would make an independent Council of Environmental Advisors as proposed in my bill unnecessary.

For the most part, the members of the Committee and the public witnesses did not agree with their position. There was, however, general agreement by all concerned that there is a need to restructure the Federal government to provide a focal point for environmental considerations.

It is my view that what is needed is an impartial, objective, full-time Council of Environmental Advisors in the Executive Office of the President. The interagency Council the President is considering would be useful for implementing action proposals, but the President also needs independent and impartial advice as to what action to take. The Council I have proposed would be properly staffed and equipped to provide this advice.

As a result of the April 16 hearing on S. 1075 and subsequent discussions with the Administration, I believe that there is now general agreement on the need for both an interagency Council as proposed by the President, and a high level independent body as proposed in my bill.

It is my understanding that an announcement will be made today that the President has signed an executive order to establish the interagency Council on the environment. I applaud the President's action. I intend to seek early Senate action on S. 1075 so that the President and the American people may have the benefit of the independent and impartial staff support and advice of the Council which I have proposed.

During the April 16 hearing on S. 1075, the Administration agreed that there is an urgent need to enact into law a statement of national policy with respect to environmental management, and that they would support a statutory declaration of national policy. Subsequent to the hearings, I directed the Interior Committee staff to draft an expanded statement of national environmental management goals, and to grant new authority to Federal agencies which, at the present time, have no mandate or responsibility for the management and protection of the human environment.

This expanded statement of national policy has been prepared as an amendment to S. 1075. It will become Title I of the bill and the other titles will be appropriately redesignated. Mr. President, I ask unanimous consent that this amendment be printed in the Record at the conclusion of my remarks.

A statement of environmental policy is more than a statement of what we believe as a people and as a nation. It establishes priorities and gives expression to our national goals and aspirations. It serves a constitutional function in that people may refer to it for guidance in making decisions where environmental values are found to be in conflict with other values.

Many operating agencies do not at present have a mandate within the body of their enabling laws to give substantive attention to environmental values. This is especially true of the older Federal programs.

A properly drafted Congressional statement of national environmental policy, along with a requirement for official statements of environmental findings in Federal decisions and legislative proposals, will effectively make the quality of the environment *everyone's* responsibility. No agency will then be able to maintain that it has no mandate or no requirement to consider the environmental consequences of its actions.

I am introducing this policy statement as an amendment to S. 1075 at present because I want the statement to be available to the Administration prior to the informational hearings of the Committee on Interior and Insular Affairs on June 3 and 11 on the Everglades National Park. At the June 3 hearings, I will want to have the judgment of the Administration witnesses on what the effect of this policy statement would have been had it been enacted at the time the Park was created by Congress.

Mr. President, an environmental policy is a policy for people. Its primary concern is with man and his future. The basic principle of the policy is that we must strive, in all that we do, to achieve a standard of excellence in man's relationship to his physical surroundings.

It is my belief that the amendment I am introducing today will go far towards ensuring that the Federal government both sets and abides by standards of excellence; standards which will ensure that our generation fulfills its responsibilities as trustees of the environment for future generations.

ENROLLED BILLS PRESENTED

The Secretary of the Senate reported that on today, May 29, 1969, he presented to the President of the United States the following enrolled bills:

S. 278. An act to consent to the New Hampshire-Vermont Interstate School Compact; and

S. 408. An act to liberalize the eligibility requirements governing the grant of assistance in acquiring specially adapted housing for certain service-connected disabled veterans, to increase the amount of such grant, to raise the limit on the amount of direct housing loans made by the Veterans' Administration, and for other purposes.

NOTICE OF HEARING

Mr. McCLELLAN. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Friday, June 6, 1969, at 10:30 a.m., in room 2228, New Senate Office Building, on the following nomination:

David W. Williams, of California, to be U.S. district judge for the central district of California, vice Peirson M. Hall, retired

At the indicated time and place persons interested in the hearing may make such representations as may be pertinent.

The subcommittee consists of the Senator from Mississippi (Mr. EASTLAND), chairman; the Senator from Nebraska (Mr. HRUSKA), and myself.

NOTICE OF HEARING

Mr. McCLELLAN. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Thursday, June 5, 1969, at 10:30 a.m., in room 2228, New Senate Office Building, on the following nominations:

George Harrold Carswell, of Florida, to be U.S. circuit judge for the Fifth Circuit, vice a new position created under Public Law 90-347, approved June 18, 1968.

John F. Kilkenny, of Oregon, to be U.S. circuit judge for the Ninth Circuit, vice a new position created under Public Law 90-347, approved June 18, 1968.

Donald E. Lane, of the District of Columbia, to be associate judge, U.S. Court of Customs and Patent Appeals, vice Arthur M. Smith, deceased.

At the indicated time and place persons interested in the hearing may make such representations as may be pertinent.

The subcommittee consists of the Senator from Mississippi (Mr. EASTLAND), chairman; the Senator from Nebraska (Mr. HRUSKA), and myself.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. McCLELLAN. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

John L. Bowers, Jr., of Tennessee, to be U.S. attorney for the eastern district of Tennessee for the term of 4 years, vice John H. Reddy, retired.

Dean C. Smith, of Washintgon, to be U.S. attorney for the eastern district of Washington for the term of 4 years, vice Smithmore P. Myers, resigned.

Edward J. Michaels, of Delaware, to be U.S. marshal for the district of Delaware for the term of 4 years, vice Joseph Novak.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Thursday, June 5, 1969, any representations or objections they may wish to present concerning the above

nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE OF CHANGE IN HEARING DATE ON EVERGLADES NATIONAL PARK

Mr. MANSFIELD. Mr. President, on behalf of the Senator from Washington (Mr. JACKSON) I ask unanimous consent to have a statement by Senator JACKSON printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. JACKSON. Mr. President, there has been a change in dates for the informational hearings on the Everglades National Park which had previously been scheduled for June 3 and 4.

Under the revised schedule of the Senate Interior and Insular Affairs Committee, testimony will be taken from representatives of the Administration and the State of Florida on this matter on June 3, 1969, in Room 3110 of the New Senate Office Building at 10:15 a.m.

Testimony from major conservation associations and public witnesses will be taken on June 11 at 10:00 a.m. The location of the hearing room for the June 11 hearing will be announced at a later date.

NOTICE OF HEARINGS ON CONSUMER CREDIT INSURANCE ACT

Mr. PROXMIRE. Mr. President, I wish to announce that the Subcommittee on Financial Institutions of the Committee on Banking and Currency will hold hearings on S. 1754, a bill to protect consumers from abuses relative to excessive charges for life, health, and accident insurance pursuant to consumer credit transactions.

The hearings will be held on Wednesday, Thursday, and Friday, June 25, 26, and 27, and Monday, June 30, 1969, and will begin at 10 a.m. in room 5302 New Senate Office Building.

Persons desiring to testify or to submit written statements in connection with these hearings should notify Mr. Kenneth A. McLean, room 5300, New Senate Office Building, Washington, D.C., 20510; telephone 225–7391.

AUTHORIZATION FOR SECRETARY OF AGRICULTURE TO CLASSIFY AS A WILDERNESS AREA CERTAIN NATIONAL FOREST LANDS IN MONTANA

Mr. MANSFIELD. Mr. President, I have discussed this matter with the distinguished acting minority leader, the Senator from Kentucky (Mr. COOK), and I am happy to ask unanimous consent at this time for the immediate consideration, S. 412, a bill having to do with the Lincoln Back Country in Montana.

The bill was introduced by my distinguished colleague, the junior Senator from Montana (Mr. METCALF). I am happy to say that the bill was unanimously reported today by the Committee on Interior and Insular Affairs.

The PRESIDING OFFICER. The bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 412) to authorize and direct the Secretary of Agriculture to classify as wilderness the national forest lands known as the Lincoln Back Country, and parts of the Lewis and Clark and Lolo National Forest, in Montana, and for other purposes.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the bill.

Mr. METCALF. Mr. President, the pending bill has important and significant bipartisan support.

Former Governor Babcock, former Representative Battin, Representative OLSEN, and the distinguished majority leader, the Senator from Montana (Mr. MANSFIELD), have all supported the legislation.

The pending bill provides that a very fragile and important scenic area will become a wilderness area and be protected from picnickers, hikers, or any other persons who might destroy this kind of area.

This is an important watershed area. It is a forest that is significant in the development of some of the most scenic and beautiful areas in the whole western part of Montana.

Mr. President, I have an editorial entitled "The Outdoor Picture—For the Lincoln Wilderness Area," written by Dale A. Burk and published in the Sunday Missoulian of May 4, 1969. The editorial sets forth some of the arguments and summarizes the proposals for the Lincoln wilderness area.

Mr. President, I ask unanimous consent that the editorial to which I have referred be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. METCALF. Mr. President, the evidence obtained both from field hearings and hearings held before the committee overwhelmingly shows that this area should be set aside as a wilderness area, that it is a peculiar and scenic area that is admirably fitted for the wilderness administration.

Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report, explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Public hearings were held on the measure which is sponsored by Senators Metcalf and Mansfield and field hearings were held in the area last autumn on a similar bill at which some 80 witnesses were heard.

Committee action in ordering the bill reported favorably was unanimous.

PURPOSE OF MEASURE

S. 412 would add approximately 240,500 acres in three national forests in Montana to the National Wilderness Preservation System established by the Wilderness Act of 1964 (78 Stat. 890). The area embraces portions of the Helena, Lewis and Clark, and Lolo National Forests straddling the Continental Divide in central western Montana.

It is known as the "Lincoln-Scapegoat Back Country," or more popularly as "The Lincoln Back Country."

S. 412 would accomplish its purpose by directing the Secretary of Agriculture, who has administrative responsibility for the national forests, to classify specifically designated tracts in the area as wilderness. The effect would be to combine the Lincoln Back Country with the existing Bob Marshall Wilderness.

DESCRIPTION OF AREA

The Lincoln Back Country is typical of the scenic grandeur that is reflected in Montana's motto "The Big Sky Country". It contains vast, unbroken spaces, glittering mountains, deep forests, and flashing clear lakes and streams. It is described by the Sierra Club as a "friendly wilderness," containing "an environment essential to the survival of the grizzly bear population and other big game animals. Native cut-throat trout, an increasingly scarce game resource, is also found in substantial amounts."

Other wildlife and fish of a rare or endangered nature abound in the undisturbed mountains, meadows, and waters, and the opportunities for ecological research are highly regarded by scientists.

The southern portion is characterized by wooded rolling lands, studded with mountain lakes. Several nearby high but relatively accessible points such as Red Mountain, Pyramid, and Olsen Peaks add opportunities for zestful, rewarding climbs. This portion of the area, although possessing true wild character, is readily available to easy family hiking and saddle horse trips.

The north central portion in contrast is characterized by spectacular relatively remote peaks, high ridges and intervening canyons. These present a true challenge for those who wish to spend a little more time and effort to sample the more rugged aspects of wilderness. Here the great Scapegoat Mountain complex dominates the scene. The alpine tundra of its highlands presents a unique climax to the most adventurous type of wilderness travel.

Short, relatively easy back-country trips are available on the far nothern end and much of the eastern side of the area.

As mentioned above, the Lincoln-Scapegoat region, with its relatively undisturbed environment, represents ideal living space for a unique variety of game animals, birds, and fish. An important segment of Montana's remnant grizzly bear population has found this place much to its liking.

Elk, mountain sheep, goats, deer and moose are also there and depend, in many important respects, upon the relatively remote character of the land for their living requirements and even survival. The rare west slope cutthroat trout is well suited to its cold, clear streams and the lighter fishing pressure of trail access country. Along with the Montana grayling the area supports a variety of fish that add much to the joy of visiting this unique region. Ptarmigan, a seldom seen grouse of the alpine environment, adds special interest to the interesting bird life of the area.

Thus, a pleasing variety in topography, vegetative cover, and animal life blend in making the Lincoln Back Country an ideal area for meaningful wilderness classification.

ECONOMIC RESOURCES

Evidence was presented at the Committee's hearings, both in Montana and in Washington, that the area has very little economic resources in the way of commercial mineral deposits, or in timber reserves.

On the contrary, the overwhelming weight of the evidence was that preservation of the area's great scenic values and its rare fauna and flora by inclusion in the National Wilderness System would be the highest use to which the area could be put, both for the present and for future generations.

ALTERNATIVE PROPOSALS CONSIDERED

The Committee gave full and careful consideration to alternative proposals presented at the hearings, including that of the Forest Service for a type of modified multiple use. The members are convinced, however, that the Lincoln Back Country is too fragile, both geologically and ecologically, to permit the driving through of roads, and construction

of permanent roadside and camping facilities as is envisioned. With respect to such development, the Committee adopts the finding of Dr. Arnold J. Silverman, Associate Professor of Geology at the University of Montana, consultant to the U.S. Bureau of Mines, and a member of national and international geological societies. Dr. Silverman testified at the Committee hearing:

"However, a number of disadvantages and potential dangers come readily to mind. Such a road would be expensive to maintain, because it would be in need of constant grading, clearing, and indeed in many places actual reconstruction. It does not appear probable that such a road can be maintained without an abnormal financial investment. In addition, there will be an ever-present danger to travelers of sliding and slumping. Lastly, the increased erosion caused by road construction and timber harvest will have a very detrimental effect on the streams and lakes of the area.

"For these reasons, I oppose a multiple-use plan for the area and support the proposal for the establishment of a Lincoln Scapegoat wilderness area."

Dr. Clarence C. Gordon, president of the Western Montana Scientists Committee for Public Information, testified even more pointedly:

"After reviewing the physical and biological aspects of the Lincoln Back Country, Scapegoat Mountain area, it is obvious that this country will be even more adversely affected than most mountainous areas if roading or logging be allowed. The hillsides are steep, much of the clay and fractured rock is presently held in place by plant roots to the depth of a foot or less. Even a slight disturbance of the soil will start an eroded gully. Whole mountain slopes slipped into valleys and streams during the flood of 1964.

"Development of the Lincoln Back Country-Scapegoat Mountain area will be disastrous. Leaving it a wilderness will provide a unique and valuable recreational and study center for generations."

COMMITTEE RECOMMENDATION

In enacting the Wilderness Act (Public Law 88-577), the Congress clearly reserved to itself the ultimate authority to act with respect to enlargement of the Wilderness System it created. Section 3, Article IV of the Federal Constitution imposes such a responsibility on Congress.

In this instance, the Committee unanimously recommends that Congress exercise its power and include in the System an area it finds uniquely qualified for inclusion and thus preserve the Lincoln Back Country's rare and fragile features for the physical enjoyment, the spiritual refreshment, and the enrichment of the life of this generation and future generations.

The proposal has the unqualified backing of the entire Congressional delegation from Montana.

EXECUTIVE AGENCY REPORTS

The reports of the Department of the Interior the Department of Agriculture, and the Bureau of the Budget are set forth in full.

EXHIBIT 1

[From the Sunday Missoulian, May 4, 1969]

THE OUTDOOR PICTURE: FOR THE LINCOLN WILDERNESS AREA

(By Dale A. Burk)

We endorse the establishment of the Lincoln-Scapegoat Back Country as a wilderness area. We do so because we feel the area would be best utilized in wilderness form and because plans for developing the area are totally unfounded on either need or practicality.

We have looked at both sides of the "issue" over the Lincoln Back Country and have presented a number of columns investigating the situation. On one hand we have legislative proposals by Sens. Lee Metcalf and Mike Mansfield and Rep. Arnold Olsen to establish the Lincoln-Scapegoat Wilderness. Aligned against the legislation is the U.S. Forest Service and some members of Montana's timber industry.

IN TRUE PERSPECTIVE

When viewed in its true perspective, the Lincoln-Scapegoat area of 240,500 acres is a rather small and insignificant part of the American landscape. In fact, in relationship to the whole of America it is minuscule. So is the total number of acres in America set aside as a heritage for tomorrow.

Contrary to the contention of would-be developers that such a vast area so close to the Bob Marshall Wilderness should not be added to the wilderness system, we conclude that when the entire picture is considered the 240,500 acres are small indeed.

Montana is one of the last frontiers where land is available in an undeveloped state. Montana and a few other of the western states are America's last resort for wilderness areas. They bear the burden for the entire nation. There's nowhere else to go. The job was botched up back East generations ago.

If we don't establish wilderness areas like the Lincoln-Scapegoat area in our generation, there simply will be no areas left to save in coming years.

A FRAGILE LAND

It seems incongruous that the Forest Service should base its plan for developing and managing the area on a premise that simply won't hold weight. It speaks of a need for a scenic highway that would provide access to the high country and from which "fairly large numbers of people could be distributed in small groups throughout the Zone for a real isolated or back country experience."

True? We think not in the Lincoln case. Once cut up with roads a real "wilderness" would not exist. The area would be like any other mountain area in western Montana now crisscrossed with logging roads. Existing developable areas already opened up by road could provide the "managed wilderness" tracts the Forest Service speaks of in its development plan.

AN UNPROVEN PREMISE

The major weakness with the proposed development plan is that it is based on an unproven premise that can be first tested elsewhere. Montana abounds with roads in high country terrain. We'd rather the Forest Service try its concept out on these areas first.

And we're sure it would find more spots now roaded and awaiting development than it would be able to get money to develop in the next half-dozen generations.

The point is that there's absolutely no need to carve up the Lincoln-Scapegoat area with a road. Highways now cross the Continental Divide south of the area at Rogers, Flescher, Stemple and MacDonald passes. Other similar passes in Montana's mountain country are crossed by road.

Develop them first. Try the plan out elsewhere instead of rushing in and ruining one of the last great areas that would be maintained as wilderness.

SOME SUITABLE SITES

Nowhere in the Forest Service literature did we read of a "pressing need" that such intensely-managed wilderness-like tracts be developed elsewhere. Yet the Forest Service maintains that such a need exists to provide for the recreation demands, now and in the future, for the populations of the Missoula and Great Falls areas.

If this demand exists it should be applied first in the areas already roaded. For example, in addition to the areas already mentioned, it would be tested in much of the country from the Canadian line to Idaho where logging roads already provide access to high country terrain suitable for providing "back country experiences."

We agree that more recreation campgrounds are needed. But the Forest Service isn't playing fair when it contends that it is critical to establish such campgrounds in the Lincoln Back Country area when hundreds of other suitable sites already accessible are available. Our recommendation is that we first develop these other sites.

There are so many of them available that those responsible for providing public recreation facilities would be so busy they wouldn't have time to worry about a 240,500 acre tract of land left in its wilderness state.

OTHER CONSIDERATIONS

Montana's timber industry, in spite of the fear-inducing testimony presented by some opponents of the wilderness, should never feel the loss of the rather insignificant amount of merchantable timber in the area (less than ½ of 1 per cent of Montana's allowable cut).

In fact, even if the industry lost something that never really was its in the first place, the state's economy would not stagger, as was intimated. Testimony in Washington showed that, on the contrary, extensive logging development in the area would be detrimental in the long run to the other values in the region—namely wildlife and the fishery.

The mineral potentialities of the area will really not be changed by establishment of a wilderness area. Under the wilderness act, the mineral industries would have a number of years in which to investigate for mineral resources before the area could be locked up.

The scenic road into the area would not be open long enough each year to justify the amount of appropriated funds it would take to build it. The area is deep snow country and the task of keeping the road open in the winter, as in Glacier Park, would be impossible or so costly as to be unrealistic. We feel the cost of building and then maintaining such a road would be unjustified. Money talks, and very simply appropriated "road" money could be better spent for campground facilities where roads now exist.

WHAT IS WILDERNESS?

What is the Lincoln-Scapegoat Back Country? Why does it deserve wilderness classification?

Basically because it is a beautiful land, because it can be saved, and because so little will be lost to man's so-called progress by protecting it as wilderness. We say this because the area can be lost. It is a fragile land that intensive development might destroy.

What is a wilderness? It is a land in which man can, at any time in the history of his species, enjoy the same values. The value of wilderness is endless, infinite, indestructible.

It is a land in which the wildlife values as they exist would be destroyed if man carved the land into tracts and diminished the wildlife habitat.

It is a land yet untrammelled, a land where man can still rise above that part of him that says he must destroy what is natural, that he must change what is, simply to change it.

It is a land which has value because it is what it is.

It is a land that we have today and can leave for tomorrow.

It is wilderness. It should be wilderness tomorrow, too.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question

is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 412

A bill to authorize and direct the Secretary of Agriculture to classify as wilderness the national forest lands known as the Lincoln Back Country, and parts of the Lewis and Clark and Lolo National Forests, in Montana, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture is hereby authorized and directed to classify as wilderness those national forest lands containing approximately 240,500 acres in the Helena National Forest in Montana, known as the Lincoln Back Country, and parts of the Lewis and Clark and Lolo National Forest specifically described as bounded by a line on the southeast boundary of the Bob Marshall Wilderness Area at Deadman Hill running southeasterly to Bench Mark, then along the ridge of Wood Creek Hogback to the top of Crown Mountain and across Welcome Pass to the midpoint of Steamboat Mountain; thence running in a more southerly direction down the ridge between Milk and Pear Creeks, across the Dearborn River and up the Continental Divide to a point above Bighorn Lake; thence along the divide and down the ridge northwest of Falls Creek, across Landers Fork to the top of Lone Mountain; thence in a southwesterly direction to Heart Lake Trail, westward to the top of Red Mountain; thence southwesterly to Arrastra Peak; thence along Daly, Iron, and Echo Mountain Peaks, and across Windy Pass to Mineral Hill; thence across the North Fork of the Blackfoot River at the Big Slide to BM 8320, northwesterly across Canyon Creek (excluding the upper Conger Creek timber stand) to the top of Canyon Peak; thence more westerly to the top of Omar Mountain, and northward along the ridge to the southern boundary of the Bob Marshall Wilderness Area on a ridge west of Danaher Pass, and thence along the southern boundary of the Bob Marshall Wilderness Area to the point of beginning. The Secretary of Agriculture shall promptly after such classification transmit to the Congress a map and legal description of the wilderness area and such description shall have the same force and effect as if set forth in this Act. Upon its classification, such wilderness area shall be subject to the same provisions and rules as those designated as wilderness areas by the Wilderness Act of September 3, 1964 (78 Stat. 890).

HAMBURGER HILL: WAS IT WORTH IT?

Mr. YOUNG of Ohio. Mr. President, Gen. Maxwell D. Taylor announced Tuesday that President Nixon should not order any of our soldiers home from Vietnam while the talks in Paris seeking to achieve an armistice and cease-fire in Vietnam are continuing.

President Johnson, during the last 4 years of his administration as President of the United States, followed the advice given him by General Taylor. He is now living in Texas, I am sorry to say.

The fact is that Richard Nixon in his campaign for the Presidency promised to end the bloodletting in Vietnam. He promised he would end the war in Vietnam and bring the boys home. Our citizens believed him. They elected him. Our President would be well advised if he would completely disregard the views and advice of Gen. Maxwell D. Taylor. He should bring 100,000 of our troops home this year; the sooner the better. It would be a simple matter to bring them home in ships and planes, the same as they were sent over there.

That we have 600,000 men of our Armed Forces in Vietnam and Thailand fighting an undeclared, immoral, and unpopular war, and that nearly 40,000 of our Armed Forces who have fought in Vietnam have been killed in combat—additional thousands were killed in what Pentagon terms accidents and incidents, which in World War II would have been termed killed in combat—and more than 208,000 wounded may be directly attributed to the fact that President Johnson accepted and was subservient to the advice of General Taylor and all of the generals and admirals of the Joint Chiefs of Staff.

Those 55 patriots gathered in Philadelphia from the Thirteen Colonies provided in the Constitution they drafted that in the United States civilian authority must always be supreme over military authority. George Washington presided over this Constitutional Convention. Benjamin Franklin at 81 was the oldest member and Jonathan Dayton the youngest at 26. Such was their determination against militarists ruling our Republic that they provided that the President of the United States would be Commander in Chief of our Armed Forces.

Mr. President, in January 1968, I was in South Vietnam as an observer as a member of the Armed Services Committee of the Senate. While in Southeast Asia throughout most of that month, I visited every area of Laos. I was told that this would be the next South Vietnam where Americans would fight and be killed. I pray there is no truth to that allegation. Laos is a most underdeveloped country. It is not worth the life of one American GI. Fighting is now going on there. We Americans who guaranteed the neutrality of Laos have been sending our warplanes over that country. Also our CIA is there in force and also many American "military advisers."

In Thailand I visited all of our air bases and also our huge coastal base at Sattahip. All these bases appear to be permanent installations, as if Americans will be fighting and dying in Southeast Asia throughout the next 50 or 100 years. We now have approximately 50,000 men of our Armed Forces in Thailand.

I was in every area of Vietnam late in January last year just before the VC Tet lunar offensive. I was in Danang and in the area north and west of Danang, and by helicopter visited marines close to Khesanh. It was a matter of surprise and comment that in this area our marines, who are the best trained and best armed fighting men in the world, were on the defensive everywhere. This, despite the fact they are supposedly especially trained for amphibious operations and to be in the forefront of offensive military actions.

I interviewed General Westmoreland and the generals commanding in the Danang area and also in the Khesanh area. General Westmoreland and the generals under his command assured us that the VC could be heard during the nighttime coming closer and closer to Khesanh and that they had encircled Khesanh. General Westmoreland stated that he was certain that at the time of the Tet lunar holiday, some 2 or 3 days away, the VC would assault our entrenched outpost at Khesanh and that they expected to overrun it and achieve a great military victory. He said, "I have encircled the encirclers." He and leading marine generals informed us that some 40,000 men of our Armed Forces had been withdrawn from the interior and Central Highlands and that the VC were being encircled and would be annihilated when they attacked Khesanh and then tried also to overrun Danang. Our generals, notably General Westmoreland, were completely outgeneraled by General Giap of North Vietnam, the Victor over the French at Dien Bien Phu.

My escort officer discussed the matter with me before the Tet lunar holiday, commenting on the very noisy approaches made by the VC up to 1 a.m. and the comparative silence thereafter night after night. He concluded, the same as I did, that they wanted our forces to concentrate in the defense of Khesanh. Then, like a bolt out of the blue, the VC in the Tet lunar holiday struck everywhere in South Vietnam except where General Westmoreland confidently expected them. It is evident they had no intention of trying to capture Khesanh. Their forces overran and captured, holding possession for varying periods of time, 37 of 44 provincial capitals of South Vietnam. They breached the fortress-like American Embassy in Saigon. For 7 hours they held possession of our Embassy grounds. Ambassador Bunker had to flee for his life. They invaded Saigon and released 7,000 prisoners from the jails there. The VC first freed prisoners in jails of the provincial capitals, then collected huge quantities of rice and conscripted or enrolled thousands of young men into their armed forces. Many American youngsters were killed in this Tet lunar offensive. General Westmoreland, although completely outgeneraled, claimed it was really an American victory. He deceived no one, probably not even himself.

Hue, the ancient capital, was seized and held by the Vietcong for a month. During that period of terror they killed many of the inhabitants. They occupied the Citadel at the center of this beautiful city. In Hue, our heroic marines, in retaking the Citadel from the Vietcong after street fighting of many days with huge losses of lives, finally by sheer force of numbers and firepower killed or forced out all of the Vietcong.

Our generals, at a cost of priceless lives of hundreds of young marines, finally accomplished by direct overwhelming assaults what they could have accomplished with little loss of life by surrounding the Citadel until the starved survivors would have slipped away or would have been compelled to surrender. This lack of generalship and competent leadership of our troops in South Vietnam was brought home to the American people.

Now we come to Dong Ap Bia, now

sorrowfully known to Americans as "Hamburger Hill." This 3,000-foot hill in the A Shau Valley in South Vietnam 2 miles from the border of Laos was captured by American troops following 10 days of repeated infantry assaults up the slopes of this hill and then retreats downhill.

From May 10 to May 20, some of the finest units of the American Armed Forces, 10,000 paratroopers of the 101st Airborne Division under the immediate command of Major General Zias, were ordered into the area and then our paratroopers were ordered to make front attacks against Vietcong entrenched in bunkers at the top of this hill. Commencing on May 10, repeated attacks by our bombers were followed by direct frontal attacks by our ground troops. Our generals claimed that Dong Ap Bia was of strategic importance as it overlooked the A Shau Valley and the Vietcong supply route from Laos. So, 10,000 of our boys were ordered up the valley to overrun this hill, despite the fact President Nixon in his address to the Nation stated that we seek no military victory but seek peace by negotiation. Our soldiers on 10 different occasions climbed the hill in terrific frontal assaults. On all 10 occasions they were hurled back. They called the hill "Hamburger Hill." This is symptomatic of the mentality of the commanders who cast strategy aside for repeated frontal attacks and the units they commanded were chopped up.

Elements of the 101st Airborne Division were lifted by helicopter into the A Shau Valley for a search and destroy mission in that area. Dong Ap Bia itself in the original planning had not been regarded as an objective. Then, when the men of the 101st Airborne Division came under fire from its crest, the decision was made by Lieutenant Colonel Honeycutt and other officers for a frontal assault. Day after day the fighting men of the Third Battalion of the 187th Regiment of the 101st Airborne struggled up the slopes of Dong Ap Bia only to retreat down under withering enemy fire. Honeycutt, termed "Blackjack" by his men, refused to be satisfied with calling air and artillery strikes and blasting the hill with our B–52 bombers. He kept demanding "Get those men moving! You are being paid to fight this war, not discuss it." One of his soldiers was overheard to say, "That damned Blackjack won't stop until he kills every damn one of us."

On May 12 they unexpectedly ran into rocket grenades, rapid fire from automatic weapons, lethal Claymore mines dangling from bushes and trees. They were forced back. Later there was another assault on Lieutenant Colonel Honeycutt's orders, but only by two companies instead of his entire force. They were hurled back with heavy losses. For 5 days from May 12 to the 20th, the frontal assaults continued. Two additional battalions from the 101st were brought up on May 18. Our reinforced forces again were ordered up in a frontal assault.

They nearly reached the top, but were hurled back by small arms fire and grenades. One dispirited company commander said, "Everyone is scared, but we have to go back up." Finally, on May 20, more than a week after the original frontal assault, our GI's were victorious. The hill was taken. One hundred and eighty-two rifles of the North Vietnamese forces were captured, but no prisoners. The crest of the Dong Ap Bia, now called Hamburger Hill, was scarred and smoldering. Thousands of tons of explosives and napalm had been dropped upon it. More than 600 Vietcong were killed, according to Pentagon claims. Certainly, at least 182 appear to have been killed. Pentagon reports of U.S. casualties were moderate. This was a heroic military achievement of our heroic 101st Airborne Division. It was a very tragic incident in the unpopular, undeclared war we are waging.

Mr. President, it is apparent those generals commanding our forces in Vietnam never learned what Stonewall Jackson did and his strategy at the Battle of Chancellorsville. Despite the fact that the Union Army of the Potomac confronting Lee's forces was superior in numbers, Lee and Jackson inflicted a smashing defeat to the Union Army. Stonewall Jackson, commanding one flank of General Lee's army in the early darkness of night, swung all his troops behind the entire Confederate Army and by early next morning the 11th Army Corps of the Union Army holding a wing of the Union line were breakfasting, ignorant of the fact that any Confederates were nearby. Jackson's forces suddenly came out of the woods, hit them on the flank and rear, routing them in great disorder. Our generals in Vietnam attacking Hamburger Hill acted as if they had never studied Lee's and Jackson's strategy. Instead, they flung our paratroopers piecemeal in frontal assaults. Instead of seeking to surround the enemy or assault the hill from the side and front simultaneously, there was just one frontal assault after another, killing our boys who went up Hamburger Hill.

The most that can be said for the general who ordered these continuing frontal assaults despite heavy losses is that he exerted "maximum pressure." In other words, maximum offensive strategy while peace negotiations are continuing in Paris. Immediately after the final assault, helicopters flew out the wounded and dead. Stacks of army helmets and bloody flak jackets remained behind. Then, the VC bunkers were destroyed and orders given to abandon the hill. A U.S. Command spokesman in Saigon said, "There's no tactical reason to stay there."

Our colleague, Senator EDWARD (TED) KENNEDY, properly denounced this frontal attack on Dong Ap Bia, renamed Hamburger Hill by the soldiers who fought there, and correctly termed it as a "senseless and irresponsible action." This irresponsibility on the part of our military commanders in South Vietnam cost the lives of 60 GI's killed, 25 missing, presumably dead, and 308 wounded.

Then, almost immediately following the critical comment in the Senate of the distinguished senior Senator from Massachusetts (Mr. KENNEDY), a few score of our soldiers were returned to the hill as temporary custodians. Presumably, the American flag now flies over Dong Ap Bia. Telegrams have been sent to the young widows and parents of our dead GI's, and our wounded are being cared for. Was it worth it?

A high State Department official stated, "With the Paris talks going on we don't need those gory stories in the papers." A Pentagon spokesman said, "Hamburger Hill was strategically important. It dominated the supply route from Laos to the A Shau Valley. This could have been the staging point for an attack on Hue." If so, why did the generals order its abandonment immediately after our troops drove out the VC?

Following the statement of the Senator from Massachusetts, instead of altogether abandoning the little hill, a token force of 20 or 30 GI's are now on the hill.

This hill that our generals considered so important to capture by frontal assault was held but long enough to evacuate our dead and wounded. It was then abandoned, the same as Khesanh, which our generals claimed early last year and in December of 1967 to be an important bastion and outpost, was abandoned.

THE MAO WORSHIPERS ON THE AMERICAN CAMPUSES

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Connecticut (Mr. DODD) entitled "The Mao Worshipers on the American Campuses," and I ask unanimous consent to have printed in the RECORD an article entitled "West's Young Mao Idolizers Could Find Lesson in China," written by Stanley Karnow.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE MAO WORSHIPERS ON THE AMERICAN CAMPUSES

Mr. DODD. Mr. President, among the student extremists who have been assaulting our university system there are many who consider themselves followers of Mao Tse Tung and wear Mao Tse Tung badges and spout quotations from his writings. This they do in the name of a newer and better society for which, they claim, they stand.

I do not think there has ever been a more spectacular example of intellectual failure or of the human capacity for self-delusion. For the fact is that Mao Tse Tung's regime in China has clamped down more brutally on student militants than any previous regime in history.

Many thousands of Chinese students have been shot. Millions of them have had their studies terminated by the regime and have been transferred at the point of a bayonet to agriculture collectives. And while the Maoist students in our own country demand student control over the administration of their universities, in Red China the students have no control at all over their universities; nor do the professors have any control. The control is entirely in the hands of the armed forces and of special workers' propaganda groups.

The distinguished Far Eastern correspondent, Mr. Stanley Karnow, points out that for the American situation to resemble the Chinese student situation, President Nixon would have to order the National Guard and labor vigilantes into U.S. colleges, with instructions to beat or brainwash unruly students or to deport them to northern Alaska.

Mr. President, I submit Mr. Karnow's article of May 26 for printing in the RECORD at this point.

The article, ordered to be printed in the RECORD, is as follows:

WEST'S YOUNG MAO IDOLIZERS COULD FIND LESSON IN CHINA

(By Stanley Karnow)

HONG KONG.—Even the most conservative American would be horrified if President Nixon ordered the National Guard and labor vigilantes into U.S. colleges to beat or brainwash unruly students, or deport them to northern Alaska.

Yet this is almost exactly what is happening in Red China despite Peking's pretensions to running the world's only authentic Communist state.

Thus there is something ludicrous in the spectacle of radical American and European youths sporting Mao Tse-tung badges and spouting Mao's aphorisms while young Chinese are being repressed for similarly seeking their emancipation. And there is something equally paradoxical in Peking's exhortations to "progressive" Western youths to trigger upheavals while their Chinese counterparts are being brutally subdued for displaying the mildest signs of independence.

For within the past year or more, the Red Guards and other activists initially unleashed in the Cultural Revolution have, with Mao's assent, been systematically crushed by a new Chinese bureaucracy composed of army officers and old Communist cadres.

Under the guise of making them true "proletarians," millions of youths have been shunted out of China's cities to bleak, backward villages, or forcibly recruited into military-style labor battalions in remote, arid frontier regions.

Those who have managed to remain in urban areas are being compelled to submit to controls by squads of soldiers and workers whose primary concern, like that of the Chicago police, is to maintain law and order.

In several places, effervescent young Chinese have been publicly executed for alleged "counter-revolutionary crimes." In South China last year, thousands of youths were killed by troops for the same rebellious activities they had been encouraged to pursue the year before.

Hence China's younger generation has discovered, to its vast disappointment, that the hopes and promises originally offered by Mao's utopian programs have been betrayed by harsh reality.

To appreciate the depth of their disenchantment, it is necessary to understand the tensions and pressures that have existed among Chinese youths ever since the Communists took over the country two decades ago.

As Mao himself has repeatedly stressed, the Communist victory in 1949 did not automatically turn China into a Marxist nirvana. On the contrary, Communist policies and practices led to serious class and regional differences in Chinese society.

For one thing, the rapid industrialization of China by the Communists in their first ten years of rule sharpened the traditional contrasts between the cities and the countryside. As a consequence, neglected peasants grew to envy the relative comforts enjoyed by urban dwellers.

Under the Communists, too, there arose an establishment of Party and government functionaries whose patronizing view of the masses resembled the haughty attitude of China's ancient mandarins towards the population.

These and other developments were reflected in Chinese schools and universities, where the sons and daughters of workers and peasants resented the privileged children of officials, who in turn resisted recurrent campaigns to homogenize them into the great unwashed "proletariat."

In addition, youths of all social backgrounds were frustrated by the shortage of career prospects in a structure dominated by veteran *apparatchiks* who clung to their jobs like limpets.

In 1965, as he plotted to uproot the Party and state machinery he believed had double-crossed him, Mao recognized the explosive potential of China's pent-up younger generation. When he uncorked them, therefore, the Red Guards burst forth wildly in what was essentially an expression of unprecedented freedom.

Brimming with idealism, a girl Red Guard told a European writer visiting the south China city of Canton in early 1967 that the Cultural Revolution was a "Feast of Criticism."

Young Chinese, she explained could now "write about things that have been forbidden for twenty years." They could voice their grievances openly, she went on, and overthrow anyone who failed to measure up to their standards of 'pure communism.'

"A government minister can be dismissed just like a foreman," she said. "The moment of truth has arrived, and we shall never relinquish it."

Where that girl is today is unknown. She may be knee-deep in a flooded Kwangtung paddy field or digging ditches in a Sinkiang desert. She may be in a "labor reform" camp, or living as a refugee in Hong Kong.

But wherever she is, her "moment of truth" has surely been lost in a revolution that has, like other revolutions before it, consumed its most dedicated children.

Mr. DODD. Mr. President, I hope that many of our young student extremists will find the time to read it.

I also hope that translations of this article will be made available in the many countries where Maoist students have been able to rise to positions of leadership and influence. This thought is prompted by the news in this Wednesday's newspaper that the students of the National University of Colombia who demonstrated against the visit of Governor Rockefeller were under the control of the pro-Chinese leadership of the university's student council.

APOLLO—AND AFTER

Mr. BYRD of West Virginia. Mr. President, on behalf of the senior Senator from Alabama (Mr. SPARKMAN), I ask unanimous consent to have printed in the RECORD an editorial entitled "Apollo—And After," published in the Birmingham News on May 20, 1969.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

APOLLO—AND AFTER

Three more brave men are en route on another leg of the most exciting voyage in human history. Thomas Stafford, Eugene Cernan, and John Young, crewmen of Apollo 10, are taking the penultimate step toward the moon. In July, if all goes well, man will set foot on the moon's surface.

While Apollo 10 so far has been as spectacularly successful as earlier missions in this sequence, the most dangerous part of the flight is still to come—orbiting of the moon, low-level scouting of landing areas in the weird Lunar Excursion Module of the type which will be used to make a touchdown in Apollo 11, and return home.

As did the three astronauts who preceded them in lunar orbit, Stafford, Cernan and Young go not only on the thrust of the magnificent machine designed and built by Dr. Wernher von Braun's Saturn team at Huntsville, but also on the wings of the prayers of millions of countrymen and other well-wishers around the world.

As the climatic moment of American's manned space program approaches—thought has turned more and more toward the post-Apollo era.

Will the space program be continued? At what level? Toward what new goals?

These are not easy questions, for beyond the scientific and other factors involved there is the matter of money—many billions of tax dollars. Should space research and exploration continue to rate high priority? Or should the space program be cut back so more funds could be diverted to other needs?

The News understands that considerable rethinking of the U.S. space effort will be in order, and that some cutback in the level of spending, at least for awhile, is probable. But we believe that a drastic reduction in the program would be a mistake.

We are only on the beaches of the universe beyond our own small planet. There are more space seas to sail, more worlds to explore.

We cannot neglect our earthly problems and responsibilities. But neither should we lower our eyes from the stars.

Shepard, Glenn, Grissom, White, Lovell, Borman, Anders, Stafford, Cernan, Young—they are names on a roster with Columbus and Magellan and Lindbergh and thousands of famous and anonymous men and women who dared the unknown, who blazed historic trails.

Stop now? We have barely begun.

THE PUBLIC INTEREST AND THE POSTAL SERVICE—ADDRESS BY SENATOR YARBOROUGH BEFORE TEXAS UNITED FEDERATION OF POSTAL CLERKS

Mr. BYRD of West Virginia. Mr. President, there is quite a bit of discussion and comment currently regarding the new proposal by President Nixon and the Postmaster General Blount for reorganizing our Post Office Department and our postal service.

This past Saturday, May 24, 1969, our distinguished colleague, the senior Senator from Texas (Mr. YARBOROUGH), in addressing the legislative rally of the Texas Federation of Postal Clerks, made some pointed and thought-provoking remarks regarding this proposal which I feel should be brought to the attention of Senators.

Mr. President, I ask unanimous consent that the statement of the senior Senator from Texas (Mr. YARBOROUGH) be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PUBLIC INTEREST AND THE POSTAL SERVICE

(Address by Senator YARBOROUGH before the legislative rally of the Texas United Federation of Postal Clerks, Greenville, Tex., May 24, 1969)

Last June a Commission headed by Frederick R. Kappel, retired chairman of the Board of Directors of the American Telephone and Telegraph Company, issued a report calling for replacement of the Post Office Department by an autonomous self-supporting government-owned corporation. Autonomous means a corporation the government doesn't control; it means free of any outside control.

Now Postmaster General Blount has recommended that Congress enact a corporate post office into law and President Nixon has endorsed Mr. Blount's recommendation.

I am opposed to such a Postal Corporation because I do not believe that it is in the pub-

lic interest, nor is it in the interest of postal employees or the postal service.

The Kappel Commission had as members a retired businessman, a banker, a dean on the Harvard School of Business Administration, five other active corporate executives, a lawyer and a labor leader.

The labor leader, AFL–CIO President George Meany, opposed the major recommendation of the report—the establishment of a postal corporation.

In view of their backgrounds, it was almost a foregone conclusion that the other members would join together to urge elimination of the Post Office Department and its substitution by a Corporation.

I do not mean, in any way, to question the integrity of these very successful businessmen, some of them executives of the biggest corporations in America. But they are geared to a market economy in which profits are the major goal, not the public service. It is hardly a wonder that this report Blount now takes as his own, stressed postal deficits, the elimination of certain public service mail delivery and a public utility approach to rate-making.

The Postal Corporation would be required to operate entirely on a self-supporting basis. This may sound highly commendable in theory, but the real issue is the price of such an operation—what would happen to the cost of mailing a letter in small towns and rural areas, to services which cannot become self-supporting and to the nation's economic and social welfare?

The Commission has called for changes in "rates and services" to reduce the "cost-revenue gap." Translated into the utility rate-making concept the Commission so greatly admires, this means the elimination of all mail delivery that they feel does not pay for itself, of some *classes* of service and then higher rates everywhere else! Under the Commission's proposal, the Blount recommendation, of having each piece of mail pay its own way, it would probably cost a dollar to deliver a letter to a remote farm or ranch.

Rural America knows from experience of the kind of concern that the power and communications utilities have for its welfare. Until the thirties, many rural areas lacked electricity and telephone services because they were spurned by the utilities as unprofitable.

The AT&T telephone system today serves only about 20 per cent of the nation's land area although it has monopoly privileges over about 80 per cent of the population. AT&T refused to move into the countryside but sought as a matter of policy simply to cream-off the urban areas.

Only after the Rural Electrification Agency of the Federal government came upon the scene did the private utilities begin to move into rural areas. If the rural electric cooperatives have such ardent support in basically conservative rural America, it is because it took cooperative principles to bring power and telephones. Even today, in many areas of rural America, the farmer and other rural residents must pay for pole lines, as well as high rates, to get service from private utilities. And there are still parts of the nation where service cannot be obtained. *The mail, however, is delivered* in these areas, sometimes under very difficult conditions.

Modern utility rate-making as practiced by the long distance communication carriers is very revealing. The cost of a telegram is based upon a zoning plan, and the grim irony is that telegrams are frequently called in to the receiver by telephone and then delivered in the mails. The mere existence of a corporation has not prevented deterioration of the nation's telegraph service. Telephone service is also based on a zoning plan. It costs more to call Texarkana, Texas from here than Little Rock, Arkansas.

This is the kind of rate-making that may be expected of a Postal Corporation using a utility approach.

There's nothing new in zoned postal rates; they were tried during the first 45 years of the Republic. It then cost six cents to send a single sheet letter 30 miles, and 25 cents to send it 450 miles; two sheets cost double; three sheets triple, and the rate was double for a single sheet enclosed in an envelope.

Gerald Cullinan, whose book on the Post Office Department is authoritative, reports that in 1834 a farmer settled his account with a postmaster by giving the latter a "good milch cow," then worth eight dollars, in return for sending 32 letters. In those days, 25 cents would buy five dozen eggs.

The Rural Electrification Agency represents a non-profit approach to telephone and electric power services, which makes that service possible for an essential part of the nation. We cannot have a private utility profit-making approach to mail service in rural America; we cannot refuse to deliver the mail. Some of the mail must be supported, and the fairest way is through our government.

The Kappel Commission reported that it had studied the postal systems of 14 other nations, and that in 12 of these the service pays its own way. But it failed to report that in most, the service is operated by a government department—not a corporation. And in most of those nations the post office includes the telephone and telegraph services. These services explain why the postal systems of those nations cited operate in the black. Telephone and telegraph profits usually make up the deficit of the mail service. The Kappel AT&T report did not propose that telephone and telegraph service be made a part of the U.S. Postal Service as in the nations cited; instead, he would reverse the situation and take the Postal Service away from the government and give it to a corporation.

Now I'm not advocating the merging of telephone service into the post office; it is obvious that the Kappel Commission and Postmaster General Blount would not favor this solution.

The postal service of the United States is far different from that of any other nation. Neither the U.S. postal service nor the nation's economy or its geographic territory is comparable to those of West Germany, little Denmark, Ireland or Japan. The U.S. service handles more mail than those of Western Europe and Japan combined; indeed, the U.S. Postal Service, and it is a *service*, handles more mail than all other postal systems in the world combined.

The U.S. domestic postal service delivers the mail from Alaska to Florida; from Puerto Rico to Guam, It covers a land area of 3,615,211 square miles. Population density averages about 51 per square mile, against 273 in Denmark, 215 in France, and 654 in Japan. And U.S. population density varies from several thousand per square mile in its big cities to 2.6 in Nevada and even less in Alaska.

I simply say that the Post Office provides so vital a service that Congressional supervision is merited. We want a better postal service and deepgoing reforms, but we want them within the present structure.

There is no more reason for saying that the Post Office Department must pay its own way than there would be for saying that the Commerce Department, the Labor Department, the Interior Department, or any other department of government, must pay its own way. None does. Government is a service, not a business. The very people who have been screaming for years, "Get the government out of business," now want to change a big branch and the oldest branch of government, into a business. There is no more reason for it than there would be to lease out the Police Department.

Postmaster General Blount reports a crisis in the postal service. I agree with the finding. While the volume of mail increases massively each year, facilities remain rundown and inadequate. Pay scales are far too low to attract a stable labor force. Labor-management relations are frustrated by lack of realistic machinery to resolve grievances. But the death of the Post Office, like that of Mark Twain, is grossly exaggerated.

Despite deficiencies, the U.S. Postal Service is the most efficient in the world. But it needs more modernization. I will support a program to modernize and upgrade the service without destroying the basic service concept, and without making the costs of mail delivery prohibitively high. I seek a much more efficient service based upon modern methods and facilities. I take the position that if more money is required to achieve these goals, it should be forth-coming. We cannot sacrifice the U.S. mail service to a corporation that is certain to result in higher rates, further curtailment of the service, and, I might add, rougher treatment of the postal employees.

"THE CRISIS IN AIR TRANSPORTATION"—ADDRESS BY GEN. WILLIAM F. McKEE

Mr. CANNON. Mr. President, on May 13 of this year Gen. William F. McKee spoke to the Aviation-Space Writer's Convention in Dayton, Ohio. His subject was "The Crisis in Air Transportation."

On this subject, Bozo McKee must be rated as an expert. He was FAA Administrator for over 3 years and this service followed his career in the Air Force.

In his speech he pointed out that our air transport system is more than just aircraft. It includes airports and airways and supporting ground transportation systems.

He notes that we have an air transportation crisis in the United States today and suggests the reason is the progress in aircraft has outstripped our airways system and our airports.

In this connection, Mr. President, let me remind the Senate that the FAA's high-density traffic airports regulation goes into effect 3 days from now on June 1. The regulation gives the airlines and scheduled air taxis "exclusive use and priority use" of five airports, Kennedy and LaGuardia in New York; Newark, N.J.; O'Hare in Chicago; and our own National in the Nation's Capital.

Our airways and our airports are overcrowded. They are becoming more so each passing day, and while the FAA advises this new regulation is temporary and will be lifted as soon as possible, the fact remains we cannot extend runways nor update our electronic ability in the airways overnight.

We must get started.

I hope all of us will read General McKee's excellent speech, and for that reason, Mr. President, I ask unanimous consent that the speech be printed in the RECORD at this point.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CRISIS IN AN AIR TRANSPORTATION

(Address by William F. McKee, general, USAF (retired) at the Aviation-Space Writer's Convention, Dayton, Ohio, May 13, 1969)

Until about ten years ago, the pacing factor in the growth of American commercial aviation was the efficiency of the aircraft. Since the earliest days of scheduled airline service, the airlines have pressed the manufacturers for aircraft with higher speeds, longer ranges,

and greater capacities. The manufacturers have responded enthusiastically and ingeniously. In forty years, the aircraft manufacturers have taken us from the Ford Trimotor, the Lockheed "Vega" and the DC–2, to the Boeing 747, the Lockheed L–500, and the DC–10. And, at the same time, they provided this country with the world's finest fleet of military aircraft.

All this progress is wonderful. It has given Americans the finest air transportation in the world. It has given wings to the nation's economy, both figuratively and literally. And, it has also been a credit factor in the nation's running struggle to maintain a favorable balance of trade.

But the air transport "system" of this nation is more than just aircraft. It is also airports and airways and supporting ground transportation systems. An important measure of the efficiency of a total system is the time it takes an individual to get from his office or home to his final destination. Similar measures for efficiency could be applied to cargo and mail.

Right now, we speak of an air transportation crisis in our country. Why? The answer is that progress in aircraft has exceeded progress in both the ground electronic environment or the airways system and in the airports. Progress in aircraft may also be said to have exceeded progress in national understanding of the problem. That is to say, the Federal Aviation Administration, which is responsible for the operation of the airways and parts of the Aviation Community have not been able to arouse sufficient congressional and public support to insure that sufficient funds were provided for the modernization and expansion of the airways and airport system.

If one takes an objective look at the situation, the reasons for this are easy to understand. When I say that, I am not trying to excuse myself or the FAA or the Department of Transportation. The fact is that FAA's needs have met very stiff competition of late from domestic and Defense needs. And it is also true that the American public has turned to air transportation at a rate that exceeded expectations.

This does not mean that the FAA did a bad job of estimating. I think it reflects, rather, unanticipated acceleration in the economy and in the pace of life in this country. Recently, TIME magazine ran a feature on under-anticipation, a phenomenon of the decade. The article listed a series of under-anticipation by experts. The experts—in quotation marks—predicted, for example, that before the Sixties had run their course, the stock market would be handling sales as high as ten million shares in one day. Of course, the sales record is now in excess of twenty million shares in one day.

The point should also be made that the Congress has, in general, been very sympathetic to the needs of the FAA, but the amount of money required to modernize the airways system and to expand airport facilities simply has reached levels that were politically difficult for the Congress to vote, in light of over-all national considerations.

Today, the key question facing the Congress, the Department of Transportation, the Air Lines, and General Aviation is where can we find the money to bring the quality or effectiveness of the airways/airports system in line with the exceptional quality and effectiveness of America's commercial aircraft. In recent years, this question has reached crisis proportions. The airlines, and general aviation, in order to meet the demands of the public for air transportation, have bought so many aircraft and expanded their operations so fast that the airways and the airports can no longer efficiently service the number of aircraft in the skies. And as we look to the future, the situation grows increasingly severe because the demand for air transportation continues to grow. From the standpoint of the airlines, the situation is reaching critical proportions because delays in the air and on the ground result in heavy financial losses. The larger aircraft, which represent heavy investments for the airlines are by no means being used to maximum efficiency under present circumstances. The result is that the volume of air traffic is up, but profit for most airlines is down. Almost all of the major airlines showed a decrease in net profits for the calendar year 1968. Indeed, several of them were seriously in the red. In addition, the airlines want to invest in the next generation of aircraft, but their available capital for such an investment is being depleted by current high operating costs.

I will offer you a solution I have advocated at every opportunity for the past several years. It is a solution under consideration by the Department of Transportation and the Nixon Administration. But, before I discuss that solution I would like to review with you briefly the recent growth in air transportation and then project for you the future growth, so that you can sense how vital it is that we bring about a balance between the numbers and quality of the aircraft and the effectiveness of the airways-airport systems.

In recent years, air transportation has grown at the rate of 16 to 17 per cent a year. Between 1963 and 1967, air carrier passenger miles went from 46 million to 86 million. Air cargo volume tripled in that five year period. And the hours flown by general aviation aircraft during the same five year period increased nearly fifty per cent. These figures reflect that air travel is now the most popular form of inter-city transportation. Last year, the air carriers accounted for seven out of ten common carrier passenger miles compared with two out of ten in 1951.

Let me relate this growth during the past few years to an airport to give you an idea of how desperately we need to modernize and expand the airways and airport systems. John F. Kennedy airport on Long Island is a very modern airport. When JFK was being built, the FAA calculated that JFK would be able to handle 260,000 aircraft operations per year—that is, take-offs or landings—without delays. You might call 260,000 aircraft operations the *delay-free threshold* for JFK. Yet that airport is already handling in excess of 500,000 aircraft operations per year, with the inevitable delays.

Now, let's project a few years into the future. The latest FAA projections give us these figures for the scheduled airlines. In 1968, the number of passengers was 152.6 million. The estimate for 1974 is 269.5 million; and for 1979, the figure is 429.0 million. In other words, the numbers of passengers is estimated at almost three times last year's total. The paralleling statistic of equal importance is "revenue passenger miles." And here the figure for 1968 was 106.5 billion; with the projection for 1974 being 204 billion, and for 1979, 342 billion.

The estimates for air cargo show a growth in excess of that for passengers. The growth rate is projected at 20 per cent per year. This means that by 1975, U.S. domestic and international air carriers should be flying about 20 billion ton-miles of freight and mail, compared with 5.0 billion ton-miles in 1967.

To provide service for additional passengers and freight, the air carriers are forecast to increase their fleets from a total of 2,452 aircraft at the beginning of 1968 to 3,480 by the start of 1979.

On the General Aviation side of the picture, the 1968 figure for General Aviation aircraft was 114,000. The 1979 estimate is 205,000, which means that General Aviation will be expanding at about the same rate as the airlines.

If these projected increases in the amount of commercial flying are not enough, you might also consider that there will be a greater diversity in the types of aircraft that will be flying by the end of the 1970's. There will be far more helicopters of various sorts and sizes, and there will be a whole new family of STOL aircraft. In one sense, these aircraft will complicate the aviation picture. But in another sense, they will help to alleviate some of the congestion in the airways, because they will be able to fly in air corridors not presently being used for the higher and faster flying jets.

These projections have been included in these remarks to help you to reach the conclusion that the airways and airport crisis of today is going to get worse—much worse if drastic steps are not taken quickly to improve and expand our total air transportation system—that is—airways, airports and the transportation systems to and from communities to the airports. If we do not move sensibly and energetically to make the needed improvements the growth predictions outlined ill not come to pass.

Here I would like to stress another vital and most important facet of the problem—and that is a primary responsibility of the Administrator of the FAA under the law. He carries this burden on his shoulders seven days a week, 24 hours per day. Statements have been made in the past that a high level of safety can be maintained with current FAA's funding levels through the exercise of the FAA's regulatory powers. This is simply not so. I know of no responsible person in FAA or in the Aviation Industry who will agree that a reasonable degree of safety can be maintained in today's environment with current funding levels. I suggest you just ask the airline pilots who fly to tell you what they think. The answer, I can assure you, will be loud and clear.

The question arises then "What needs to be done?" The answer has been well thought out and presented in FAA's "National Aviation Systems Plan." This Plan is a product of bitter experience, and a lot of hard work by many dedicated people. There is little disagreement, if any, between the FAA, the military, and the aviation community in regard to this Plan. The Plan covers a 10 year period, with detailed costing for the first five years and estimated for the next five.

The Plan covers the additional equipment and facilities that will be necessary to service efficiently and safely the vastly larger number of aircraft that are projected to be flying in our skies during the next decade.

I will not discuss the details of the Plan, but I would like to make some comments relative to it. First, I wish to explain what we mean when we use the term "Air Traffic Control System" or the "National Aviation System." We mean not only the control towers, the En Route Traffic Control Centers, the Controllers, the Instrument Landing Systems, radars, communications, etc., but also the operational part of the nation's airport, i.e., runways, taxiways, ramps and the high intensity lighting systems. With all of the deficiencies in the airways part of the system—and they are too numerous to mention here—the biggest bottle neck in the Air Traffic Control System is the airport.

The problem then—where do we get the money to do the job which we all know must be done. Will the Administration request the necessary billions from the Congress to come from the General Revenues of the Treasury? The answer is a "flat" *no*—and this applies whether the Democrats or Republicans are in power. Will the Congress appropriate the necessary funds if the Administration requested them? Again, the answer is a "flat" *no*. I speak from painful experience.

Since it is clearly in the National interest that the job must be done—the question is: "Where does the money come from?" The answer here is also quite clear—"From a reasonably equitable system of user charges, augmented by a fair share from general revenues which may be properly charged to the National interest."

Such a plan was unanimously proposed last year by the prestigeous Senate Commerce Committee. Overall it was a good plan

and deserved to become law. Unfortunately, and I should say very fortunately for the country, it did not. There were disagreements within the Administration and within the Aviation Community. All of us are the losers.

I know that the new Secretary of Transportation, Mr. Volpe, and the new Administrator of the FAA, Mr. Shaffer, understand the importance of doing something *now* to improve our Air Transportation System and that they are in favor of airways/airport legislation along the general lines proposed by the Senate Commerce Committee last year. Again there is disagreement within the Administration and within the Aviation Community. On the other hand, there is a good understanding in the Congress of what needs to be done and the importance of doing it quickly. The Committees principally concerned are awaiting the Administration's proposed legislation. It is my hope, a faint one I must add, that the diverse elements within the Administration and within the Aviation Community can reach some reasonable accord and agreement on the proposed legislation. This would assure the early passage of an Airways/Airport Bill. Failing this, I think the Congress must pass legislation which in its judgment, is in the best interests of the 200 million stockholders in this corporation called the United States.

In closing I want to say just as strongly as I know how that failure to get early airways/airport legislation will result in:

A. A significant deterioration in the safety of the system.

B. Further deterioration in the operational effectiveness of the system, including more delays in the air and on the ground and more arbitrary restrictions.

C. An adverse impact on the growth of the National economy and on the Defense posture of this Nation.

I earnestly hope that we do not have a series of catastrophies to bring these points home.

OKINAWA

Mr. BYRD of Virginia. Mr. President, the Foreign Minister of Japan will arrive in Washington Saturday, May 31.

He will be in the United States to discuss the future status of the island of Okinawa.

Okinawa, and in fact the whole U.S. position in the Far East, is part of the heritage of World War II, which ended 24 years ago.

During the past quarter century, the United States has entered into mutual defense agreements with 44 nations—and has been involved in three major wars, counting World War II.

I doubt that any other nation in history, during such a short period of time, has engaged in three different major wars.

The U.S. Senate, under the Constitution, has a responsibility for foreign policy.

Too often during the past 25 years, the Senate has abdicated its responsibility in the field of foreign affairs, relying instead on the Department of State. Now I know that within that Department the overwhelming majority are dedicated, conscientious individuals; I know, too, that many of them are men of great ability.

But, I know also that whatever the reason, or wherever the responsibility may lie, the fact is that our Nation in this year of 1969 finds itself in a most unenviable position.

We are the dominant party in the North Atlantic Treaty Organization, the purpose of which is to guarantee the freedom of Europe; we are the dominant party of ANZUS—the treaty among Australia, New Zealand, and the United States; we are the military head of CENTO—Central Treaty Organization—Turkey, Iran, and Pakistan; we are the dominant partner in the Southeast Asia Treaty Organization, one of the prime reasons, according to former Secretary of State Dean Rusk, that the United States became involved in the war in Vietnam; we have guaranteed the security of Free China, and we have guaranteed the security of Japan.

As a practical matter, we have become the policeman of the world.

Can we logically continue in this role? Should we, even if we could?

Twenty-four years after the defeat of Germany, we have 225,000 troops in Europe, mostly in West Germany.

Twenty-four years after the defeat of Japan, we have nearly 1 million military personnel in the far Pacific, on land and sea.

The question of Okinawa, which the Japanese Foreign Minister is coming here to discuss, is of great significance to our position in the Pacific.

The status of the island has become the most inflammatory political issue in Japan; a clamor is rising among Japanese and Okinawans for the reversion of the Ryukyu Islands to Japanese administration.

There are many factors behind this move by Japan to regain administrative control of Okinawa, one of which is the political fate of the administraton of Prime Minister Sato.

In Japan, leftist elements, including the Socialist and Communist Parties and radical student groups, have vowed to wage a massive campaign of confrontation with the Government in 1970 to force the dissolution of the United States-Japanese Security Treaty. In addition, the same elements have coupled with this a demand that the United States withdraw completely from Okinawa.

This reminds one of the effort of elements in Panama to blackmail the United States into giving up the Panama Canal. The administration of President Johnson drew a treaty to meet the demands of the Panamanians, but strong opposition in the Senate kept the President from bringing the issue to a vote.

Okinawa is our most important single military base complex in the Far East—and is strategically located.

The United States has had unrestricted use of the island since World War II.

Beginning with President Eisenhower, each administration since 1951, has firmly maintained that the unrestricted use of U.S. bases on Okinawa is vital if the United States is to continue to have obligations in the Far East.

Sometimes the future status of Okinawa is linked to the United States-Japan Mutual Security Treaty in which the United States guarantees the freedom and safety of Japan.

Such linkage is not correct. These are two separate issues.

The Mutual Security Treaty with Japan was consummated in 1960. Either party has the right to reopen it after 10 years, otherwise it remains in effect.

But, the status of Okinawa was determined by the 1952 Treaty of Peace with Japan. There is no legal obligation to discuss reversion of the island to Japan at this time or any other time.

The United States has complete administrative authority over the Ryukyu Islands, the largest of which is Okinawa, under the provisions of article 3 of the 1952 Treaty of Peace. This peace treaty is entirely separate—and I want to emphasize that—from the 1960 Mutual Defense Treaty with Japan.

The Japanese Government recognizes the important contribution of our Okinawa bases to Japanese and Asian security and is not likely to seek the removal of our bases. The Japanese Government does, however, want administrative control of the island which supports our major military base complex in the West Pacific.

To state it another way, the Japanese Government wants the United States to continue to guarantee the safety of Japan; to continue to guarantee the safety of Okinawa; to continue to spend hundreds of millions of dollars on Okinawa—$260 million last year. But it seeks to put restrictions on what the United States can do.

Japan wants a veto over any U.S. action affecting Okinawa. It specifically wants the right to deny to the United States the authority to store nuclear weapons on Okinawa and would require prior consultation before our military forces based there could be used.

In other words, the United States no longer would have unrestricted use of Okinawa.

Our role as the defender of the Far East has enabled Japan to avoid the burden of rearmament—less than 1 percent of her gross national product is spent on defense—and thus concentrate on expanding and modernizing its domestic economy.

In defense matters, the Japanese have gotten a free ride. As a direct result, Japan's present gross national product is over $120 billion and ranks third in the world, behind only the United States and the Soviet Union.

While the peace treaty with Japan gives the United States unrestricted rights on Okinawa, the 1960 Mutual Security Treaty provides that our military forces based in Japan cannot be used without prior consultation, with the Japanese Government.

For example, when the North Koreans seized the U.S.S. *Pueblo* last year, Adm. Frank L. Johnson, commander of naval forces in Japan, testified that one reason aid could not be sent to the *Pueblo* was that approval first must be obtained from the Japanese Government to use U.S. aircraft based in Japan, those being the nearest aircraft available.

The Japanese Government now seeks to extend such authority to Okinawa.

Whether the United States should continue to guarantee the freedom of Japan, and Free China; whether we should continue the mutual defense arrange-

ments covering the eight countries signing the Southeast Asia Treaty; plus the Philippines; plus Australia and New Zealand; plus Thailand, Laos and Vietnam, is debatable.

But what is clear-cut commonsense, in my judgment, is that if we are to continue to guarantee the security of the Asian nations—and our Government has not advocated scrapping these commitments—then I say that it is only logical, sound, and responsible that the United States continue to have the unrestricted use of its greatest base in the West Pacific; namely, Okinawa.

The demand on the part of Japan that she obtain administrative authority on Okinawa stems from President Kennedy's statement in 1962 that he looked forward to the island's reversion to Japan "when the security interest of the free world will permit."

President Johnson reaffirmed this statement, and, in 1967, he and the Japanese Prime Minister agreed that the United States and Japan should keep the status of the Ryukyu Islands under review, "guided by the aim of returning administrative rights of these islands to Japan."

While I agree that eventually the Ryukyu Islands will be returned to Japan, I think it unfortunate that public statements by past Presidents, not binding on the U.S. Senate, have aroused the hopes of the Japanese that it could be accomplished at an early date.

It would be foolhardy, in my judgment, to commit the United States to defend most of the Far East and then to give away this country's unrestricted right to use its military bases on Okinawa.

For 4 long years, we have fought the Vietnam war with one hand tied behind our back. As a result, the war has been prolonged and the casualties increased.

Let us not be so foolish as to get into a similar position by giving someone else control over our principal military complex.

It is vitally important that public attention be focused on this issue of unrestricted use of our bases on Okinawa.

I speak as one who is not sympathetic to our deep involvement in Southeast Asia, one who from the beginning regarded it as an error of judgment to become involved in a ground war there.

I speak as one who questions the wisdom of our country's committing itself to mutual defense agreements with 44 different nations.

I speak as one who feels that we cannot logically be the world's policeman.

If by the act of granting Japan administrative control over Okinawa, the United States could insure a multinational defense structure in the Far East, with increased participation by Japan—if this action would relieve our country of a measure of its heavy international responsibilities—then, I would support a reversion of Okinawa to Japanese control.

But this is not the case.

Quite the contrary. Surrender of control over Okinawa would only make more difficult our role in the Pacific.

The issue must be decided by the Senate; it was the Senate which ratified the treaty of peace in 1952, which gave to the United States the unrestricted use of Okinawa.

In my opinion, so long as the United States maintains its significant role in the Far East, the continued unrestricted use of our bases on Okinawa is vital and fundamental.

Mr. President, circumstances have made it impossible for the distinguished senior Senator from South Carolina (Mr. THURMOND) to be in the Senate today. He asked me to insert in the RECORD, on his behalf, certain remarks which he would have made had he been here in regard to the matter of Okinawa. So at this point, in behalf of the senior Senator from South Carolina (Mr. THURMOND), I ask unanimous consent that remarks prepared by him for delivery in the Senate be inserted in the RECORD, including a supplement from the Morning Star, published on the island of Okinawa.

There being no objection, the statement and supplement were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR THURMOND

Mr. President, I heartily endorse the remarks of the distinguished Senator from Virginia with regard to the return of Okinawa to Japanese control.

This is not a matter where there has to be a significant difference of opinion between the United States and the Japanese Government. The Japanese have frequently stated that the Okinawa situation need not be a point of contention. The Japanese realize that Okinawa has great significance to them as a bastion of U.S. defense forces since these defenses are as important to them as they are to us.

The Honorable Takezo Shimoda, Japanese Ambassador to the United States, recently stated in a news conference in Tokyo that Japan would have to possess its own defense power before Okinawa could be returned. He said that the U.S. bases could not be withdrawn without endangering world peace.

The problem is that it is easy to stir up negative agitation in any part of the free world over any emotional issue. Those who are seeking to destroy the U.S. presence in the Far East have been working hard fanning the flames of emotion. It is noteworthy that no agitation has been raised in Japan about the return of the Soviet-held Kurile Islands, former Japanese possessions.

These issues are especially clear to those Americans living on Okinawa. The Okinawa Morning Star, under the editorship of Robert M. Prosser, has courageously battled to keep the status of Okinawa under objective examination, so that the mutual benefits to all parties concerned may be discussed in a public forum.

Mr. President, The Morning Star recently put out a special supplement containing a number of worthy articles bearing on the situation. I submit the supplement for printing in the Congressional Record at the conclusion of my remarks.

[From the Okinawa Morning Star]

MAJOR GENERAL PAGE CITES OKINAWA'S IMPORTANCE

(By Robert M. Prosser)

Okinawa's importance as a military base will be increased rather than lessened with the conclusion of the war in Vietnam, Maj. Gen. Jerry D. Page, commander of the 313th Air Division, told members of the American Chamber of Commerce on Okinawa yesterday at the Tokyu hotel.

Okinawa by itself has no great economic potential nor is it a tourist paradise, the two-star general said. The prime and continuing usefulness of the Ryukyus is as a military base and as a deterrent to Communist aggression in the Far East, the general said.

"Within the past 25 years every time that the Communists have smiled at the outside world the United States has bent over backward to smile back," the general said. Each time that the Americans have smiled the Russians have taken advantage of the situation with aggressive military moves. When the Americans smile military budgets are slashed and if the Soviets were to smile on a sustained basis the American military potential would disappear entirely, the general reasoned. The Communists have not been able to maintain their good behavior for longer than seven years at a time, Page said a fact which keeps the United States on guard. Before the Korean War, which Page described as the Soviet's greatest military blunder, the American military budget had been to $11 billion. After the North Korean attack on South Korea, however, American military spending rose to $43 billion. The general reasoned that the Communists attack was brought about by the fact that the Russians believed that the Americans would not defend South Korea against attack and that America's soft posture toward the Communists invited attack.

Inviting the chamber members to think as Chinese Communists, Page asked what they would do if they saw an undefended Okinawa or a Ryukyu chain that the Americans were prepared to give away.

"The Communists have not changed their objectives in the past 25 years," Page said. "Only their methods have been changed. They still hope for world conquest."

"Military capability plus military resolve equals deterrent power," the two-star general said. "We are attempting to deny the Communists the use of war to attain their objectives by maintaining a strong deterrent force in the Ryukyus. By denying the Communists the use of war to attain their objectives we force them to compete with us on a peaceful basis. Under the circumstances military power is a creative force since it makes it possible for us to force the Communists to face us in peaceful competition."

"If our will to defend ourselves is lacking then our military strength is meaningless," Page said. Unless the United States maintains a flexible posture in facing the Communists then we forfeit leadership and provide the Communists with the ingredients for the decisions that they will make. We have made wrong decisions in the past and they have been expensive mistakes paid for in both lives and money. In protecting ourselves against the Communists we have any of three alternatives, Page reasoned. We can do nothing and prove to be paper tigers, we can fight a conventional war or we could fight a total war. When the United States abandons necessary bases in order to win friends the United States loses flexibility and narrows the choice that it may have to make in case of a showdown with the Communists. When we lose flexibility we must choose between being paper tigers and all-out war. Polaris missiles can be used in total war but they are not sufficient by themselves to create doubt in the minds of the Communists concerning their ability to win an all-out war.

"South Korea and Taiwan would welcome the American military bases that are on Okinawa," Gen. Page said. "However, there are disadvantages to both of those locations. Besides, he added, Okinawa provides a greater degree of flexibility than any other available base.

"Americans on Okinawa do not communicate adequately with the Ryukyuans," the general commented. As the result the Ryukyuans are not sufficiently well-informed concerning the value of American presence on Okinawa. "The Okinawans are good peo-

ple but they are not astute or sophisticated," the general said. Few of them realize the dangers involving reversion because they have not been told.

The Air Force general described the recently released figures covering the American contribution to the Ryukyuan economy as "low." According to figures carried yesterday in the Morning Star, U.S. direct and indirect expenditures in the Ryukyus during 1968 amounted to $260,700,000. Gen. Page said that he felt that this figure was low because the Air Force and Air Force personnel alone spent $116,000,000 in the Ryukyus during 1968. Not included in the calculations made by the military, Page said, were 3,000 Air Force personnel who were on Okinawa every day on temporary duty status during 1968 nor was the spending of 80,000 Air Force passengers who were funneled through Air Force installations on Okinawa each month last year. These TDY personnel and passengers were described by the general as being heavy spenders since they were away from home. As such they contributed a great deal to the civilian economy of the Ryukyus, a fact which was not taken into account by financial observers.

OKINAWA'S FUTURE COURSE STILL SAME, DECLARES HIGH COMMISSIONER LAMPERT

(By Robert M. Prosser)

No new policies have been recommended for the future course of events on Okinawa, Lt. Gen. James B. Lampert, high commissioner of the Ryukyus, told the American Chamber of Commerce on Okinawa yesterday noon at the Top of the Rock.

Lampert had returned only an hour earlier from a background briefing in Hawaii by military officials. The three star general emphasized the importance of foreign business on Okinawa and then outlined some of the problems facing the American administration of the Ryukyus. Answers to the problem are not immediately available but are being sought the high commissioner said.

The major topic of discussion concerning Okinawa is the question of the reversion of administrative rights of the Ryukyus to Japan, the general said. The high commissioner emphasized the "unofficial" aspect of conferences which recently took place in Kyoto concerning Okinawa and its return to Japan. The general found encouragement in the fact that there is considerable talk concerning reversion in Japan and that the subject is gaining some attention in American newspapers.

Other problems which the general said were present included objections to B52 bombers on Okinawa by left wing groups, the gold flow and labor problems. Foreign investment in the Ryukyus is a problem that has come to the fore of late the general said, with the passage of a foreign investment law by the Ryukyuan legislature. The law at present is in conflict with a military ordinance covering the same subject and the military ordinance takes precedence over the law. Despite this the GRI is attempting to place its law in operation despite its illegality. The U.S. Civil Administration in the Ryukyus has objected to the GRI law covering foreign investment on the grounds that it needlessly restricts investment in the Ryukyus. Lampert said that he was hoping that the GRI and the U.S. administration could find a "mutually acceptable" solution to the problem in order to raise the economic role of Okinawa.

Foreign business has been an important factor in making Okinawa the "economic keystone of the Pacific" the general said.

Maintenance of Okinawa as a stable and strategic military base is still the high commissioner's prime function, General Lampert said.

After describing his background in the peaceful development of atomic energy, General Lampert who described himself as "a tourist in residence" said that on a recent Sunday drive he purchased a quantity of freshly caught fish from a shop in Nago. The fish came from the immediate offshore waters. They tasted fine the general added. Left wing politicians have conducted a campaign recently similar to earlier drive in Japan to convince the people of the Ryukyus that atomic submarines were contaminating the seas off Okinawa and making fish caught in these waters unfit to eat.

COMMUNIST PEOPLES' PARTY PERFECTS SOLUTION FOR MAKING ENEMIES ON OKINAWA AND IN JAPAN

(By Robert M. Prosser)

Okinawa's bumptious People's Party has again demonstrated its amazing ability to create ill-will, lose friends and alienate people. This time, posing as the spokesman for 900,000 Okinawan people, one Saneyoshi Furugen accomplished the near impossible by thoroughly angering Japan's suave and politically cool Prime Minister Eisaku Sato. Furugen is the darling of, and the spokesman for, the wild, wild far left as the representative of the Communist-kowtowing Okinawa People's party.

Furugen gained audience before Japan's prime minister as a member of a nine-man delegation which had gone to Japan to complain about the presence of B52 bombers on Okinawa. Furugen and the People's Party are better known for the variety and consistency of their complaints than for their accomplishments. As the permanent self-appointed complaint department of the Ryukyus the OPP has a 20-year record of unending complaints, accusations and tales of unmitigated grief that would bring tears to the orbs of a glass-eyed process server. During this double decade of determined woe the OPP has frequently complained and bemoaned opposing causes all in the same list of conflicting demands. To the OPP the complaint is all-important and the solution, if any, is to be avoided. Why spoil a good complaint by doing something about it, has been the political theory upon which the OPP has attempted to base its success.

As insurance against * * * to complain the OPP has blandly demanded lower taxes, higher salaries for government employes and lowered commodity prices all in the same breath. The local complaint department suffered a serious political bereavement recently when the high commissioner announced that in the future the post of chief executive would be filled through popular election. Bereft of one of their favorite and most durable complaints the OPP made haste to find some new source of political annoyance. They discovered the B52s and fell upon this new issue with shrill cries of delight like a flock of sea gulls finding a fresh cache of offal. Furugen was in the act of sticking political pins into his pelt in search of public sympathy when he made bold and told Japan's Prime Minister Sato that he wasn't sufficiently worried about the B52 issue with which the OPP was currently attempting to worry the nation. If Furugen's reasoning was bad his manners were worse. Prime Minister Sato was quick to tell Furugen that he was in no mood to be admonished on behalf of a phony * * * complainer and that Furugen could perform a great service for all by getting lost, preferably on a permanent basis.

No one should feel sorry for Furugen. He has been denounced before and no doubt will be censured again in the future for his boorish conduct unless his manners undergo radical improvement. It is unfortunate, however, that Okinawa must be represented in Tokyo by persons of Furugen's caliber. Furugen's amazing conduct in the presence of his betters is particularly unfortunate in that it occurred at the time when Okinawa is attempting to gain the political and financial sympathy of Japan. Okinawan demands for seats in the Japanese Diet for Ryukyuan observers have not been furthered by the actions of Furugen or the busy-body delegation which accompanied him to Japan to complain about the conduct of the Americans on Okinawa.

The Japanese reason with considerable logic that if they are to be beset by complaints from the Ryukyus even before Okinawa becomes Japan's official problem, then what will the conduct of the Ryukyuans be after reversion? If Furugen's conduct in Tokyo is a sample of what Japan is to expect from the Ryukyus the Japanese are likely to postpone reversion for as long as possible. And we can't say that we blame the Japanese.

COMPROMISE TAKES TWO, JAPAN EDITOR EMPHASIZES

(By Robert M. Prosser)

The art of compromise was reviewed the other day by Masaru Ogawa, senior editor of the Japan Times, in connection with the recent and somewhat explosive statement issued by the Japanese ambassador to the United States earlier in connection with the possible return of Okinawa to Japan.

In the light of a possible Adults day truce it might be appropriate to review Ogawa's analysis of the statements by Ambassador Takeso Shimoda, veteran diplomat for Japan, and perhaps add a few notions of our own for the benefit of Americans and others who may have missed the opinions of a Japanese writer who is not a member of the Japanese left wing brotherhood of crisis creators. Ambassador Shimoda told the Japanese that if they expect the return of Okinawa they must be willing to do so on American terms which also seem to be acceptable to the majority of the Japanese people. The Americans might be willing to turn Okinawa over to a friend, Ogawa reasoned, but it is the duty of the Japanese ambassador to the U.S. to explain to the Japanese people that the Americans are unlikely to release Okinawa to an avowed enemy.

The ambassador is not a traitor to the Japanese people when he explains these facts of life to the Japanese, Ogawa said. The ambassador is only doing his duty when he explains to the Japanese people what responsible thinking in the United States dictates, Ogawa wrote. Shimoda said that anti-American struggle with helmets and staves is not the answer to the return of Okinawa to Japan and those who feel that this is the answer to all current problems are not realistic.

It is not only the task of the Japanese ambassador to the United States to explain Japanese feeling in Washington but it is also the duty of the Japanese ambassador to explain American opinion to the Japanese. Compromise and information exchange is a two-way street. Critics of Shimoda in Japan have complained that Shimoda is something less than a honorable Japanese because of his having relayed American opinion to Japan as well as carrying Japanese opinion to Washington.

"We feel strongly that it is unworthy of an independent Japan to seek the return of territory without being prepared to make due payment," Ogawa told readers of Japan Times. "Due payment" in this case is proper assurance that the American military base on Okinawa does not fall into hostile hands.

"To expect the return of the islands (Okinawa) immediately and unconditionally as our leftist elements insist, is indeed, a sign of subservience and of mendicancy, a throwback to the postwar occupation period when we depended heavily on American generosity—which we came to expect as our due.

"If we want to deal with the U.S. as an equal, we must be prepared to hold up our end. And in the instance of Okinawa, it would mean an eventual willingness to compromise after due negotiations on the status of the bases while building up our own capability

for self defense which would in time enable us to replace the American presence there," Ogawa concluded.

In violently criticizing Ambassador Shimoda the Japanese leftists have contrasted Shimoda's reports with the opinions from the former U.S. ambassador to Japan, Edwin O. Reischauer whom the leftists charge is more pro-Japanese than the Japanese ambassador to the U.S. Perhaps this is a splendid time to begin our compromises. How about trading ambassadors with Japan for keeps. We'll keep Shimoda and the Japanese can keep ex-ambassador Reischauer who still insists upon talking like the sole voice of American opinion. This arrangement might please a wider spectrum of American and Japanese opinion than anything else that could be arranged on short notice.

OKINAWA IN SPOTLIGHT WHILE RUSS HOLD KURILES

(By Hessell, Tiltman)

(EDITOR'S NOTE.—In Japan the view is widely held that the postwar era will not end until not only Okinawa and the Ryukyus also the "lost" northern island territories occupied by the Soviet Union are returned to the motherland. The Soviet Union, which seized the islands in question—Habomai, Shikutan, and Etorofu and Kunashiri, the two southernmost isles in the Kuriles chain—during the confused period that followed the termination of the Pacific war, denies that any territorial issue exists between the two nations and declines to discuss the question. There matters have rested since Japan regained its sovereign independence. Now, following the reversion of Ogasawara last June and with negotiations underway aimed at fixing a date for the reversion of Okinawa. Tokyo is belatedly blueprinting plans to raise afresh the unsolved northern territorial issue, in the following article our Asian commentator tells the story of an issue that has been deadlocked for the past twelve years.)

TOKYO.—One of the major curiosities of Japanese history as the 44th Year of Showa dawns consists of the fact that while public pressures are being whipped up among emotional Japanese for the "immediate and unconditional" return of Okinawa, little is said or read concerning the Russian-occupied island territories off the coast of Hokkaido: the only recent item in the Japanese press being a Soviet statement that maybe 18 Japanese fishermen seized by Russian patrol boats for allegedly violating so-called Soviet territorial waters will be released and returned to Japan in the near future, presumably as a New Year "present" to the nation from the big-hearted Kremlin.

The contrast between the United States record in the south, and Russia's reiterated refusal even to admit the existence of any unsolved territorial question in the north forms an interesting study. On the one hand the influential Japan Times recently declared that a sane, dispassionate appraisal of the Ryukyu situation rules out any sudden return of the islands to Japanese control, adding "it would be most unfortunate if the impatient islanders should fall under the influence of the rabble-rousers to cause a major confrontation." On the other hand, there is little comment in Japan and a deafening silence from Moscow save only for Russia's persistent and fateful "Nyet."

Since plenty is heard in some quarters in Japan concerning the sins of wicked American "imperialists" who have already returned several chunks of real estate to Japanese control, and strangely little about the Soviet imperialists who seeped into Japanese islands in 1945 and have ever since declined to discuss the matter, a recapitulation of the facts concerning Japan's northern irredenta may be recommended as interesting bedside reading this year-end.

That story first came widely to public notice in the summer of 1956, four years after Japan regained its independence, when Russo-Japanese negotiations aimed at terminating the technical state of war between the two countries ended inconclusively with an exchange of documents restoring diplomatic relations plus pictures of an historic handshake between Japan's late Foreign Minister Mamoru Shigemitsu and Soviet Deputy Foreign Minister N. T. Federenko.

It took 11 years and four months (including the seven days that the Soviet Union was at war with Japan before the surrender!) to reach that limited agreement. Another 12 years have since passed, during which nothing has changed and no progress toward a formal peace treaty has been made: the lovable Communists still occupy the two southernmost islands of the Kuriles chain plus Shikotan and Habomai, all historically and geographically integral parts of Japan's home islands. And how many more years or decades will elapse before they quit and go home only God knows.

At the time the Soviet Union uttered its first "Nyet" in August, 1956, this reporter commented: "The Soviet Union's flat rejection of Japan's territorial claims is viewed in many quarters in Japan as constituting Russia's revenge for nearly half a century during which Japan represented the main obstacle to Russian expansion in East Asia.

"In prewar days, Japan's troops in Manchuria were ordered to sleep with their arms beside them 'for ycı know not the day nor hour when the Russian bear will strike,' and border incidents—not excluding pitched battles between considerable forces—were frequent, with foreign newsmen in Tokyo wondering whether each clash would prove to be 'it'—the one-too-many that would touch off a second Russo-Japanese war.

"In the end 'it' did not happen until Japan's capacity to fight back had been broken by others. One week before Japan surrendered to the allied powers, the Soviet Union proceeded to make the most of the opportunity thus presented by grabbing all it had ever lost or tried to seize, plus a number of islands that had been part of the Japanese homeland throughout recorded history.

"For good measure the Red Army then proceeded to 'liberate' such machinery in the vast Mukden Arsenal as its experts considered worth shipping back to Siberia. When I visited the arsenal a few weeks after the Russians had withdrawn northwards, gaping holes in the workshops bore eloquent testimony to the thoroughness with which the Russians had accomplished that task.

"While Stalin's 'seven day soldiers' were thus looting while the looting was good, Gen. Douglas MacArthur was establishing in Japan the most benevolent occupation in history—an occupation that was terminated seven years later by a peace treaty restoring Japan's sovereignty and self-respect which the Soviet Union and its satellite declined to sign.

"When, eventually, the Soviet Union got around to opening negotiations with Japan aimed at ending the technical state of war and the resumption of normal relations between the two countries, it quickly became clear that Moscow's conception of 'peace' was one dictated by the victors to the vanquished.

"Irrelevances such as increased trade, fishing 'rights' and belated return of surviving 'war criminals' held in Russia were used to bait the hook dangled before the Japanese. But on the key-issue—the return of Russian-occupied Japanese territories (other than the Habomais and Shikotan under certain circumstances) to Japan the Russian reply was an adamant 'nyet.'

"The reply is still 'nyet.' Even though Foreign Minister Mamoru Shigemitau had indicated that Japan would waive its desire for the return of the main Kuriles and Southern Sakhalin in exchange for Russian agreement to restore Etorofu and Kunashiri—the two southernmost islands of the Kuriles which have always been Japanese territory—Moscow, which lashes the West as imperialists, continued to stand firm in its intention to retain its hold on those 'colonies' of the Soviet Union.

"Pravda and Izvestia, the official newspapers of the Russian Communist party and the Soviet government respectively, have characterized the Japanese demands for what is termed 'territorial concessions'—Russian euphemism for the return of Japanese territory to Japan—as 'unreasonable and unfounded' and we are told the Moscow observers interpreted these comments 'as indicating that Russia believes it holds all the trumps and has no intention of giving up the island.' Nevertheless, in making 'nyet' the last word Moscow may well be miscalculating. The Japanese, like the Russians, have long memories. It is at least possible that a 'peace treaty' dictated by Russia would herald the beginning of a new period of tension in the North Pacific, with the former position reversed and Japan awaiting her chance to balance accounts. Moreover, before a 'peace-loving' Moscow becomes too certain that it holds all the trumps in its cynical offers to swap trade and fishing permits for Japanese soil, it would do well to devote some thought to the repercussions of its attitude on the rest of Asia.

"Messrs Bulganin and Khrushchev have devoted considerable time, energy and charm to traveling around Asia and denouncing the wicked colonizers who exploited the weakness of other peoples, and to holding up the Soviet Union as the true friend of the under-privileged. The acid-test of such lofty sentiments has now come. Russia has the chance of proving the genuineness of its declarations by conceding to Japan terms as just and benevolent as those extended to that country by the 'imperialists' of the West."

And I concluded my reports to newspapers in Britain and the United States by saying: "Moscow may stand words on their heads but even Moscow cannot make a refusal to return Japanese territory to Japan appear respectable. Two little specks of land off Hokaido—of scant importance to anyone except fishermen who earn a living in those waters and the nation of which they have always formed a part—could build up into an international issue which will reverberate down the corridors of history long after the men who are making 'nyet' their trademark have departed from the international scene." That prediction stands.

Twelve years after the above words were written. Soviet Prime Minister Alexei Kosygin told a visiting Japanese cabinet minister that there was no territorial issue between the two countries to discuss, and the Sato administration announced plans to mount an active publicity campaign shortly aimed at securing the return of the "lost" northern territories.

"However," reported the Japan Times, "Government officials and Liberal-Democrats pessimistically believe that Soviet opposition to settling the (territorial) issue as Japan wants has become stronger than ever, reflecting the fluid international situation, the strengthening of Japan-U.S. ties, and other factors."

Just who are the Imperialists??

JAPAN CLAIMS OKINAWA RETURN WOULDN'T AFFECT U.S. BASES

TOKYO, January 24.—Japan's desire to regain Okinawa under a formula banning nuclear weapons from U.S. bases there does not necessarily conflict with its view that the bases are important, the foreign ministry said yesterday.

The important question is timing, Naraichi Fujiyama, director-general of the ministry's public information bureau, told a news conference.

If the United States agrees to return the island to Japanese control in three to five

years, Fujiyama said, Japanese Prime Minister Eisaku Sato hopes that the situation in Asia will have improved enough that the security of the Far East no longer requires bases with nuclear weapons.

Foreign Minister Kiichi Aichi told the Foreign Correspondent's Club of Japan Wednesday that the U.S. bases on Okinawa were important to the security of the Far East, "including Japan."

He also said "if it were at all possible" he would like the Okinawa bases put on the same status as U.S. bases in Japan, which by mutual agreement cannot stock nuclear weapons or employ their forces against any country without prior consultation with the Japanese authorities.

Asked if these two statements were contradictory, Fujiyama said, "There is no contradiction if you take the timing into account. The matters of timing and the bases are closely related."

He added: "It has been explained to the Japanese people that the bases in Okinawa are certainly serving as a deterrent power against any possible aggression. That, everybody understands."

On the other hand, Japan has a widely supported policy banning nuclear weapons. As long as Okinawa remains under U.S. administration, the Americans have a free hand in deciding what weapons to keep there.

The Japanese newspaper Mainichi reported yesterday that the United States has told Japan the rock-bottom American requirement is that Polaris-type nuclear-powered submarines be allowed to call at Okinawan ports.

If Japan agrees, the newspaper said, the United States would agree to remove land-based nuclear weapons from Okinawa.

Fujiyama said he did not know whether the report was true or not. He added: "I can clearly state that as far as the foreign ministry is concerned we have received no such information officially or unofficially from the United States."

JAPAN'S TOP SOCIALIST FAVORS RETURN OF OKINAWA TO JAPANESE RULE

TOKYO, January 24.—Japan's top Socialist said today the return of Okinawa to Japanese rule, if it can be accomplished this year, will make it easier for Japan to abrogate the Japan-U.S. security pact in 1970.

Tomomi Narita said if Japan can force the U.S. to give up its jurisdictional right over Okinawa, it will be a major "breakthrough" in the struggle against the security pact.

The chairman of the Japan Socialist party (JSP) was the keynote speaker at the JSP's . . . opened today.

He called on 500 of the party faithful to "fully participate in 'Return Okinawa' struggles" and lend brotherly assistance to demands that the U.S. withdraw its B52 bombers from Okinawa.

The JSP and the Japan Federation of Labor Unions (Sohyo) are spearheading a drive to call an end to the security pact, under which the U.S. is permitted to maintain military bases in Japan.

A national committee set up by the two groups have mapped a year-long program. Narita himself was outside the main Tokyo station yesterday handing out leaflets that denounced the treaty.

NUCLEAR ARMS REMOVAL FROM OKINAWA "MISTAKE"

(By Leon Daniel)

TOKYO.—Informed American sources in Japan insist firmly that removal of nuclear weapons from Okinawa would be a grave mistake.

Although they do not say so for the record, it is known that many U.S. military leaders hold this view. It is a view that is shared by some American diplomats here.

Many Japanese demand not only the return of Okinawa to Japan, but also removal of nuclear weapons from the island base the United States considers the keystone of its Pacific defense network.

But some U.S. military leaders and American diplomats believe that the nuclear stockpile on Okinawa serves as a deterrent, particularly to North Korean Premier Kim Il-Soung, who has vowed to "unify" the Korean peninsula.

The nuclear weapons on Okinawa are tactical rather than strategic, which means they are the kind designed for "limited war" rather than an intercontinental nuclear shoot-out.

In short, they are weapons that could be employed against North Korea if that Communist nation again marches against South Korea, as it did in 1950 to start the Korean War.

So some American military men and diplomats hold that what ultimately is decided on whether to keep nuclear weapons on Okinawa, vitally affects South Korea, Taiwan and other Asian nations with which the United States has security commitments.

It is a problem that cannot be isolated to the parties directly involved—the United States, Japan and Okinawa—but must be dealt with in the light of the security of the free nations of Asia, they contend.

The United States and Japan have the question of Okinawa reversion under joint and continuous review. The United States recognizes Japan's "residual sovereignty" over Okinawa and the rest of the Ryukyu Islands but how soon Japan gets them back may ultimately hinge on whether agreement can be reached on what to do about the nuclear weapons there.

If, for political reasons, the United States is some day forced to relinquish its nuclear capability on Okinawa, it might look around for an alternative site.

Guam is considered by some military leaders to be "too far to the rear" to be an effective site for stockpiling tactical nuclear weapons. But South Korea has indicated that its southern island of Cheju-do would be a likely site.

From a strategic standpoint, U.S. military leaders consider Okinawa the best spot to stockpile tactical nuclear weapons. It is situated 1,100 miles southwest of Tokyo, 780 miles south of Seoul, 400 miles northeast of Taipei, 920 miles northeast of Manila and 900 miles northeast of Hong Kong.

Another significant advantage of Okinawa, again from a military standpoint, is that the United States now has free use of its bases there.

So even if the administrative rights over the Ryukyus are returned to Japan U.S. military men want to hold on to "free access" to their bases and the right to stockpile tactical nuclear weapons there.

Before he became the No. 3 man in the State Department, Ambassador U. Alexis Johnson told the Japanese that if they wanted Okinawa back they were going to have to fish or cut bait. In other words, he told the Japanese that it was up to them to come up with a definitive plan for the reversion of the Ryukyus.

The American position, under former president Lyndon Johnson, was that any reversion plan must assure the United States free access to its bases on the islands. American sources said that "free access" principle was understood by both sides to include the continued maintenance of nuclear weapons on Okinawa.

The government of Prime Minister Eisaku Sato of Japan still has not come up with a definitive plan for reversion. If the plan it comes up with calls for the maintenance of nuclear weapons on Okinawa, Sato can look for vigorous opposition to it from the left.

These protests likely would contribute to the mounting opposition to the security treaty between Japan and the United States which is subject to review in 1970.

President Nixon has not tipped his hand on the reversion question, one that Sato plans to discuss with him during a visit to Washington next fall. That meeting is expected to have an important bearing on the future of U.S.-Japan relations.

JAPANESE AMBASSADOR DEFENDS U.S. POSITION ON OKINAWA

The reversion of Okinawa to Japan will be brought about by mutual understanding between the United States and Japan and not by a feud between the two countries, Takezo Shimoda, Japanese ambassador to the United States, told a news conference in Tokyo Monday.

According to press reports, Shimoda made the statement after emerging from a meeting with Japanese Prime Minister Eisaku Sato and Foreign Minister Kiichi Aichi. Shimoda is currently in Japan to consult with his government on several issues, among which is Okinawa.

Shimoda compared the strategic role of Okinawa's military bases with that of Gibraltar and said that the bases cannot be removed from Okinawa without endangering world peace. The role of the bases would be hampered if nuclear weapons, reportedly stored on Okinawa, were to be withdrawn, he added.

He also said that there is a need for Japan to possess a defense power in seeking the return of Okinawa.

When asked by a reporter how he felt about the planned demonstration on Okinawa to demand the removal of B52s, Shimoda said the movement is a discourtesy to the United States because the U.S. is defending Japan and Okinawa with its bases and B52s on Okinawa. He added that he "did not know how to apologize" to the U.S. for the planned strike.

Shimoda's comments drew reactions from Okinawan politicians Tuesday.

Tomomasa Ota, secretary general of the Okinawa Liberal Democratic party (OLDP), said that Shimoda should take into account the Okinawan position on the matter. The OLDP wants the bases reduced to the level of those in Japan when reversion occurs, Ota said.

Kansai Miyara, chairman of the Socialist party, saw the hand of Sato behind Shimoda's remarks. He said Sato is sounding out local reaction. The Socialists want reversion with all U.S. bases withdrawn.

Tsumichiyo Asato, chairman of the Socialist Masses party, commented that Shimoda shows no regard for Japanese and Okinawan desires. Asato added that Shimoda should never have been allowed to make the remark.

Sanetoshi Furugen, secretary general of the Okinawa People's party called the statement traitorous and said Shimoda shouldn't have been allowed to make it.

QUESTION OF OKINAWA STATUS STIRS LIVELY SENATE DEBATE

(By John Roderick)

TOKYO, February 10.—U.S. senators and congressmen yesterday pressed divided members of Japan's ruling Liberal Democratic party to say how far, if at all, the United States should pull back in Asia.

The question of the American military presence in the west Pacific arose in lively discussions during the second Japan-U.S. Parliamentary Conference which opened here Saturday.

An American organizer of the conference said afterwards the talks demonstrated primarily that the Liberal Democrats still thinking in terms of 15 years ago when the United States insisted on a military force-in-being in this part of the world.

Protestations by the American legislators that Washington wants to know how and to what extent—if at all—the U.S. should be committed were received with some disbelief, said this source.

The American congressmen—they included Sen. Hugh Scott of Pennsylvania, the minority whip, Sen. Clifford Case (R—N.J.) and Sen. Frank Moss (D—Utah)—came to the conclusion that the Japanese government party has prepared no unanimous views on the subject of security, which includes reversion of Okinawa, the question of Communist China and U.S. bases in Japan.

The Japanese, among them former foreign minister Zentaro Kosaka, Takeo Miki and Ichiro Fujiyama and party Vice Chairman Shintaro Kawashima, presented sharply divergent views on the return of Okinawa.

All agreed that reversion is wanted soon but disagreed on when and what status the bases should have. Afterwards, Miki told reporters the majority of the party wishes "hondo nami," elimination of prior consultation which now apply to American bases in Japan.

Prime Minister Eisaku Sato has not yet finalized his position.

U.S. Congressman Jeffery Cohelan (D—Calif.) said he believed there may be a possibility of negotiations between Japan and the U.S. on a formula which removes the nuclear weapons but continues to give the Army, Air Force and Navy free use of Okinawa.

He said he had made it "very clear" to the Japanese that if the "price is to high"—restriction of free use—the United States might have to abandon the Okinawa bases.

RUSS USED KURILES AGAINST U.S. PLANE

(By Phil Newsom)

NEW YORK.—When the Japanese carried out their surprise attack on Pearl Harbor, Dec. 7, 1941, their airplanes flew off carriers that had rendezvoused in secret at Tankan Bay, a deep cut in Etorofu Island, largest of the Kuriles.

In the summer of 1968, Russian MIG fighters rose from Etorofu to force down an American jetliner carrying American soldiers to Vietnam.

The GI's reported it appeared to be an important military installation.

Beyond that, little is known of these bleak and little islands which before Russian occupation in 1945 primarily were of importance to fishermen who sought crabs in the icy surrounding waters.

But, like Okinawa and Bonin Islands in the south, the Japanese regard them as integral parts of Japan and they want them back.

The islands involved are Habomai, Shikotan, Etorofu and Kunashiri, located just north of Japan's largest northernmost island of Hokkaido.

The Russians got them by agreement at the Yalta Conference and under terms of the San Francisco peace treaty after the end of World War II.

One basis for the Japanese claim now is that the Russians never signed the San Francisco treaty.

Aside from the territorial issue, an important factor is the safety of Japanese fishermen who find themselves in Soviet territorial waters almost the instant they leave Hokkaido.

The Russians have seized more than 1,200 Japanese fishing boats and arrested more than 10,000 fishermen since 1945.

Japanese ambassadors to Washington and Moscow are in Tokyo to report on progress of negotiations with both countries.

The United States recognizes Japan's "residual sovereignty" over Okinawa and other Ryukyu Islands and has agreed to their eventual return.

The Japanese have had no such luck with the Russians.

The Russians even have refused permission to Japanese families to visit graves on the islands.

Despite the Soviet Union's rigid stand, Japanese Prime Minister Eisaku Sato has declared that Japan cannot consider their independence restored until she has regained sovereignty over Okinawa and the northern islands.

Under the Japanese concept of strict division between diplomacy and economics, the issue is not expected to affect trade relations.

The Soviet and private Japanese interests signed a $350-million five-year agreement last summer under which Japan will buy much needed timber in Siberia. The Japanese and the Russians also are discussing joint development of copper, petroleum, natural gas, pulp and paper and a northern shipping route across the top of the Russians' land mass.

Mr. BYRD of Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. COOK. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MILITARY POLICY IN VIETNAM

Mr. PELL. Mr. President, as I read in the press that our troops have now withdrawn from Hamburger Hill, I cannot help but rise to commend the sensibleness and prescience shown by the senior Senator from Massachusetts last Tuesday when he said:

> I feel it is both senseless and irresponsible to continue to send our young men to their deaths to capture hills and positions that have no relation to ending this conflict.

All that we will have gained as a result of the operation is 600 dead North Vietnamese and National Liberation Front young men. And sometimes I wonder if that is such a gain. And what have we lost? Fifty of our finest young men killed and 300 wounded.

This whole operation reminds me of a question and answer exchange I had with Secretary Rusk on March 12 1968, when he testified before the Foreign Relations Committee. On that occasion, Secretary Rusk said we were saving the South Vietnamese. I raised the question then whether our military efforts although succesful might determine only whether the graveyard would be in non-Communist territory.

It is not a question, Mr. President, of we here in the Senate attempting to direct individual military operations in South Vietnam. The senior Senator from Massachusetts pointed to this specific operation as one symbolic of a mistaken policy.

Accordingly, I thoroughly share the views of Senator KENNEDY and say, as I have said repeatedly here on the floor of the Senate, we should deescalate our military activities. Rather than continue our search and destroy policy, let us adopt a policy of military restraint consistent with the stated objectives of our negotiations in Paris.

And, let us remember that in the last week alone 265 young Americans have been killed in this war—a war in which we have become far too overcommitted; a war in which we should not be interested; a war from which with good sense and with viewpoints prevailing similar to that of the senior Senator from Massachusetts, we may extricate ourselves.

NEW YORK CITY'S CONSUMER UNIT TO FIGHT PROPOSED TELEPHONE RATE INCREASE

Mr. METCALF. Mr. President, during the past few months, the Subcommittee on Intergovernmental Relations has been holding hearings on my bill, S. 607, which, among other things, would establish an independent Federal Office of Utility Consumers Counsel and provide grants and other assistance to State and local consumers' counsels to represent the public interest of the consumer in matters concerning electricity, gas, telephone and telegraph services.

With applications for rate increases by industry-owned utilities soaring throughout the Nation, the issue of utility company overcharge is a basic one to the consumer. Witness after witness has filled our hearing record with case studies showing inadequate regulation, economic concentration, alleged antitrust abuses, unreasonable profits and restrictive practices.

Yet, the industry-owned utility companies and the National Association of Regulatory Utility Commissioners say that there is no need for a lawyer for the consumer because the companies and the regulatory agencies are perfectly capable of affording consumer protection.

Apparently, the officials of the largest city in the United States—New York City—are not about to buy the IOU-NARUC argument.

As reported in the New York Times on Sunday, May 25, the city, through its corporation counsel and assisted by a panel of utility experts and the resources of its Department of Consumer Affairs will go before the New York Public Service Commission and challenge New York Bell's $175 million rate increase application.

The main point here is that they are fighting the Bell increase and its unreasonable service charges for the consumer, not just for the city. Mrs. Bess Myerson Grant is quoted as saying:

> Since there are so few resources on the consumer's side, the initiative always rests with the utility. They set the time for a hearing on their policies. They determine which policies shall be the subject of inquiry.
>
> Only a nationwide network of vigorous and informed consumer-advocate institutions can offset the vast resources at the command of the utilities to persuade regulatory officials to see things their way.

No better argument for speedy consideration of S. 607 can be made than this statement by Mrs. Grant.

This action by New York City—taken by a duly authorized local consumer counsel is precisely the kind of activity which would be supported under the legislation. As the rate increases begin to pile up on the other areas of our country, the people will stand up and be heard—as they have done in New York. They will be heard in this Congress in a voice that will reduce the annual crowing of the utility lobbyists to a whisper.

I ask unanimous consent that the article from the New York Times be incorporated at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CITY HIRES UTILITY EXPERTS TO FIGHT PHONE RATE RISE

(By Peter Millones)

The city has decided to fight the New York Telephone Company's recent request to the state Public Service Commission for a $175-million-a-year rate increase.

To bolster its chances for success, the city—through its Department of Consumer Affairs—is taking the unusual step of forming a committee of utility experts from universities to assist the Corporation Counsel's office in preparing its opposition.

The formation of a group of utility experts—five of whom have been selected—foreshadows a more vigorous scrutiny by the city of all public-utility operations here, according to sources in the Department of Consumer Affairs.

THE ACADEMIC ADVISERS

The city's move comes at a time not only when the telephone company is seeking its first statewide rate increase since 1957 but also amid recurring rumors that the Consolidated Edison Company will seek higher electric rates.

Selection of the five utility experts to be part of a permanent Advisory Panel on Public Utility Matters was revealed yesterday by Mrs. Bess Myerson Grant, Commissioner of Consumer Affairs.

Corporation Counsel J. Lee Rankin said he welcomed the assistance of the advisory panel. "These cases," he said, "are enormously complex and time consuming; now for the first time we should have needed support."

The telephone company has just completed its presentation of data to the P.S.C. to support its request. The commission has recessed further hearings for about a month to give opponents and the commission staff time to prepare cross-examination of company officials.

The increases sought by the company would raise the basic monthly 75-message-unit residential telephone bill in the city to $6.19 from the present $5.60.

The company would also increase the flat-rate monthly costs elsewhere in the state and increase toll-call costs. For example, a daytime call from New York City to Albany that now costs 70 cents would cost 77 cents.

The charge for installing a telephone would be doubled to $10 under the company's proposal.

The city is expected to attack the company's rate of return, its accounting procedures, its borrowing methods and other policies, including its advertising expense.

The five advisers selected by the city thus far are:

Prof. William K. Jones of the Columbia Law School, who has written a study of the theory and practice of regulation of the Federal Communications Commission and a textbook on regulated industries.

Prof. Herman Schwartz, now on the faculty of Michigan Law School, who will be at the Buffalo University Law School next fall.

Prof. Norman Redlich of the New York University Law School, who is a former executive assistant Corporation Counsel of the city.

Prof. Leonard M. Chazen of the Rutgers University School of Law.

Leonard M. Ross, a doctoral candidate in economics at Yale, who will serve as a Junior Fellow at Harvard University in the next Academic year.

Professor Chazen and Mr. Ross will be concerned primarily with helping to prepare the city's case against the telephone rate increase.

Commissioner Grant said that a question "fundamental to the structure of the nation's communications system is why consumers aren't allowed to own their own telephone handsets which they could plug into the telephone network the way television sets, electric lights, and appliances are plugged into the electrical system."

"If customers were allowed to take their handsets with them, plugging in the handset at their new location," Mrs. Grant went on, "this expense [of new installment] could be avoided."

"Since there are so few resources on the consumer's side," Commissioner Grant said, "the initiative always rests with the utility. [They set the time for a hearing on their policies. They determine which policies shall be the subject of inquiry.

"Only a nationwide network of vigorous and informed consumer-advocate institutions can offset the vast resources at the command of the utilities to persuade regulatory officials to see things their way."]

CRISIS IN AIR TRANSPORTATION

Mr. MAGNUSON. Mr. President, much has been spoken and written about the current crisis in air transportation and the great necessity for a bold and effective expansion program for airport and airways systems. The seriousness of our present aviation problems is well illustrated by the fact that during the last session of Congress the Committee on Commerce devoted a great deal of time and effort in defining our national aviation needs and the development of the proposed legislative program. It is my understanding that President Nixon currently has a task force working upon an administration proposal and has assigned this project a high priority. I am hopeful that the administration proposal will be in final form shortly, for on June 17 our committee will undertake broad-based hearings in an attempt to update the definition of our airport-airways needs and to recommend appropriate legislation.

Gen. William F. McKee, U.S. Air Force, retired, former Administrator of the Federal Aviation Administration, recently spoke before the Aviation-Space Writers' Convention in Dayton, Ohio, on the subject "The Crisis in Air Transportation." I am sure Senators are aware of the tremendous knowledge and skill possessed by General McKee in the field of aviation. Because of the timeliness of his speech and the clear and concise analysis put forth therein, I commend to Senators a careful reading of General McKee's remarks.

I ask unanimous consent that his remarks be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE CRISIS IN AIR TRANSPORTATION

Until about ten years ago, the pacing factor in the growth of American commercial aviation was the efficiency of the aircraft. Since the earliest days of scheduled airline service, the airlines have pressed the manufacturers for aircraft with higher speeds, longer ranges, and greater capacities. The manufacturers have responded enthusiastically and ingeniously. In forty years, the aircraft manufacturers have taken us from the Ford Tri-motor, the Lockheed "Vega" and the DC–2, to the Boeing 747, the Lockheed L–500, and the DC–10. And, at the same time, they provided this country with the world's finest fleet of military aircraft.

All this progress is wonderful. It has given Americans the finest air transportation in the world. It has given wings to the nation's economy, both figuratively and literally. And, it has also been a credit factor in the nation's running struggle to maintain a favorable balance of trade.

But the air transport "system" of this nation is more than just aircraft. It is also airports and airways and supporting ground transportation systems. An important measure of the efficiency of a total system is the time it takes an individual to get from his office or home to his final destination. Similar measures for efficiency could be applied to cargo and mail.

Right now, we speak of an air transportation crisis in our country. Why? The answer is that progress in aircraft has exceeded progress in both the ground electronic environment or the airways system and in the airports. Progress in aircraft may also be said to have exceeded progress in national understanding of the problem. That is to say, the Federal Aviation Administration, which is responsible for the operation of the airways and parts of the Aviation Community have not been able to arouse sufficient congressional and public support to insure that sufficient funds were provided for the modernization and expansion of the airways and airport system.

If one takes an objective look at the situation, the reasons for this are easy to understand. When I say that, I am not trying to excuse myself or the FAA or the Department of Transportation. The fact is that FAA's needs have met very stiff competition of late from domestic and Defense needs. And it is also true that the American public has turned to air transportation at a rate that exceeded expectations.

This does not mean that the FAA did a bad job of estimating. I think it reflects, rather, unanticipated acceleration in the economy and in the pace of life in this country. Recently, TIME magazine ran a feature on under-anticipation, a phenomenon of the decade. The article listed a series of under-anticipations by experts. The experts—in quotation marks—predicted, for example, that before the Sixties had run their course, the stock market would be handling sales as high as ten million shares in one day. Of course, the sales record is now in excess of twenty million shares in one day.

The point should also be made that the Congress has, in general, been very sympathetic to the needs of the FAA, but the amount of money required to modernize the airways system and to expand airport facilities simply has reached levels that were politically difficult for the Congress to vote, in light of over-all national considerations.

Today, the key question facing the Congress, the Department of Transportation, the Air Lines, and General Aviation is where can we find the money to bring the quality or effectiveness of the airways/airports system in line with the exceptional quality and effectiveness of America's commercial aircraft. In recent years, this question has reached crisis proportions. The airlines, and general aviation, in order to meet the demands of the public for air transportation, have bought so many aircraft and expanded their operations so fast that the airways and the airports can no longer efficiently service the number of aircraft in the skies. And as we look to the future, the situation grows increasingly severe because the demand for air transportation continues to grow. From the standpoint of the airlines, the situation is reaching critical proportions because delays in the air and on the ground result in heavy financial losses. The larger aircraft, which represent heavy investments for the airlines are by no means being used to maximize efficiency under present circumstances. The result is that the volume of air traffic is up, but profit for most airlines is down. Almost all of the major airlines showed a decrease in net profits for the calendar year 1968. Indeed, several of them were seriously in the red. In addition, the airlines want to invest in the next generation of aircraft, but their available capital for such an investment is being depleted by current high operating costs.

I will offer you a solution I have advocated

at every opportunity for the past several years. It is a solution under consideration by the Department of Transportation and the Nixon Administration. But, before I discuss that solution I would like to review with you briefly the recent growth in air transportation and then project for you the future growth, so that you can sense how vital it is that we bring about a balance between the numbers and quality of the aircraft and the effectiveness of the airways-airport systems.

In recent years, air transportation has grown at the rate of 16 to 17 percent a year. Between 1963 and 1967, air carrier passenger miles went from 46 million to 86 million. Air cargo volume tripled in that five year period. And the hours flown by general aviation aircraft during the same five year period increased nearly fifty per cent. These figures reflect that air travel is now the most popular form of inter-city transportation. Last year, the air carriers accounted for seven out of ten common carrier passenger miles, compared with two out of ten in 1951.

Let me relate this growth during the past few years to an airport to give you an idea of how desperately we need to modernize and expand the airways and airport systems. John F. Kennedy airport on Long Island is a very modern airport. When JFK was being built, the FAA calculated that JFK would be able to handle 260,000 aircraft operations per year—that is, take-offs or landings—without delays. You might call 260,000 aircraft operations the delay-free threshold for JFK. Yet that airport is already handling in excess of 500,000 aircraft operations per year, with the inevitable delays.

Now, let's project a few years into the future. The latest FAA projections give us these figures for the scheduled airlines. In 1968, the number of passengers was 152.6 million. The estimate for 1974 is 269.5 million; and for 1979, the figure is 429.0 million. In other words, the numbers of passengers is estimated at almost three times last year's total. The paralleling statistic of equal importance is "revenue passenger miles." And here the figure for 1968 was 106.5 billion; with the projection for 1974 being 204 billion, and for 1979, 342 billion.

The estimate for air cargo show a growth in excess of that for passengers. The growth rate is projected at 20 per cent per year. This means that by 1975, U.S. domestic and international air carriers should be flying about 20 billion ton-miles of freight and mail, compared with 5.0 billion ton-miles in 1967.

To provide service for additional passengers and freight, the air carriers are forecast to increase their fleets from a total of 2,452 aircraft at the beginning of 1968 to 3,480 by the start of 1979.

On the General Aviation side of the picture, the 1968 figure for General Aviation aircraft was 114,000. The 1979 estimate is 205,000, which means that General Aviation will be expanding at about the same rate as the airlines.

If these projected increases in the amount of commercial flying are not enough, you might also consider that there will be a greater diversity in the types of aircraft that will be flying by the end of the 1970's. There will be far more helicopters of various sorts and sizes, and there will be a whole new family of STOL aircraft. In one sense, these aircraft will complicate the aviation picture. But in another sense, they will help to alleviate some of the congestion in the airways, because they will be able to fly in air corridors not presently being used for the higher and faster flying jets.

These projections have been included in these remarks to help you to reach the conclusion that the airways and airport crisis of today is going to get worse—much worse if drastic steps are not taken quickly to improve and expand our total air transportation system—that is—airways, airports and the transportation systems to and from communities to the airports. If we do not move sensibly and energetically to make the needed improvements the growth predictions outlined will not come to pass.

Here I would like to stress another vital and most important facet of the problem—and that is a primary responsibility of the Administrator of the FAA under the law. He carries this burden on his shoulders seven days a week, 24 hours per day. Statements have been made in the past that a high level of safety can be maintained with current FAA funding levels through the exercise of the FAA's regulatory powers. This is simply not so. I know of no responsible person in FAA or in the Aviation Industry who will agree that a reasonable degree of safety can be maintained in today's environment with current funding levels. I suggest you just ask the airline pilots who fly to tell you what they think. The answer, I can assure you, will be loud and clear.

The question arises then "What needs to be done?" The answer has been well thought out and presented in FAA's "National Aviation Systems Plan." This Plan is a product of bitter experience, and a lot of hard work by many dedicated people. There is little disagreement, if any, between the FAA, the military, and the aviation community in regard to this Plan. The Plan covers a 10 year period, with detailed costing for the first five years and estimates for the next five.

The Plan covers the additional equipment and facilities that will be necessary to service efficiently and safely the vastly larger number of aircraft that are projected to be flying in our skies during the next decade.

I will not discuss the details of the Plan, but I would like to make some comments relative to it. First, I wish to explain what we mean when we use the term "Air Traffic Control System" or the "National Aviation System." We mean not only the control towers, the En Route Traffic Control Centers, the Controllers, the Instrument Landing Systems, radars, communications, etc., but also the operational part of the nation's airport, i.e., runways, taxiways, ramps and the high intensity lighting systems. With all of the deficiencies in the airways part of the system—and they are too numerous to mention here—the biggest bottleneck in the Air Traffic Control System is the airport.

The problem then—where do we get the money to do the job which we all know must be done. Will the Administration request the necessary billions from the Congress to come from the General Revenues of the Treasury? The answer is a "flat" NO—and this applies whether the Democrats or Republicans are in power. Will the Congress appropriate the necessary funds of the Administration requested them? Again, the answer is a "flat" NO. I speak from painful experience.

Since it is clearly in the National interest that the job must be done—the question is: "Where does the money come from?" The answer here is also quite clear—"From a reasonably equitable system of user charges, augmented by a fair share from general revenues which may be properly charged to the National interest."

Such a plan was unanimously proposed last year by the prestigeous Senate Commerce Committee. Overall it was a good plan and deserved to become law. Unfortunately, and I should say very unfortunately for the country, it did not. There was disagreements within the Administration and within the Aviation Community. All of us are the losers.

I know that the new Secretary of Transportation, Mr. Volpe, and the new Administrator of the FAA, Mr. Shaffer, understand the importance of doing something now to improve our Air Transportation system and that they are in favor of airways/airport legislation along the general lines proposed by the Senate Commerce Committee last year. Again there is disagreement within the Administration and within the Aviation Community. On the other hand, there is a good understanding in the Congress of what needs to be done and the importance of doing it quickly. The Committees principally concerned are awaiting the Administration's proposed legislation.

It is my hope, a faint one I must add, that the diverse elements within the Administration and within the Aviation Community can reach some reasonable accord and agreement on the proposed legislation. This would assure the early passage of an Airways/Airport Bill. Failing this, I think the Congress must pass legislation which in its judgment, is in the best interests of the 200 million stockholders in this corporation called the United States.

In closing I want to say just as strongly as I know how that failure to get early airways/airport legislation will result in:

A. A significant deterioration in the safety of the system.

B. Further deterioration in the operational effectiveness of the system, including more delays in the air and on the ground and more arbitrary restrictions.

C. An adverse impact on the growth of the National economy and on the defense posture of this Nation.

I earnestly hope that we do not have a series of catastrophes to bring these points home.

RADIO STATEMENT BY SENATOR BYRD OF WEST VIRGINIA ON THE SUPREME COURT

Mr. BYRD of West Virginia. Mr. President, on May 16, 1969, I made a statement for radio regarding the U.S. Supreme Court.

I ask unanimous consent that the transcript of that statement be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

SUPREME COURT

A storm of controversy has engulfed the Judicial Branch of the Federal Government for several years now. A primary cause has been the U.S. Supreme Court's decisions in notable cases affecting what has been called the "rights of criminals" or those accused of crimes. As a result of these decisions, questioning of suspects by police has been severely limited, the use of voluntary confessions has been restricted, and the police find it more difficult to jail persons suspected of criminal acts. Critics of the Court have said the net result is to make more difficult the job of law enforcement. As a consequence, more and more criminals go unpunished, and we begin to see a breakdown in respect for law and order in our society.

Moreover, such decisions as those which have had the result of removing prayer from public schools, and decisions limiting school officials' authority to regulate student demonstrations on school property have contributed to widespread criticism of the Supreme Court of the United States. Many citizens have begun to wonder just whose rights are being protected because they often feel that it is certainly not theirs. Furthermore, by these and other decisions the High Court has left the impression that it is doing more than just interpreting statutes and interpreting the Constitution. It appears frequently to be writing the laws of this land.

In most instances, the decisions of the Supreme Court that have come under heavy attack have been split decisions. A bare majority of the nine Justices has brought about, in recent years, radical changes in constitutional law. I think that in many cases the Judges have tended to interject their own personal philosophies rather than adhere to strict objectivity when interpreting the United States Constitution and the laws.

But now the makeup of the Supreme Court will change. Chief Justice Warren announced last year his retirement from the Court at the end of its present session. And of course former Justice Abe Fortas has now resigned. Seldom in our history has a United States President had the opportunity to fill two vacancies on the Supreme Court so early in his administration. In the exercise of his appointive powers, President Nixon can recast the Judicial Branch of government. He can quell the temptest of controversy that has surrounded the Supreme Court for several years. And he can redirect its path to better reflect the majority's will in this country and to strengthen the principles embodied in our written Constitution.

The resignation of Mr. Fortas has lifted from the Supreme Court an immediate problem which his private dealings had created. However, the larger controversy brought on by court decisions radically departing from traditional interpretation of the Constitution can be settled only through the appointive process to which President Nixon now holds the key.

Any branch of government, to operate effectively, must have the confidence and respect of the American people. The power divided among the three branches of the United States Government is enormous. Each must be wise in the exercise of this power, and each must be especially careful it does not usurp powers not intended to be within its hands. This is especially important in the Judicial Branch. There, a great deal of power rests with a very few men. Thomas Jefferson expressed concern about this when he once wrote, and I quote, "The great object of my fear is the Federal Judiciary."

The Supreme Court was never intended to be the place for innovation or experimentation. Its force must always be one of prudence and caution—one that will always protect American citizens from excessive and over-zealous government. It follows then, that judges sitting on the Supreme Court must be cautious, restrained men able to subjugate their own fancies in their quest for objectivity. They must not be innovators or experimenters. We have enough of both of these in the other two branches of government. Moreover, the Court must not arrogate to itself the power to legislate. Restraint in the Judiciary is indispensable if it is to maintain the trust of the American people.

POLITICS AND THE POSTAL SYSTEM

Mr. BAKER. Mr. President, I recently conducted a poll in all 95 counties of the State of Tennessee on the question of whether politics should be taken out of the postal system. More than 90 percent of Tennesseans approve of that policy as set out by President Nixon and Postmaster General Blount, according to the sampling.

A total of 1,374 responded to the question, which was included in a newsletter mailed earlier in May. Of the total, 1,247 said they support the policy, compared with only 127 who voted in opposition to it.

Probably more than 200 of those favoring the policy indicated by notes and letters that the change was long past due. Many suggested that an independent agency, such as Tennessee Valley Authority, be created to operate the system. Others recommended that the mail be handled by a private organization.

There were many who opposed the policy, but who wrote that politics should be taken out of the department only after Republicans had been appointed to replace Democrats.

Based on the actions of past administrations there is sound argument for kicking all Democrats out of the system and appointing all Republicans. Every administration in history has used the system as a political sugar barrel. It has been this policy which has developed a highly inefficient, costly organization which requires drastic changes.

Postmaster General Blount, I am convinced, is sincere in his efforts to take politics out of the system. He is attempting to put it on a self-sustaining, business-like basis.

While this policy is causing great concern among a few who were counting on the patronage, it is obvious from the poll and from the reaction from throughout the country that this decision is one of the most popular made by this administration.

A vast majority of the people want a postal system which can do the job. They do not want a service organization such as this one to be a sugarplum tree that gets robbed of its best fruit every 4 years.

I was convinced when President Nixon and Postmaster General Blount announced the new policy that it was proper. I am now even more sure that it was right and that the American people feel the same way. There is no doubt about how the people in Tennessee feel about it.

THE SAFEGUARD SYSTEM

Mr. GORE. Mr. President, on May 21 three distinguished scientists appeared before the Subcommittee on International Organization and Disarmament Affairs to testify with regard to the proposed Safeguard system. These three witnesses were Dr. Donald Hornig, former science adviser to President Johnson; Dr. Gordon MacDonald of the University of California at Santa Barbara; and Dr. Eugene P. Wigner of Princeton University, a Nobel laureate. Dr. MacDonald and Dr. Wigner were among the scientists Secretary Laird had suggested the subcommittee hear.

I ask unanimous consent that the prepared statements presented by Drs. Hornig, MacDonald, and Wigner be printed in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT OF DONALD F. HORNIG BEFORE SUBCOMMITTEE ON INTERNATIONAL ORGANIZATION AND DISARMAMENT AFFAIRS, MAY 22, 1969

Mr. Chairman, Members of the Subcommittee: I am grateful for the opportunity you have given me to put my views before you on the subject of the ABM. I should tell you frankly at the outset that all of the technical points regarding the proposed ABM system, the Safeguard, have at one time or another been made, so that I doubt that nothing I say will be new in that sense. What I will try to do is to paint the over-all picture as I see it and elaborate any technical questions in the discussion. I want to begin by saying that in my view the most imminent and urgent threat that confronts the U.S. and the world is the constant and continuing expansion in the level of nuclear armaments on both sides. I regard the current ABM question as only an immediate episode in deciding how we should approach the problem of nuclear arms control while preserving our own security.

As to my qualifications to discuss these matters, I note only that I have been involved in weapons development, either actively or in an advisory capacity, since 1941. My acquaintance with the ABM question began when President Eisenhower appointed me to his Science Advisory Committee in 1960.

My detailed concern with nuclear offensive and defensive systems began when President Johnson appointed me as Special Assistant for Science and Technology in January 1964, and in that capacity I had the continuing assistance of many of our best scientists and engineers. I worked closely with the Secretary of Defense, with the Director of Defense Research and Engineering, and with the military and intelligence agencies until January of this year.

The central fact that emerged during these years was that the security of the United States depended on maintaining a nuclear stand-off vis-a-vis the Soviet Union. The most essential element was that we maintain an adequate deterrent—by which I mean that it is clear to the Soviet Union we could reply to any attack by inflicting such destruction and loss of life that it would never make any sense to attack us. It also became clear that even when we had a three- or four-to-one edge over the Soviet Union in the number of rockets available to us, we never approached a first strike capability, that is, the possibility of a strike against their forces which would not bring devastating retaliation. In other words, even with a three- or four-to-one edge, the Soviet deterrent was also adequate. It is this *mutual deterrence* which is the key to peace and such stability as we have had.

The ABM question is not new. In the 1950's the Navy was assigned the Polaris missile submarine program, the Air Force was assigned the offensive rocket forces, and ABM's were assigned to the Army. Subsequently we built Polaris submarines; we built offensive rocket forces, but we never got beyond R & D on defensive rocket systems because they never seemed worthwhile. Throughout the period I was in Washington, we studied the question of defenses against ICBM's, including both ABM's and underground shelter systems but ABM's never seemed attractive. All of our studies and those of the Department of Defense indicated that an ABM system could not protect our population for at least two reasons: (1) The ABM system costs more than the rockets it could destroy so that for each increment of ABM defense the enemy could, at less cost, add enough attacking rockets to his force to maintain his destructive potential. (2) The technical difficulties were so great that the system could not be counted on and would be relatively easy to defeat.

Still, when it became clear that the Soviets were installing a limited and relatively ineffective ABM ring around Moscow, there was a renewed effort, in the Pentagon and in the Congress, in late 1966 to commit us to a $40 billion system to attempt to protect both our cities and our missiles. This was the "thick system." In particular, some elements of the intelligence community attempted to identify the so-called Talinn air defense system in the Soviet Union as a large-scale ABM deployment and used this as an argument for a large-scale U.S. deployment.

It was against this background that in January 1967, at a meeting with President Johnson, all of the four preceding Presidential Science Advisors plus all three Directors of Defense Research and Engineering, advised him that an effective ABM defense against the Soviet Union was not practicable. This point was made again in Secretary McNamara's testimony in the spring of 1967, to the Armed Services Committee.

In his San Francisco speech of September 18, 1967, Secretary McNamara presented a particularly cogent and succinct discussion of the whole action-reaction phenomenon in the arms race and of the ABM problem. He noted that as each side made its plans on the basis of the "worst plausible interpretation" of the other's plans, each side increased its arms more than subsequent events showed to be necessary. He stated—and I concur—that if we could build an impenetrable shield over the U.S., we should certainly do so. But the effect of a leaky shield is simply to guarantee that the other side increases the quantity and quality of his weapons still further.

It should be pointed out that our own response to the limited Soviet ABM deployment was to increase our efforts in the direction of multiple warheads and penetration aids so that the Soviets are probably more—not less—vulnerable than they previously were.

Since it was generally agreed that a defense of our cities against a massive Soviet attack was not practicable—and President Nixon has also accepted this conclusion—the previous administration decided against it and in favor of the Sentinel system which it was hoped would protect us against a few primitive Chinese missiles. My technical advisors doubted that it would even do that reliably.

However, what concerned many of us was not the details of the system or its technical deficiencies but the fact that the deployment plans were patently the first phase of a "thick" system, including missile sites close to cities. It was so regarded in the Pentagon and this is presumably what made it palatable; it was a foot in the door.

The Safeguard system now proposed retains the anti-Chinese capability. Most importantly though, the President recognized the impossibility of defending our population centers and introduced a new philosophy, the protection of a small second strike force for retaliation in the event of a Soviet attack. This objective is surely sound since in a nuclear age when the casualties in a war would be tens or hundreds of millions, the objective of our forces cannot be to fight a war; it must be to make an act of war so reckless that the other side would never attempt it. If I were convinced that the protection of a credible deterrent were indeed the eventual goal and that a Safeguard was the best way to protect our deterrent I would support it. But the uneasy feeling persists that although presidents may change, Secretaries of Defense may come and go, the philosophies enunciated by our political leaders may change, the design of our ABM system hardly changes at all. It includes the same radars, the same rockets and largely the same deployment which was contemplated for the "heavy" defense. Safeguard continues to look like a first step toward a much bigger, much more expensive and still ineffective system.

The President proposed a limited effort, and if it were genuinely limited to a feasibility demonstration at one or two bases, and if I could be satisfied that the feasibility could be demonstrated in that way, I might not oppose it, but the words of our civilian and military leaders in the Pentagon when they elaborate the President's proposal are not reassuring. They always seem to be talking about something much bigger.

Now I would like to examine the reliability of our second strike forces. We have in excess of 1000 nuclear tipped rockets in hardened silos, 41 Polaris submarines carrying 656 missile launchers, with most of them hidden beneath the seas, and about 600 long-range bombers, a considerable part of them in a state of alert. We also have a very extensive network of early warning radars, over the horizon radars and other devices which would give us a warning time of about 20 minutes against a Soviet attack.

At the moment these forces are sufficiently invulnerable so that the Soviet Union is assured of destruction if they were to initiate an attack. But, of course, it is possible that in the future the accuracy of their missiles, particularly the large SS–9, could be improved so that if they were still in their silos, a large proportion of our Minutemen might be destroyed. It is possible that the Soviet Union may one day develop means to track down our Polaris submarines and either destroy them or prevent their missiles from being launched successfully. It is possible that means may be found to destroy many of our bombers on the ground. It is possible that means may be found to blind our long-range warning system. Actually, I do not believe it likely that many of these objectives can be achieved by 1975; I find it totally incredible that they *all* could be achieved on a scale which would knock out our second strike forces.

After all, the Soviet Union must assume that if they were to launch an attempted first strike, our radars would see *very large numbers* of missiles on their way, and this they would do without ambiguity. Nor, under these circumstances, would our decision making be delayed. Our missiles would be on their way before their missiles arrived. This is our surest deterrent.

Of course, questions can be raised as to whether something might go wrong. But to launch a first strike with any hope of success *the other side must be confident* that we could not retaliate and nothing I know or have heard leads me to believe he could achieve such confidence in the foreseeable future.

Therefore, I conclude that for the foreseeable future we have a reliable deterrent, provided it is equipped to penetrate any defenses he may erect. It must have this capability whether or not we construct Safeguard.

The role of the Safeguard, therefore, is not to assure a deterrent, but only to add to the deterrent and to give us the option of holding back some missiles. This is important but not vital since the other side could never assume that we would withhold our fire.

Other witnesses have pointed out the technical problems. The radars must sort out a thousand or more missiles and decide, with the aid of a massive and incredibly complicated computer system, what the individual tracks and targets are, and assign appropriate defensive missiles to each. They must distinguish between nuclear warheads and the dummies, decoys and other penetration aids. I believe that these things can eventually be done; it is doubtful whether they can be now with the present Safeguard system. But a system so complex is certain to have bugs—the history of much less complex military systems attests to that—and an ABM in which one cannot have *confidence* at the time of crisis adds to our insecurity, not our security.

I am quite willing to predict that the very deficiencies which are so fiercely debated now will be advanced in the near future as the very reason why the system must be improved or even replaced by a new model. That has happened before, too. If we go this route, we must realize that the current Safeguard proposal is only a down payment.

To conclude, I support the notion of protecting our retaliatory capability. I question whether the Safeguard ABM is the best, or even a satisfactory way to do it. I am not sure I would oppose the construction at one or two sites if that could be shown to provide the means to check out the technical questions, but I am not satisfied that it will.

However, I am convinced that this is another step in the arms race—no worse than other steps—and I fervently hope it can be deferred until the seriousness and intent of the Soviet Union can be tested in discussions aimed at halting a fruitless competition which is draining our resources and providing no increase in our security.

STATEMENT BY GORDON J. F. MACDONALD BEFORE THE DISARMAMENT SUBCOMMITTEE OF THE FOREIGN RELATIONS COMMITTEE, MAY 21, 1969

Mr. Chairman and Members of the Committee: I deeply appreciate the opportunity to testify on such a vital issue of our time. I will speak as an individual scientist who has been involved in defense matters for the last ten years serving as a consultant to the Defense Department and as an officer of the Institute of Defense Analyses.

President Nixon in his announcement of his decision on the Antiballistic Missile System indicated two very significant departures from the position taken by the Johnson administration. First, Safeguard will be a system designed primarily to defend the United States deterrent force. Second, Safeguard will be deployed in a phased fashion with annual reviews. I strongly endorse the President's position both with regard to a defense of the deterrent and the measured pace of a deployment in which further steps toward an overall operational system will depend on an evaluation of intelligence, progress, or lack of it, toward Strategic Arms Limitations and new technical advances relevant to defensive systems. My support for the President's position follows from a number of considerations.

First, an active defense of the deterrent cannot by itself be considered as an escalation of the arms race in that it protects only the deterrent and does not enhance any U.S. first strike capability. If the Soviets are indeed following a deterrent philosophy, an ABM defending the U.S. nuclear force does not alter the Soviet's second strike capacity. Either a deployment of a population defense system or the addition of offensive forces are escalatory in that they increase the U.S. first strike ability. Indeed I was amazed to read in the hearings of the Armed Services Committee witnesses opposing deployment of a defensive system because of the risk of furthering the arms race and indicating that the proliferation of Polaris and Minuteman would be preferable. I would also argue that both the increased Soviet deployment of offensive missiles and the deployment of an apparent population defense ABM about Moscow are escalatory.

Second, the defense of key elements of the deterrent, Minuteman sites and key command and control centers, is technically an easier job than the defense of the population, which was the primary purpose of Sentinel. The area that needs to be covered by radar is less and the concentration of defensive missiles near to the potential target can be far greater. In the defense of population high value targets are being protected and a successful system must work with a high degree of reliability. In the case of defense of the strike forces a fraction of the enemy missiles can penetrate the defense without in any major way eroding the offensive power of the U.S.

Third, a measured, phased approach will permit, *if adhered to*, the development of components and systems specifically designed to defend the deterrent. The Safeguard system uses the components of Sentinel and Sentinel was designed to protect cities, not Minuteman. If properly emphasized, research and development could, in a short time, produce a system much better suited to defending our strike forces. For example, such a system might consist of hundreds of cheap, short range radars, one to each silo, and interceptor missiles with very short ranges (less than 10 miles). Such a system might provide adequate defense of Minuteman at a cost less than that of the total Safeguard deployment.

Fourth, my analysis of available intelligence convinces me that a major portion of the Soviet offensive force, in particular the SS–9, was designed as a weapon having the principal goal of destroying Minuteman missiles and their command apparatus. This

conclusion, if correct, is of value in interpreting the overall Soviet strategic doctrine. Since my view of the Soviet strategy is at variance with that usually presented, I would like to briefly discuss it.

Historically, the Soviets have emphasized defense as a key element in their military posture. Their military experience dating back to Napoleon has been one of defending the homeland. Just on the basis of history it might be expected that the Soviets would, in their overall strategic forces, emphasize those elements that would protect and limit damage to the homeland. Indeed, some of this flavor comes across in the writings of such Soviet strategists as Zakharov and Sokolovsky. Whatever the Soviet intentions in the strategic field are, there is the hard evidence of deployment that indicates a Soviet desire to build up, at least, a damage limiting, if not a first strike capability.

The Soviets have deployed a massive air defense system, recently supplemented by the Tallinn system and a new class of fighter aircraft. Elements of their air defense system have received extensive tests against U.S. forces and equipment in North Vietnam. In ABM the Soviets began with a system around Leningrad, which was later abandoned, probably because of technical difficulties. The Soviets now have underway a deployment about Moscow of a new system. Accompanying such moves toward active defense, the Soviets appear to have emphasized civil defense to a far greater extent than the U.S. has; such a civil defense program makes sense only in the context of an active defense which supplements a damage limiting offense. The Soviets have recently displayed a semi-space based weapon called FOBS (Fractional Orbit Bombing System). The only credible targets for FOBS are the bases of the Strategic Air Command and these certainly would be targeted in a damage limiting attack. While FOBS may not, on the whole, be an attractive weapons system, it does demonstrate Soviet intent to upgrade continually their capability of delivering large weapons at great distances. Finally, there is the continuing deployment of the SS–9, a giant missile designed to deliver 20 or more megatons. This missile was originally thought of in terms of a "city buster" but now I believe the evidence strongly points toward its role as a counter force weapon.

In summary, I believe that the primary thrust of the Soviet strategic deployment has been toward development of an offense-defense system that will guarantee the survival of the Soviet Union as a nation in the case of a nuclear war. This goal differs greatly from the stated principal purpose of the U.S. nuclear force; that is of destroying any other nation even if that nation launches a determined attack against U.S. forces. Of course, in the Soviet case, their total forces have a deterrent second strike capability while the U.S. forces also could play a damage limiting role.

The important conclusion I deduce is that we must not let our emphasis on deterrence blind us to the possibility that the Soviets are following a different path leading to the ability to limit damage in any nuclear exchange so that survival as a nation is possible. The great danger along this path is that with the capability of effectively limiting damage comes the power to launch a first strike and destroy the U.S. deterrent and the U.S. nation. This power, if achieved, can bring to an end the existing balance of nuclear might which has served well, over the past years, in maintaining world stability. How realistic is it to assume that the Soviets can achieve a first strike capability? Can an active U.S. defense guard the U.S. deterrent? A discussion of these questions requires a more detailed examination of our total strategic system and its strength and weaknesses.

A deterrent is made up of three elements, the offense, defense, and the command and control. The offense has the mission of delivering to the enemy weapons sufficient to bring about near total destruction. The command and control system activates and guides the offense and defense. The defense protects the critical elements of the total strategic system. The defense can either be completely passive providing protection by means of deception or hardening or it can in part depend on a shield of defending weapons.

The job of the defense planner is to design a deterrent which for a given cost has a maximum destructive capacity and one which will credibly survive any attack. The total cost of the system equals the sum of the cost of the three elements, offense, defense and command and control. However, the effectiveness of the total system depends not only on the sum of capabilities of each element but how the pieces work together in accomplishing the deterrent mission. The analysis of how good our strategic forces are requires not only a determination of capabilities of the various components but of how the parts of the system contribute to each other.

The offense consists of two parts—the warheads and the means of delivering them. The weapons can vary in size from the many megatons which can wipe out a large city to the tens of kilotons devices designed for special purposes. The warheads are vulnerable to attack by an active defense and highly complicated schemes have been devised to protect them. The incoming vehicle sheltering the warhead can deploy chaff designed to hide the weapon and confuse the defense radars. Or the incoming object can disgorge a number of smaller objects, some decoys, some weapons thus creating a problem of discrimination for the radar systems. The next step in sophistication is for the reentering vehicle to let loose a number of smaller objects, many carrying a weapon and each of these guided to a preselected target. Beyond such MIRV's (Multiple Independently Targeted Reentry Vehicles) lies the missile which delivers a large number of weapons, each one of which is guided to its target in real time with the target selected from the course of the battle through a command system perhaps linked by satellite communications.

The missiles can be based either at land or on sea. The Soviets with their vast expanse of geography concentrated early on spreading their land strike forces and only now are undertaking a major build-up in their submarine based force. The U.S. has followed a balanced strategy of land missiles based in a more restricted terrain and a sub-based fleet roaming over large expanses of oceans. In the future new ways of basing missiles may prove advantageous, such as surface ships, airplanes or even slowly crawling platforms continually roving on the continental shelf. The basing is chosen to provide a *passive* defense to the missile force. This defense arises either from the difficulty in identifying and locating the missiles or from the actual protection afforded by the bases. A Polaris depends on stealth for security, the land-based Minutemen depend on dispersed hardened silos for partial protection against a nuclear attack.

The U.S. in its balanced offense has built up its strategic bomber fleet which complements the land- and sea-based missile strike forces. While the Soviets have not emphasized long-range bombers, their fleet of medium-range bombers provides powerful strike forces against NATO countries. On the ground, bombers are highly vulnerable. In the past it was the U.S. policy to keep a fraction of the force in the air at all times, but a number of accidents involving nuclear weapons have altered this concept though it undoubtedly would be implemented in times of crisis.

The offense is guided by the command and control system which consists of many elements and is supposed to perform many functions. Ideally it should contain a warning element capable of alerting the President and his military commanders of an attack or an impending attack. The President or his designated authority uses the command system to ready or to launch an attack. The system should transmit and verify the command to the forces in the field, the Minuteman missiles, the strategic bombers and the far flung Polaris subs. As the battle develops the command systems should continue to function not only in guiding the course of the campaign but preparing for the recovery operations following any nuclear exchange.

Physically the command and control system consists of a few key command posts plus the communications links between the posts and the forces in the field. The passive means of defense include hardening to resist direct attack, dispersal so as to make the attack on the command system more expensive and redundancy so that the destruction of one key element of the system does not completely disrupt the total system.

Today the defensive component of the U.S. deterrent is purely passive. Silos are hardened, subs are dispersed, command posts are hidden, communication links are duplicated many times over and research goes forward in how to protect by such means the U.S. deterrent. A number of realities and possible future developments make imperative an answer to the question, can *active* defense contribute significantly to the U.S. deterrent?

In the first place the openness of American society makes it unlikely that the location of missile fields and command posts are hidden now or can remain so forever. Secondly, we must assume that developments in sophisticated means of guidance provide to the Soviets either now or some time in the future targeting accuracy sufficient to permit a counter force attack, that is an attack against the land-based missiles and the command posts. Thirdly, it is risky to assume that the Polaris force will always remain undetectable. The science of oceanography and advances in buoy and sensor technology, for example, are proceeding at such a pace that make possible new and perhaps previously unthought of schemes for monitoring the depths. Fourthly, the Soviets have begun the deployment of a defensive antiballistic missile system. If this is substantially expanded it could provide the Soviets with defense against any U.S. missiles that might survive first strike.

In brief, a great world instability would result if the Soviet Union acquired the capability of destroying the U.S. deterrent at an acceptable cost. The acquisition of such a capacity would require all of the four developments mentioned above. The Soviets would have to know of the location and means of operation of our offensive forces and command and control systems, they would have to have highly accurate missiles, they would need to know the location of the Polaris fleet and they would have to have confidence that their defense could deal with the residual U.S. threat. Further the Soviets would have to solve the problem of orchestrating their attack so that at the same time it would render largely ineffective the three principal elements of our offensive forces.

I return to the question of whether the Soviets can solve the great array of technical problems connected with the development, in the next five to ten years, of a first strike capability. The magnitude of certain problems, such as countering Polaris, is such that it would seem very improbable—that the Soviets, even devoting greater national resources than they have in the past, could indeed pose a credible first strike threat. However, the small chance that they might would suggest that the prudent course is one

which adds to the security of our deterrent without escalating the arms race. Thus I favor proceeding toward an ABM protecting the deterrent.

No defense can be constructed that would with complete certainty protect any element of the U.S. nuclear force. A determined enemy can locally defeat a defense if by no other means than exhausting the defensive missiles. But such exhaustion comes at a cost in offensive missiles that could have been targeted elsewhere. The value of the defense in such an exchange will, of course, depend on how effective each defensive warhead is in killing reentry vehicles. If the offense involves decoys and MIRVS then the defense must either go to very large weapons or use sophisticated radar techniques for discrimination. But the increased complexity of the offensive system will almost certainly reduce its reliability and in this way its overall effectiveness.

A defense increases the uncertainty of the attacker. In the absence of an active defense, the attacker can quite precisely project the effectiveness of his own force, knowing the reliability of his missiles and the general characteristics of the foes' offensive bases. With an active defense, the uncertainty is increased enormously; a conservative defense planner would recommend an attack only if he were sure that the offense could penetrate the defense and reduce the enemy's forces substantially. The level of certainty will always be lower in the presence of an active defense. How much lower depends on many factors, including the reliability of the intelligence estimates of the defense capabilities.

What about the detailed proposal for Safeguard in which the first phase would involve partial protection of two Minuteman fields using components which were developed for a very different purpose. Despite the apparent mismatch of components to the task, I could support this initial deployment if it were viewed as an operational test and evaluation program and as a means of *readying* for full scale production of a deterrent defense. In terms of President Nixon's phased approach, a test and production readiness program makes a great deal of sense if at the same time accelerated research and development move forward on alternative components or systems specifically designed for deterrent defense. If such research does not produce competitive alternatives, then full scale production on Safeguard can proceed.

I am concerned by two features of the administration discussion of Safeguard. These discussions have not always emphasized the phased approach. Indeed it would sometimes appear that the decision being made this year is not whether two Minuteman fields will be protected but whether the total Safeguard system will be deployed. Further, there has been little or no emphasis on the great need for research and development if full advantage is to be taken of the President's phased approach.

Let me summarize my position by giving my priorities as to action required if we are to prevent the greatest of all tragedies, a nuclear war. We should give highest priority to the successful prosecution of a Strategic Arms Limitation Agreement. The negotiations will involve issues, both technical and political, that will require the best of the intellectual resources of the nation. I would hope that this Subcommittee will play a leading role in insuring that the proper sense of national urgency be given to the preparation for and the development of a suitable agreement. Second priority I would give to research and development leading to a system which can provide defense of our total deterrent force. Third priority would be assigned to phase one of Safeguard provided it is viewed as a test and readiness for production program. At the same time I would argue that it is not in the national interest to assume an answer to Safeguard now settles the question of ABM or of our strategic posture for the next decade or even the next year. The continued attention of this Subcommittee to these issues is essential if we are to achieve continuing world stability.

BIOGRAPHICAL SKETCH OF GORDON J. F. MACDONALD

Dr. MacDonald has served as Executive Vice President of the Institute for Defense Analyses and in September, 1968, he came to the University of California, Santa Barbara, where he is Vice Chancellor for Research and Graduate Affairs. Dr. MacDonald received his higher education at Harvard University where he was awarded his A.B. summa cum laude, A.M. and Ph.D. degrees and served as a Junior Fellow from 1952–54. He taught at M.I.T. and did research at Carnegie Institute's Geophysical Laboratory before going to UCLA in 1958 as a Professor of Geophysics. At UCLA, he became Director of the Atmospheric Research Laboratory, Associate Director of the Institute of Geophysics and Planetary Physics, and Chairman of the new Department of Planetary and Space Science.

Dr. MacDonald has been a member of the President's Science Advisory Committee since 1965 and a member of the Defense Science Board since 1967. He has served the Department of State as a member of the U.S.-Japan Committee on Scientific Cooperation and as a consultant; the Department of Commerce as a member of the Commerce Technology Advisory Board; and the National Science Foundation as a member of the Advisory Panel for Weather Modification. Dr. MacDonald has been active as a consultant to NASA serving on the Lunar and Planetary Missions Board, the Science and Technology Advisory Committee for Manned Space Flight, and the Science Advisory Committee. For the National Academy of Sciences, Dr. MacDonald has served on the Committee on Atmospheric Sciences since 1961, the Space Science Board since 1962, and is a member of the Executive Committee of the Earth Sciences Division of the National Research Council.

Dr. MacDonald specializes in the study of the earth's interior, the upper atmosphere, weather modification, and the origin of the moon and planets. In 1960, he was awarded the American Academy of Arts and Sciences Monograph Prize in physics and biological sciences for his book "Rotation of the Earth," co-authored with Walter Munk. In addition, he is the author of over 100 articles on scientific subjects.

Dr. MacDonald is also a member of the National Academy of Sciences, the American Philosophical Society, the American Academy of Arts and Sciences, and thirteen professional and scientific societies.

STATEMENT OF EUGENE P. WIGNER BEFORE THE SUBCOMMITTEE ON INTERNATIONAL ORGANIZATION AND DISARMAMENT AFFAIRS OF THE COMMITTEE ON FOREIGN RELATIONS, U.S. SENATE

When thinking about the problems facing this Committee, I came to conclude that the two principal questions are: do our defenses need strengthening and, if so, what are the best ways to do this. I realize my own inadequacy for answering questions as difficult and important as these, but I sincerely and earnestly tried to come to valid conclusions.

The case for strengthening the defense of our country is easy to make. The Soviet Union has surpassed us in the most effective weapons system: its capability to deliver ballistic missiles exceeds ours by a considerable margin. It is instituting civil defense measures which are calculated to impair our deterrent capability. I wish to enlarge a bit on these two points.

The total explosive power of the missiles which the USSR can deliver exceeds ours by a factor between three and four. This will surprise many, but it is well known in our Defense Department. As far as area coverage is concerned, we are somewhat better off: the area which we can cover with a certain overpressure is 70 to 80 per cent of the area which the USSR can cover with the same overpressure. Considering that our population is concentrated in cities to a greater extent than that of the Soviet Union, the disparity is great also in this regard. It is true that the number of nuclear warheads which the U.S. can deliver exceeds that which the Soviet Union can deliver, but the number of warheads is not a measure of the fallout or of the destruction of life that can be caused. In my opinion, the best measure is what I earlier called "area coverage".

The situation is aggravated by two other factors. The first is that this country will surely not be the one to initiate hostilities; the time of any armed conflict would be chosen by our opponents. I could quote many statements by leading personalities in the USSR extolling what they call a preemptive strike against the imperialistic aggressors. The second circumstance aggravating the situation and, in my opinion, aggravating it gravely, is our neglect of civil defense. The USSR has elaborate plans for evacuating its cities, and these plans can become effective much before we can establish an effective civil defense, even if we were to start this afternoon.

I may mention in this connection that the particular form of civil defense which plays a prime role in the USSR planning, the evacuation of the cities, was found objectionable to those participating in a civil defense study. I am referring to the Little Harbor Study, the participants in which, including myself, expressed opposition to evacuation plans because they felt such plans are "provocative". The time needed for the actual evacuation is long, of the order of a day at least. Hence, evacuation can be carried out in time only if the time of the confrontation is known well ahead of time. Since this is the case only for the party which initiates the confrontation, evacuation is most useful as a measure supporting aggression. The preceding is a much condensed discussion of the rationale of evacuation planning but, unless asked to do so later, I will not elaborate on it further.

I will say, though, that the evacuation of the cities could decrease the fatalities which an opponent can inflict by a very considerable factor. I calculated that, assuming evacuation of the cities of the USSR into circles with 50-mile radii, our present missile power, including that on submarines, could cause a fatality level of about 9½ million if (a) all our missiles were used against the population, none against the military targets, (b) if the ballistic missile defense of the USSR were completely ineffective, (c) if we suffer no losses whatever from a first strike and (d) if all our submarines are on station. Naturally, though only a fraction of the numbers often quoted, 9½ million is an extremely high level of fatalities. It is based, however, on extreme assumptions and, of course, we do not know the lives of how many people a possible bellicose leadership of an opponent may be willing to sacrifice in order to assure permanent freedom from "imperialist war plotters."

Even though I wish to proceed to my next subject, I cannot help interjecting here that the tactic I am most afraid of is not an actual attack. It is, rather, the threat of an attack, preceded by the evacuation of cities. If the USSR and U.S. armaments developed in the way the present trends indicate, I greatly fear that we would have to accede to whatever demands accompany the threat just described.

The preceding comparison of the relative powers of the U.S. and of the USSR is, I am sure, known to the members of this Committee, except possibly the effectiveness of the evacuation planned by the USSR. To support this last point, in case it needs supporting, I'll quote from an article by Marshal

V. Chuykov, head of the Russian civil defense establishment, which appeared in the January issue of a rather popular periodical, Science and Life. It came to my attention just a few days ago.

"In our country, everything possible is being done to build reliable means enabling us to protect lives in a possible war. It is well known that the task of defense of the population can be accomplished by two methods—by evacuation and dispersal of the population out of the regions which would probably be struck by the enemy, or by sheltering them in special defense installations. There are no other possibilities, but even these two give us a huge advantage over other countries, especially those of Western Europe. Our country has lots of space and a developed transportation network, our cities are surrounded by ample green belts. All this enables us, on short notice, to take people out of the cities and regions which are probable targets for the enemy into rural locations and thus sharply reduce possible losses.

"Take for example city 'A'. If today the average density of population in this city is 7,000 people per square kilometer, after the execution of dispersal and evacuation it would be lowered, on the average, to 700 to 800 people per square kilometer. In other words, the average would be lowered by eight to ten times. This means that after dispersal and evacuation, a nuclear explosion of the same magnitude would cause losses eight to ten times lower than before the implementation of these measures."

I should admit, though, that the density of the evacuated population, mentioned in this article, 700 to 800 per square kilometer, is much higher than the density which underlies my own calculations. If we adopt this figure for the density of the evacuated people, but still use the four rather unrealistic assumptions mentioned before, the number of casualties which we could inflict rises to about 13 million. I gave some details of these calculations a few weeks ago in an address to the American Physical Society, and Senator Miller of Iowa honored me by inserting the text of this address into the CONGRESSIONAL RECORD. My original calculation has been reported, independently, by Carsten Haaland of the Oak Ridge National Laboratory.

I can imagine only two conditions under which we could escape the conclusion that our defenses need to be strengthened. These are: (a) if our deterrent power, though inferior to that of the USSR, would remain, nevertheless, "sufficient", and (b) if we could be convinced that our opponents are not interested, now or later, in imposing their will on us by threats or otherwise.

As to the first condition, I very much fear that it is absent. If the civil defense plans of the USSR, in particular its evacuation program, are carried out—and I cannot see what might prevent this—our deterrent power will be gravely degraded and may become insufficient. It has been argued that the deterrent will remain effective even if the number of casualties which we can inflict were reduced because we could still destroy much, if not most, of the industrial capacity of the USSR. I doubt that we would be willing, as a result of a confrontation, to sacrifice the lives of many millions of Americans for the destruction of material goods in the USSR. The USSR could well threaten that it will demand the rebuilding of their industry as part of the price of any peace, should we carry out our threat of destruction. We know from past experience that it would be able to carry out that threat. As to the period in which the industrial production can be restored, I may recall that it took barely two years after the Second World War to restore Germany's gross national product to the prewar level, once a stable currency system was reestablished. The threat of the destruction of material goods is not a potent deterrent.

As to the second condition for the absence of a need to strengthen our defenses, that our opponents are simply not interested, now or later, in imposing their will on us, this Committee can judge that much better than I can. As for myself, I am willing to believe the statements of their leaders which accuse us of being plotters of war and promise victory over us. The increasing emphasis on the mounting strength of the USSR, as compared with that of the U.S., is unmistakable in their statements.

If we accept the thesis that our defenses need strengthening, the next question is how this strengthening should be carried out. There are, clearly, two ways: to increase our offensive strength, or to improve our defenses both of people and of installations, including military installations. The two could also be combined.

When I express a strong preference for the second, the defensive, alternative, I admit to having principally the longer range objectives and effects in mind. A world in which potential antagonists are relatively safe from each other is infinitely preferable to a world in which they can inflict, within minutes, tremendous damage on each other. The latter condition is inclined to promote antagonism, the former may lead to accommodation. Surely, disarmament is much easier if a few concealed weapons do not have decisive importance. If I accepted Dr. Rathjens' figures, I would have to say that less than one per cent of the present ballistic missile armaments of the USSR can inflict unacceptable damage on our country. Surely, no one believes that arms control can be detailed enough to uncover the concealment of one per cent of the present arsenal of weapons. Hence, disarmament is impossible unless we can improve our defenses and this remains true even if we do not accept the grossly exaggerated damage estimates of Dr. Rathjens—as I do not.

I will not dwell further on this subject—the preferable nature of defensive rather than offensive armaments. You have heard a powerful articulation of this point from Dr. Brennan. Let me instead address the question of the effectiveness of defense measures.

I cannot assert, with full confidence, that the BMD system proposed by our Defense Department will be less expensive than an equivalent increase in our offensive power. I am not able to estimate the costs accurately and I know that members of this Committee feel that no one can forecast the cost of as intricate a weapons system as the ABM with sufficient accuracy. I do know that civil defense, even the more expensive variety which the Little Harbor Study advocated instead of evacuation, would cost only a fraction of what the offensive weapons, able to annul its protective effects, would cost. As to the ABM, I cannot assert anything like this with confidence, though I am inclined to agree with Dr. Teller's guess, "that our expenditures on penetration aids were not much less and possibly were considerably higher than the Russian expenditures on defense." What he did not ad, but what I wish to supplement, is that the installation of the penetration aids, the subdivisions, etc., led also to a certain degradation of our striking power. We paid in two ways when trying to counteract the ABM of the USSR.

What are, then, the reasons for my confidence in the effectiveness of ballistic missile defense? The crudest one of these reasons is that our striking power had to be decreased when it was adjusted to the presence of the Russian ABM. Similarly, I expect that the striking power of the USSR missile force will be decreased when it will have to counteract our missile defenses. The modifications necessary for this will result in a significant decrease of the total damage the USSR missile force can inflict even if our ABM became totally ineffective as a result of these modifications. As Secretary Nitze mentioned in the course of his testimony, our answer to the Russian ABM will imply replacing 10 MT warheads by 10 warheads, 50 kt each. Such a replacement results in a reduction of the total explosive power to 5, the area coverage to 29 per cent of their pre-replacement values. The total effect on our missile strength is not too great because we have few very large warheads—none of the 20 to 25 Mt variety of the SS–9. However, the reduction of the striking power of the USSR missiles could be very significant—they have mainly large warheads.

On a more purely technical level, I can see no fundamental problem that could not be solved by a competent group of engineers and physicists. If I may delve into my past experience, the situation may be similar to that which prevailed when the chain reaction was established by the Fermi and the basic design for the Hanford reactors laid in Chicago. This may be a good opportunity to compliment those who laid the foundations for the present missile defense plans. The invention and development of the phased array radar required, in addition to underdence in the effectiveness of ballistic missile standing and inventiveness. Naturally, such qualities will be of major help also in the implementation of the present plans but there are, as far as I can see, no outstanding problems which could not be solved in a more routine fashion than the information gathering could be solved. The phased array radar was a breakthrough in this regard.

I do not mean to say that the present plans constitute a final solution of the missile defense problem. The situation is rather similar to that of a chess game. There is a counter-move to every move, even the best one. This, however, is no argument against making a good move. The difference between our situation and that of the chess player is, of course, that we have no desire to win. It would be simply embarrassing. However, we have a fervent desire not to lose and the hope that we do not lose is, I may interject, also the fervent hope of the people in Western Europe who cherish their freedoms.

I would not be entirely honest if I did not admit that another reason for my confidence is the ability, competence, judgment and integrity of members of the Defense Department who discussed these matters with me. I am referring, among others, to Dr. John Foster.

My overall confidence in the promise of missile defense does not mean that I am in agreement with all the details of the technical decisions. In fact, I concur in some of the technical criticisms of Dr. Panofsky, though of course not with his main thesis. On the other hand, I am convinced, as was also Dr. Seitz, president of the National Academy of Sciences, when he testified before the Armed Services Committee, that there is some flexibility in the plans. In one respect, and this is not a detail, I would go much further in modifying plans than previous witnesses have recommended. I would like to see the ABM deployment coupled with an expanded civil defense program. However, this is not a subject on which I should speak today.

On the other hand, when I think of the possible consequences of a refusal to authorize the present relatively modest proposal for the Safeguard system, I become very deeply concerned. Such a refusal might be considered by potential opponents of this country as a sign of unwillingness of this country to defend itself. Nothing could be more provocative than this for people who constantly speak of the doom of the capitalist system, its downfall, the unavoidable victory of the progressive system in the future war, and so on.

On the contrary, that defensive measures are not provocative has not only been declared by Kosygin in the course of the famous interview on February 9, 1967; it has also been demonstrated by the vigorous civil

defense measures the USSR has undertaken and which went virtually unnoticed by our country. Certainly, I never heard any of the passionate opponents of our own missile defense characterize the defense measures of the USSR, civil or antiballistic, as provocative. The fact that some in the USSR dislike seeing us adopt defense measures does not alter these facts.

Let me make three points in conclusion. First that I tried to avoid repeating arguments which you have already heard. It may be good to state, though, that I concur with the criticism which Dr. Wohlstetter offered in his supplementary statement concerning the calculations on USSR first strike capability offered by Drs. Rathjens and Lapp, and which were apparently accepted by other critics of the Safeguard program, such as Dr. Panofsky. I find also other inconsistencies in these statements but will not go into details now. Let me mention next that the statements of Drs. Bethe and Killian seem to be endorsing, nay, proposing, the Safeguard system and are opposed only to the Sentinel. This is particularly true of Dr. Bethe's statement, as originally presented to this Committee:

"A completely different concept of ABM is to deploy it around Minuteman silos, and at command and control centers. This application has gone in and out of the Defense Department planning. I am in favor of such a scheme."

This part of Dr. Bethe's statement was, though, somewhat modified in the printed version.

Third, let me say that I fully concur with all of Dr. MacDonald's statement, in particular with his emphasis on the fact that a defense of the deterrent, such as the Safeguard, cannot be considered as an escalating move because it does not increase the first strike capability. It would induce the opponent to increase his armaments only if he planned a first strike. The difference between Dr. MacDonald's and my own views is based on my grave apprehension stemming from the evacuation plans of the USSR.

It is my belief that not responding to the threatening increase of the armaments of the USSR would be the most provocative behavior in which we could engage. It would encourage the most aggressive part of the USSR leadership by dangling a dangerous temptation before their eyes.

FROM RIOTS TO REBELLION TO REVOLUTION

Mr. ALLEN. Mr. President, the April 1969 issue of the Alabama Lawyer, the official organ of the Alabama Bar Association, contains an address by Hon. B. B. Gullett, immediate past president of the Tennessee Bar Association, delivered at the Law Weekend convocation at Samford University, Birmingham, Ala., one of Alabama's outstanding institutions of higher education.

The title of the address, "From Riots to Rebellion to Revolution," expresses its general theme. The factual observations and thoughtful conclusions presented in the address are timely and as valid today as they were when the address was delivered in May 1968.

Mr. President, we believe that a retrospective view of Law Day 1968, through this message, will lead us to a greater appreciation of the Law Day theme for 1969: "Justice and Equality Depend Upon Law and You." I commend the message to the thoughtful consideration of Members of the Senate and to the public in general and I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FROM RIOTS TO REBELLION TO REVOLUTION

(By B. B. Gullett)

Suddenly our system of government—our way of life—has met its greatest challenge—mob rule—so I speak to you today on the unhappy subject of "From Riots to Rebellion to Revolution."

History should teach us that this road has been traveled before and that the journey sometimes is not too long. I confess that at this moment I am not only greatly concerned but frightened. In my opinion, in our race for the survival of our democratic system of government, the time now is not five minutes to 12 o'clock, but it may be 15 minutes past.

What has happened to this glorious nation which was conceived in liberty and dedicated to the proposition that all men are created free and equal?

What has happened to our people and their respect for the law and what has happened to the leadership of the Bar?

I drafted a speech more than sixty days ago, after attending the Mid-winter meeting of the American Bar Association in Chicago, where I listened to expressions of concern for the problems facing this country.

There, I heard warnings about the growth of crime in the United States—about the predicted riots of this summer—about the responsibility of the Bar to inventory its assets and to be ready to assist in the heavy additional load that would be placed on the bench and bar as the result of the anticipated racial disorder—I heard a frightening report by the former President of the Detroit Bar on how the race riots were handled—or mishandled—in Detroit last summer.

Immediately upon my return from that meeting I prepared, I thought, my talk for today. Some of the things that I predicted in it already have regrettably come to pass, and I have been forced to revise it in the light of many of the things that have transpired in the last two months. The seven days in April have stunned the nation—one of the minor casualties was my speech.

As a matter of fact, things have been moving so fast in this trying period that today's situation reminds me of an airline pilot who was flying across the United States. It was foggy outside and the passengers were very concerned because, as they looked out their windows, they could not see the wingtips to the port side or to the starboard. Finally, the pilot came over the intercom with a rather reassuring voice and he said: "I have two things to report. One is good news and the other is bad news. I would like to give you the bad news first. The bad news is that we are lost. The good news is that we are making record time."

Before we discuss our present status as a people and as a government—and how we have arrived at this point—let's discuss where we were during the infancy of this great democracy.

The great French scholar and statesman, Alexis De Tocqueville, in his renowned. "Democracy in America," writing of his visit to our country, where he had made a study of what made democracy work, was particularly impressed by the influence of the legal profession in American public affairs. He referred to it as being "the most powerful existing security against the excesses of democracy," and he added, "I question whether democratic institutions could long be maintained, and I do not believe that a republic could subsist in the present time if the influence of lawyers in public business did not increase in proportion to the power of the people."

De Tocqueville further said, "The profession of the law is the only aristocracy that can exist in a democracy without doing violence to its nature."

The important role which the Bar played in politics and government at that time is a familiar part of our history—the Bill of Rights—taxation without representation—unlawful search and seizure—trial by jury. The lawyers were indeed the leaders in the founding of the new republic.

I wonder what Mr. De Tocqueville would say if he came back to America today. Would he think that the influence of the lawyer in public business has increased either in proportion to the power of the people or the power of the government? Regrettably the influence of the legal profession has not kept pace, and that is one of the reasons why I am deeply concerned.

Three decades after De Tocqueville observed our fledgling republic, we found ourselves engaged in a civil war—the bloodiest of all wars to that time—a conflict engendered over a matter which our own hands had wrought—slavery. This problem tore the nation asunder—nor was it solved when President Lincoln, in his wisdom, decreed that a nation half free and half slave could not survive and prosper. Today the magnitude of the race problem far exceeds what it was at that time.

As youngsters we learned Lincoln's stirring Gettysburg address in which he spoke of the conflict to determine whether a government so conceived and so dedicated could long endure.

Under the leadership of the lawyers—and with renewed respect for law and order—our nation survived that test of which Lincoln spoke—and prospered, but in its transformation, many social changes which were neither welcomed, nor readily accepted, were forced upon us. Our nation grew strong and became the leader of the free world. And now when we are the richest and most powerful nation in history, we are engaged in a still greater conflict, still testing whether our system of government that you and I know can, in fact, exist. We are now concerned with the pressing question of whether our government can simultaneously fight a war on a foreign front, and put down civil disobedience and riots at home. We are faced with the urgent need for resolving deep-seated issues and critical problems so as to enable us to live in peace with ourselves and our neighbors both at home and abroad.

In the decades since Lincoln's Gettysburg address, we have made progress in many fields, but we seem to be losing the conflict for the very survival of our system of government. And, in the broader sense, we are losing the fight to be one nation indivisible under God, with Liberty and Justice for all.

It is pleasant to observe progress in road building, in transportation, in medicine, in science, in space exploration, in food, in housing, in automobiles, in clothes, in the circulation of news. It is gratifying to reflect upon the growth of our material wealth and our comforts since the days of De Tocqueville, but that's not the cheery picture I came to paint. Instead, I came today to discuss with you our troubles which are more deep-seated, more alarming and more awesome and which present a greater test of our system of government than the war about which Lincoln was speaking at Gettysburg.

When I first prepared this talk over six weeks ago, I wrote: "In our capitol city of Washington and in many other places, when night falls, thieves, thugs and marauders take over our streets. We see the ugliness of crime on all sides—violence, rioting and a general disregard for law and order. Civil disobedience and riots are about to engulf us." I have since had to change tenses and now say, *civil disobedience and riots have engulfed us*—and unless there is a rebirth—on the part of all races—of a sense of moral responsibility for law and order and for freedom under law, our system of government will perish.

The 1968 theme of Law Day U.S.A. is "Only a Lawful Society Can Build a Better Society." In this I believe wholeheartedly but there are those who have no respect for authority or for freedom under our Constitution. Mob violence is about to become the ruling force of our land.

Respect for legal authority, for institutions, for people's rights has been replaced by arrogant unreason. Before the seven days in April, crime in its traditional sense of robbery, burglary and similar offenses was the major problem facing America. This problem has been magnified by rioting and looting.

Even before the days of the recent riots and mob violence, a great mass of people appeared to have taken a new approach as to what observance of the law means. Individuals and groups were pursuing a course of determining for themselves which laws they would respect and which laws would be disregarded. Too many people had the attitude that "good laws will be obeyed and bad ones ignored." But I say to you, who is going to determine which are the good and which are the bad laws?

This new concept of law observance according to personal choice has acquired many different facets. A few years ago who would have thought that two hundred coeds at the University of Georgia in Athens would have seized the building on the campus and staged a strike demanding later curfew law and a relaxation of the drinking rules?

Who would have thought that students who were supposedly going to college to receive an education would have seized administration buildings and caused the cessation of college activities?

Who would have thought that prospective inductees would burn their draft cards?

Who would have thought that a faculty member would have forbidden industry recruiters to interview students because these particular industries made war material used in the defense of our country?

Who would have thought that teachers would have gone on strike for higher pay and *then refuse to obey court injunctions?*

Who would have thought that a citizen of this country would have referred to our flag as a "damn rag"?

Who would have thought that a minority group would have burned down great parts of our metropolitan area and that one of its leaders would have said, "I do not call for any violence and I don't call for any riots, but the nonviolent days are over, and if we must die, let us not die like hogs in some inglorious spot"?

What brings about these conditions? Mr. Leon Jaworski, a member of the President's Crime Commission, speaking to the Conference of Bar Presidents at the recent midwinter meeting of the American Bar Association in Chicago, said it is attributable to our attitude as a nation, an attitude that no longer embraces the virtue of a high regard for law.

Mr. Jaworski, continuing, said: "Who is better equipped and more competent than the lawyer to offer the leadership necessary to reverse this dangerous trend?" I agree with him and ask who should be better equipped than the lawyer, but can we stem the tide of racial disorder and civil disobedience?

What did De Tocqueville say of the influence of the legal profession: "That most powerful existing security against the excesses of democracy." Have we lost that influence? Has the legal profession ceased to carry its obligation to the people and to the cause of democracy? I'm afraid that the lawyers have failed to exert the influence that they should have, and perhaps this is not something which happened yesterday.

No one would deny that the lawyer in the early days of this country was always willing to defend the poor, to represent defendants in unpopular causes, to fight for the rights of the people. No tradition of our profession is more cherished by lawyers than that of its leadership in public affairs. But with the tremendous population explosion, the growth of business, the complexities of everyday life, I am *afraid* the influence of the lawyer in American public affairs has not kept pace with the growth of the country and I am *afraid* that we have fumbled the ball in maintaining our security against "the excesses of democracy"; I am *afraid* our failure is not one of recent date.

I am proud of the glorious history of the legal profession, but I must concur with Mr. Justice Holmes who said in 1934: "Candor would compel even those of us who have had the most abiding faith in our profession, and the firmest belief in its capacity for future usefulness, to admit that in our times the bar has not maintained its traditional position of public influence and leadership."

Perhaps the problems are too numerous—and too great for the legal profession to solve. Wherever we look, something is wrong. America is faced with a multitude of crises—monetary, military, moral, constitutional, and social. Today we are engaged in two great conflicts—at home and abroad.

Our major problem is our domestic one. Before the seven days in April, the press was reporting the formation of vigilante committees in various cities; that the police in Kansas City, in Dearborn and in Philadelphia were conducting classes to teach women to fire pistols and rifles, and that the grand juries were recommending the arming of each individual. You were reading of the National Guard training for anticipated summer riots. And now the riots have already broken out—crime and civil disobedience are rampant—and we are doing little to solve the problem.

The report of the President's Commission on Civil Disorder which was filed prior to the untimely death of Dr. Martin Luther King cogently calls our attention to the problem that we are facing and points up the events of the seven days of April. This report said, "Our nation is moving towards two societies, one black, one white—separate and unequal. If we are heedless, none of us shall escape the consequence."

Unless immediate action is taken, the Commission said, "largescale and continuing violations could result, followed by white retaliation, and ultimately, the separation of the two communities into a garrison state." I wish this report had not been so prophetic.

Did you read the "remedy for riots" as set out in the report of the National Advisory Committee on civil disorder? It recommended the creation of 2,000,000 new jobs, new housing, better schools and welfare. It recommended a national open housing law, which Congress has since passed.

The Committee's recommendation will cost an estimated $2,000,000,000 per month, just about the cost of the war in Vietnam. I do not know whether our economy will stand that kind of appropriation. I do not know whether that program will solve the problem but unless some solution is found, I think I can project the future. We will wind up a nation of two races with the ultimate destruction of our basic system of democratic government.

Kenneth Clark, the Negro member of the committee, reached this conclusion: "This society does not have the moral nor ethical fiber to meet the problem." If this is true, our democracy is doomed.

How do we attempt to solve the race issue? That is the pressing question. Who leads the fight? The lawyers? How do we instill a new respect for obedience to the law? Do we follow the report of the National Advisory Committee on civil disorder? What is the solution?

What is your responsibility in this crisis? What is my responsibility? What is the responsibility of the legal profession?

Mr. Justice Brennan, writing on the responsibilities of the legal profession, which appeared in the *American Bar Journal*, February 1968, said:

"Society's overriding concern today is with providing freedom and equality of rights and opportunities, in a realistic and not merely formal sense, to all the people of this nation; justice, equal and practical, to the poor, to the members of minority groups, to the criminally accused, to the displaced persons of the technological revolution, to alienated youth, to the urban masses, to the unrepresented consumers—to all, in short, who do not partake of the abundance of American life."

How do we provide equality of rights and opportunities in a realistc sense as called for by Mr. Justice Brennan? I'm not sure I know, but the problem can only be solved under law. There is no way to have equality of rights and opportunities, and justice and freedom except under law.

Freedom under law depends upon voluntary compliance with the law by an overwhelming majority of the people. When this is done, the individual and society as a whole is protected by the law and thereby enjoys the blessings of liberty and the freedom of choice. Under our laws and our system of government, the law violators, who constitute such a minute percentage of the population as a whole, are punished for their violation, and so long as the law violators constitute only a small segment of our society, our law enforcement authorities can cope with the situation, but a democratic system of government is not equipped for massive law violations.

To cite an example, and I do not mean to over-simplify the proposition, I say to you that if fifty percent of the citizens of this country should refuse to file and pay their income tax, the government could do nothing about it. The processes of the Federal Government could not arrest—indict—try—convict—sentence—and confine 35,000,000 people. The courts and the administration of justice are not geared to do this. Therefore, voluntary compliance with the law is imperative for a free society and those of us who do not willingly exercise self-restraint in compliance with the law chisel at the very foundation of our government. Such acts, in effect, constitute the denial of liberty and justice to the remaining citizens.

Riots represent a total breakdown of law and order. They jeopardize our continued freedom under law. If they continue, they will destroy our whole society. There will be no law for your protection, and my protection.

I say to you that dissent under a leadership which dedicated itself to nonviolence—led to violence—and in turn *that* violence led to counterviolence in the form of murder.

The so-called peaceful march in Memphis, which Dr. King had led a few days prior to his murder, picked up in its wake the rabble-rousers, the malcontents, the vicious, the hoodlums, those bent on destruction and on looting. The tragic sequel to this nonviolent march in Memphis in turn generated the most widespread spasm of racial disorder in our history. From Washington to Oakland, from Baltimore to Denver, from Chicago to Tallahassee, fires burned, looting prevailed and Federal troops had to be called to suppress these riots. In our National Capitol, fires burned as in the War of 1812. Helmeted combat troops, with bayoneted rifles ready, guarded the White House. Twelve thousand Federal troops secured the public buildings, and machine gun posts defended the National Capitol. I say secured the public buildings—from whom? From the rioters, from the looters, from the law violators. Huge sections of Washington, Chicago and Baltimore were burned, fires broke out in Nashville, in Pittsburgh, in Kansas City, in De-

troit, in Baltimore, in Memphis, in Oakland, in Tallahassee. Violence erupted—looting was the order of the day. The leader of the nonviolent group was dead and Stokely Carmichael cried, "Go home and get your guns."

Violence can only lead to counter-violence—and mob rule is no substitute for law and order. Furthermore, in my opinion, violation of the law or violation of a valid court order in the name of nonviolence is no less a crime than the violation of law by a mob bent on destruction and looting.

In this May 1968 when the flowers and shrubs are blooming and the trees are putting out their foliage and the grass is green, our land is sick. As my pastor said a few Sundays ago, the people are sick from despair and when men lose hope, they despair, and when they despair they grow afraid, and when they grow afraid they find an object for their fear, and mixed together, despair and fear and hatred breeds in them a desperation out of which comes action often irrational, utterly violent and most often destructive.

When this attitude is prevalent among a large segment of our society, our country is in real trouble. The theme of Law Day is, "Only a Lawful Society Can Build a Better Land." This I subscribe to, but to accomplish this, we need to face our problems squarely in the light of what is best for all our people. You and I and millions of Americans must re-evaluate our blessings and our responsibilities. *It will take more than talk to cure the sickness of this land.*

This is the Springtime of crises, of hatred, of violence, of riots and of horror. Ugly hands have been put upon the honored concept of free dissent. Dissent, under law, is a part of our democratic heritage—but dissent in violation of law leads to riots—to rebellion—and to revolution.

These troublesome days have brought America to an important crossroad and to the choice of whether its people are going to be brought together in a common unity and destiny, or whether hostility, hatred, violence and bloodshed will lead them down the road to the overthrow of the democratic government. America *must* be *one* people living in harmony and dignity or it will be destroyed on the anvil of mutual hostility.

If America lives—if freedom lives—we must live under an orderly society of law. We cannot exist by mob rule. A mob never creates—it destroys. No one ever heard of a mob building a Church or a courthouse—or writing a symphony or a Bill of Rights.

Today I have focused upon the awesome problem which we must solve if our system of government is to endure. Regretfully, I have not brought you the solution, but if you, the college students, the leaders of tomorrow, clearly see the problems, perhaps together we can find a way to solve them. I pray to God we can.

In closing, listen to the words of the poet, Josiah Gilbert Holland:

"God give us men! A time like this demands
Strong minds, great hearts, true faith and ready hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor, men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking."

POSTAL REFORM

Mr. GRIFFIN. Mr. President, anyone who suggests drastic changes in the way our postal service is financed or operated walks into a hornet's nest of controversy. Prof. Stanley Siegel, of the University of Michigan Law School, did not hesitate to tackle that difficult, complex subject when he recently addressed the Economic Society of Michigan.

An adaptation of his remarks, in article form, appeared in the spring 1969 issue of Law Quadrangle Notes, a publication of the University of Michigan. Whether one agrees or disagrees with Professor Siegel, his thoughtful and thought-provoking article deserves to be studied by those in the administration and Congress who now are seeking "An Alternative to Politics in the Mail."

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ALTERNATIVE TO POLITICS IN THE MAILS

(By Prof. Stanley Siegel)

(NOTE.—Adapted from an address before the Economics Society of Michigan on March 29, 1969.)

In 1967, the American public contributed nearly $6 *per capita* to the deficit of the United States Post Office, a total of almost $1.2 billion. In 1968, after massive rate increases, the deficit will still approach $600 million. Despite the rising cost of service, its quality has declined. For example, as many of us are painfully aware, where once the American household received mail deliveries twice daily, the single delivery of today doesn't assure even overnight transmission of nearly one-third of first-class mail. This combination of increasing cost and declining service bears striking contrast to the improved efficiency of both private enterprise and other government operations. What is wrong with the postal system? The answer, at least for the government overseers of the postal system, is uncomfortable: the mechanisms of government control are totally unsuited to the running of a business enterprise.

The Post Office is affected with the public interest, but it is a business nonetheless: it provides physical communication services for stated fees. Although many of these services are subject to a statutory monopoly, some may be provided by private competitors, such as United Parcel Service and the Oklahoma-based Independent Postal System of America.

At the founding of the Nation, the Post Office was the nation's communication lifeline. It was the presence of the federal government in every outpost of the country—the vital link between the government and the people. For these reasons, the mails had been a government department in other nations; indeed, in the early days of the nation no other organization—private or public corporation, administrative agency, or public authority—had matured sufficiently to take on so massive and important a job.

Times have changed. Great private corporations have emerged and grown to extend services and produce products of every conceivable nature, and administrative and regulatory agencies have been created to police their activities in the public interest. Public corporations have been created anew or spun off from the government to conduct activities of mixed business and governmental character. Throughout this period of business and administrative transformation, the United States Post Office has slumbered like an enchanted princess in the outdated mold of its eighteenth-century creation.

But for historical accident, the Post Office might have been a private corporation subject to government regulation, such as American Telephone and Telegraph Co.; or a public corporation accountable directly to the government, such as the Tennessee Valley Authority, the British Post Office, or Canadian National Railways. Would a change in form today help to solve its massive problems?

WHAT IS WRONG WITH THE POST OFFICE

Twenty years ago, the Hoover Commission recommended that the Post Office be taken out of politics. For nearly a generation, Congress has known that nearly all the ills of the Post Office are traceable to political intervention in postal operations. In April, 1967, following a speech by Postmaster General Lawrence F. O'Brien advocating reorganization of the Post Office Department, President Johnson appointed a Commission to examine the Department's problems and make recommendations for their solution. *Towards Postal Excellence,* the report of the President's Commission on Postal Organization, concluded that a public postal corporation could most effectively address these problems.

Personnel: With 716,000 employees, the Post Office Department is one of the nation's largest employers. Unfortunately, five out of six employees are in one of the five lowest pay grades. Although the uniform nationwide pay scale makes postal jobs attractive in outlying areas where living costs are low, it is difficult—often impossible—to attract capable recruits in sufficient numbers for major urban centers, where living costs are high and postal needs greatest. Moreover, working conditions in most post offices are extremely unpleasant: antiquated buildings have poor heating systems, inadequate locker, dining, and sanitary facilities, and generally dismal decor. Poor training programs make advancement unlikely; indeed, four out of five postal employees retire in the same grade as they entered the Department. It has been claimed that political considerations enter into promotions, even at the lowest levels.

Political considerations affect appointments of top officials in all government departments, but the Post Office is unique in that the top 25,000 management positions—postmaster positions at principal post offices—are political appointees, selected by the President with Senate confirmation. Although the formal procedure calls for selection from eligibles certified by the Civil Service Commission, the process is in fact more cynical. An "advisor," usually the local Congressman of the political party in power, transmits the choice of local party leaders to the Postmaster General. If the chosen man does not qualify on the examination, he is often named acting Postmaster, and new examinations scheduled until he *does* qualify. To date—despite the introduction in the last few years of nearly one hundred bills designed to remedy the situation—attempts to eliminate political appointment of Postmasters have been futile. Postmaster General Blount has announced the elimination of the "advisor" system in his appointments of new postmasters, and President Nixon has announced support of proposed legislation to eliminate Senate confirmation, but the fate of these moves must again await the action of Congress. Until then, the managers of the Department will continue to be chosen by a process carefully designed to avoid considerations of their merits. From 1960 to 1967, two-thirds of the postmaster appointees were chosen from outside the postal system.

Finance: Aside from its staggering size, the most significant aspect of the postal deficit is that *it is not the responsibility of the Post Office Department.* The Post Office does not set its rates; *Congress* sets them. Nominally they are set in accord with the mandates of the Postal Policy Act, but in actuality they are the product of undisclosed political considerations. Ideally, rates should be set at or about the break-even point for all services except those for which a policy of subsidy has specifically been adopted. But the Department's figures show a small profit on first-class mail and enormous deficits on second-, third- and fourth-class. Although the validity of these statistics has been called into doubt, there is every indication that the most sophisticated cost-accumulation system would have little effect on the financial pic-

ture of the Department under the present rate-making structure.

Nor does the Department have much more control over its expenditures than its income. The budgetary process begins some fifteen months before actual expenditures; Congress appropriates funds for annual use in six categories, of which some 80 per cent is spent in the category of operations. The detailed appropriation process is directed toward assuring appropriate approval and legality of expenditures, rather than efficiency of financial operations. Financial statements show appropriation headings, not useful financial results. And in periods of fiscal austerity, Congress cuts appropriations without knowledge or regard for postal operations.

The appropriation process has had a devastating effect on postal modernization. Despite the existence of proven time- and labor-saving mail-handling devices, many major postal centers have done without them. The optical-scanning letter-sorting machine, now in experimental operation in Detroit, will produce enormous savings when perfected and spread throughout the system. But Congress has not appropriated sufficient funds to introduce even earlier-generation mechanized equipment in major postal centers. American Telephone and Telegraph Co. devotes more than one-third of its annual revenues to capital expenditures, but Congress appropriates a paltry 2 per cent of postal revenues to capital improvement. When AT&T introduced nationwide direct-distance dialing, the Post Office was still sorting mail into the 49-compartment cases created by Ben Franklin.

Operational Autonomy: Just as in the areas of personnel and finance, the Post Office Department is subject to pervasive outside control over all other aspects of its operations. Construction, transportation, contracting, internal management, are all the subject of some 800 pages of statutes and regulations governing the Department. Congressional hearings in 1968 reported the case of a lost lock box key that was ultimately resolved only by the office of the Postmaster General.

So detailed is the process for authorizing new postal construction that a five-year period elapses between decision to construct new postal facilities and actual construction. When new buildings are constructed, as postal logistics experts will testify, they should be placed near trunk roads and airports, since mail moves by air, and highway access is critical. Nevertheless, major new facilities, such as those in Baltimore, Maryland, and Jersey City, New Jersey, are located in downtown areas. City traffic, of course, makes movement of mail from such centers difficult and slow, but the Department has no say in their placement. The Jersey City facility, indeed, is now under investigation for purported Mafia influence in construction and subcontracting.

Similar constraints apply in so major an area as choice of the modes of mail transportation. The Department has difficulty, for example, in using freight forwarders and truck common carriers, even where these services are cheaper than rail transportation. Congressman Steed, in hearings on postal operations, summarized the extent of control over operations by the Postmaster General:

. . . At the present time, as the manager of the Post Office Department, you have no control over your workload, you have no control over the rates of revenue, you have no control over the pay rates of the employees that you employ, you have very little control over the conditions of the service of these employees, you have virtually no control, by the nature of it, of your physical facilities, and you have only a limited control, at best, over the transportation facilities that you are compelled to use—all of which adds up to a staggering amount of "no control" in terms of the duties you have to perform.

The pervasive problems of the Post Office Department are subject to solution only through large-scale disengagement by the government. This is hardly news. This course was recommended, by one means or another, by the Hoover Commission, the President's Commission on Postal Organizations, and—in a comparable situation—by the British Select Committee on Nationalized Industries reporting on the British Post Office.

WHAT ARE THE ALTERNATIVES?

One solution to governmental problems, particularly when they involve business operations, is to spin them off to private industry. Two private-industry alternatives are open to the postal service: either sell the entire system to a business corporation, or simply allow free private competition through repeal of the statutory postal monopoly. Either presents great problems. No single investor or group of investors would snap up the opportunity to buy an unprofitable and archaic enterprise for a present value of some $1.7 billion, requiring another $5 billion in immediate modernization. And simply opening postal operations to competition leaves unanswered the question of what to do with existing facilities and employees. Nor does it face the fact that much of the required postal service, after the cream has been skimmed in profitable local delivery, would still have to be provided—perhaps with even greater deficits—by the existing system. Neither alternative faces the enormous political difficulties of attempting so radical a change in ownership and control.

The public corporation is a tenable alternative, both politically and operationally. Among the many forms in which government has conducted its activities, the public corporation has a long and respected history. Indeed, in the United States it dates back to the Bank of North America, chartered by the Continental Congress in 1781. The combination of business autonomy and political responsibility that characterizes this form has led to its use for many state and federal purposes, for example, electric power production, ports, bridges, airports, and financing institutions. The Tennessee Valley Authority is closely analogous to the Post Office in its commercial power production; and the U.K., Canada, and other nations have used public corporations to run numerous industries including, in some cases, the mails. Creation of a public postal corporation would require a departure from traditional government operation of the Post Office, but that change would be precisely what is needed to revitalize the system. The public corporation idea is not startlingly original, not unique, and not untried.

Possessed of substantial autonomy in finance, personnel, and operations, the Tennessee Valley Authority has been highly successful by any measure. It has repaid much of the government's initial investment and, while returning income to the government on its remaining investment, now conducts its commercial operations at a break-even point. Its record of labor relations is exceptional. Instrumental in achieving these successes are the powers granted to TVA: exemption from the civil service system, authority to sell bonds for capital financing, rate-making power, general managerial autonomy, and scrupulous elimination—by statute—of political interference in operational decisions. While the British nationalized industries have not achieved quite so admirable a record, the successful industries have similarly been characterized by a substantial degree of autonomy, considerably greater than that of a government department.

ESSENTIAL FEATURES OF A POSTAL CORPORATION

The Board of Directors: Whatever form a reorganized Post Office takes, an essential feature will be greatly increased autonomy both in matters of major policy and in day-to-day operations. The essentially business operations of the Post Office should be insulated from Congressional and Executive interference except on matters of overriding national policy. Virtually essential to this insulation is a board of directors, but such a board must be constituted differently from the board of private corporations. Most major private corporations today have "mixed" boards of directors, composed in part of outside, part-time directors and in part of inside, full-time officer-directors. The advantages claimed for this system are two: outsiders provide perspective, vision, and objectivity, while insiders supply detailed knowledge and immediate responsibility for results. Ever since Berle and Means' landmark study of 1932, it has been understood that corporate management—the board of directors—tends to perpetuate itself or its designees through use of the proxy system. Thus, the board in most of those corporations is "controlled" by the full-time insider-officers.

The board of a public postal corporation should be named by the President of the United States, consistently with prior practice. The board structure proposed by the President's Commission on Postal Organization is, like its commercial counterparts, mixed: six part-time Presidential appointees, and three full-time officer-directors named by the six. Such a board gives great power to generally uninformed outsiders who—unlike the outsiders in *private* corporations—are not effectively subordinate to the officer-directors. Moreover, early experience with TVA's combined policy-operations board of directors was disastrous; the board of a public corporation should be concerned with policy only. A Presidentially appointed *full*-time policy board such as TVA's has four major virtues:

A degree of executive supervision through naming of the board.

Necessary insulation of executives from politics, through board appointment.

An informed full-time board of directors, and executives responsible to the board.

Separation of policy (the board) and operations (the executives).

Personnel: No postal reorganization will be effective without total elimination of political influence in appointment of postal employees and executives. Postmaster General Blount has taken the first steps in this direction, and legislation proposed by President Nixon will, if enacted, go a long way toward meeting the problem. However, nothing short of exemption from the civil service laws will fully solve the Post Office's personnel problems.

Exemption from civil service would not be unprecedented. Nor would it herald political intervention or labor strife. TVA, which has enjoyed such an exemption from the outset, has had excellent labor relations and virtually total political insulation in its personnel process. For executives of a postal corporation, civil service exemption would have two virtues: greater flexibility in assigning responsibilities and determining pay grades, and potentially higher salaries. There is rigidity in the civil service system, much of which might be avoided through a personnel system tailored specifically to the Post Office. Moreover, the disparity between compensation of executives in major American corporations and compensation of postal officials is great. The Post Office, unlike the Justice Department or the Department of Interior, is a business; it requires long-termed business executives for its direction. The recommendations of the Kappel Commission on Executive Pay will go a distance towards eliminating the compensation gap, but it will still prove difficult to attract a top corporate executive for a salary probably less than one-fourth of what he is worth in industry.

The advantages of civil service exemption for laborers and other non-executives are also twofold. For the first place, exemption would provide increased flexibility in hiring, assignment, evaluation, and discipline—in short, a personnel system tailored to postal needs. Secondly, exemption would mean that

at long last labor-management problems could be tackled by genuine collective bargaining—as opposed to legislative lobbying. Any argument that elimination of civil service will open the floodgates to political influence can be dismissed readily. Aside from the fact that the Department is presently inundated with political appointments, reference may be made to TVA—also civil service exempt—where political influence is unheard of. Fears of loss of pension and seniority rights may similarly be answered, by statutory preservation of these rights.

Interestingly, the most powerful objections to such a proposal—an indeed to postal reform generally—is likely to come from organized labor. For the existing system of statutory pay scales provides organized labor with a powerful weapon—the lobby. Elimination of this weapon will necessarily encounter opposition unless replaced with another—the strike. TVA has a strike-ban, as do other government corporations. However, AT&T and other industries of equal magnitude and importance to the Post Office have no such prohibition. Tradition and precedent aside, the arguments against the Post Office strikes seem no more convincing than those against telephone and airline strikes. If labor opposition can be overcome only by granting a right to strike, the Administration should pay that price for reorganization. In the long run, I submit, such a price would be low.

Finance: It is in the area of finance (rate structure, capital expenditures, borrowing, budgets, and auditing) that freedom of action tends to be most important—and controversial. Occasional fears are expressed that given free rein, a postal corporation would set prohibitive rates for unattractive services, eliminate essential but unprofitable operations, and gather huge profits. Of course, no such corporation would be unregulated. The President's Commission on Postal Organization, for example, suggested regulation of rates and conditions of services by an internal board of rate commissioners. Another possibility would be to create a separate government agency to regulate rates and conditions of service, or to vest such authority in an expanded Federal Communications Commission.

Whatever form rate regulation takes, two characteristics of the ratemaking scheme will be essential: 1) the initiative for setting rates and conditions of service must be in the postal corporation; and 2) the corporation should be required to break even and to set rates on an economic basis. Subsidies, if determined to be necessary, should be separately funded by Congress. Break-even operation—including possibly a return on the government's invested capital—is desirable to avoid the enormous indirect subsidy paid by the taxpayer to the users of 80 per cent of the mail service, American business. Post Office Department statistics indicate that to achieve break-even operation, rates on first-class mail should be kept relatively constant, but third-class rates increased about one-third and second-class rates *nearly tripled.* Break-even operation *is* possible. All available data indicates that the demand curves for all classes of mail are remarkably inelastic, and that only a few marginal users of third-class mail would be seriously affected by rate increases.

The advantage of granting the Post Office initiative in setting its rates and services is that the corporation must come forward with economic and operational justifications for its proposals. More importantly, changes from these proposals must be publicly explained by the body that would make such changes, whether regulatory agency or Congress. Today, by contrast, the lobbying process for favorable rates is largely covert, and Congress sets rates at the deficit level while the Post Office Department takes the blame.

The Department's inability to make necessary capital expenditures rests with the appropriation process. Congress will not appropriate the necessary funds, and it is literally impossible to pay for improvements—now estimated to require $5 billion—out of rate increases. The postal corporation should be given authority to raise capital funds through the sale of bonds. TVA has used its bond-issuing authority to advantage. Indeed, despite their lack of a U.S. Treasury guaranty, it has secured a "Triple-A" rating for its bonds. Such authority for a postal corporation, perhaps augmented by a Treasury guaranty during the early years, would be of inestimable value in bringing postal operations into the twentieth century.

Finally, the budget and appropriation process should be adjusted to meet the business needs of the Post Office. Full business-type budgets and financial statements, as well as commercial audits, should be introduced, and the corporation permitted to expend its receipts outside of the limitations of the appropriation process.

WILL POSTAL REFORM BE EFFECTIVE?

Creation of a postal corporation, by itself, will not initiate a golden age for the Post Office. In fact, unless certain critical elements of autonomy are secured, no improvement can be expected. The virtue of the corporation approach, as opposed to piecemeal reform, is that it can be used to secure all the necessary reforms at once, and to untie for all time the Congressional apronstrings. The President's Commission on Postal Organization predicts savings of some 20 per cent in a five- to ten-year period if its proposals are enacted. If such savings do materialize they will of course be welcomed. It may be safely said, however, that a reorganization which does no more than cut back the rising postal deficit while maintaining reasonable rates and service will be hailed as a success. The task is not yet to transform the Post Office into a model of American enterprise, but simply to stave off rigor mortis.

TAX FAVORITISM

Mr. YOUNG of Ohio. Mr. President, it is clear that there is a genuine "taxpayers' revolt" sweeping the country in protest against rapidly rising local, State, and Federal taxes and against our income tax law replete with loopholes. It is clear there is an urgent need for genuine tax reform.

The President has submitted his proposals to the Congress and the Senate Finance Committee and the Ways and Means Committee of the House of Representatives are presently considering these as well as other proposals for plugging tax loopholes and correcting inequities in our tax laws.

Senators are aware that the Treasury Department officials have quasi-legislative authority in interpreting tax legislation. Unfortunately, there are cases in which this power has been abused and in which the intent of Congress was not followed. Recently, Sanford Watzman, investigative reporter in the Washington bureau of the Cleveland Plain Dealer, wrote a penetrating series of articles involving a decision by Treasury Department officials which appears to be a case of blatant tax favoritism which operated for the benefit of one specific firm.

Because of the importance of this subject and of increasing widespread interest in reforming our tax laws and procedures, I ask unanimous consent that the series of articles written by Mr. Watzman and published in the Plain Dealer of Cleveland on April 27, 28, and 29, be printed in the RECORD at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Plain Dealer, Apr. 27, 1969]

REGULATION GIVES HANNA ORE FIRM TAX BREAK IN MILLIONS

(By Sanford Watzman)

WASHINGTON.—Under a "special" government regulation, in one of the largest cases ever to turn on a single issue, a subsidiary of the Hanna Mining Co. of Cleveland has been allowed to avoid payment of $10 million to $20 million in federal taxes.

Hanna's offspring, the Iron Ore Co. of Canada (IOC), got the opening it wanted in the closing days of the Johnson administration. A regulation tailored for IOC was put on the books, resulting in a tax return of zero money owed.

As a decree applying across the board, helping any company with a case that fits, the regulation does not name any corporation. It was drafted in such a way, however, as to make it unlikely that any other company could benefit.

The break came for Hanna after the case had been pending seven years. In its fight with the Internal Revenue Service, Hanna lost every round. But higher authorities speeded action at the end to lift Hanna's hand in victory.

It was not the edict itself that raised eyebrows in the IRS building and produced critical remarks there. Rather, it was the way it was written and the procedure followed.

As to the merits of the case, the few who know the facts acknowledged that IOC, the Hanna subsidiary, had good legal arguments which could have swayed a court. But the regulation spared IOC the necessity of going to court, or of paying up.

A Hanna spokesman asserted in an interview with the Plain Dealer that the Treasury Department action had saved IOC $10 million. An authoritative rival figure computed for this reporter was $20 million.

Other estimates by tax specialists not as close to the case range higher.

The top official identified as being involved —although he denied an active role—was former treasury secretary Henry H. Fowler, IRS is a part of the Treasury Department.

In addition to taking its case to Fowler, Hanna enlisted the aid of the Canadian government, which interceded for the company.

The other principals were Stanley S. Surrey, then assistant secretary of the treasury for tax policy, and Sheldon S. Cohen, IRS commissioner until the Nixon administration.

It was Surrey who ordered his staff to write the pro-Hanna regulation. He took this action after the chief counsel of IRS refused three times to grant relief to the company, and after Cohen declined twice to issue a favorable ruling.

Surrey himself rejected Hanna's argument the first time the case was presented to him. In the end, both he and Cohen signed the regulation that laid the issue to rest. It was approved by them on Jan. 9, 1969— 11 days before they left office.

The issue was IOC's eligibility to pay its taxes in a special way—by filing what is known as a consolidated return. It did file such a return in 1959 and 1960 with the IRS district director in Cleveland.

The return treated IOC and its own wholly owned subsidiary, the Quebec, North Shore and Labrador Railway Co., as a single tax-paying entity.

The railroad runs from Seven Islands, a Canadian port on the St. Lawrence seaway, to the ore fields at Knob Lake, some 350 miles to the north.

Starting in 1960, and without interruption since then, the railroad has been paying dividends to its parent corporation.

In 1960 these payments totaled $34.4 million. In addition, IOC that year realized a

gain of $12.1 million from the sale of rolling stock to the railroad.

If a consolidated return were in order, these items could be eliminated from IOC's taxable income—meaning that IOC could retain the earnings tax-free.

The problem that arose was whether the railroad could be treated for tax purposes as a domestic (U.S.) corporation, although it had been chartered in Canada.

If it were held to be a strictly foreign entity, it could not be included in a consolidated tax return with IOC, which was incorported in Delaware in 1949.

In that event, the gains realized by IOC would be considered income and held taxable by the United States.

Section 1504 (D) of the U.S. Internal Revenue code assigns domestic status to foreign subsidiaries of an American company—providing that the subsidiary was organized because the laws of the host country do not permit an American corporation to operate within its borders.

This section of the code dates to the revenue act of 1928. While it applies to Canada as well as Mexico, it was put in the code because of problems that arose over American business operations in Mexico.

When the consolidated return was filed, IRS officials in Cleveland questioned it. They argued that Canadian law does not bar American companies from Canada. It would follow, then, that the foreign railroad could not qualify as a domestic (U.S.) corporation.

IOC countered that, while there was no explicit prohibition in Canadian law, there was an implicit government policy—backed by historical precedent—which had the same effect.

Cleveland officials asked IRS headquarters here for a ruling. In September 1961, IRS sent out an agent from its office of international operations to examine the returns.

The fight—with its many long counts—had begun.

Meantime, IOC continued to file consolidated returns for subsequent years pending a final decision. Railroad payments to IOC kept rolling in, reaching a total of $136.3 million by the end of 1968.

Despite these earnings, IOC did not pay a penny in taxes to the United States in those years. Company officials assert that tax liability was wiped out by foreign tax credits and other special allowances.

The dispute has been over the 1960 return. Apparently, a challenge for the other years was not in the cards, even had IOC been forced to back down from a consolidated return.

By now, the company has built up a surplus credit of $30 million on taxes paid to Canada. This money is deductible, dollar for dollar, on returns filed with IRS. The credit has run through the 1960s, leaving the surplus available for the future.

When Cohen denied a favorable ruling to IOC, all possibilities of relief from IRS itself had been exhausted. Only the IRS commissioner—and no higher authority—has the power to issue a tax ruling.

But one more avenue remained open to Hanna as an alternative to going to court. It led beyond IRS to the Treasury Department, which shares responsibility with IRS for tax regulations.

Ordinarily, regulations are drafted or changed only after Congress amends an old law or enacts a new one. The regulations interpret the law, giving guidance on how it is to be applied.

There is a difference between an IRS commissioner's ruling and a regulation. A ruling resolves a particular case. A regulation—like a law—lays down a broad policy.

A complicated procedure has evolved for promulgating new regulations. Usually, it starts with a "proposed rule making"—an initial draft.

This is published in the Federal Register as a public document. Interested parties are given an opportunity to comment on the proposal, after which a public hearing may be held. Then the regulation is republished in final form.

For a regulation to become effective, it must be signed by two persons—the assistant secretary for tax policy and the IRS commissioner. A refusal by either one to sign kills the proposal.

What had set the stage for the Hanna controversy was the fact that the then existing regulation, based on section 1504 (D), did little more than restate the law. This opened both law and regulations to varying interpretations.

So far as Cohen and his staff were concerned, the law was clear. But the company felt IRS was being unfair and rigid in its rendering of the statute.

Surrey's order that a new and expanded regulation be written was carried out by publication of his proposal in the Register on Nov. 2, 1968, just before the presidential election.

As a statement of general policy, the prospective new regulation turned out to be surprisingly specific.

It said: "the term 'laws of such country' (Canada and Mexico) includes . . . in addition to explicit statutory or constitutional provisions, any existing legislative practice or policy."

Then the specific language followed, with the regulation offering an example of a situation that might arise. This lengthy sentence, virtually a recitation of IOC's case except that IOC's name was omitted, reads:

"For example, if the laws of Canada (SIC—not Mexico) permit the ownership or operation of specified property, such as a railroad (SIC), only by a person granted a special legislative authorization, and it is established that there is an implicit (SIC) legislative policy that such authorization would be granted only to a corporation organized under the laws of such country, then a corporation organized under the laws of Canada to own or operate such property will be considered maintained solely for the purpose of complying with the laws of such country . . ."

In addition to the precise wording of the example, to other aspects of the regulation proved interesting. Both had the effect of narrowing the circle of companies that might be helped by the edict, perhaps eliminating all other corporations.

One of these features was that the regulation is retroactive, applying only to the tax years before 1966. The second was that certain qualifying tests were retained without change.

Retroactivity stemmed from the fact that IRS has two sets of regulations in the consolidated return area, one applying to the pre-1966 period and the other to the years following. The reason is that regulations in this field slowly are being revised as part of a general undertaking.

To make the Hanna regulation apply to the present and future, as well as the past, it would have been necessary to repeat the new proposal in the post-1965 regulations.

The fact that this was not done prevents any company from using the regulation today, even if it should find that for any year after 1965 its situation was similar to that of IOC.

The Plain Dealer was told that an amendment to the current regulations was also intended. However, this action was postponed in the rush to complete paperwork on the pre-1966 regulation. That was the explanation given.

The restrictive provision retained when the pre-1966 regulation was amended says:

"The option treats a foreign corporation as a domestic corporation so that it may be included in a consolidated return must be exercised at the time of making the consolidated return, and cannot be exercised at any time thereafter."

Hanna met this test because, as related earlier, it had begun in 1959 to file consolidated returns on behalf of IOC and the railroad.

The next sentence in this section holds that, once a consolidated return is filed, the filing must be repeated "each consecutive year thereafter." Hanna also met this test.

Because there was no loosening of these provisions any company seeking relief under the new regulation would have to show it had done exactly what IOC did—that is, produce a record of consistent filing of consolidated returns.

When the proposed regulation was made public, two parties availed themselves of the opportunity to comment. But their objections missed the point. Clearly, the authors were not aware of the real reason for the new regulation.

One comment was submitted by the American Bar Association on behalf of members of its committee on foreign tax problems. The second came from Chicago lawyers for the U.S. Gypsum Co.

The bar appeared puzzled. Its members observed that the decree "appears to apply only to taxable years commencing before Jan. 1, 1966."

U.S. Gypsum—and the bar members to a lesser extent—were particularly concerned about what impact the edict might have on American organizations doing business in Mexico.

Robert M. Gunn, attorney for U.S. Gypsum, told The Plain Dealer about a conversation he had had with Stanley Weiss, who was drafting the regulation for Surrey.

"We felt that a Gypsum mine might properly be cited as an example, in the same way that a Canadian railroad was," Gunn recalled.

He added: "but our main problem was that we wanted to be sure that the same regulation would be made applicable for the years after 1965."

Gunn said to this reporter: "as you have probably gathered, there was a lot of urgency about this regulation and a great desire to get it closed out in January."

"How do you account for that? Do you think it had anything to do with the impending change of administrations, any company, seeking relief under the new regulation would have to show it had done exactly what IOC did—that is, produce a record of consistent filing of consolidated returns?

"Your interpretation of that would be as good as mine. Why don't you check with Weiss? For my part, I was assured the matter would be taken care of later, and I saw no harm in waiting."

Weiss has since left the government. Reached at his law office here, he was asked what the rush was about.

"Well, this issue had been pending a long time, and there were tons of paper on it," Weiss replied. "Cohen and Surrey had already decided it, and they felt it ought to be disposed of before they left."

In spite of the comments by the bar association and U.S. Gypsum counsel, the proposed regulation was adopted without changes. No public hearing was held.

After Cohen and Surrey signed, notice of their action was published in the Federal Register on Jan. 15, 1969—five days before the Johnson administration was replaced by the new Republican team.

More than three months later, there still has been no publication of a proposal to repeat the edict in the current consolidated return regulations.

Treasury officials told The Plain Dealer this would be done. But other work, they said, has priority.

[From the Plain Dealer, Apr. 27, 1969]

EX-TREASURY AIDE TELLS WHY HE OK'D REGULATION

WASHINGTON.—Stanley S. Surrey's first reaction when approached about the regulation that bailed out the Iron Ore Co. of Canada (IOC) was to ask what had become of the regulation.

"This is a proposal," the former assistant secretary of the treasury for tax policy remarked casually, when a newsman showed him a tear sheet from the Federal Register.

Then he added, "Oh, it was finally adopted as a regulation? And without change?"

In this interview in Surrey's office at Harvard Law School, the name of the taxpayer was not mentioned.

While the regulation itself is a public document, the case that gave rise to it, like all individual tax cases, was confidential.

Asked what had prompted the decree, Surrey replied, "There were some cases in the Internal Revenue Service and IRS needed guidance."

"How many cases?"

"There aren't very many that come up under this provision in the nature of things."

As the interview progressed, gradually there came an acknowledgement that the edict was traceable to a single case.

Surrey said, "No, you can't assume that, because a regulation sets broad policy, it always covers a number of cases. But when a case does come up under this section, it's usually important because foreign governments are involved.

"Many regulations do get promulgated because of a particular problem. They don't rise in the abstract. This regulation resulted because a case came up that brought this matter to a focus."

At the same time, Surrey said, there was no way of knowing how many other taxpayers might be affected by the regulation, now or in the future. He added that there were pending cases where this was possible.

The reporter then asked Surrey why the regulation was retroactive, granting relief only for the years prior to 1966, and only to a taxpayer able to met certain requirements.

The former treasury official at first contested this interpretation; he maintained there was no time cut-off. But on examining published material shown him by the interviewer, Surrey appeared startled.

He then conceded that the reporter apparently was correct. He said, however, it had been his intention to have the regulation apply in the future as well as the past.

He asserted he did not know why this had not been accomplished, adding he would check it. Surrey then made it clear that no aide acted in his name.

He said, "I take full responsibility for all regulations I signed, and I reviewed them all."

Surrey telephoned the reporter two days later with an explanation for the lapse. He said one of his former assistants in the Treasury Department had assured him that the regulation would be made effective for 1966 and subsequent years.

"They are preparing a series of technical changes in the current-consolidated-return regulations, and this one will automatically be in that batch," Surrey said. "Mechanically this is the normal way to do it, and I'm satisfied now."

In a later telephone interview, the reporter cited that fact that the file on the proposed regulation contained a comment on the retroactive feature. This had been submitted by the American Bar Association.

Surrey said, "I did not get to see all those protests. My people looked them over and called to my attention those of substantive merit. This one didn't get called to my attention."

In this later exchange, the newsman said he knew the identity of the taxpayer and asked why the new regulation, in the process of being rewritten, had not been loosened so corporations other than IOC could benefit.

Surrey replied it was not good practice to invite trouble," since the government had no way of knowing how many taxpayers would seek relief if the decree were broadened.

He asserted the old regulation had merely been interpreted—not stretched—by the language that was added.

"After the case had been pending for a long time, why was there a rush to decide it just before you left office?" Surrey was asked.

"You clear your desk—that's sensible administration," he replied. "I believed that all problems that have been answered should be finished."

I was under no pressure. He added, "Absolutely not. I never had pressure to decide any case. The Canadian government came to see the secretary, and he told them I was handling it."

The reporter asked, "In view of the differences between you and the Internal Revenue Service, why didn't you just hold off and let a court decide the matter, if that became necessary?"

"That's not what an administrator is supposed to do, in my philosophy," Surrey said. "I was paid to decide cases myself. You can't shrink from that; that's not the way to do business.

"Furthermore, the matter got more of a public airing through publication of the proposal in the Federal Register. It gave all those interested an opportunity to comment. In court, you have to be a party to a case or get special permission to make your views known."

Surrey is 59. A graduate of Columbia Law School, he served with the Treasury Department for 10 years until 1947. He pursued an academic career before returning to the treasury as an appointee of the Kennedy administration.

He enjoys a high standing in professional circles. He had an image here as a tax reformer.

[From the Cleveland (Ohio) Plain Dealer, Apr. 27, 1969]

DID NOT KNOW ALL FACTS, COHEN ASSERTS

WASHINGTON.—Sheldon S. Cohen would not have signed the regulation in the Iron Ore Co. of Canada (IOC) case, had he known the facts as the Plain Dealer found them.

The former commissioner of the Internal Revenue Service (IRS) made this statement at his law office here, in the second of two interviews with a Plain Dealer reporter.

After discussing the edict in general terms at the first session, the newsman on the next occasion said he had learned the regulation was promulgated expressly for IOC.

"Well, I'm not surprised that you did," Cohen said. "It wouldn't have been hard to figure out."

This was a reference to the highly specific language of the decree—"For example, if the laws of Canada permit the ownership or operation of specified property, such as a railroad . . ."

IOC owns the Quebec, North Shore and Labrador Railway Co.

Cohen said he suspected the wording stemmed from sarcasm on the part of some government officials, who were assigned to write the regulation though they disagreed with the procedure being followed.

The order to draft it was issued by Stanley S. Surrey, then assistant secretary of the Treasury for tax policy. Cohen balked at first, but then agreed to sign it with Surrey.

What Cohen did not know, he said, until the reporter showed it to him was that the edict was not effective for tax years after 1965 and that it contained other provisions that further narrowed its applicability.

Cohen said he thought when he signed it that the regulation was up to date. There were no technical or procedural reasons that would have barred simultaneous promulgation of the same edict for later years, he added.

He agreed with the reporter that the new regulation was restrictive in its coverage that changes could have been made to broaden it, increasing the possibility that companies other than IOC would find some benefit in it.

Cohen said he did not give the matter his personal attention because it was Surrey's staff, rather than his own, that initiated the regulation.

He confirmed that at least twice he had refused to use his own powers to issue a commissioner's ruling, which would have had the same effect so far as IOC's individual tax problem was concerned.

"Then why did you sign a regulation?" the reporter asked. "On another occasion recently, some new rules on oil depletion allowances did not go into effect because you declined to sign what Surrey handed you."

"In that case," said Cohen, "I wasn't given an opportunity to review the material, and it was just five days before we were leaving office. The case you're inquiring about was different.

"It was always my view that the job of the IRS commissioner is to determine what the law is, and that the job of the Treasury secretary and his assistant secretary for tax policy is to determine what the law ought to be.

"At IRS, we had consistently taken the attitude that the law dealing with consolidated returns would not allow what Mr. Surrey proposed. For me to have issued a ruling would have been inconsistent.

"However, I always regarded Mr. Surrey as speaking for the secretary. Since the department had decided to set policy in this area, I decided I could go along with that, even though I wouldn't have done it on my own authority.

"I was willing to share the responsibility, but I wasn't going to shoulder it all myself. I really didn't feel that strongly about this case. After all, it did involve a set of facts which honest and competent lawyers could call either way."

Cohen was asked: "As a general rule, do you feel it was proper for taxpayers to go to Mr. Surrey's office, asking that it act as a reviewing court on decisions made by you?"

He replied: "No. The standard rule was that Mr. Surrey should throw them out. This could be very disconcerting to me and my staff. It may have happened a few times but, believe me, it occurred with greater frequency under the Republicans."

The policy of former Treasury Secretary Henry H. Fowler, Cohen said, was that IRS itself should be the administrative court of last resort in disputes with taxpayers.

At the Treasury Department level, he explained, there are officials who deal with Congress and outside pressure groups.

Consequently, he said, there is always a danger that compromises might be forced in individual cases that get caught in the political whirlpool.

Cohen asserted he had been under no pressure from higher authorities to sign the decree.

The former commissioner is 42. He is a lawyer and a certified public accountant. Before he joined IRS, he was associated with the Arnold, Fortas and Porter law firm here.

[From the Plain Dealer, Apr. 27, 1969]

HANNA: "SURE WE WERE RIGHT"

WASHINGTON.—The Hanna Mining Co. was convinced it had a good case against the Internal Revenue Service, and that ultimately it could have won without a new regulation.

So said John R. Greenlee, director of taxes for Hanna.

"We persisted for so long because we felt so clearly and so surely that we were right,"

he said. "We were prepared to go to court if necessary."

Greenlee recalled that he sent a telegram to former Treasury Secretary Henry H. Fowler after IRS turned him down. The response was a telephone call, he said, from Stanley S. Surrey, then Fowler's assistant secretary for tax policy.

"I respected Mr. Surrey as a lawyer, and I knew that if he got into this he would overturn Mr. Cohen (Sheldon S. Cohen, former commissioner of IRS)."

Greenlee asserted: "The thing to keep in mind is that we were contesting a principle. At no time did IRS file a claim against us for any amount of money.

"The principle had to be resolved first, before we could be told whether we owed anything.

"I don't see this regulation as helping only us."

[From the Plain Dealer, Apr. 28, 1969]

SURREY SAW TREND GROWING—EX-TREASURY AIDE HIT TAX BREAKS

(By Sanford Watzman)

WASHINGTON.—"The refuge of the wealthy has been in the brains of their tax lawyers and in the technicalities of the tax law."

Author of that sentence is Stanley S. Surrey, who wrote an essay for the May, 1957, Harvard Law Review entitled: "Congress and the Tax Lobbyist—How Special Tax Provisions Get Enacted."

Surrey's focus then was on Congress. But as the assistant Treasury secretary for tax policy, Surrey exercised quasi-legislative powers himself, as in the Iron Ore Co. of Canada case.

In his 1957 article, Surrey wrote:

"These provisions run counter to our notions of tax fairness. Moreover, the tendency of Congress to act this way seems to be increasing."

He cited the so-called "Louis B. Mayer Amendment," named for the movie mogul.

"It is generally assumed that the amendment at the time covered only two persons, Mayer, retired vice president of Loew's, Inc., and one other executive in the company, and that it saved Mayer about $2 million in taxes."

Surrey continued:

"The question, 'Who speaks for tax equity and tax fairness?'," is answered today largely in terms of only the Treasury Department. If that department fails to respond, then tax fairness has no champion before the Congress.

"The Treasury, representing the executive branch, stands in the open before the Congress virtually alone as the champion of tax fairness. The main reason is obvious.

"When the issue is a special provision for one group as against the taxpaying public as a whole, what pressure group is there to speak for the public?

"Other legislation—labor laws, natural gas prices, farm legislation—brings forth strong and opposing pressure groups. But what pressure group fights against capital-gain treatment for employe stock options? Which group sees itself harmed by a 'Mayer Amendment'?

"In sum, there are no private pressure groups actively defending the integrity of the tax structure . . .

"Perhaps the most significant aspect of the consideration of special tax provisions by the Congress is that it usually takes place without any awareness of these events by the general public.

"Almost entirely, these matters lie outside of the public's gaze, outside of the voter's knowledge. The special provisions which are enacted lie protected in the mysterious complex statutory jargon of the tax law.

"This technical curtain is impenetrable to the newspapers and other information media. The public hears of debate over tax reduction or tax increase and it may learn something about the general rate structure.

"But it seldom learns that the high rates have no applicability to much of the income of certain wealthy groups. Nor does it understand how this special taxpayer or that special group is relieved of a good part of its tax burden.

"All of these matters are largely fought out behind this technical curtain. Hence the congressman favoring these special provisions has for the most part no accounting to make to the voters for his action.

"The task of educating and informing the public is formidable. To begin with, the educators are a very limited group. Most of them are in the executive branch, and hence perhaps the prime responsibility should fall on them. But in recent years that department has shown little disposition to inform the public about tax problems.

"Some of the prospective educators are in the universities. But academic knowledge and learned writing are not the keys to public education of this nature—more writing at the public information level is clearly needed. . .

"It would seem proper for the Congress to require that all retroactive tax proposals limited in application to one person or to a small group be presented as private-relief bills to be considered by the tax committees (of Congress).

"The bills would name the individuals concerned and specify the amounts involved.

"Nor is there any reason why the 'Louis B. Mayer Amendment' should not have been handled as a 'Bill for the relief of Louis B. Mayer' and the amount of the relief stated in a precise dollar figure. . .

"It is only later that the extent of the tax generosity inherent in (special) provisions is comprehended.

"But by then they are in the law, the problem of the group benefited is one of defense rather than attack, and the strategic advantages are all with that group."

[From the Plain Dealer, Apr. 28, 1969]

FOWLER SAYS HE GAVE "PROXY" IN IOC CASE

WASHINGTON.—Former Treasury Secretary Henry H. Fowler says the Iron Ore Co. of Canada tax case was decided at a level beneath him, even though an appeal was taken to him.

"I never at any time acted to overrule the commissioner (of the Internal Revenue Service)," Fowler asserted when reached at his law office in New York. "It was my invariable rule never to sit as a one-man court of appeals in individual tax cases."

Sheldon S. Cohen, then commissioner of the IRS, had ruled against the company. The action shifted later to the office of Stanley S. Surrey, who was assistant Treasury secretary for tax policy.

Acknowledging that he had heard from company representatives and also from the Canadian government, Fowler said he responded by referring the taxpayer to Surrey.

"He had my complete proxy to deal with the matter," Fowler said. "I did not intercede and I made no attempt to influence the outcome."

"What was your general policy on whether Mr. Surrey should sit as a court of appeals?" Fowler was asked.

He replied: "On any matter involving tax policy, you would have to look to Mr. Surrey for an answer. You'd have to ask him how he handled his relationship with the IRS."

Fowler added that, in the event of a disagreement between Surrey and Cohen, he would expect the two to try to resolve it themselves. He reiterated that Surrey had his "proxy."

Asked whether he was satisfied with the decision in the Iron Ore case, Fowler said:

"I didn't examine into it at all, to be satisfied or dissatisfied. I left it completely to Mr. Surrey, in whom I reposed the greatest trust."

[From the Cleveland (Ohio) Plain Dealer, Apr. 28, 1969]

HANNA RANKS CANADIAN FIRM AS GREATEST SINGLE INVESTMENT

WASHINGTON.—The Hanna Mining Co. ranks the Iron Co. of Canada (IOC) as "our most important single investment."

"We are in a better financial position than ever before," the Cleveland industrial giant said in its 1968 annual report to stockholders.

"The $10 million increase in net sales and operating revenues is due to the additional tonnage purchased from IOC.

"We resell this tonnage to steel companies in the United States and Europe and receive our profit in the form of dividends from IOC.

"The dividends received by Hanna Mining from IOC in 1968 increased to $8,420,000, as compared to $7,207,000 in 1967."

IOC was organized in 1949 as a Delaware corporation, with Hanna's George M. Humphrey, later secretary of the Treasury, since retired, as the prime mover.

Hanna is the largest single shareholder in IOC. Besides owning 26.85% of the stock, it also has a substantial interest in two other companies that hold chunks of IOC. These corporations are identified below with an asterisk.

Although IOC has a stable of owners, Hanna alone acts as its manager. The owners are:

[In percent]

Hanna Mining Co	26.85
Bethlehem Steel Corp	17.94
National Steel Corp.*	16.83
Hollinger Mines Ltd	11.64
Republic Steel Corp	5.61
Armco Steel Corp	5.61
Youngstown Sheet & Tube Co	5.61
Labrador Mining & Exploration Co., Ltd.*	5.42
Pittsburgh-Wheeling Steel Co	4.49
Total	100.00

With Minnesota ore reserves declining, IOC in the 1950s ventured into the Canadian wilderness and found rich deposits of iron. The other companies were invited to participate because they could furnish capital and assure a quick market.

"The financial position of IOC is strong," the annual report says. "Despite the two expansion programs, it has made important reductions in its long-term debt, from $145 million to $52 million.

"At the end of the year, the Hanna portion of IOC's net worth was $47 million."

[From the Plain Dealer, Apr. 28, 1969]

CANADA CONCERNED WITH IOC

WASHINGTON.—The Canadian government was "quite concerned" about the tax problems of the Iron Ore Co. of Canada (IOC), according to Stanley S. Surrey, formerly assistant secretary of the Treasury for tax policy.

Sheldon S. Cohen, past commissioner of the Internal Revenue Service (IRS), also related to The Plain Dealer that there were some letters from Canadian officials and that Canada "argued about fairness."

A spokesman for the Canadian embassy here pointed out that IOC was a taxpayer in his country and therefore was entitled to whatever services Canada could properly provide.

"At the instance of IOC, we furnished the U.S. government with a certification of facts relating to Canadian law, as they pertained to this case," the spokesman said.

He added, "We did nothing more than that. We would do the same for any company in a comparable situation. This is a normal practice."

He added that any public release of communications in the case would have to be made by the U.S. government, since it was the addressee.

[From the Cleveland (Ohio) Plain Dealer, Apr. 28, 1969]

HANNA'S CHIEF DENIES TAX FIGHT WITH IRS

W. A. Marting, president of Hanna Mining Co., issued this statement in response to articles on tax regulations as they concerned the Iron Ore Co. of Canada (IOC), published yesterday:

This is a clear case of careless reporting and irresponsible journalism. It looks as if The Plain Dealer has been led astray by an informant in the Internal Revenue Service leaking false and misleading information.

Your reporter drew conclusions that have no foundation in fact and your headline writer was even more careless.

In the first place, the article states, "In its fight with the Internal Revenue Service, Hanna lost every round." Completely untrue. There never was any fight and there were no rounds to be either lost or won.

The article quotes a Hanna spokesman as saying "the Treasury Department action had saved IOC $10 million." Completely untrue. He never said that. In fact, he said the opposite. He made it clear to your reporter from the beginning that IOC never owed any money and that the IRS never claimed it did.

If a man agrees after seven years that you never owed him anything in the first place, he hasn't "saved" you any money.

Another example of the carelessness is calling IOC a Hanna subsidiary. Nothing could be further from the truth. Hanna has a minority interest in IOC, the majority of its stock being held by American steel companies and Canadian mining interests. Of its 16 board members, only two are connected with Hanna.

The facts of the situation are simple:

IOC never owed any tax to the United States. All of its tax people, including independent counsel, advised that there was absolutely no tax liability whatsoever.

During the Democratic regime following the Eisenhower administration, this case moved from the Cleveland IRS office to Washington. We are convinced that the purpose of this was to see if there were any possible way to tax IOC on these transactions. For seven years tax and legal experts in the IRS tried to develop some theory under which IOC could be taxed.

IOC objected to the long delay. Time after time IOC said, "Either assert a tax liability or clear us."

Obviously, if the IRS had asserted a tax, the case could have been taken to court and won.

After all of these deliberations, they finally had to admit there was no way to tax IOC and the case was closed in the final days of the Johnson administration.

[From the Plain Dealer, Apr. 29, 1969]

LAWYERS WORK ON CURTAIN THAT SCREENS TAX DECISIONS

(By Sanford Watzman)

WASHINGTON.—The "technical curtain" that obscures many big tax decisions sometimes baffles even the experts.

Government lawyers trained to write technical rules and corporate lawyers paid to interpret them spend a great deal of time speculating about why a rule was written, thereby hoping to learn more about it.

One such case involves a set of regulations published last July 3 in the Federal Register, spread across four pages and taking up 12 columns of type.

The rules tell affiliated companies how to account for earnings and profits exchanged within the group. They sanction intercorporate payments compensating one company for the "use" of its tax loss by an other.

But some insiders theorize the real purpose of the regulations—or at least an impelling ancillary purpose—was to bail out certain companies from problems they were having with other units of government.

Fanning the gossip is the fact that the regulations apparently will not substantially increase or decrease the amount of taxes the government collects. Yet the Treasury Department spent three years working on them.

They were approved by Stanley S. Surrey, former assistant secretary of the Treasury for tax policy, and Sheldon S. Cohen, commissioner of the Internal Revenue Service (IRS) in the Johnson administration.

Commenting last April on a draft of the regulations, an anonymous member of the American Bar Association's section of taxation protested that they were "impossibly complex," so much so that there was no way to anticipate the possible effects.

"The problems in determining earnings and profits are difficult enough," he objected, "without adding complications which probably have relatively narrow application and probably little impact on the federal revenue."

The comment was filed with IRS.

The same theme figured in a sharp argument some months ago between Surrey and Cohen, part of which took place in the presence of their subordinates. As the exchange grew more heated, everyone else was ordered to leave the room—and then it resumed.

Cohen confirmed the incident when this reporter questioned him about it. Surrey said he did not recall it specifically, but he did not deny it.

Cohen told Surrey he was not going to sign the regulations because they did not have sufficient tax significance. Surrey replied he had already "committed" himself to issue the rules. Cohen retorted the commitment, then, was Surrey's, not his.

But in the end, Cohen did sign. He told this reporter: "I guess that's one that I caved in on."

Sen. Everett M. Dirksen, R-Ill., was interested in getting the regulations adopted, the Plain Dealer learned. In 1965 the GOP leader was defeated in an attempt to obtain legislation similar in many respects to the later regulations.

News reports at the time linked Dirksen with some gas pipeline companies who reasoned that, if certain bookkeeping methods were blessed by IRS, then a case for higher rates could be made before the Federal Power Commission.

But so far as utility rates today are concerned, a recent Supreme Court decision involving the United Gas Pipeline Co. appears to have wiped out any benefits the utilities might have received from the regulations, one source pointed out.

In addition to Dirksen, representatives of the Mobil Oil Corp. pushed hard for adoption of the rules. The Mobil people tried to get Cohen to issue a commissioners' ruling that would permit them to do what the regulations later allowed.

When Cohen balked, they took their case to Surrey. Instead of a ruling, they got the regulations.

One report was Mobil wanted the rules so it could squeeze out from under an antitrust decree that had been handed down by a federal court in 1941, in a lawsuit involving a predecessor of Mobil and many other corporations.

This decree imposed limits on dividends that could be exchanged among members of an affiliated group of companies. The prohibition could be undermined, one source suggested to The Plain Dealer, if a trading of funds could be labeled a payment for the "use" of a tax loss, rather than a dividend.

George F. James, senior vice president of Mobile, acknowledged in a telephone interview that his company worked hard to ge the regulations promulgated. He added tha other corporations were similarly active.

But he denied the rules could help his com pany in antitrust litigation.

James said: "We simply had to have i made clear, for our own internal purposes what was the correct method of allocating on our books, the charges among companie in our consolidated group.

"This doesn't save us any tax money at all The only tax advantage it would have for u would come, possibly, if we deconsolidated th corporate group or if we sold off one of th companies. However, we have no plans to d this."

When the rules were first proposed, IRS an nounced it was not that agency's intention t try via the regulations to influence the pol icies or requirements of other governmen agencies dealing with corporations.

However, everyone concedes that what IR intends is one thing but how lawyers migh choose to stretch it or take advantage of it, i they can, is quite another.

Writing in the Journal of Taxation in July 1968, one authority, Arnold Jay Cohen, ob served:

"The implications of these rules may go fa beyond their tax aspects. It may well be tha . . . their main impact will not be in the ta area, but rather in the corporate or regulator area."

Surrey was asked about this by The Plain Dealer. He replied:

"The purpose of these regulations was t accept methods of accounting that account ants say are proper. So long as the metho is right and IRS is protected, the Treasur ought to recognize it.

"No, it wouldn't concern me if someon says that the regulations might have mean ing in antitrust or rate-making cases. Wha we do often spreads to other areas. Tha isn't relevant so long as we are right an IRS isn't hurt by it."

Asked about the "commitment" he ha cited to Cohen, Surrey said: "At variou times bills were introduced in Congress deal ing with the area of these regulations. I my judgment, those bills were too generous

"I told the Senate Finance Committee w would study the matter and try to wor something out administratively. I don't thin it's a good idea to clutter up the legislativ books and to have people running to Con gress if it's something we can handle here.

"If I used the word 'commitment,' it wa in that sense. I wasn't under any pressur from Sen. Dirksen or anyone else. I don' work that way."

"Some of the news stories in 1965 reporte that you were backing Sen. Dirksen's legisla tion," the interviewer said.

"Well, some of those stories were correc and some were not, because there were a lo of versions of the legislation," Surrey replied

---

RADIO STATEMENT BY SENATOR BYRD OF WEST VIRGINIA ON ANTIOBSCENITY BILLS

Mr. BYRD of West Virginia. Mr. Pres ident, on May 21, 1969, I made a state ment for radio regarding antiobscenit legislation.

I ask unanimous consent that th transcript of that statement be printe in the RECORD.

There being no objection, the tran script was ordered to be printed in th RECORD, as follows:

ANTIOBSCENITY BILLS

Smut, obscenity, offensive sex-oriente material and pornographic literature hav been with us for a long time. Only recentl however, has this filth swelled to such pro portions that no family can be certain will escape the stench. Until a couple

years ago, it was thought that the censorship laws of most states were the appropriate means to protect the general public against this type of exploitation.

The United States Supreme Court has since declared that censorship in most of its forms violates the freedom of speech or press guaranteed in the United States Constitution. Since the right of our citizens to speak out freely distinguishes our Republic more than anything else perhaps from totalitarian forms of government, we have guarded this right jealously.

But in the process of striking down censorship, the courts have left the public unprotected against a flood of unwanted pornographic filth in the form of sex-oriented materials now gluting the mails and invading the privacy of American homes. While we have succeeded in guarding the right of free speech and free press, we now face the problem of finding a new means to protect the sanctity of the home, and the health of our children against this bombardment of smut that increasingly invades our society. And certainly there is no reason why citizens should be forced to accept such mail which is insulting to adults and harmful to children.

And I believe a means has been found that could go a long way toward providing this protection. That is why I am co-sponsoring in the United States Senate two bills requested by the President.

The first bill would prohibit outright the sending of offensive sex-oriented material to any child under 18 years old. The bill is based on the New York law that has been upheld by the U.S. Supreme Court, and recognizes the special status of young people and the special need to protect them against material that could be damaging to healthy growth and development. Any smut dealer violating the federal statute would be punished with up to five years in jail and a $50,000 fine for the first offense. Further violations carry stiffer penalties.

The second bill would protect American homes against invasion of privacy and prurient advertising. The Post Office Department reports that during the last nine months 140,000 letters of protest about unsolicited salacious mail have been received. Since 1964, the number of such complaints has almost doubled. Americans resent intrusions into their homes by erotic advertisements through the mail. These ads are expressly directed at lustful interests, and, as President Nixon has said, are clearly a form of pandering. And I agree with this. Certainly our homes should be inviolate and free from such intrusions.

In 1967 Congress passed a law to help deal with these unwanted intrusions. The law permits a person receiving mail which he finds "erotically arousing and sexually provocative" to obtain from the Postmaster General a judicially-enforceable order prohibiting the sender from making any further mailings to him or his children and requires the sender to remove that person's name from his mailing list. This is a good beginning, and more than 170,000 persons have requested such orders.

The new legislation which I am co-sponsoring, however, would broaden the existing law by permitting citizens to file in advance their objection to sex-oriented advertising and to require mailers and potential mailers to respect these wishes under penalty of civil and criminal prosecution.

The bill would also prohibit the transportation in interstate commerce or through the mails of pornographic literature intended to appeal to a prurient interest in sex.

I am co-sponsoring this legislation in response to the thousands of parents who ask that something be done about the flood of pornographic mail reaching their children and who are turning to the government for help. We can act to protect the public against this unwarranted intrusion of private lives. The laws already in force have proven inadequate to the task; it is time to take steps to enact legislation that will do the job.

I am not so optimistic to believe that it will put the sex merchants completely out of business, but at least it will go a long way toward keeping this filth out of decent American homes and out of the sight of decent young American people.

REVITALIZING RURAL AMERICA

Mr. PEARSON. Mr. President, the need to create new jobs in our rural areas is one of the most pressing challenges facing America today. We simply must find ways to make our small towns and farm communities more attractive to industry if we are to halt the migration to the cities that is stripping the countryside of its best talent and flooding our urban areas with a mass of humanity that only compounds their already grave problems.

I recently enjoyed the privilege and pleasure of speaking before the Smokey Hill Electric Cooperative on this very vital subject. Knowing of the great interest of Senators in the Rural Job Development Act and the ways in which it might help to stimulate new rural career opportunities, I ask unanimous consent that the speech before the Smokey Hill Cooperative be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REVITALIZING RURAL AMERICA

(By Senator JAMES B. PEARSON)

When the people of Kansas several years ago gave me the opportunity to serve in the United States Senate, there was the necessity to think of Kansas as a whole and of the nation as a whole. And one problem became clear, pressing and essential. That problem was the necessity to develop, redevelop and revitalize rural America and rural Kansas.

And so several of us in the Senate conferred—Democrats and Republicans alike—counseled with farm organizations and rural experts and introduced the Rural Job Development Act. I would like to review the purposes of that measure this evening.

And in doing so, I realize I have made a lot of speeches in the countryside, in the cities, universities and indeed it was my great pleasure to address your national convention in Dallas two years ago. But in spite of these many engagements it seems to me that at a gathering such as this—an annual meeting of REA Electric Co-ops—is the most appropriate forum. For in modern times no other organization has made such a positive contribution to rural development as the REA's.

America in the last third of the 20th century is indeed a paradox, a strange mixture of success and failure. We are the strongest military nation on the globe, yet we seem unable to determine our own destiny in Vietnam. We are a leader of the world, yet few follow. To influence and win friends we have poured forth $122 billion from our Treasury yet our influence diminishes in the world and at times we seem friendless. This nation, rich beyond the wildest dreams of many people, is scarred by ugly pockets of poverty. We have made the greatest advances in equality and civil rights in the last decade within our history yet our races seem farther apart. We have spent more money on education and provided greater learning facilities than ever before known to the American people, yet there is student unrest and violence and lawlessness on the campus.

And there is a paradox in rural America also. Almost every economic indicator indicated that rural America is "better off" today. We might compare rural America today and in 1935 when the REA was first established. In 1935 only 10 percent of the farms in this country were electrified. Today 95 percent are served by electricity. In 1939 the average income of the farmer was only 40 percent of the non-farmer. In 1969 the average income of the farmer is 72 percent of the income of the non-farmer.

But statistics can be tricky. Is farm income really up? It seems to me that the real and meaningful fact is that in 1935 there were 32 million farm population while in 1969 only 11 million lived on the farm. And so farm income really isn't up. What the statistics actually show is there is simply fewer to divide up the economic pie. And the total income from agricultural endeavors is less than during the 1940's or the 1950's period.

But I do not intend to make a "farm speech." What I would like to do is discuss the problems of the total rural community, the farms, rural towns, and rural cities of a population of 30 and 40 thousand.

To cite another paradox, America's communities are dying at the two extremes of community life. On the one hand we find a deterioration in the core of the great cities, on the other hand the dying of the small rural communities. This rural community deterioration can be traced to the great rural to urban migration. And one is compelled to understand that when some of our small rural communities cease to grow and literally die that this is not acceptable nor necessary nor best for America.

These conditions and problems of rural America are not new—they are several decades old. REA provided the answer to one problem. But it has only been within the last few years that we have moved from talk to action. Your national association has been most helpful in its advertising campaign. Big city newspapers through their editorials have recognized the problem and we have begun to understand that good thoughts are nothing more than good dreams until we act.

Let me mention another paradox. It was the great trouble in the cities which finally caused us to see more clearly the difficulties of the small towns and the countryside. It was the turmoil in the hard core of the great metropolitan areas that gave us some understanding of the relationship between rural and urban life.

The headlines of the past few years have made all of us painfully aware of the problems which are incorporated in the phrase "crisis of the cities." It is a phrase of common usage but if one is to describe it in a meaningful way it must be described in terms of festering slums, rising crime rates, disintegrating families, chronic unemployment, racial tensions, congested streets, polluted air and contaminated water. And these conditions really can be traced to the overcrowding of people and the concentration of industry in the great cities. We are now beginning to realize that the problem is not just to make the cities more efficient and more livable for more and more people but how we can halt or retard the great migration from rural to urban commuities.

This tide of migration really is formed in two parts. First there is the rural poor and untrained who move to the cities and who believes he has taken the first step up the ladder of economic success. However, instead of economic success and salvation, because of lack of training or skill, he finds tenements and unemployment and the welfare roles. He all too soon falls into the slum environment and the depersonalized forces which dull responsibility.

And second it catches up in its movement the talented young, highly educated, bright and ambitious people who move to the cities for economic and social opportunities. Thus the rural community is bled of its leadership

and human talent and its most productive resources. Ironically in this way the rural areas are subsidizing the cities.

When a rural community is in trouble, when it does, an irreplaceable and valuable part of this nation dies.

I have not meant to say that all migration is bad. In a recent discussion with the Secretary of Agriculture concerning this problem, Secretary Hardin emphasized the point that getting the right people at the right place rather than an absolute halt of migration should be our purpose. Indeed we cannot hold back the forces of urbanization. We are a nation now of 200 million people. At the turn of this century we will have a population of 300 million; moreover 75 percent of all these people will be living in three great metropolitan areas: From Boston to Richmond; from Milwaukee to Cleveland; and from San Francisco to San Diego. Urbanization will continue. But when we find slums in the big cities on the one hand and rural ghost towns on the other it is damning testimony that we fail to meet one of the great problems of our generation.

What we need is a rural-urban balance. And I believe we can achieve that balance by taking the following steps.

1. Shore up farm prices. Rewrite present farm programs to the end that we will be able to preserve the family farm system.

2. Improve rural education, housing, public services and facilities so that it can support industrial development and offer opportunities which will permit those who choose to stay in our small towns to do so.

3. Provide for a commission on balanced economic development so that grants and contracts may be equitably distributed.

4. Quick passage of the Rural Job Development Act wherein tax incentives by means of depreciation, deductions and credit can create a climate which will permit local authorities and private industry to make their own decisions about industrial development in the rural areas.

This is not a poverty measure. It is a redevelopment measure for all rural areas of the country. For unless we provide for 500 thousand new jobs every year nothing else will have any lasting effect. It is not a cure-all but I am persuaded that it is a step in the right direction.

In conclusion, let me emphasize once again my own conviction that it is the REA organization who can take the giant steps, play the significant role, and offer the bright leadership for the revitalization of rural America.

I offer you my help—I ask for yours.

APOLLO 10 MISSION

Mr. HARRIS. Mr. President, the United States has just reached another milestone in the exploration of space with the successful completion of the mission of Apollo 10.

My State of Oklahoma played a significant role in the Apollo 10 mission, because one of our native sons, Col. Tom Stafford, served as the command pilot, and along with Commander Cernan traveled closer than any other man in history to the moon's surface, making possible the lunar landing in July.

The Nation is proud of the outstanding job done by John Young, Gene Cernan, and Tom Stafford, and Oklahomans are especially proud that Stafford, a native of our State, played such an important role in this mission carrying out his duties without flaw.

I was fortunate enough to have seen the blastoff of the Apollo spacecraft, and I commend all those connected with the mission from beginning to end for their outstanding accomplishment, and to Tom Stafford I would say: Your fellow Oklahomans are proud of you for a job well done.

FREDERICK DOUGLASS, A FREE BLACK

Mr. HART. Mr. President, Cedar Hill, the home of Frederick Douglass from 1877 until his death there in 1895, stands in a deteriorated condition in the Anacostia section of our Nation's Capital—barred to public visitors since 1962.

The Christian Science Monitor recently published a series of articles on "Blacks in America: Then and Now." In his article entitled "North of Slavery and Black Abolitionists—1800–60," Prof. Edgar A. Toppin has eloquently placed the extraordinary accomplishments of Frederick Douglass within the framework of the further obstacles to freedom—encountered and overcome—by a black man who has already fought for and won his right to that freedom.

Mr. President, I ask unanimous consent that the article be printed in the RECORD. I express the hope that this empty house may once again become a living home and fitting memorial to this great American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BLACK FOE OF RACISM: NO JIM CROW CAR FOR HIM

(By Edgar A. Toppin, professor of history, Virginia State College)

(NOTE.—For free blacks like Frederick Douglass, life was a constant struggle for racial equality. The battle was slow and often overshadowed by the slavery issue. This article, "North of Slavery and Black Abolitionist (1800–1860)" describes life in the North.)

Frederick Douglass strode down the platform at Lynn, Massachusetts, boarded the train to Newburyport, and took a seat in a luxurious car for the 25-mile trip. "As usual, I had purchased a first-class ticket," he narrated in his autobiography, but "I was soon waited upon by the conductor and ordered out."

When Douglass refused to leave, the conductor recruited half a dozen men to throw him out. "They attempted to obey with an air which plainly told me they relished the job," Douglass continued, and "clutched me, head, neck, and shoulders."

Anticipating their move, Douglass held on with all his might so that "in removing me I tore away two or three of the surrounding" seats, which "must have cost the company $25 or $30. . . ." This was possible because "I was strong and muscular and the seats were not then so firmly attached or of as solid make as now."

What could prompt such an assault in the early 1840's on a dignified gentleman like Douglass? He explained that "on that road," identified by him as the Eastern Railroad from Boston to Portland, "as on many others, there was a mean, dirty, and uncomfortable car set apart for colored travelers called the Jim Crow car." Since he had escaped from slavery and was "determined to fight the spirit of slavery wherever I might find it," Douglass decided against riding in the Jim Crow car.

Though sometimes beaten for his efforts, his persistence embarrassed the railroad to the point that the superintendent "ordered all passenger trains to pass through Lynn, where I then lived, without stopping."

RAILROAD DENOUNCED

The entire city was inconvenienced, and many people denounced the railroad. The superintendent responded that white passengers preferred segregation and that the railroad was not a reforming institution. The railroad argued, Douglass reported, "that until the churches abolished the Negro pew we ought not to expect the railroad company to abolish the Negro car."

Douglass' friends retorted that slaves accompanying slaveowners could ride first class but not a dignified free black. Gradually, during the 1840's, the railroads abandoned segregation in New England, bowing to resistance by blacks, abolitionist pressures, aroused public opinion, and threats of enactment of antidiscrimination statutes.

The struggle against railroad segregation in New England serves as a reminder of the presence, problems, and perseverance of free blacks in the first half of the nineteenth century. Slavery so dominates the antebellum period that there is a tendency to neglect the growing free black population. At the first census in 1790, only 8 percent (59,000) of the nation's 757,000 blacks were free.

At the last slave era census, in 1860, 11 percent (488,000) of the nation's 4,441,000 blacks were free. Since blacks were found mostly in the South, there were more free blacks there than in the North; in 1790, 32,000 in the South to 27,000 in the North and in 1860 250,000 in the South to 238,000 in the North. Both in the North and South free blacks faced many barriers, but some overcame, achieved distinction, and strove to set their brothers free.

SUPPRESSION EXPLAINED

Although the North began abandoning slavery in the revolutionary atmosphere of the 1780's, it did not abandon long-standing prejudice. Alexis de Tocqueville of France, on visiting America in 1831, found racial prejudice "stronger in the states that have abolished slavery than in those where it still exists. . . ." He found blacks free, but able to "share neither the rights, nor the pleasures, nor the labor" of whites.

In his Pulitzer-prize history of early American racial attitudes, Winthrop Jordan explains that white Americans, North and South—fearing loss of identity, lack of self-control, and sexual license—achieved peace of mind (a sense of protecting identity and purity) by cruelly suppressing and setting apart blacks, denigrating them as inferior. Thus, Jordan noted: "In fearfully hoping to escape the animal within himself the white man debased the Negro, surely, but at the same time he debased himself."

To suppress the black man, whites had to make him the great expection to their religious-political ideology of brotherhood and equality. Federal laws set the tone, barring nonwhite aliens from becoming naturalized citizens (1790), excluding blacks from the militia (1792), and barring blacks from employment as postmen (mail carriers), in 1810.

VOTING RIGHTS LOST

By 1840, New Jersey, Pennsylvania, and Connecticut stripped blacks of voting rights previously held. By 1860, only the five states of Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont granted equal voting rights.

The other 13 Northern states, where 94 percent of the Northern blacks lived, did not let blacks vote, except for New York, which let them vote if they met a special property qualification (propertyless whites could vote) that many low-paid blacks could not meet.

Northern blacks encountered job discrimination. As a slave in his native state of Maryland, Frederick Douglass (1817–1895) had learned a skilled trade, working as a caulker on ships in Baltimore. After escaping in 1838, he settled in New Bedford, Massa-

chusetts, where he sought work in caulking and coppering a vessel being outfitted for a whaling voyage.

"I was told that every white man would leave the ship in her unfinished condition if I struck a blow at my trade upon her." Working at his skill he "could have earned two dollars a day, but as a common laborer I received but one dollar."

His experience was typical. Southern white craftsmen objected to the competition of skilled slaves. But the slaveowners having a vested interest, saw to it that slave craftsmen were employed. Hence, blacks worked at many skilled tasks in the South, more so than whites. In the North, however, white workers and their unions generally restricted blacks to menial tasks.

Even a prominent abolitionist like Arthur Tappan did not hire blacks as clerks in his department store in New York City, apparently fearing the reaction of his white clerks and customers.

Some black men, unable to secure work, had to depend on the earnings of their wives as maids, cooks, and laundresses. There was a deleterious impact on family life as men unable to fulfill their roles as breadwinners sometimes deserted their families.

JOB LOSS LAMENTED

As the century progressed, the job plight of black workers worsened because of competition from newcomers, especially the Irish. In 1790, blacks were 19.3 percent of the total population, but in 1860 they were only 14.1 percent of the total population of 31,443,000 because of the great waves of immigration from Ireland and Germany in the 1840's and 1850's.

In an editorial in his newspaper in 1853, Frederick Douglass lamented that "every hour sees the black man elbowed out of employment by some newly arrived emigrant, who hunger and whole color are thought to give him a better title to the place." He listed various jobs once left to blacks that the newcomers were seizing, including porters, cooks, stewards, hodcarriers, stevedores. woodsawyers, barbers and coachmen.

Douglass therefore urged blacks to get educated for better positions, such as crafts, mechanical skills and professions. But education was not easily obtained. Blacks were taxed everywhere in the North but public schools were not always open to them on an equal basis. In some places no schools were provided, in others, only segregated schools in dilapidated buildings with lower-paid teachers.

Blacks brought suits, Douglass winning a case for his children in Rochester, New York, where he moved in 1847 to publish his newspaper, The North Star. In the Roberts case, brought in 1849 to desegregate schools in Boston (schools were already integrated in other cities in Massachusetts), Charles Sumner was the lawyer for the plaintiffs. Massachusetts Chief Justice Lemuel Shaw originated the "separate but equal" doctrine in his ruling to uphold Boston's segregated system, but the Legislature, prodded by black and white abolitionists, passed a law that desegregated Boston's schools in 1855; despite dire forebodings, integration took place peacefully.

Private schools suffered harassment. In Canterbury, Connecticut, whites threw manure in the well and storekeepers refused to sell provisions, forcing Prudence Crandall in 1834 to close her school for black girls. In Canaan, New Hampshire, in 1835, whites yanked from its foundation the Noyes Academy, that had recently opened with 28 white and 14 black youths enrolled.

Fearing that Southerners would emancipate worn-out slaves and send them North to become public wards, many states passed statutes (such as Ohio's black laws) to discourage blacks from settling. Most hotels, theaters, restaurants, and other public accommodations barred blacks. Mobs often attacked them, as in Cincinnati in 1829, New York in 1834, and Philadelphia in 1842.

In defense of slavery, Southerners cited such Northern oppression, but ignored the fact that Northern blacks were free to speak out, organize, and fight back, and also that many white allies aided them in their quest for equality.

Southern free blacks, by contrast, were treated as outcasts and increasingly restricted, for fear that their presence would make slaves discontented or that they might aid slave insurrections.

To their credit many Northern and Southern blacks did well in the face of all adversity. Some succeeded in business, including: Thomy Lafon (1810–1893) of New Orleans who left to charities, irrespective of race, a fortune of half a million dollars he had amassed in real estate, merchandising, and money lending; James Forten (1766–1842) of Philadelphia who rose from foreman to owner of a sailmaking business employing 40 blacks and whites and accumulated a fortune of $100,000 but found time to be an active abolitionist; and Paul Cuffe (1759–1817) of Westport, Mass., ship captain and owner of a fleet of ocean-going vessels who financed and carried in 1816 the first load of U.S. blacks (38 of them) returned to Africa.

MANY OVERCAME OBSTACLES

Among inventors there was Norbert Rillieux (1806–1894) of New Orleans who revolutionized sugar refining by inventing a multiple-effect vacuum evaporator that he installed on many antebellum plantations; his process is used in manufacturing sugar, soap, gelatin, condensed milk and other products.

In every field there were blacks who overcame obstacles, such as Shakespearean actor Ira Aldridge, physician-scientist James McCune Smith, painter Robert Duncanson, poet George Moses Horton, educator John Chavis, Western pioneer James Beckwourth, and heavyweight boxing champion Tom Molineaux. Encountering white hostility and prejudice, blacks developed separate institutions, including: the African Methodist, Episcopal Zion (AMEZ) denomination in 1821; the first black newspaper, Freedom's Journal in 1827; and Lincoln University in Pennsylvania in 1854.

Blacks were active in the antislavery movement. In a mass meeting in Bethel AME church in Philadelphia in 1817, blacks, led by James Horton, rejected colonization plans to ship freedmen to Africa, resolving that "whereas our ancestors" successfully cultivated America we "feel ourselves entitled to participate in the blessings of her luxuriant soil. . . ."

Bishop Richard Allen insisted that "this land . . . is now our mother country, and we are well satisfied to stay. . . ." In their opening editorial on March 16, 1827, the editors of Freedom's Journal, Samuel Cornish and John Russwurm, explained: "We wish to plead our own cause. Too long have others spoken for us."

Historians generally date militant abolitionism as beginning with the first issue on Jan. 31, 1831 of The Liberator, the newspaper published in Boston by the white abolitionist William Lloyd Garrison. It is not generally known that his largest support came from blacks, who composed three-fourths of his subscribers by 1834.

GARRISON MILITANCE FORESHADOWED

Moreover, two years before Garrison's newspaper began, David Walker (1785–1830) issued the militant and widely circulated "Appeal" (1829), published in three editions before his death. Born a free man in Wilmington, North Carolina, Walker had settled in Boston, where he established a clothing business on Brattle Street in 1827. In his "Appeal" Walker asked his fellow blacks "Are we men!! . . . Did our Creator make us to be slaves to dust and ashes like ourselves?"

He warned white Americans "that we must and shall be free. . . . And wo, wo, will be to you if we have to attain our freedom by fighting. . . . Treat us like men . . . we will all live in peace and happiness together. . . . And we will be your friends."

Walker exhorted slaves to throw off their chains, saying: "Twelve black men . . . well armed . . . will kill and put to flight fifty whites. . . . If you commence . . . do not trifle . . . kill or be killed. . . . Have you not rather be killed than be a slave to a tirant. . . ."

Inspired by such sentiments, blacks were active as abolitionist lecturers, none more effectively than such former slaves as Frederick Douglass and Sojourner Truth. They played a major role in the Undeground Railroad: William Still of Philadelphia was an important organizer; and Harriet Tubman, after escaping from slavery in Maryland risked her life by returning 19 times to lead some 300 slaves to freedom, never losing a passenger and never letting any turn back.

Thus blacks were ready when the Civil War came to fight for freedom, as will be seen in the next article.

THE RIPON SOCIETY STATEMENT

Mr. COOK. Mr. President, some Senators may not be aware of the fine work many of the younger members of the Republican Party have been doing in the area of research and comment on the great issues confronting our country. The Ripon Society epitomizes this thoughtful and intelligent group of predominantly younger Republicans who are making a dedicated effort to constructively criticize the past directions of our Government. As this society has criticized, it has also brought forward highly innovative recommendations for the improvement of our party and the Nation.

The Ripon Society recently issued a statement on the 100th day of the Nixon administration entitled "The Lessons of Victory." While I do not agree with every conclusion reached, the statement does represent a responsible Republican document which I feel should be recommended reading for all Senators. This society is an integral and important component of our Republican Party, and I commend it for its efforts. I ask unanimous consent that the article entitled "Beyond the First 100 Days: A Ripon Society Statement," be printed in the RECORD:

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

BEYOND THE FIRST 100 DAYS: A RIPON SOCIETY STATEMENT

We are pleased this morning on the 100th day of the Nixon Administration to release *The Lessons of Victory*, the Ripon Society's analysis of the Republican campaign of 1968. The study's generally critical assessment concludes with a call for new departures for the Republican Party and the country. From the evidence that is in, it appears that efforts to make these departures are developing in the early months of the Administration.

We in the Ripon Society have been concerned over the past six years with introducing a number of progressive programs into the mainstream of Republican debate, applying our most intense efforts in those areas in which we feel that American society has gone out of kilter under two Democratic presidents. It is in these areas that we would like to read the tea leaves on Mr. Nixon's first hundred days.

First, there is military and war spending, which has gone without critical scrutiny since President Eisenhower warned of the dangers of the military-industrial complex. The pruning of the defense budget and the reallocation of priorities to domestic programs is a fundamental issue for American politics, and it is now symbolized in two ways, the war in Vietnam and the debate over an anti-ballistic missile system.

In both these areas, the President has made significant technical departures from the confused programs of the Johnson Administration. On Vietnam he has moved to two-track negotiations, a decided improvement. On the ABM he has revised his predecessor's misconceived program. But we cannot yet be optimistic about the general tone of the Administration in the defense area. When all is said and done, Mr. Nixon has not made a case to justify a multi-billion dollar expenditure on the Safeguard system. And in Vietnam we see no signs to justify optimism about the chances of a negotiated settlement, even though we do see signs indicating de-escalation of the American presence. Further, we caution the Administration not to fall into the trap which caught President Johnson, who was deluded by the statistical gimickry of his own bureaucracy into giving a false impression of progress in the war. We hope that the new Administration will not engage in wishful thinking about the progress of the peace.

In the broader sphere of foreign policy, the restraint and caution of Mr. Nixon's government have come as welcome relief. We would cite the quiet diplomacy of the European trip. Mr. Nixon's handling of the recent Korean provocation departed not only from the truculent tone of some of his campaign statements but also from the panicky and futile actions of Mr. Johnson after the Pueblo incident, notably the call-up of the Reserves.

In domestic policy, despite limited financial room for maneuver, the President has pledged new programs and new priorities Most important, he has determined to overhaul the welfare system, something Ripon has long recommended and which was never undertaken by the previous Administration; and, secondly, to institute a program of revenue sharing with the states and cities.

At the very least, we expect a federalization of welfare standards and tax exemption for the poor, including the working poor, with a resulting improvement of poverty conditions and social cohesiveness. Welfare reform also will reduce the incentives for migration to the cities and urban states.

If followed through, these Nixon initiatives will far surpass in their impact the contributions of the War on Poverty, with its grandiose claims and meager achievements.

As consequential as welfare reform to the cities is Nixon's commitment to a program of revenue sharing with state and local governments. Largely because of Southern Democratic domination of Congressional Committees, the Northern cities and states have been vastly shortchanged in the distribution of federal revenue. New York, for example, gets as little as one twentieth as much federal aid per dollar of federal taxes contributed as Mississippi. A substantial program of revenue sharing based on a modified per capita formula will make a major contribution toward penalizing the poorer southern states.

Also on the urban front, the Republican Administration has committed itself to rebuild the riot-torn areas of those cities whose names have become a legion of social strife in the 1960s—Watts, Harlem, Newark, Detroit, and Washington.

Advocacy of House Rule for the nation's capital, an invigorated fight against organized crime, whose basic feeding grounds are in the nation's urban cores, are other hopeful initiatives.

GOVERNMENT REORGANIZATION

One of the least dramatic but most important areas for Presidential action is the structure of the administrative process. The Johnson administration—with its preoccupation for legislative first steps—did a relatively poor job of executive follow-through. But President Nixon's determination that "administrative performance should match legislative promise" represents a worthy correction to that failing.

This determination has been reflected in several specific ways. The revival of the National Security Council, the establishment of the Urban Affairs Council, and the Cabinet Committee on Economic Policy are important developments within the White House itself. The new program for Minority Business Enterprise in the Commerce Department and the major overhaul of the Labor Department's Manpower Administration could provide improved mechanisms for dealing with the urban crisis. The Department of Health, Education & Welfare has been restructured, too, and its new office of Child Development, with its focus on the first five years of life, could be a particularly creative source of social initiatives.

Two reforms deserve special mention: (1) The decision to select postmasters through less political processes (and to reform the postal service in other ways), and 2) the establishment of common regional boundaries and headquarters for the field operations of five federal agencies (many urban experts believe this could make a great difference in the quality of federal social services to the cities). Both improvements have been urged for many years and both were long delayed for solely political reasons. Both have now been quickly implemented despite strong political counterpressures.

ECONOMIC CONCENTRATION

Also largely unnoticed, except by the business community, have been the initiatives taken by this Administration to halt the present trend toward economic concentration. In a series of articles in the Forum entitled "The Complex Society," the Ripon Society expressed its concern with the trend toward "conglomeratization" and with the business-government partnership that flourished under the prior two administrations. The Johnson administration justified inaction in this area by claiming that additional legislation was needed. Under the Nixon Administration, the Justice Department has used existing anti-trust laws to commence litigation on conglomerate mergers which restrict free competition. In addition the Administration has recognized the unhealthy effects of concentration in the banking industry and has proposed legislation to close the one-bank holding company loophole and remove the danger that institutions of finance will use their lending power to restrain competitions. Successful conglomerate litigation with the precedents established by new regulation of the banking industry, will have a healthy impact on the structure and nature of our economy and our society.

YOUTH

Finally, there is the problem of youth, symbolized by the turmoil on a number of American campuses in the President's first 100 days. Outside factors, such as the war and the draft, have exacerbated university tensions. But even without these factors students would not return to the apolitical attitudes of the 1950s. For the new generation of young people have been reared to demand meaning, responsibility and independence at an early age. Yet society is not prepared to provide roles in which they can express these values in the years before they reach adult status and financial independence. A dispersal of power, a sharing of authority with the young will be necessary if hierarchical institutions are to tap the best energies of this new generation. But this message—their message—is not getting through. Communication between the generations is breaking down, in part because debate on campus is monopolized by the loudest voices rather than by the most reasonable ones, in part because of a resort to violence that shatters the sense of community on which fruitful discourse in American institutions depends.

But in part communication is failing because of the rigidity of the generation in power, which is content to intone the principles on which its authority is based without bothering to justify them or adapt them to the needs of the younger generation. There are many older Americans who are willing to condemn the young from afar, few who are willing to reason with them face to face.

Federal legislation cannot heal the breach between the generations, but the President has the capacity to provide a mediating influence. He has already taken one step by appointing a commission to phase out the draft and replace it with an all-volunteer military—a position which Ripon has argued since 1966. But Mr. Nixon must have in addition a comprehensive program on all the various concerns of youth. Indeed, Ripon is preparing a major report to the President to provide just that.

As for non-governmental action, there is vacuum on campuses that requires the mobilization of those students who will be able to understand the wrongs of society but who will use libertarian means for righting these wrongs. On this subject, too, we expect to have more to say.

FURTHER PROBE OF MILITARY OIL PROCUREMENT IN SOUTHEAST ASIA

Mr. MONTOYA. Mr. President, I have joined the distinguished Senator from Wisconsin (Mr. PROXMIRE) in a letter dated May 27, 1969, to the Comptroller General of the United States, asking that the General Accounting Office examine most thoroughly into weaknesses and abuses in our Government procurement programs in Thailand, Vietnam, Singapore, Taiwan, Laos—indeed all of Southeast Asia—and Okinawa, dating back to January 1, 1966.

As a result of new information which Senator PROXMIRE and I have received—in the form of official DD–250–1 Government delivery receipts—there is evidence that Government officials in Southeast Asia are still failing to obtain documented verification that quantities of fuel shown on contractors' delivery documents actually have been received and that there is suspected pilferage by oil company employees. Additionally, we have evidence of similar oil procurement irregularities in connection with the U.S. AID program in other parts of Southeast Asia.

Mr. John M. McGee, a U.S. fuel inspector for the Department of the Navy, originally brought oil procurement deficiencies and shortages in Thailand to Senator PROXMIRE's and later my own attention some time ago. As a result of his courageous action, and the evidence which has been accumulating, both Senator PROXMIRE and I feel that a full probe of oil procurement inspection and distribution procedures is essential before further cures can be prescribed, and in order that the best interests of the Government, procurement management, and the public may best be served.

Senator PROXMIRE and I will have more

to say on this important subject in a few days. Meanwhile, we look very hopefully to what may be the effect of these inquiries, and would hope, too, that every Senator will join us, insofar as possible, in helping to put a stop to policies which are hostile to the welfare of the many.

SLEEPING BEAR DUNES NATIONAL LAKESHORE: DEVELOPMENT POSES URGENT THREAT

Mr. HART. Mr. President, this Congress has an opportunity to continue its history of concern for America's natural environment. We have before us this year vital issues of air and water pollution control, wildlife conservation, pesticide dangers, and many others. No area of our concern will be of greater long-range importance than our active attack on the problems that imperil the health, fruitfulness, and beauty of our land.

A significant project in the conservation field is the proposed Sleeping Bear Dunes National Lakeshore in Michigan. This is a project for which I have worked for 8 years. The Senate has approved the national lakeshore twice.

THE ALTERNATIVES ARE CLEAR

When I again introduced the Sleeping Bear Dunes legislation this year, I said I was optimistic that we would act in time. I remain optimistic that we can secure this area and preserve its beauty. The alternatives are clear: either we protect the Sleeping Bear Dunes as a national lakeshore now, or this natural area will be lost to all of us and to future generations.

The conservation-minded people of Michigan recognize these alternatives and are demanding that we act now to save "the Bear." I have been heartened and encouraged by the growing tide of concern and support expressed to me by people from Michigan and throughout the Nation.

DEVELOPMENT ENCROACH UPON THE LANDSCAPE

Recent correspondents have expressed a new sense of urgency in the need for the Sleeping Bear Dunes National Lakeshore. As James C. Ganter, a resident and businessman in the area, pointed out:

> This beautiful area is being prostituted at an unprecedent rate with unplanned and very disjointed "development."

Establishing a national lakeshore would protect the natural values of the area from this encroachment. Without that protection the region is doomed to the stranglehold of subdivision and inappropriate development. Mrs. Harold T. May, a property owner within the proposed boundaries, tells me:

> If there is to be a Dunes National Park in this area, and I still hope there is, the urgency is more acute than ever. In just the past few years we have lost so much prime natural resources through private development in this immediate area, it seems there will be little left to preserve if there is any further delay.

Mr. Walter R. Nevill likewise points out how clear the alternatives have become, stating:

> Any further delay in protection of the Sleeping Bear Dunes will not only be financially costly; it will give a reprieve to the exploiters who will proceed at an accelerated pace to destroy the basic values which currently make the area precious as a natural resource.

The greatest danger now, I believe, are ill-planned vacation subdivisions. With little or no local zoning control, these spring up to mar key natural areas in this landscape of national importance. Mr. Joel Konikow expressed the citizen's exasperation when this kind of natural treasure is "divided and fenced":

> At this stage in the development of the United States, it is a crime, and the general people are the victims, which is being perpetrated on us; the fact that the land is not ours to enjoy but is divided and fenced. Even when you want to enjoy Lake Michigan and the land around it, you can't enjoy it in peace. One feels like a fugitive.

DESTRUCTIVE LOGGING ANOTHER THREAT

Along with the problem of cottage subdivisions, Mr. George D. Ferrar reports that "there has been a step-up in the proposed area of timber harvesting—some of which is destructive logging." Mr. Ferrar points out that timber harvesting based on a sustained-yield program can maintain natural beauty. Such careful sustained-yield timber management will be permitted in the Sleeping Bear Dunes National Lakeshore. However, the destructive logging now taking place will "mar the landscape for many years to come in addition to adversely affecting forest-resource values."

These are disturbing reports, and they alert us again to the destruction that a landscape of natural beauty can sustain by encroachment and misuse. That is what we seek to stop. The Sleeping Bear Dunes National Lakeshore will avert this loss; it will sustain the landscape as a legacy of beauty for our enjoyment now and for generations in the future.

Within its 61,000 acres, the Sleeping Bear Dunes National Lakeshore will encompass the key areas of natural value and beauty. Land-use controls and zoning protections will assure the preservation of the landscape. Private rights to existing improved properties are fully protected by my bill; in a balance that will also protect the public interest.

CONSERVATION IS OUR OBLIGATION

Mr. President, in pointing out these threats to the Sleeping Bear Dunes area, I wish to emphasize that conservation of such national treasures is this generation's obligation. The Congress should act promptly with this sense of urgency. I hope that all concerned will proceed cooperatively, recognizing that further delay will prove expensive both in money and in irreparable damage to the area. I urge the administration to give this conservation program the priority it must have, so that we may maintain America's momentum of conservation progress and foresight for the future.

We must act promptly to establish the Sleeping Bear Dunes National Lakeshore, in the spirit expressed to me by Mr. James S. Henderson, of Henry, Ill.:

> I urge you to keep trying, and to try to enroll all who would pass on a land of beauty to our children, to join your efforts to conserve what is good and clean in our natural environment.
>
> I sometimes feel that the next generation of Americans may inherit a land like a junk car cemetery, unless those of us here now exert every effort to protect and preserve the land.

BIAFRAN LIFE AND CULTURE

Mr. PEARSON. Mr. President, despite the efforts of peace mediators from virtually every quarter of the globe to halt the fighting, the tragic civil war between Nigeria and Biafra drags on and on. Though the rate of death by starvation has shown a merciful decline, the problem still remains serious as does the loss of life brought about by bombing civilian areas, not to mention the deaths attributable to direct combat.

The untimely death of any human being is always deplorable, of course, and when thousands upon thousands have been killed by bombs and blockades as in the Nigeria-Biafra conflict, truly all of humanity should grieve. What is particularly tragic in this case, however, is the number of talents that have been prematurely snuffed out because of man's inability to find a negotiated path to peace.

A group of Americans concerned about the loss of this priceless talent on the Biafran side—where war's ravages have been greatest—have gotten together and formed a Committee for Biafran Artists and Writers. Headed by Miriam Reik, a professor at Temple University, the committee has been active in bringing prominent Biafrans in the creative arts to America to talk about their West African culture and their attitudes toward the war.

This past Tuesday, the committee sent to Biafra a mission which will spend the next 2 or 3 weeks studying conditions in the field and searching out further examples of the qualities of the Ibo tribal life and culture that predominate in the territory held by Biafra.

In addition to Professor Reik, the committee is sending Diana Davies, a photographer-journalist; Leslie Fiedler, a well-known man of letters and a professor at New York State University at Buffalo; and Herbert Gold, novelist, essayist, and critic.

The committee plans to submit a report, upon the group's return, which I will make available to Senators for their reference. I do this not because I necessarily share all the political attitudes held by the committee toward the issues raised by the war, but because I am very much concerned about the human aspects of this conflict. The more information we can garner about the dimensions of the human problem, the greater our chances of making the need for a peaceful settlement clear for all the world to see and demand. The rhetoric of politics and the litany of ancient grievances must not be allowed to obscure the awful tragedy that is being visited upon an entire generation—both Nigerian and Biafran—a tragedy whose barest outlines can now and again be glimpsed through occasional study missions such as that undertaken by the committee this week or the effort led by the distinguished junior Senator from New York (Mr. GOODELL) earlier in the year.

MEMORIAL DAY TRIBUTE—REFLECTIONS ON WAR AND PEACE, AND HONORING THE DEAD BY HELPING THE LIVING

Mr. MONTOYA. Mr. President, Memorial Day visits us once again, and I feel privileged to rise and pay tribute to the courage, endurance, and patriotism of those brave Americans to whom we owe the most—those who have made the supreme sacrifice and whose names are written indelibly upon every battle monument.

Spring is a particularly pleasant time of year, and May is perhaps the best month of all. Both the season and the month are favorite topics of poets. It may, then, seen somewhat incongruous that we have chosen the 30th of May as the day for honoring our war dead. Some might feel that a dark and gloomy winter's day would be more appropriate for discharging such a solemn duty.

I cannot, however, accept that view. I believe it to be absolutely fitting that we should observe the finest day of the year as Memorial Day. In this way, we make ourselves aware of all the good things of life which we as American citizens enjoy and which we continue to enjoy only because, in every period of our history, there have been young men willing to make the complete sacrifice in defense of our country and our way of life.

On this day, we are, of course, reminded of a thousand battles fought. What a record is thus presented in making right the master of might. And without the valor of our American soldiers and regiments, many of these wars might yet be in full progress.

But the conclusion of these conflicts also represents a renewal of our liberty, for we are further reminded on this day that the American people—so given to peace and occupied with schools, agriculture, technology, and Government—which does their will through the ballot box—these people have yet, when aroused, a power of resistance sufficient for any need, however great. Shake them rudely, or menace their freedom and put them in fear and there is no confronting them.

Nor can we fail, on this Memorial Day, to be reminded of our own individual service—such as it was—and of our sons and comrades—alas, too many to be named—whose honorable discharges were given them by a bullet in battle, or fever in a jungle; whose bones lie in shallow graves in the stillness of a valley, in the mountain's breast, or the ocean's deepening bed.

Believe me, I am proud of these multitudes of American soldiers. They are our immortals who wear uniforms of light. On their rolls shine herioc names, without regard to such distinctions as rank. It is for their sake that we have resolved to honor them each Memorial Day—to salute them martially with the roll of drums and thunder of cannons—so our fallen comrades know they are remembered and will never be forgotten.

REFLECTIONS ON WAR AND PEACE

Our own General Sherman is reported to have said:

> You want to know what war is? War is hell.

Anyone who saw war as he did would agree. True, war sometimes develops noble and heroic qualities in individuals or a people. But war is hell for all that.

Yet, there are some who would teach that a war from time to time is by no means a misfortune, but, rather, a necessary and healthy exercise to stir up patriotism and preserve manliness. To those eager to plunder the public under a cheap guise of patriotism, love of country will flag, they say, unless stimulated by hatred of someone else.

It is a strange fact, too, that while the medieval conception of honor—which regarded the duel as the only adequate settlement of a question of honor—has yielded to more enlightened and moral views in civilized countries, yet nations are in such cases still apt to rush to arms as the only means of satisfaction. Indeed, war is a duel on an expensive scale, and bloody wars have happened in spite of an earnest popular wish for peace on both sides, especially when the controversy was inflamed by points of honor.

What is the rule of honor to be observed by a power as strong as this Nation? Surely we cannot be expected to meekly pocket and accept real threats and insults if offered. One country alone can start a war, and the new means of nuclear warfare which could destroy mankind have loaded the balance with incalculability and uncertainty. Men and women alike continue to examine this difficult question in an effort to find ways of preventing nations from pursuing policies which can inflict on mankind sufferings far more hideous than in past centuries.

Mencius, in ancient China, when asked for guidance in matters of defense by the ruler of a small state, counseled:

> Dig deeper your moats; build higher your walls; guard them along with your people.

This has remained the classical posture up to our age. But the total wars of this and other centuries have taught us that in our search for peace, we must keep before us certain common higher goals:

First, it will be in vain to cry peace, peace on both sides of the ocean if we continue to rattle sabers and missiles in one another's faces. Nor should we judge other nations on their actions and capabilities and then expect to be judged ourselves on our intentions only. For a world without violence must also be a world of justice. In our dealings with other nations we must distinguish between self-assertion and subservience, and have scrupulous regard not only for the rights but also the self-respect of other nations in their simple human demands for the freedoms that we and other nations have long taken for granted.

Second, we should see our highest glory not so much in battles won as in wars prevented. By seeking to influence mankind, not by heavy artillery and nuclear weapons but by good example and wise counsel, other nations will instinctively turn to us as their mutual friend and preserver of peace. If the civilization of which we boast is to mean anything it must mean this: That no war is justifiable unless its cause or object stands in just proportion to its cost in blood, destruction, waste, human misery, political corruption, social demoralization, and relapse of civilization—and even then only when every expedient of statesmanship to avert it has been thoroughly exhausted.

In short, Mr. President, our manifest destiny rests upon peace, which is peace with honor. It is also the noblest aspiration of good Americans who love their country most.

Despite the superiority of our staying power, the unextinguished fire of the war in Vietnam calls for our most earnest attention. With this dark cloud of uncertainty hanging over us, we are more and more depressed by an unsettling anxiety-paralysis which must be removed or at least lessened as much and as soon as possible. I do not believe it idealistic fancy to say that the peace sentiment prevailing here and in other parts of the world can be set to work for the accomplishment of that end.

And the peace and greatness of our country is also the truest monument and highest tribute we can pay the memory of those fallen heroes who have served our Nation so well. For their task in saving our Republic will be finished, and their great deeds and duty nobly done will never cease to be prized by a grateful country, as one of its most prized possessions.

BY HELPING THE LIVING WE ALSO HONOR THE DEAD

There come to mind, too, on this Memorial Day, the words of Abraham Lincoln, whose memory is so dear to us:

> Let us strive on to bind up the nation's wounds; to care for him who shall have borne the battle, and for his widow and orphan. . . .

Lincoln was reminding us that it was not enough that we should merely remember those who died in our behalf and frame eloquent words to tell the world how much we appreciate the fact that they gave up their lives for us. And he was right; we have a far greater obligation than that. While we have little power to repay our war dead directly, we can and should honor them by making certain that we have adequately provided for their families and for their comrades who survive.

This is an obligation which we have taken very seriously, and I feel that on this Memorial Day we can take some justifiable pride in the benefits we provide for our veterans and their dependents. On an average day there are close to 100,000 patients in our Veterans' Administration hospitals; more than 3 million veterans are getting disability compensation or pensions; 1½ million survivors of veterans are receiving compensation or pensions; over 7 million loans to veterans have been guaranteed by the Veterans' Administration; more than 11 million veterans have received educational assistance under the GI bills.

Impressive as these statistics are, there is much that remains to be done. We must constantly reexamine our veterans' benefit programs to find ways to improve them. In the 90th Congress, I sponsored a bill, S. 16, which was enacted on August 31, 1967, as Public Law 90–77, the Veterans' Pension and Readjustment Assistance Act of 1967. This act brought up to

date a number of the provisions of our veterans' benefit laws. It increased pension rates, raised educational assistance allowances, and provided full wartime rates of disability compensation for veterans of the Vietnam era. Public Law 90–77 also made many other needed changes in our veterans' laws.

I am confident that this 91st Congress will continue to improve the benefits we provide our veterans, and I have already introduced several bills with this objective. S. 1279 and S. 1607, for example, would make special provision for veterans who underwent the ordeal of imprisonment at the hands of the enemy. Other bills I have introduced would make certain improvements in the laws governing dependency and indemnity compensation payments for widows, increase some statutory awards payable as disability compensation, and remove the arbitrary 6-month limitation on nursing home care insofar as that limitation applies to veterans with service-connected disabilities.

In the coming months we will be considering these and other proposals to broaden and strengthen our system of veterans' benefits. In so doing, we will also be honoring our war dead by improving the lives of their families and the lives of their comrades.

CAUTION NEEDED ON GROWTH RETARDANTS

Mr. HART. Mr. President, some of the chemicals which we use to kill bugs and increase crop production may have monstrous, quite unsuspected effects. They may cause the unwanted death or mutation of fish and wildlife. It is possible they could, given long-term and widespread use, bring mutations and death to man himself.

An extreme example of such possibilities is reported in an article entitled "Caution Needed on Growth Retardants." The article, written by Dr. David B. Carlisle, was published in the New Scientist of November 7, 1968. It is speculative, particularly since the dosage levels used in the experiments are quite high, but it is a speculation we should all ponder.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAUTION NEEDED ON GROWTH RETARDANTS

(By Dr. David B. Carlisle)

(NOTE.—Substances like chlormequat which render plants resistant to pests can cause deformity and sterility in the offspring of locusts so treated. The possibility of similar effects in higher animals should be thoroughly investigated before such compounds are released for general use.)

The other day I bought a pot of chrysanthemums at the local florist's. Four or five years ago a pot like this would have been an unwieldy burden to carry home, with three or four foot high stems bending and breaking. But now these plants are dwarfs, easy to transport and fitting neatly into a small modern room. It's not that dwarf varieties have been bred, but rather that horticulturalists are using dwarfing sprays that cause the habit of the plant to alter, producing more and shorter stems per plant, and usually more but smaller blossoms. Compounds like 2-chloroethyltrimethyl ammonium chloride (Cycocel, chlormequat or CCC) and N-dimethylaminosuccinamic acid (Dimas or B9) have revolutionized the production of flowering plants for the house. This Christmas we may expect to see miniature azaleas crowded with blossoms and dwarf poinsettias.

These substances have other advantages too, as Dr. B. D. Smith argued recently in *New Scientist* ("Starving out plant pests", 10 October, p. 84). The application of CCC to a plant can confer some resistance to pests such as blackcurrant gall mite and aphids. The rate of development and reproduction of aphids is reduced, according to Dr. Van Emden, and later generations often die before reaching the adult stage.

On the surface then, it seems that the stage is set for a rapid expansion in the use of these plant growth retardants in agriculture. CCC appears to show no toxicity to mammals, yet it may protect plants against attacks of pests and, more important, it may induce desirable growth habits in plants. It is easy to see that wheat or rice with shorter stems will stand up to gales more readily and can be harvested even in a bad year, while the increased number of stems, and hence of ears, may more than make up for their smaller individual size.

Nevertheless, I would like to sound a note of warning and ask for fuller testing of CCC, B9 and similar compounds before they are released for general use. CCC is quite persistent and accumulates in the seed, the very part of the plant we eat from our cereal crops.

In this laboratory we have begun investigating the mechanism of the action of CCC upon locusts and cotton staining bugs. My colleagues, Dr. Peggy E. Ellis and Mr. L. J. McVeigh and I, together with Dr. Daphne J. Osborne of the Agriculture Research Council Unit of Experimental Agronomy, Oxford, have shown that direct feeding of CCC to locusts at the stage when meiosis is beginning interrupts gametogenesis and so leads to sterility. In most insects the reduction divisions which lead to gamete formation are completed during larval life, and by the time the adult emerges only yolk formation and the construction of the spermatophore remain to complete the process. CCC has no effect that we have been able to discern on adult locusts or bugs. They live a normal life span, they reproduce as freely and successfully as untreated insects, and their offspring appear to be normal.

MEIOSIS HALTED AT FIRST METAPHASE

The picture is quite different, however, when CCC is fed to locusts at the beginning of the fourth of the five larval stages, or if it is injected into them at this stage. A dose of 2000 parts per million (2 mg per g) applied to locusts at this stage leads to complete sterility, and meiosis is halted at the first metaphase (a stage halfway through the first of the two reduction divisions which lead to the formation of gametes). Weeks after a single dose, the testis remains fixed in this stage; then degeneration sets in and it finally atrophies. Much the same seems to happen in the female, but our studies are less complete here. This same sized dose administered later in life, when some parts of the gonad have completed the first reduction division, leads to delayed sexual maturation, a lower sperm or egg count and reduced reproductive performance, but not to complete sterility; it seems that only those parts of the gonad which have not completed the reduction divisions are affected by CCC.

When a tenth of the dose is applied at the earlier stage (before meiosis has begun) maturity is again delayed, but sexual reproduction is eventually possible. In experiments under these conditions, however, some of the eggs laid by parents which had received a dose of CCC as larvae developed into abnormal adults which were themselves sterile and showed monstrous deformities. I must emphasize that it is not treated animals which are deformed and sterile (though their reproductive performance is impaired) but their offspring. In terms of the direct effect of CCC on pests of crops this is great news—a compound which has useful effects on plants also protects them against pests by directly damaging them and hindering their reproduction. But what if there is some similar effect on mammals? After all, CCC depresses reproduction in plants as well as in insects—witness the smaller ears of wheat, with fewer seeds per ear. How much more likely then that unrelated animals should be affected in the same sort of way.

CCC is not toxic to adult or (apparently) to juvenile mammals so far as we know, but neither is it to adult or larval insects. Its single known effect on insects is on the early stages of meiosis. And when do these stages occur in female mammals? They take place even earlier than in insects; no more oocytes are formed after birth, since the first stages of oogenesis take place in the embryo, *in utero*. The possibility may be remote that CCC affects mammals as it does insects, but the foreseeable consequences seem to me so hideous that this must be tested before CCC is released for general use. Dr. Smith used a foliar spray of 5000 parts per million of CCC on his blackcurrants; we have produced monsters with 200 parts per million.

Let us suppose for a moment that mammals are affected like insects, and that CCC is being used at this sort of level on wheat. A pregnant woman eats bread tainted with CCC (remember that it accumulates in the seed). The daughter she bears later seems perfectly normal until puberty, which is somewhat delayed. As a married woman this girl has difficulty in conceiving a child, but does so eventually, only to bear a cripple with distorted limbs, malformed, malfunctioning organs, or even neoplasms. This is the grandchild, not the child, of the woman who ate the contaminated bread. How much harder to trace the cause than it has been for thalidomide, and how equally tragic! Remote the possibility may be, but it must be investigated. Dr. P. C. Williams, of the Imperial Cancer Research Fund, agrees with me in this and has just begun a programme of research in which he plans to test this possibility. I hope he finds that there is nothing in the idea.

PROTEST IN REVERSE

Mr. GRIFFIN. Mr. President, at a time when violent confrontations seem to be the order of the day on college campuses, it is particularly encouraging to take note of what recently occurred at Kalamazoo, Mich., Valley Community College.

A few weeks ago, the 1,500 students at that college, which opened its doors only last fall, staged a "demonstration of appreciation" for the education they are receiving.

I ask unanimous consent that an article written by four of the students as well as an editorial which appeared in the Waco, Tex., News-Tribune commenting on this event be printed at this point in the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

PROTEST IN REVERSE BY STEVE DONALDSON, NILE WARNER, RICK SHAW, FLORENCE BALDWIN

It all began at a talk-in. What is a talk-in? Dr. Dale Lake, President of Kalamazoo Valley Community College, instituted talk-ins as a time and place for students to air their views. They may gripe, brag, or praise. They may ask questions about the administration, the policies, goals and future of K.V.C.C. Talk-ins are very flexible. Dr. Lake and members of the Student Congress are there. Students may drop in for as little as five minutes or as long

as one and one-half hours. Faculty members, trustees and deans wander in and out. The coffee is hot and good; and everyone is welcome to do his or her thing.

At our first talk-in a student expressed her delight with dynamic enthusiasm of the faculty. She also commented on the many fine young minds she had discovered at the College.

Later, this same student wrote a letter to the Editor of the Kalamazo Gazette stating these same thoughts. When the letter was published, she was surprised at the number of students who approached her and told of their gratitude for K.V.C.C.

At the next talk-in a male student spoke of the good rapport existing between students and faculty members. A comment was made about the College being student-oriented. There was a question as to whether this would be retained in the future. Dr. Lake stated that the administration and Board of Trustees realized that it would take "a lot of hard work to keep it this way. But we intend to do it."

Following this talk-in, these two students discussed the possibility of involving the student body in a happening of some kind to thank Dr. Lake, the Deans, and the Board of Trustees for their efforts on our behalf.

Enlisting the aid of two students, they started planning. "How about a protest in reverse?" they asked. The reaction was both delightful and enlightening. Like a star quarterback, the student body grabbed the ball and ran for a touchdown.

Flyers were printed and passed around to students and faculty.

The first flyer began: "When a College has a poor administration it is the *right* of the students to protest."

We should have had cameras to record the facial expressions of some who read these lines. One of the instructors threw his hands in the air and fairly shouted, "I knew it! We didn't even make it through the first year."

However, the consternation subsided when the rest of the flyer was read: "Further—if a College has a good administration and faculty it is the duty of the students to show their appreciation."

A petition was drawn up thanking the Board of Trustees for the many hours they had devoted to the development of K.V.C.C. A second petition thanked Dr. Lake and the Deans for drop-ins, talk-ins, and the creation of a student-oriented, full student participation college. These petitions were signed by several hundred members of the pioneer class of 1968–69.

A collection was started to purchase some plaques for the administration and trustees. The money could have been appropriated through the Student Congress but the students wanted it to come directly from them. Quickly the fund grew—nickels, dimes, pennies, now and then a quarter. Many of these young people gave their last penny. One black student took a handful of change from his pocket, "I just need a dime for a coke," he said, and dropped the rest into the kitty. Tuesday—April 15—1:30 p.m. was the target day. Like magic posters appeared everywhere. "At KVCC You Are a Name Not a Number. Think About It?" "Welcome to K.V.C.C. The Student-Oriented College."

We were all nervous as the big day got closer. We had our time schedule worked out—but suppose something went wrong? What if - - -? Do you imagine that - - -? We crossed our fingers. I think some of us prayed. We hoped for a clear day.

Tuesday morning the atmosphere throughout the building was electric. Even the secretaries were excited. Would the misty rain let up in time?

By 1:15 the truck we were using for a platform was in place and the mike was hooked up. Five male students swept through the halls opening classroom doors and calling the students to the rally. They gathered around the truck cheering and clapping. One of the leaders stated our purpose. The students began chanting "We want the Deans. We want the Deans. Bring out the Deans." Escorted by two mustachioed, long-haired students the Deans arrived. Dean Kocher received one of the petitions. There had been some money left after paying for the plaques. It had been decided to donate this to one of the scholarship loan funds. The check was presented to Dean Chick. There were cheers. Placards waved. "Lake's No Fake. Kocher is Kool. Ross is Boss. Chick is Slick."—"K.V.C.C. the Cool School."—"Thank you for a fine first year."

Amid loud cheers and laughter the Trustees and Dr. Lake joined us. Dr. Lake was carried on the shoulders of two students. The plaques of appreciation were presented to Mr. Wollam, Chairman of the Board of Trustees and Dr. Lake.

Cheer after cheer rose on the air—exuberance, high spirits and good will were rampant.

And we all collapsed. We had done it! A Protest in Reverse! It had been successful and we all felt good.

From the top side of the generation gap the view is very exhilarating. What fun to see an idea take hold and grow. When young people can feel so much gratitude and express it in such an outgoing manner, I believe we *all* have something to cheer about. Hip! Hip! Hooray!

[From the Waco (Tex.) News-Tribune, May 20, 1969]

THESE STUDENTS AREN'T ONLY SQUARE, THEY'RE ALSO FAIR

Kalamazoo Valley Community College in Kalamazoo, Mich., opened its doors only last fall. Already its students have been involved with petitions and demonstrations.

Administration eyebrows were lifted some weeks ago when a flyer began circulating on the campus, which began:

"When a college has a poor administration it is the right of the students to protest."

Eyebrows went even higher at the next sentence:

"Further—if a college has a good administration and faculty it is the duty of the students to show their appreciation!"

It seems that the 1,500 students in the pioneer class of KVCC actually wanted to show their gratitude to the school for giving them an education. A petition was circulated thanking—of all people—the board of trustees for the many hours they had devoted to the development of the college.

A second petition thanked President Dale Lake and the deans for "the creation of a student-oriented full student participation college," a feature of which are regular "talkins" where faculty members, trustees and students informally exchange gripes, praises and opinions.

A collection was started among the students to purchase some plaques for the administration and trustees. On the day of the big "confrontation," during which the check for the plaques was presented, signs were displayed. One of them read: "Thank you for a fine first year."

Not a building was occupied, not an office ransacked, not a single nonnegotiable demand was made.

All in all, a pretty square bunch of students and teachers at KVCC—square, that is, in the original meaning of the word.

RADIO STATEMENT BY SENATOR BYRD OF WEST VIRGINIA ON STUDENTS AND THE KNOWLEDGE BOOM

Mr. BYRD of West Virginia. Mr. President, on May 28, 1969, I made a statement for radio regarding graduating students and the knowledge boom.

I ask unanimous consent that the transcript of that statement be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

STUDENTS AND THE KNOWLEDGE BOOM

Nearly all of us have heard the cliche, "Get a good education. There is no better investment for the future."

This statement, of course, is true. However, I believe this misses an extremely vital point. The point is that education need not always refer to the kind one receives in college.

Educational opportunities abound in our country. These opportunities, for the most part, are the result of a tremendous knowledge boom that has hit our society. Scientists estimate that today there is twice as much to know as there was just 15 years ago. As though this were not incredible enough, the scientists go on to say that in the next 10 years the quantity of knowledge will again double. And there is no end in sight.

This creates for us all—and students especially are aware of it—a number of very real problems. What means can we find to deal with all this new knowledge and information? How can we store it for quick recall when it is needed? And, perhaps most important, where will we find the highly trained people needed to apply this knowledge effectively?

Already, we have begun to feel the crunch of a manpower shortage. A good example of this is in the field of medicine. The shortage of doctors is becoming acute in this country. Medical schools have found it impossible to keep up with the demand. A suitable solution advanced by many persons calls for a sharp increase in the number and kind of paramedical people—people who will perform some tasks ordinarily performed by doctors but which can be done as well and as effectively by technicians under the direction of a doctor. We see this practice evolving now in the medical profession as it has evolved in other scientific fields. Laboratory technicians with especialized skills and training have long kept tab on experiments and research performed in various fields.

Specialist skills are indispensable when we are faced with so much information, so much data, so many facts relating to so many problems. It has become impossible for one person to deal with every phase of the new, complex tasks that have become vital to our society.

And this is where young people will make their marks. Those graduating from high school must now decide what they will do. Will they continue their formal schooling by entering college? For some, this is the next step; and certainly the knowledge boom puts a premium on college training. But how about the majority who are not going on to college? Whatever their decisions, I can assure them of one thing: while their formal schooling may be finished, their education has just begun.

With a minimum of searching, they will find that the boom in knowledge has created intense demand for skilled technicians trained in highly specialized fields. College training alone cannot satisfy the demand. Successful management of the rapidly growing wealth of information requires skilled specialists in nearly every field—for example, technicians, laboratory specialists, quality control people, trained supporting personnel of unlimited description—all kinds of essential jobs. But without interested people, without a new crop of graduating seniors capable of applying the available knowledge, these opportunities will go begging, and the wealth of knowledge will become worthless.

The knowledge boom has left in its wake the unskilled and the untrained. While a premium is placed on formal education, an equally high value should be placed on tech-

nical skills and training. Enterprising high school graduates have only to look about them to find that they are in great demand as trainees in technical, highly specialized jobs. College provides one path into the mainstream of our society. But we should keep in mind also that this is by no means the only path. Our nation's continued progress depends on our applying what we know. This, in turn, depends on the youth of our nation. Only in them will we find the human resources, the technical skills, the talents to do the job effectively.

WHY USELESSLY CONTAMINATE GOOD AMERICAN EARTH?

Mr. COOK. Mr. President, before the Senate adjourns, I should like to read, from the United Press International wire service, a report just issued. It reads as follows:

DUGWAY, UTAH.—The Army has admitted contaminating a remote area of Dugway proving grounds with a teacup full of deadly Anthrax bacteria.

But authorities said the threat to humans and animals is almost non-existent, at least partly because of the area's remote location.

Brig. Gen. John G. Appel, commander of the desert test center, said today a 100-square-yard area of nearly pure crystalline salt on the western Utah salt flats was contaminated with the bacteria 15 years ago "To determine how long it might present a hazard."

Similar tests by Britain during World War II indicated areas contaminated with Anthrax bacteria would be uninhabitable for more than 100 years.

The bacteria can be fatal to humans and animals if they are inhaled into the lungs or contact a cut in the skin.

I conclude my remarks, Mr. President, by asking the military, with the results of the tests by Britain, tests that have already been successfully completed, why was it necessary to contaminate 100 square yards of pure crystalline salt? Or, more pertinent still, why was it necessary to contaminate 1 square foot of American ground with tests that had already been made and the results established and proved?

ADJOURNMENT UNTIL MONDAY, JUNE 2, 1969

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 1 o'clock and 46 minutes p.m.) the Senate adjourned until Monday, June 2, 1969, at 12 o'clock noon.

NOMINATIONS

Executive nominations received by the Senate May 28, 1969, under authority of the order of the Senate of May 27, 1969:

U.S. CIRCUIT JUDGE

Charles A. Bane, of Illinois, to be U.S. circuit judge for the Seventh Circuit, vice Elmer J. Schnackenberg, deceased.

SECURITIES AND EXCHANGE COMMISSION

Hamer H. Budge, of Idaho, to be a Member of the Securities and Exchange Commission for the term of 5 years expiring June 5, 1974; reappointment.

James J. Needham, of New York, to be a Member of the Securities and Exchange Commission for the remainder of the term expiring June 5, 1973, vice Manuel Frederick Cohen, resigned.

IN THE ARMY

I nominate Brig. Gen. Hal Bruce Jennings, Jr., 026995, Army of the United States (colonel, Medical Corps, U.S. Army), for appointment as the Surgeon General, U.S. Army, and for appointment to the grade of lieutenant general under the provisions of title 10, United States Code, section 3036.

I nominate the following-named officers under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Arthur William Oberbeck, 020569, U.S. Army.

IN THE MARINE CORPS

I nominate Lt. Gen. Richard G. Weede, U.S. Marine Corps, when retired, to be placed on the retired list in the grade of lieutenant general in accordance with the provisions of title 10, U.S. Code, section 5233.

Having designated, in accordance with the provisions of title 10, U.S. Code, section 5232, Maj. Gen. Frederick E. Leek, U.S. Marine Corps, for commands and other duties determined by the President to be within the contemplation of said section, I nominate him for appointment to the grade of lieutenant general while so serving.

EXTENSIONS OF REMARKS

HUBERT HUMPHREY OFFERS COMMENCEMENT ADDRESS FOR ALL AMERICA

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 29, 1969

Mr. RANDOLPH. Mr. President, this is the time of year when high schools, colleges, and universities across the entire country are conducting their commencement programs.

A great amount of wisdom and good advice is being dispensed by thousands of speakers at these programs. Deserving of careful attention also is the advice offered by former Vice President Humphrey in an article entitled "An Open Letter to America's Youth," published in Parade magazine for May 18, 1969. What he has to say should be pondered carefully by every American, young and old alike.

Mr. Humphrey's article could well be classed as a commencement address for all of us.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO AMERICA'S YOUTH

(By Hubert Humphrey)

No age group has a monopoly on idealism. The desire for justice, freedom and peace is as alive among the old as it is among the young. Idealism, nevertheless, is most apparent in the young. Our students have the time and the energy and the motivation to express their discontent with the failures of our civilization, and to try in their own way to remedy these failings. Their discontent is praiseworthy, since we live in an imperfect world.

I find it unfortunate, however, that so much of the admirable energy of our youth is being dissipated on the fringes of society. While young people have been justly proud of some of their victories, and even prouder, perhaps, of some of their efforts that ended in defeat, they are falling far short of making their power felt on our society.

It seemed, a year ago when students banded together to advance the candidacy of Senator Eugene McCarthy, that they had gained an understanding of their power. Working within the democratic system, they proclaimed their message across the country, and they were heard. Unquestionably, a large part of Senator McCarthy's success in the primaries can be credited to young people who gave so much of themselves to his campaign. They also had an impact on the push for a Vietnam peace.

Although a good bit of the protest voiced during the last election campaign was directed against me, the greatest part of it was responsible protest. The youth of America had a message, and it did not go unheard or unheeded.

HEALTHY FOR COUNTRY

Certainly, I was disturbed when some groups interrupted my public talks and kept me from communicating with others who wanted to listen, but most of the young people who involved themselves in the last campaign respected the rights of others. These young people were directed toward issues, and I think their participation was healthy for the country and for American politics. The Student Coalition—composed of McCarthy, Kennedy and Humphrey supporters—was among the most effective and hard-working campaign organizations supporting my candidacy.

Most of the students on our campuses, like most of the students who were involved in the last campaign, are concerned Americans. Most of the violent and destructive campus protests have been provoked by a relative few.

We find faults and deficiencies in all of our institutions—our universities, our government, our political parties, our corporations and labor unions, even our churches—but they will not be remedied by the actions of screaming, rock-throwing mobs. The answer lies in sustained positive action. This process of peaceful change is the foundation of a democratic society.

I urge that the doors to participation in our society be thrown open to young people who want to take an active part in the future course of this nation. It is one thing to stand on the outside and complain when our institutions seem unfair, unresponsive, irrelevant—or to resort to violence and other illegal tactics. It is another to do the work that is needed to make them fair and responsive and relevant. That is the opportunity that beckons young Americans today—as it has every generation.

In my youth, and that of most other parents of today's young people, much of our energy went to help our families and relatives survive the rigors of the Depression—and to educate ourselves like every generation, today's young people also want to be involved in building a more just and humane social order. But in most cases, their contributions are not essential to the welfare of

their families or friends. Instead, they encounter a society which places high value on material comforts and they properly conclude that materialism is an insufficient goal, either for themselves or society.

Is it surprising, then, that a growing number of young people are searching for higher goals and are expressing dissatisfaction with society as they find it? The paradoxes of our time contribute to this alienation and frustration; proverty in the midst of wealth, unemployment in the midst of an expanding economy, or hunger in the midst of food surpluses.

What is more, our young people know the imperative need of an education, but they see universities and colleges with programs wedded to the past and with standards unrelated to tomorrow's needs. This is fertile ground for trouble. And trouble we have. What to do about it?

DON'T WAIT FOR TROUBLE

First of all, the adults ought to seize the initiative in removing these inequities and injustices. We have the power to do something about them. We should do what ought to be done through the democratic processes of orderly change—rather than being forced to take action as a result of conflict, destruction and rebellion.

The existing processes of democracy provide a forum for action—for adults and young people. But will these processes be used effectively . . . or will they be rejected for the alternatives of unrestrained mob rule and intimidation? History has demonstrated conclusively that those persons who set themselves above the rules of ordered liberty are the ultimate destroyers of the justice and freedom upon which a democracy must rest.

Every citizen has the obligation, *now*, to see that our young people have every chance to participate effectively within the system—to be heard, to be taken seriously, and to be treated as equal partners in our democratic enterprise. Parade magazine has agreed to help young people gain access to the institutions of democratic government. Anyone who is interested in learning more about the many opportunities which do exist for young people can write to me in care of Parade.

AN URGENT NEED

For those who are qualified for government service, I will be delighted to pass on names to President Nixon, with my personal recommendation that they be given special consideration. I know that our Federal departments urgently need people with a young spirit and fresh ideas.

Others may be interested in working in the political parties. I will pass on the names of young Republican volunteers to the Republican Party. As a leader of the Democratic Party, I will forward the names of those interested in volunteering for Democratic activity to the appropriate party leaders.

There are other exciting opportunities such as the Young Franchise Coalition, a broadly-based movement committed to winning the vote for eighteen year olds—an objective I have worked for since 1952.

There is no political partisanship involved in these suggestions, and none will be tolerated, by Parade or by me. I also recognize that a written request for information is no substitute for dedication and commitment which young people ultimately must generate or for the receptivity and openness which the established leaders must demonstrate if the energies and ideals of youth are to be used constructively. But I also know that many young people would welcome some specific suggestions on how they can become more fully involved in the democratic process.

More than half our citizens are under 25 years old. Yet their voice has not been heard adequately in Congress, in the top councils of government or in our political parties. That is, perhaps, the fault of my generation. Today, however, youth has an opportunity to put its idealism to work.

Its response will be a measure of its sense of purpose.

DR. EDWARD H. LEVI, PRESIDENT OF CHICAGO UNIVERSITY, URGES 2-YEAR LAW STUDIES

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. PUCINSKI. Mr. Speaker, recently Dr. Edward H. Levi, president of the University of Chicago, proposed that the Nation's law schools give serious consideration toward an earlier termination point for formal law training.

Dr. Levi's proposal was incorporated in an address he delivered during the program celebrating the completion of a law school building at the University of Pennsylvania in Philadelphia on March 15, 1969.

I am including in the RECORD today Dr. Levi's address and am hopeful that his bold suggestion for an earlier termination of formal law studies will help start major dialog on the subject.

I believe that there is great merit in Dr. Levi's suggestion. His excellent address follows:

DR. EDWARD H. LEVI, PRESIDENT OF CHICAGO UNIVERSITY, URGES 2-YEAR LAW STUDIES

Karl Llewellyn, outstanding law teacher of a past creative period, thought lawyers could do almost everything. He thought doing was important. A scholar of folklore and legal history, he included the proper conduct of ceremonial events among the proper doings of lawyers. With special shrewdness, he knew these events were necessary and should be done well. As a former law school dean, who in one year—stretching over two—took part in at least five separate final dedications of the very same building, I can only imagine with awe the trail of luncheons, symposia, dinners and dedications which your ten-year program to complete the law quadrangle has left in its wake. We do well to celebrate. Ten years is a long time in the history of any American university; particularly for a private university where the art of planning is a subdivision of fortune-telling and witchcraft. Ten years is a particularly long time now; both law and education are at a turning point. We must welcome the realization that the conditions of 1969 and probably the next ten years are quite different from those perceived in 1959. You have earned the good fortune of new and renewed facilities. Their significance will be in their use to meet the changes of our time.

Our period is characterized by an enormous sense of inequality, a belief in the unbounded affluence of our country, a self-concern which is within the traditions of individualism and idealism but has other roots as well, an acceptance of power and coercion as ruling principles, and of an anti-intellectualism typical of agrarian or populist movements. These views and attitudes are widely shared. They are frequently coupled with such an assurance of helplessness as to make freedom of choice seem no longer personal, or merely symbolic, or at least something not to be exercised now, or to emphasize the desirability of drastic or catastrophic change. A feeling of collective guilt is pervasive. We have a soil conducive to self-righteousness, never hard to come by, for as Edmund Burke wrote describing the attitudes of a time which we hope is not too similar to our own "history consists for the greater part of the miseries brought upon the world by pride, ambition, avarice, revenge, lust, sedition, hypocrisy, ungoverned zeal, and all the train of disorderly appetites." There is a resurgence, too, reminiscent of older periods, of conviction in the inevitability and, therefore, the rightness of waves of the future. You may find this picture overdrawn and, of course, it is. Fierceness, exaggeration and wild, rapid swings in points of view are endemic in our history. But there is enough correctness in the characterization to present problems with which both law and education must deal.

Our present condition is the result of many circumstances, including the normal ones described by original sin. The attitudes and beliefs have deep roots. A combination of events has made them dominant today. To some extent the beliefs are based on reality. There has been and there is great inequality. The divisions and barriers are high. Steps to reduce them intensify awareness. There is affluence, although progress is not just purchasable—even though we may think it is—and resources are inadequate for the jobs to be done. The individualism in our country has always given high marks for getting ahead, even when individualism is used as an excuse for dropping out. We have not found a comfortable way of assuring an individual that even contentment is appropriate. So there is pressure. Even though we value the individual for what he is, we still find it necessary and so does he, to explain a lack of advancement as due to helplessness within a system. As for power and coercion, the examples cannot be avoided. The civil rights movement is seen as the creation of power necessary to counteract the coercion—and largely unlawful coercion—inherent in the society itself. The undeclared Viet Nam War harrowingly questions public and private morality and the legitimacy of violence.

Of importance to both law and education is the increased power of the communications media, with new forms and a new reach, and with an effectiveness which has made the creation of stereotypes and images a national endeavor. The stereotypes and images not only substitute for thought and discussion, they also substitute for experience. There have been times in the past when our country has had a special falling for platitudes. Now the combination of affluence, delayed entry into the world of doing, and the kind of education we have developed has made a large segment of the population more dependent upon what it is repeatedly told for its view of reality. It is not the world which is made available to the individual, but someone else's conception of it, telling him not only what is said to go on, but defining for him, in lieu of the real thing, what his reactions are. Of course, this has always been the case. One must depend upon the observations of others. But the patterns of life have changed sufficiently to make the individual particularly vulnerable to the message which substitutes for questioning and doing. Socrates taught by examining with his students certain common experiences. Today the pictures and the slogans not only come complete with the answer, when there is insufficient experience or thought to ask the question, but they operate on a level of a manufactured mythology of gods and devils. The individual is enveloped in this stuff. He is hard to reach—where does one begin?—and education is much more difficult.

Despite all the talk about the knowledge explosion and the rat race, we have a leisurely pace for education for many people in our country. At least we can say the education is long in time. Our motto seems to be "the longer, the better." Many more people are going to college and many more are going to graduate school. We have made a fetish about general education, confusing it with liberal education. We have contrasted liberal

education with professional, sometimes called vocational, training, meaning by this contrast that liberal education is not serious, or is not held to a high standard of proficiency, or that it is too serious, since it is concerned with self-development, to be turned to practical ends. In a peculiar although historic way, liberal education is often equated with amateurism. As Robert Brustein has cogently written, "the word amateur comes from the Latin verb, to love—presumably because the amateur is motivated by passion rather than money. Today's amateur, however, seems to love not his subject but himself." Since he frequently has not known any subject well enough to do anything with it, he often has not learned how to read, write or think very well. So he goes on to do graduate work, or enters a law school or some other professional school.

If he goes to graduate school it is likely he does this not because he wishes to learn how to do research, but rather because he would like to get the credentials so that he can become a teacher of other students who will go to college as he did and then go on to graduate school for the same reasons. The process is self-sustaining. The professional schools are in a separate category, although the lines are blurred. In general one can say the overwhelming trend is to build up more graduate programs and more professional schools, including for example, schools of business. It is a matter of some prestige to have the graduate or professional training begin as late as possible and to go on for as long a period as can be justified. Medicine is a good example. Not so long ago a medical student was expected to spend one year as an intern; now it is almost necessary that he spend two or three years more as a resident, or perhaps five or six or more for some specialties. He may be well in his thirties when this part of his training is over. Or, take the law schools. There was a time when we hardly had them. Then we began increasing the number of pre-law years required in college. In 1925 only one state required as much as two years of college before beginning law school. Today the general minimum is to require three years of college, and leading law schools, such as the University of Pennsylvania Law School, proudly require four. All this is regarded as good. But I wonder.

Education is costly. It costs the student. It costs society. For the student, a requirement of added years of formal study preempts part of his life. Should we not have as a mild principle: the required period of formal training will be as short as possible consistent with its proper purpose? To lengthen the period in order to screen or limit entry into the professions or because this is a result of the characteristic behavior of guilds, or adds prestige—these do not seem to come within a proper purpose. Our society has an educational burden which it has not met. The need is greatest at the pre-school, primary and secondary level. It is wasteful to misallocate educational resources—to keep the total period any longer than necessary is wrong. There are other consequences of the present system. We have isolated a substantial segment of the population, denying to it experiences which it wants and needs. At the same time we have encouraged the megalomania of colleges and universities by demanding they behave as substitutes for the world at large and for the agencies of government. Thus, we have weakened the intellectual aims and life of the universities, and we have deprived students a chance to develop skills and even wisdom by working on tasks outside formal education. The results should give us pause.

On a festive occasion such as this it would be nice to conclude that these doubts and questions do concern law schools. Perhaps they don't. I hope the merits of our great law schools are obvious. Their intellectual standards are often high. They are teaching institutions in which the students share to an amazing degree in the creativity of research in the humanistic tradition. The unity of subject matter and interest and the method of instruction, which as an ideal, anyway, compels participation, not only create an intellectual community, but they provide a training in the liberal arts not otherwise given in most academic programs. We should take note that these qualities are insufficient in the minds of those who call for more social science training or research in law schools, decry the over-emphasis on the case method—which in its pure form surely has not existed for generations—and decry the emphasis on case law, believe that law students should be able to take broadening courses outside of law in other departments of the university, feel strongly that some further training in service and more explicitly in processes of law reform should somehow be a greater part of the law student's experience. I do not know whether the call for a more practical training has waned or has become lost in the effort to staff anti-poverty and similar programs. On all these points of criticism, the law schools over the last forty years—and nothing in this area is entirely new of course—have made certain adjustments and accommodations. In addition, the schools have developed, and particularly in the foreign field, intensive graduate programs of their own. But I believe it is fair to say that law schools deserve their distinction because of their dedication to the application of structural thought, with precision and persuasion, to complex human problems and transactions. This is a great contribution which, in itself, invites questions.

There are three questions. I do not suggest the answers are obvious. The first is, accepting what the law school's greatest strength is, would it not be possible to give this basic training within a two-year rather than a three-year period. I believe there is general acceptance of the view that for many students the guts of what a law school has to teach have been given within two years. The coverage would not be as great. But the suggestion is not to wipe out a third, fourth or fifth year, but rather to give a reasonable early termination point for those who wish to leave formal law training after two years of study. What an extraordinary constructive challenge to the rest of the academic world it would be if law schools took this step! I don't think they will.

The second question is why should law schools, now that some of the malaise of undergraduate and graduate education is perceived, insist that their students have completed a four-year program before their law study is commenced? I am not sure there is even a doubt but that undergraduates could do just as well as graduates in formal law study. The argument has rather been that a broad liberal arts training or perhaps a general education was necessary to make a man or a woman a good lawyer or a public servant. But law is a liberal arts training. It is one of the best. I realize the argument is that law training will replace other study, although we are not usually sure what this is. It is a fallacy, in any event, and one with particular significance for the age which we seem to be entering, to assume that education must come in these college years or not at all. We must work toward a period in which not only is self-education understood to be the education which counts, but also a period in which there is continuing access to courses and lectures, and continuing self-education throughout an adult's life.

The third question cuts deeper. Why not make law study clearly undergraduate with some courses available to all students followed by more specialized work for those who desire this? This shocking suggestion has at least three points to commend it. The first is that it is of the greatest importance that the average college student have access to some training in basic legal theory. And second, this should be offered in terms of the serious consideration of legal problems so that college education can be revitalized by a professional standard of proficiency—we once could say excellence—building upon problems which can be perceived. And third, placing the lawyer's professional education at this point would respond to the law student's desire to take other broadening courses while he is engaged in law study. Those non-law courses are usually undergraduate courses which could be more easily available to him. I do not believe this suggestion will be adopted. It somewhat follows a European model, and we believe our training for law is better. Moreover, it flies in the face of the strongly held views of both the colleges and the law schools.

I have asked these questions to put the subject of law schools and legal education in its double perspective. One perspective looks toward the problem of education in its full sweep, with its confinement of the student, the length of time involved, the misallocation of resources as I think it is, the distance it imposes between the student and the reality of doing, and the lack of standards of proficiency when work is not seriously undertaken. We must, I think, find a way to shorten this period, to provide easier means for entrance and exit from the system with time out for doing, and we must find a way to give renewed seriousness—I have avoided the use of the word relevance—both in terms of the problems looked at and the standards of excellence required. The other perspective looks towards the law and the legal profession. Law schools do not train a complete lawyer. They cannot do so. In many ways we still have an apprenticeship system. But I do not believe the Bar has created the institutions which can make the necessary internship or apprenticeship as viable, equal and serviceable as can be done. And here, too, I believe, there are consequences for the law. It is not good to develop programs which only use law students to defend and represent the poor in criminal or civil cases or to lead community action programs, thus giving rise to the public view that the successful lawyer is busy on other things, and giving rise to the law student's view that virtue is to be found only on one side. We are in danger of developing a caricature of the adversary system, forgetting that this system only operates when the institutions of the law are created, defended and reformed by the Bar. It would help if the profession had institutions of doing in which all lawyers spent some time, and which were committed to the aid of the courts, to law revision, and to work in representation through assignment or some other mechanism so that a fair spectrum of causes would be seen and senior lawyers would be available on both sides. This is easier said than done. The institution which I have barely sketched undoubtedly won't work, but I am sure there must be some way for the Bar to face up much more directly to these problems than it has. I realize that in the last few years it has done quite a bit. I am suggesting there might well be a new allocation of responsibility between the law schools and the Bar, particularly if the law school could shorten the time, and young lawyers could more quickly move into a period of supervised practice.

What a queer talk to give at the end of a celebration of the completion of facilities which so elegantly meet the needs of the great law schools of today, and enable them to preserve the community which they have created. Our great law schools must be preserved. They will be. But they will do so best in these shifting times by looking ahead, not only at their own needs, and not only at the needs of the legal profession, but at the pattern of professional life in this country, and not only of education in general, but our system of justice and our understanding of it. The responsibility is very great. It is

a responsibility for leadership. I am sure this school, in the light of its tradition and its strength, will be among the leaders.

THE INCOME TAX SURCHARGE, PAY INCREASES, AND INFLATION

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 29, 1969

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks an editorial entitled " 'Nuff Said," published in the Savannah, Ga., Press of May 5, 1969.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

'NUFF SAID

Comments that require no editorial interpretation:

Sen. Harry F. Byrd, Jr., speaking of recent salary increases given members of Congress, the Supreme Court, Cabinet officers, and about 1300 other high-ranking executive and judicial officials: "We are in a period of high inflation. If we're going to get inflation under control there must be example at the top."

Sen. John J. Williams of Delaware, speaking on the same subject: "More than one-half of this $9 billion extra revenue that's coming in from the 10 per cent income tax surcharge, which we levied on every taxpayer in this country, will go for pay increases in the first half of this year."

TEXTILE IMPORTS SKYROCKET

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. DORN. Mr. Speaker, 2,400,000 textile employees are concerned about the fantastic increase in textile imports. For instance, textile imports reached a record monthly level of 362 million equivalent square yards in March. The March level was 45 percent higher than March 1968.

Mr. Speaker, the American people are concerned about this threat to an industry so vital to the national defense of our country. Secretary Stans is making a determined and courageous effort to protect the textile job security of the American people and preserve the defense posture of our country.

I commend to the attention of my colleagues an editorial from the Greenville News, Greenville, S.C., the textile capital of the world, and an excellent column by Mr. James K. Kilpatrick which appeared in the Washington Evening Star on Sunday, May 25.

The material follows:

[From the Greenville (S.C.) News, May 23, 1969]

NINETY-DAY NOTICE ON TEXTILE TRADE

The Nixon administration obviously hopes to work out a negotiated solution to the textile imports problem which threatens many American jobs and the economies of several states.

A negotiated and fair settlement, worked out with all countries involved, would be in the best interests of everyone. While it is necessary to protect textile markets in this country in order to keep the domestic industry strong, nobody really relishes unilateral action which could set off all sorts of trade repercussions.

Basically this section of the country clings to the ideal of free and friendly trade among nations, with as few barriers as possible. But free trade also has to be equitable.

The textile situation has special considerations. Under existing international arrangements, low-wage nations can and do flood certain segments of the manmade fibers market in this country, causing sudden disruption affecting many domestic plants and thousands of workers. A few years ago, they hit cotton with severe results. It is unfair competition from any angle.

Unlike previous administrations, the Nixon team has grasped that fact and is determined to do something about it. Preferably the solution will come through voluntary agreements with those nations in the Far East, Europe and a few in Africa which can and often do upset textile markets in the United States.

Commerce Secretary Maurice Stans' recent trips abroad were made with that purpose in mind. He was and still is trying to arrange friendly and fair agreements with all foreign nations concerned.

His efforts so far have not met like response. The Japanese attitude is especially intransigent and unrealistic. The Japanese insist on the privilege of virtually unlimited access to American markets. Japan, however, has numerous protective devices of her own.

Refusal of Japan to agree to voluntary controls prevents other countries from entering into such arrangements with the United States. As of now the prospect is not too bright for a negotiated settlement.

Secretary Stans, therefore, is quite right to issue what amounts to a 90-day ultimatum on Japan and other countries to show signs of reasonableness. He strongly indicates the administration will back legislation to put quotas on textile imports if voluntary give and take fails. Many members of Congress have quota bills ready for action.

As we have said before, we much prefer negotiated solutions to such issues, but textile state congressmen should keep their mandatory legislation updated.

[From the Evening Star, May 25, 1969]

THE TEXTILE INDUSTRY FIGHTS FOR ITS LIFE

(By James J. Kilpatrick)

SALISBURY, N.C.—Commerce Secretary Maurice Stans returned a week ago from his disappointing tour of the Far East. He went forth as a missionary preaching voluntary limitations on textile exports, but he came home with no converts. The very day after he got back, the U.S. Department of Labor hit the textile industry with a new regulation on noise levels.

Here in this textile town, it seemed too much. The industry is in deep trouble, fighting for survival against its foreign competitors. In the past seven years, imports of cotton products have more than doubled—from 720 million square yards to 1,700 million square yards—and imports of woolens and blends have gone up by 54 percent in the past year alone.

Now comes the limitation on noise, applicable to plants filling federal contracts. The rule says that factory noise must be held to 90 decibels. A typical plant manager, Thomas W. Borland of Cartex Mills, says flatly that it can't be done—not without the development of machines that haven't even been invented. Even expensive remodeling, involving carpeted floors and acoustic ceilings, won't reduce the noise level of spinning rooms and wave rooms to the newly-fixed point.

Borland looks like everyone's grandfather ought to look: Tall, white-haired, a ruddy face. He takes a visitor on a tour of his plant, talking as he goes of free trade, comparative wages, noise levels and equipment changes. His is a small mill, representative of scores of plants throughout the Carolinas. Great bales of orlon, dacron, and imported cotton arrive at the rear of the plant. The raw material passes through a long series of cleaning and carding procedures, runs through the Rockette rows of spinning bobbins, and emerges from the winding rooms as finished yarn.

Yes, it's noisy, but monster vacuum cleaners keep the place spotless and workers say they get accustomed to the racket. A reporter who strikes up conversations in drug stores, filling stations, and in the "towel stores" that dot the highways, learns that workers are merely mystified by the noise regulation. They are deeply concerned about foreign trade and the future of such towns as Salisbury. The U.S. textile industry employs 987,000 persons; the related apparel industry employs 1.4 million more. Never mind the noise. What about jobs?

This profound human concern was pressed upon President Nixon during the 1968 campaign. He promised, if elected, to seek voluntary restraints by foreign manufacturers. Stans' tour of the Orient fulfilled this pledge, but it produced no commitments from competitors abroad. They have a good thing going in the free American market; they don't want to se it curtailed.

Textile wages in the United States average about $2.28 an hour. The comparable figures are 25 cents in Hong Kong, 36 cents in Japan, 18 cents in Portugal, and 56 cents in Italy. European manufacturers are behind the U.S. in equipment technology, but Japanese mills are miniskirt modern. Shipping costs make no significant difference. Importers are having a marvelous time; the domestic industry is hurting: Its profits last year amounted to a net of 3.1 percent on sales, after taxes. Only the food industry has a smaller margin of profit.

"Either we get quotas put on imports, or many of our mills will close," Borland says. A number of members of Congress, not only from the South, but from other regions also, accept this unhappy prospect. The choice is especially galling for the South, which has preached the doctrines of free trade since the days of Jefferson and Calhoun. But some thing has to give; and if principle has to bend to reality, the realities of North Carolina count more than realities in Hong Kong.

This is not a novel dilemma. "Free trade," said Macauley, 150 years ago, "is one of the greatest blessings which a goverment can confer on a people, but it is in almost every country unpopular." If the Congress slaps on import quotas on foreign textiles, all the old devils of protectionism may swarm on Capitol Hill. Nixon is a free-trade man himself, but he can hear the political noise level rising. The astute Japanese, happily counting their profits, would do well to count these decibels, too.

WHERE ARE THE HEROES OF YESTERDAY?

HON. BERTRAM L. PODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. PODELL. Mr. Speaker, Memorial Day fast approaches, and this year its meaning shall be brought home to us in no uncertain terms. One cannot help but ponder wars and sacrifices of the past—those involving other lands as well as our own.

Why do men make war and offer their lives on an altar of sacrifice? There have been acts of heroism and selflessness through the ages which defy most explanation. Leonidas and the Spartans gave their all for the laws of their land. El Cid died for Spanish unity and freedom. The French soldiers at Verdun perished by the thousands for the sacred soil of their land. The last stand of the Imperial Guard at Waterloo is yet another example of what men will do in the manner of sacrifice.

There is devotion to duty, love of country, thirst for freedom, demand for liberty, and nationalistic sentiment. All have secured the ultimate gift a person can give to a cause or belief—the life of another human being.

Our Nation was conceived in an age of turmoil, from which surfaced certain elementary ideals of human dignity which we have since sought to embody by our actions and existence. From the very beginning of our national life we have enshrined sacrifice for a noble cause. Our ideals have supported this. Our wars have reinforced this. Our young men have died for it. Our people have revered it. Always there is one strain running through all these actions and happenings. The dignity of man and his inherent right to be free does not stop with any era of history or at the threshold of our Nation. For this Americans have fought and given their all in many wars, here at home and in far-off places. Always we felt it was worth while.

That is why we say that it was worth it to give half a milion young Americans to strike the shackles from the limbs of 4 million enslaved human beings. It was correct to fight the Kaiser and the right thing to crush Adolf Hitler and prevent South Korea from being swallowed up by an aggressor. Many men have fought to enslave other men, but only our country has consistently fought to free them.

Until now.

Memorial Day or Decoration Day was originally a spontaneous occasion that began after the Civil War. It was and remains a gesture of respect to the dead from the living for their sacrifice and ultimate devotion to our beliefs.

Our graveyards grow nowadays with a terrible swiftness, filling with the young men who only yesterday were their father's hopes, their mother's love and their sweetheart's dreams. In the past we could place their deaths in immediate perspective, for we knew instantly what we were struggling for. Grief could be dealt with, if not alleviated. In years afterwards, loved ones always had the consolation of knowing that their beloved had died for a cause that embodied America's highest ideals. Somehow military cemeteries of all wars and all nations are similar. I have visited several, from the Normandy beaches to the hills above the Valley of Meuse at Verdun. One wanders among the markers, noting that this one was 19 or that that one had been 21 when struck down. Always it is the young ones who perish, sent by the old to die.

As one stands overlooking one of these silent gathering places, the thoughts rush in. How many Einsteins lie buried here? How many Chopins? How many great surgeons and researchers? How many had quick laughs and warm hearts? Who among them was very sentimental or overly generous? Who had been an only son or a mother's sole support? Who had been the swift runner and who the innovator?

And before they died had they the chance to savor the beauty and warmth of life? Had they known the love of a woman and the joy of hearing their child's first cries?

How had they died? With brave words on their lips charging at the foe? Or in terror, dirt and loneliness? Did the words of glory which come so easily to the lips of the noncombatant race through their minds before they were struck in mid-flight? Their last thought? Of home? Of a woman's caress? A father's enjoinder? A thought of the Almighty? No one can know.

We can only ask ourselves whether or not it was a worthy altar upon which they laid their lives. For independence from Britain? Certainly. For the end of slavery? Of course. For stamping out Naziism? No doubt about it.

Today, however, we can and should ask the same questions about our present involvement. Let us compare what we are involved with today with the conflicts and sacrifices of the past. Do they compare? Are the sacrifices we are being asked to make today as worthy of being made as those our forebears made so freely and generously yesterday? Will pride mix with remembrance in years to come when we memorialize and revere the memory of our dead? Or will we have stained our escutcheon for the first time. Or will Americans have perished for the first time for an ignoble cause and in vain?

Let this Memorial Day be a time for soul searching as well as for memorialization and remembrance. Let us ponder our Nation, its destiny, its ideals, and what we want it to do. Those who have gone before would surely request this of us—in the name of what they died for to hand over to us. Let us give thought to what we are doing with their heritage and what we are going to pass on to our inheritors.

KEEPING TAB ON EX-OFFICERS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 29, 1969

Mr. PUCINSKI. Mr. Speaker, the Chicago Daily News recently commented editorially on my proposal which requires defense contractors to list former military men in their employment.

I am pleased that the Chicago Daily News has endorsed this proposal.

The Chicago Daily News editorial follows:

KEEPING TAB ON EX-OFFICERS

Rep. Roman Pucinski's proposal to require defense contractors to list former military men in their employ is in the public interest. The information is particularly pertinent in the light of the costly waste and blundering sometimes involved in such contracts, and joint efforts by the military and industry to cover them up.

The Chicago congressman's measure is based in considerable part on the recent Daily News series by William McGaffin and Robert Gruenberg detailing some of the wheeling and dealing by the military-industrial complex, in the course of which the taxpayer took a drubbing.

There is nothing necessarily sinister in a former military officer's accepting a private job in an industry engaged in defense or related work. The education and training of career officers tend to qualify for that type of work. At the same time, there is no denying that an ex-officer employed by a defense contractor may have certain advantageous contacts at the Pentagon. It would help clear the air all around if the identity of such officers were a matter of public record.

We do have a reservation about the requirement that contractors list not only ex-officers but all former military personnel, including enlisted men, who have served four or more years in the armed services. Compiling the roster of ex-enlisted men would entail a great deal of paper work, and prove nothing of any consequence. The bill should apply to former officers only.

FRAUD IN AMERICA—II

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. GONZALEZ. Mr. Speaker, 1 year and 1 week ago tonight, the CBS television network produced "Hunger in America." That show was possibly one of the most shocking things ever viewed in the United States. Its implications were vast, and it produced a national wave of revulsion, indignation, and demands for action.

No one denies that there is hunger in America. But it became clear that "Hunger in America" was a vastly overstated documentary, inaccurate, distorted, and shot through with fabrications. I pointed out all these things to CBS, in a long series of letters. I also called these facts to the attention of the House. From CBS I got replies to each of my letters—each reply from an executive higher on their totem pole, each one a little more curt and a little more insulting. Not one of the letters I got from CBS showed that I was wrong in condemning their film; in fact their responses showed that they knew they had lied to me and to the country at large, but in their sense of journalistic responsibility evidently nothing matters except ratings—certainly not objectivity and accuracy.

The opening segment of the "Hunger in America" show—what they call a "teaser" in the entertainment industry, was a picture that purported to show a baby dying of hunger. But independent investigations showed repeatedly that the picture was not of a baby starved to death, but of one that was born 2 months premature, of healthy parents who were neither ill nor hungry. Those investigations were conducted by a journalist, by the Federal Communications Commission, and by investigators from the great Committee on Appropriations, and every one of them came to the same conclusion; namely, that this shocking, horrifying scene that CBS used as its

"teaser" to gain and capture the attention of millions of viewers, and hence boost ratings, was a complete and blatant lie. But not only has CBS denied the truth, they brush it off as unimportant, and the findings of all investigators as mere nit-picking. Further they have gone to the trouble of promoting themselves a so-called Emmy Award, which in their view at least, will serve as a testament to the validity of their show.

Now it is revealed that CBS paid the persons who appeared on "Hunger in America." This is a clear violation of the Communications Act. CBS calls some of these payments "payments for releases" but in one case at least, a person was offered construction materials, and in another instance, a person was paid for the trouble of spending 3 days at home while awaiting the film crew's arrival. The amounts of the payments were small—usually ranging from $5 to $40 apiece. But the principle and the law are not so small. CBS might excuse itself for the payments by saying that they were for charity. But then it is plain that their "charity" hardly nicked the corporate coffers. One would expect more from the barons of the broadcast world. Or CBS might say that they paid for services rendered, or just to compensate people for their troubles. If that be so, Mr. Speaker, their wages are far below union scale for speaking parts, and they are cheating Actors' Equity out of their dues.

CBS was plainly looking for sensationalism in this film—not any objective study. They remarked to one man who cooperated with them that they were disappointed in the subjects he obtained for filming, because they looked too healthy. This gentleman pointed out that he told CBS representatives that cases of hunger were generally temporary in nature, and that in any case hunger might be present only because of other problems in the family. In the case of one family shown on the film, there might have been hunger, but there was also a father who was said to drink a great deal and stay away from home 3 to 4 weeks at a time. Yet if you believe CBS, the family was having problems because of governmental indifference and neglect.

Sensationalism requires the right kind of pictures. CBS wanted to show long lines of hungry people in San Antonio, waiting for food commodities. So they went to the commodity distribution office. When no big line of people showed up they asked that the doors to the place be closed until a line built up. The doors were closed for an hour and 45 minutes, so a line of people built up, for the benefit of the cameras. Even though the film was never used, it shows the callousness of the CBS crew, which cared not a whit about the inconvenience they were causing people, or the plain suffering that might have resulted from their tactic—they were told to get pictures of long lines of starving people, and that was one way that they could get what might seem at least to fill the bill. This incident shows clearly that CBS aimed to manufacture a story if nothing could be found that would factually support their script.

In another instance, CBS showed a girl about 11 or 12 years of age who had been arrested, they said, for soliciting for prostitution. They said that she was selling her body for food. Again the implication clearly was that governmental indifference and neglect had led this girl to her fate.

The fact is that at the time the film was made no investigation on her had been completed; indeed, she was placed in a foster home at the time of the filming and her troubles were being worked out. But she was taken out of the home and brought to a courtroom specifically so that she could be filmed as a Dickensian example of the hard life a careless and uncaring government had wrought. The television crew did not care about the facts of the matter, or the truth of the statement, or about how the girl had happened to be in the trouble she was in—they just wanted to be able to say that this was yet another example of horror in America. In fact, the child was neglected by her father, who evidently had no problems in caring for his children if he would only assume his responsibilities.

I do not find evidence of a single case where CBS attempted to document the full story of the people that they presented as being starving. There were no medical records checked on their "dying baby" segment; no interviews with medical personnel—unless those interviews happened to fit into the script; there were no efforts to trace how a family might fall into dire straits, or what might have been done to help them that was not already being done; only an effort to produce the harshest, most shocking picture possible and demand action from the Government.

Mr. Speaker, there is not a day when I do not encounter a family that has severe problems. I do not deny that there are people who are hungry, or who do not eat properly. But CBS lied and slandered in its presentation of the problem, it distorted the facts and it misrepresented the entire situation. Not only did CBS lie about the extent of the problem, it did not truthfully portray its causes, and made no effort whatever to assess what was being done about it, or how specifically more effective action might be taken.

CBS violated its public responsibility. Its conception of journalism is clearly not that which serves the truth, but that which serves CBS.

Mr. Speaker, I insert in the RECORD at this point a story from the San Antonio Express and News dated Sunday, May 25:

THE COCK PIT

In the whole long controversy over the CBS TV show "Hunger in America" there has been little, if any, public discussion of the way it illustrates the increasingly pervasive influence of massive foundations in the areas of communications and of politics itself.

It's an influence that stirs cheers from some Americans and fears in others, but it also marks a powerful new trend in public affairs that deserves honest and open examination and evaluation.

The CBS show which devoted a highly controversial one-fourth of its hour to San Antonio serves to illustrate this national trend. As far back as last July the Express-News disclosed the fact that the most shocking portion of the film—a scene purportedly showing an infant dying of hunger at Green Hospital simply was not true, and that the baby, in fact, had died of the complications of premature birth.

But it was only last Friday that a congressional committee made the flat assertion that much of the entire film appeared to have been staged. The committee report then lectured the press, radio and TV on their responsibilities for accurate newsgathering.

There seems little question but that the inspiration for the CBS show was the earlier report "Hunger USA" produced by the "Citizens' Board of Inquiry into Hunger and Malnutrition in the United States."

The Congressional committee report last week also indicted this work of the "Citizens Board" which has played a key role in the development of the national hunger controversy.

The Citizens Board was a spin-off from organizations which are now part of the "Center for Community Change" a national organization which has been heavily financed by the Ford Foundation and which—the New York Times has objected—is linked closely through its directors to the political activities of the Kennedy family.

The major organizations which were banded late last year into the Center for Community Change were the Citizens Crusade against Poverty which had established the Citizen Board of Inquiry into Hunger and Malnutrition, and the Citizens Advocate Center which helped staff the hearings and research of the Citizens Board. Included also was a "community press" which published "Hunger USA."

A member of the board of the Center for Community Change is County Com. Albert Pena who was a key advisor to CBS in its hunger filming here.

Pena was cited by CBS as authority for some of its statements about the hunger problem in San Antonio and CBS also relied on testimony given the "Citizens Board of Inquiry" at its September, 1967, San Antonio hearing in answering complaints by U.S. Rep. Henry Gonzalez as to accuracy on the San Antonio segment of the program.

A major recent flare-up in the political controversy over the CBS "Hunger in America" program and the Hunger USA publication also involved activities by the foundation-financed groups.

This occurred after the House Appropriations Subcommittee on Agriculture began its own investigation of both the publication and the TV film, sending investigators across the country.

The committee probers came under quick attack, and a major incident was headlined across the country from San Antonio.

This came when Rev. Ralph Ruiz, a member of the "Texas Committee Into Hunger and Malnutrition" which had sponsored the San Antonio hearing of the "Citizens Board of Inquiry," appeared before the December hearing of the U.S. Commission of Civil Rights in San Antonio to charge that FBI agents working for the House subcommittee had harassed and frightened poor people from San Antonio who had appeared on the CBS TV show. Rev. Ruiz had been a major performer on the show, but agreed he had not been frightened by the FBI agent who met with him.

The Ruiz charges made headlines from coast to coast.

One interesting aspect of them was the fact that the text of his remarks before the Civil Rights Commission had been made available in advance to major U.S. newspapers by Washington sources connected with the escalating battle over hunger.

At about the same time Harry Huge, a Washington attorney who had been a member of the "Citizen Board of Inquiry" appeared in San Antonio and visited Green hospital with an introduction from Pena.

Pena explained that Huge was doing a story for the original Citizens Board of Inquiry.

Huge subsequently joined Robert Cole in writing a lengthy article for "The New Republic" entitled "FBI on the Trail of the Hungar-Mongers." It centered on San Antonio and, needless, to say, was highly critical of the use of the FBI agents by the House committee—though the G-men, incidentally, did not identify themselves as such, but only as investigators for the committee.

The New Republic article also quoted Ruiz at length, noting he had substantially repeated remarks he made to the authors in his subsequent statement to the Civil Rights Commission.

Interestingly enough, Ruiz quoted from the very same portion of the 1967 San Antonio Model Cities application in proving a point about local poverty conditions as had CBS in one of its numerous exchanges with Rep. Gonzalez.

Now the House committee has had its say and it was a blockbuster. But what with the kind of virility being shown by foundation-backed groups working in the area of "social change" it will probably not be the last word in the propaganda battle over "Hunger in America" and "Hunger USA."

VENTURA COUNTY NAVY COMMANDS LEAD NATION IN YOUTH PROGRAMS

HON. CHARLES M. TEAGUE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. TEAGUE of California. Mr. Speaker, I am sure my colleagues will join me in a feeling of pride in the accomplishments of the Ventura County Navy commands in the back-to-school programs.

An article from the Point Mugu, Calif., Missile follows:

VENTURA COUNTY NAVY COMMANDS LEAD NATION IN YOUTH PROGRAMS

POINT MUGU.—Navy commands in Ventura County top the nation in youth assistance programs, the Navy's Office of Civilian Manpower Management (OCMM) announced recently.

Point Mugu and Port Hueneme Navy commands average one Back-To-School program employee for every 37 full-time civilian employes, the latest statistics show.

"This is almost three times better than the nearest Navy metropolitan area," Louis T. Shook, Pacific Missile Range (PMR) employment officer said.

The Pensacola, Florida, area has a ratio of 1:92. Other metropolitan areas which include Navy bases range from 1:95 to one youth program participant for every 1,117 employees. The Navy-wide average is 1:165.

"One of the outstanding features of our program here," said Shook, "is absolute backing from top management to first line supervisors. There is enthusiasm for the Back-To-School program at every level."

Support for the program is partly based on results, Shook believes.

"The command has found that the youths are a real asset," he said, "and this attitude enhances acceptance of the program here."

The Point Mugu program enrolled 137 students during the 1968–69 school year. Some graduated or returned to full-time school work during the year.

A summer youth opportunity employment program here will recruit 175 area youths, including many now in the Back-To-School plan. Another 50 persons will be trained at Point Mugu under the Neighborhood Youth Corps' Project Value, funded by the Department of Labor.

The OCMM noted that youth programs "are strongly encouraged by the Federal Government and the Navy," but not required.

The Naval Air Systems Command, under which Point Mugu operates, has more of its activities participating than any other major component of the Navy.

HIPPIES AHOY

HON. ALBERT W. WATSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. WATSON. Mr. Speaker, the age-old fable about the grasshopper and the ant has never been more applicable than it is today, especially in regard to the so-called hippies and other indolents who enjoy the good life at the expense of those of us who work for a living.

Mr. Speaker, I believe that the honest, hardworking American taxpayer is justifiably sick and tired of the vermin which we have all been subjected to in recent years. As far as I am concerned, these unkempt, long-haired creeps who are constantly flaunting the law, especially on the American college campus, are a worse form of blight on the natural beauty of this country than all of the junkyards and other debris which Mrs. Lyndon B. Johnson sought to eliminate in the so-called beautification program.

The editor of Christian Economics, Mr. Howard E. Kershner, recently wrote an excellent article about these creatures which is one of the best analyses of their irresponsibility that I have ever read. I would like to include it as a part of my remarks as follows:

HIPPIES AHOY

Hippies, ahoy! The rapids are ahead. You may live as vagabonds now while you are young, while you get support from your parents, while a benevolent government tolerates your irresponsibility, while taxpayers pay for the roads you use, the buildings in which you live and afford a generous amount of charity by which, in some degree, many of you exist.

You are privileged to live the kind of lives you lead because other, responsible citizens produce the undergirding which makes your irresponsible life possible. Your illegitimate children are adopted by stable families whom you despise. Your medical needs are taken care of by hard working, diligent doctors who work, as you are unwilling to work. The motorbikes you ride and the cars you drive were not made by people like yourselves, but by men and women who are willing to discipline themselves, as you are unwilling to do, and to produce the things which you are unwilling to produce.

You can be the irresponsible creatures you are, the drones living off of the work of others, only because most of the people are not like you. If they were, then your form of life would come to an end. All would perish, or discipline would have to be imposed by some tyrannical ruler who would be obeyed as a better alternative than starvation.

What right have you to be free of discipline while sponging your very existence off of people who must submit to it? The latter will not always tolerate your arrogant assertion of the right to enjoy the luxury of the civilization they create, without contributing to it.

Moreover, you will grow old and your needs will increase. They will be far more exacting than they are now. You will need warmer clothing, better housing, a better grade of food and more expensive living in many respects. What right have you to expect that others will provide for you? And if not, how will you provide for yourselves? You have little education, few skills and little to contribute to society in return for the living which you will need.

What is ahead for you, say, after forty? It is difficult for any one to find a good job after that age, but for people like you, without discipline and without skill, what is to become of you? You will not deserve charity and you cannot assume that you will get it. The taxpayers have every right on revolt against providing for you. Your indolence and defiance of the law of nature that men must live by the sweat of their own faces do not qualify you to expect, nor to receive, help from your more diligent brethren.

You are the perfect example of the ancient fable of the grasshopper who sang away the summer as he flitted from flower to flower enjoying the nectar and the sunshine. Meanwhile the diligent ant was storing up food. When the sun was gone and the flowers had dried up, the grasshopper was hungry and cold. He said to the ant, "Give me of your food and let me share your shelter."

The ant replied,

"Have you no food and shelter of your own?" The grasshopper confessed that he had none. "But what have you done all summer?" said the ant. "I sang," said the grashopper. "You sang?" said the ant. "Well now you may dance."

Beware, young Hippies, you are wasting your substance and the precious years of your youth in indolence and short-lived sensory pleasure. Sex, dope and idleness have their limitations. You have no idea of the bitter dancing that lies ahead for you, if you do not change your ways before you have squandered your heritage of time and strength. If you do not use your youth to lay the foundation for success in maturity and comfort in age, your suffering in years to come will be unmitigated bitterness.

EXPANDED NORTH PACIFIC AIR ROUTE BETWEEN SEATTLE AND TOKYO NEEDED

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. PELLY. Mr. Speaker, the people of the Pacific Northwest and especially those in the Seattle area were appalled at the recent decision of the President and the Civil Aeronautics Board which dealt them a disappointing blow in the transpacific air route case. These people felt entitled to competitive service and that if a second carrier was granted backup service with certain eastern and midwestern cities, through Seattle, as the closest gateway to the Orient the traffic would fully justify such competitive service.

Now, Mr. Speaker, the ever-alert Japa-

nese have recognized the potential of the timesaving northern route.

The State Department should grant Japan Air Lines' request and thereby the needs of such service will be partly met.

In turn it is to be hoped that Japan will grant similar American flight privileges so that the recent mistake of our Government will be overcome.

On this subject, under unanimous consent, I include an editorial from the May 25, 1969, Seattle Times:

SECOND CHANCE ON NORTH PACIFIC

The ever-alert Japanese have recognized what the American government apparently failed to see in its recent, disappointing decision in the transpacific air-route case.

That decision left the Seattle international air gateway with single-carrier service over the short, time-saving North Pacific route between Seattle and Tokyo.

But the Japanese have recognized the impressive traffic potential in such a route if it is provided with adequate backup service to Eastern and Midwestern cities.

A column by Robert L. Twiss elsewhere in the Times today reports on Japanese-government plans to seek two North Pacific air routes in bilateral discussions to be held between the United States and Japan, beginning next month.

One such route would link Tokyo with Chicago and New York by way of Seattle, the closest major United States point to Japan. The other route would connect New York to Tokyo via Anchorage.

Northwest Orient Airlines now is the only passenger carrier on the North Pacific Seattle-Tokyo route. Washington State parties in the transpacific-route case sought without success to convince the administration of the need for competitive service on that route to meet an expected boom in Pacific travel.

The logic of this view can be seen in the opinion of Shizuma Matsuo, president of Japan Air Lines, that air travel between the United States and Japan will double within the next six years.

Japan's interest provides Washington State governmental and trade-promotion groups with an opportunity to renew their bid for competitive service through the Seattle gateway over the North Pacific. It is to be hoped that they will make maximum use of that opportunity.

We urge the State Department to grant Japan Air Lines' request, which, of course, should open the way for additional American flight rights in Japan.

The logic of geography as well as present-day trends in international air transportation support the Japanese position.

PUCINSKI HAS A POINT

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. PUCINSKI. Mr. Speaker, recently I introduced legislation which will require that all bids for defense contracts would have to list military personnel working for the company submitting such bid.

The Chicago Sun Times has commented on my proposal and I would like today to call the Sun Times editorial to the attention of my colleagues.

I am pleased to have the editorial support of the Chicago Sun Times on this proposal and I believe that the suggestion made by the Sun Times improving the legislation is most valid.

The Chicago Sun Times editorial follows:

PUCINSKI HAS A POINT

Rep. Roman Pucinski (D-Chicago), a former military officer in World War II, has raised an eyebrow at some statistics he uncovered. Pucinski says the nation's 100 largest military contractors employ more than 2,000 retired high-ranking military officers.

Pucinski has introduced a bill to require all defense contractors to list the names of retired military personnel (and their former military assignments) in bids for defense contracts.

There has been much justified criticism of military spending. An enormous amount of waste in dollars and time has been uncovered by the General Accounting Office and others.

Nor is it uncommon for the defense-contracting industry and the military services to band together to conceal the fact that millions of dollars of the taxpayers' money has been wasted.

However, if defense contractors had to list such retired officers in their contract bids, it might be much easier to follow the line of influence when contracts go far beyond the agreed upon amount or violate the time limit for delivery of military hardware.

Pucinski's bill is in the public interest. It should be modified slightly. The bill now requires the listing of all former military men—officer and enlisted—who had served four years to be identified by the defense contractor. The requirement to list the former enlisted men should be dropped. It creates unnecessary paperwork. Few if any enlisted men ever had any influence in the esoteric circles of defense procurement in the Pentagon.

HON. WILLIAM J. DRIVER

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 28, 1969

Mr. EDMONDSON. Mr. Speaker, it is an honor for me to join my colleagues in paying tribute to William J. Driver, who is leaving as Administrator of the Veterans' Administration. He does so, I am certain, with pride.

As head of the VA, Bill Driver administered the world's largest medical program involving some 5,000 doctors and 15,000 nurses who care for the wounds and ills of veterans and their families.

He has continuously fought for legislation to improve loan programs enabling veterans and their dependents to own a home, a farm, or a private business.

The VA has the largest program of adult education and vocational rehabilitation and training ever undertaken in this country. The VA has underwritten the GI bill, enabling millions of veterans and certain numbers of their wives and widows to attend schools of higher learning under the direction of Bill Driver.

Few men, Mr. Speaker, have so justly earned the acclaim so justly bestowed on Bill Driver today. I am proud to share in this tribute to my friend and I wish him well.

Mr. Speaker, a few years ago it was my pleasure to have the distinguished chairman, the gentleman from Texas (Mr. TEAGUE), and Bill Driver as guests in my hometown of Muskogee, Okla.

It was a most pleasant experience, and I was highly impressed with the genuine admiration the employees at the Veterans' Administration hospital and the VA regional office in Muskogee showed for Bill Driver.

He earned and received the respect of those he worked for—the veterans—and those who worked for him. This is distinction of the highest order.

HOUSE OF REPRESENTATIVES—*Monday, June 2, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

From the rising of the sun unto the going down of the same the Lord's name is to be praised.—Psalm 113: 3.

Almighty God, our loving Heavenly Father, who art clothing the world with beauty and throwing a mantle of green across the shoulders of the hills, by whose law the planets keep their courses and by whose creative thought life has risen on this planet, make us conscious of Thy presence and help us to be patient and strong in Thee.

May the thoughts of our minds be channels for Thy way. May the dreams in our hearts fulfill Thy purposes for our Nation and for mankind. May the work of our hands weed out injustice and war and cultivate the seeds that flower into justice for all and peace in our world. By Thy spirit may we have courage enough to be pioneers in brotherhood, sustaining the hands and hearts of all who seek to end strife and to bring peace to the hearts of men.

To this end guide Thou our President, our Speaker, the Members of this body and all who labor with them. Ennoble their lives by the sense of Thy presence that they may be for this generation channels through which Thy kingdom may come and Thy will be done on earth.

In the Master's name, we pray. Amen.

THE JOURNAL

The Journal of the proceedings of Wednesday, May 28, 1969, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 412. An act to authorize and direct the Secretary of Agriculture to classify as wilderness the national forest lands known as the Lincoln Back Country, and parts of the Lewis and Clark and Lolo National Forests, in Montana, and for other purposes.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to announce that pursuant to the authority granted him on Tuesday, May 27, 1969, he did on May 28, 1969, sign the following enrolled bills of the Senate:

S. 278. An act to consent to the New Hampshire-Vermont interstate school compact; and

S. 408. An act to liberalize the eligibility requirements governing the grant of assistance in acquiring specially adapted housing for certain service-connected disabled veterans, to increase the amount of such grant, to raise the limit on the amount of direct housing loans made by the Veterans' Administration, and for other purposes.

ADDITIONAL PROPOSED MOON LANDINGS

(Mr. CONABLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CONABLE. Mr. Speaker, I would like to add my voice to those expressing skepticism about the proposed schedule of 10 additional moon landings after Apollo 11. It is difficult for me to believe that such a repetitive program for exploration of the moon can possibly return scientific knowledge sufficient to justify the expense and the hazard to our fine young men who serve this country as the pioneers of space. A splendid success repeated too often does not remain a success but becomes a waste. NASA tells us that a Saturn V rocket mission to the moon costs $350 million. Think of the terrestrial benefits $350 million could bring in the field of, say, pollution control. I do not advocate junking the rockets already built, but I question that we are putting this magnificent hardware to its most scientifically rewarding use in sending men back to the moon time after time.

The success of Apollo is a great tribute to NASA and to the quality control of the American aerospace industry. I have long felt, however, that once we have demonstrated the capabilities involved in landing men on the moon, we should proceed to less dangerous but equally significant scientific projects. If we don't have such projects prepared at this time, because of our concentration on manned space flight, let us save some of these rockets until we can develop a purpose in unmanned space flight worthy of the investment the American taxpayer has already made in the Saturn V.

SUPPORT PRESIDENT NIXON'S ABM REQUEST

(Mr. WYMAN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WYMAN. Mr. Speaker, the effect on the President's strength at foreign bargaining tables of denying him his considered request for minimum protection of our missile sites would be well nigh disastrous. Representatives of allies as well as the Soviet Union would immediately conclude that the President could not produce even a minimum of accomplishment in the defense of the Nation although he is Commander in Chief. This would be a poor way to send our No. 1 champion to any foreign conference table.

More basically it can be succinctly observed of the modified ABM President Nixon requests that—

It's better to have it and not need it than to need it and not have it.

The President wants the Safeguard system for the national security. After full consultation with legions of defense experts, the Joint Chiefs of Staff, leading scientists, and senior Members of Congress, the Commander in Chief has arrived at his opinion that Safeguard is needed to keep America strong and secure. To fail to support this modified request at this juncture in history is to fail America itself in its hour of need.

The Soviet Union has already deployed an ABM system around Moscow, consisting at present of more than 67 ABM sities. It is steadily expanding its ABM capability.

One of our principal deterrents to aggression upon us is the prospect of certain and devastating retaliation upon any aggressor. The limited ABM system President Nixon asks of this Congress would help assure us a continuing retaliatory capability which is of urgent importance to the National Security and in fact to our survival as a free Nation.

President Nixon's "minimum program essential for our security"—to use his own words—deserves the support of all Members of Congress and the American people in their own self-interest.

CONSENT CALENDAR

The SPEAKER. This is Consent Calendar day. The Clerk will call the first bill on the Consent Calendar.

DISCONTINUANCE OF THE ANNUAL REPORT TO CONGRESS AS TO THE ADMINISTRATIVE SETTLEMENT OF PERSONAL PROPERTY CLAIMS OF MILITARY PERSONNEL AND CIVILIAN EMPLOYEES

The Clerk called the bill (H.R. 4246) to discontinue the annual report to Congress as to the administrative settlement of personal property claims of military personnel and civilian employees.

Mr. HALL. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

AMENDING UNITED STATES CODE, TO AUTHORIZE THE SECRETARY CONCERNED TO MAKE PARTIAL PAYMENTS ON CERTAIN CLAIMS WHICH ARE CERTIFIED TO CONGRESS

The Clerk called the bill (H.R. 4247) to amend section 2734 of title 10, United States Code, to authorize the Secretary concerned to make partial payments on certain claims which are certified to Congress.

Mr. HALL. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

AMENDING SECTION 336(c) OF THE IMMIGRATION AND NATIONALITY ACT

The Clerk called the bill (H.R. 3666) to amend section 336(c) of the Immigration and Nationality Act.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. HALL. Mr. Speaker, reserving the right to object, I would like to inquire as to whether or not there is anything in this Federal legislation that would preclude the various States of the Union from still enacting their own requirements for voting?

Mr. Speaker, in lieu of an answer, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

PROVIDING FOR THE REAPPOINTMENT OF DR. JOHN NICHOLAS BROWN AS CITIZEN REGENT OF THE BOARD OF REGENTS OF THE SMITHSONIAN INSTITUTION

The Clerk called the Senate joint resolution (S.J. Res. 13), to provide for the reappointment of Dr. John Nicholas Brown as Citizen Regent of the Board of Regents of the Smithsonian Institution.

There being no objection, the Clerk read the Senate joint resolution, as follows:

S. J. RES. 13

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the vacancy in the Board of Regents of the Smithsonian Institution of the class other than Members of Congress, which will occur by the expiration of the term of Doctor John Nicholas Brown of Providence, Rhode Island, on April 25, 1969, be filled by the reappointment of the present incumbent for the statutory term of six years.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PROVIDING FOR THE APPOINTMENT OF THOMAS J. WATSON, JR., AS CITIZEN REGENT OF THE BOARD OF REGENTS OF THE SMITHSONIAN INSTITUTION

The Clerk called the Senate joint resolution (S.J. Res. 35) to provide for the appointment of Thomas J. Watson, Jr., as Citizen Regent of the Board of Regents of the Smithsonian Institution.

There being no objection, the Clerk read the Senate joint resolution, as follows:

S.J. RES. 35

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the vacancy in the Board of Regents of the Smithsonian

Institution, of the class other than Members of Congress, shall be filled by the appointment of Thomas J. Watson, Junior, a resident of Connecticut, in place of Jerome C. Hunsaker, resigned, for the statutory term of six years.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ALABAMA SESQUICENTENNIAL MEDALS

The Clerk called the bill (H.R. 10931) to provide for the striking of medals in commemoration of the 150th anniversary of the founding of the State of Alabama.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that a similar Senate bill, S. 1995, be considered in lieu of the House bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There being no objection, the Clerk read the Senate bill, as follows:

S. 1995

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in commemoration of the one hundred and fiftieth anniversary of the founding of the State of Alabama, the Secretary of the Treasury is authorized and directed to strike and furnish to the Alabama Sesquicentennial Commission five thousand silver and fifty thousand bronze medals with suitable emblems, devices, and inscriptions to be determined by such Commission subject to the approval of the Secretary of the Treasury. The medals shall be made and delivered at such times as may be required by such Commission, but no medals shall be made after January 1, 1970. The medals shall be considered to be national medals within the meaning of section 3551 of the Revised Statutes (31 U.S.C. 368).

SEC. 2. The Secretary of the Treasury shall cause such medals to be struck and furnished at not less than the estimated cost of manufacture, including labor, materials, dies, use of machinery, and overhead expenses; and security satisfactory to the Director of the Mint shall be furnished to indemnify the United States for full payment of such costs.

SEC. 3. The medals authorized to be issued pursuant to this Act shall be of such size or sizes as shall be determined by the Secretary of the Treasury in consultation with the Alabama Sesquicentennial Commission.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 10931) was laid on the table.

The SPEAKER. This concludes the call of the Consent Calendar.

THE ENVIRONMENTAL QUALITY COUNCIL

(Mr. GUDE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. GUDE. Mr. Speaker, I have today sent to the President a letter commending him for his action last Thursday creating the Environmental Quality Council as a Cabinet-level post to coordinate and direct the protection of our Nation's natural resources. His action marks an encouraging new breakthrough in the efforts at controlling the enormous problems posed by increased industrialization and increased population in urban and suburban areas; and it is an achievement around which all of us who are concerned about the quality of our environment can rally.

For too many people the areas of conservation and preservation of this country's natural resources remain only a latent priority. They fail to acknowldge the real menace perpetuated upon us by a polluted, neglected environment because so often the real menace is impossible to detect without scientific assistance. The President's concern that this trend be reversed is heartening: it prods us to reject a reliance solely on visible evidence in assessing such problems and reminds us that we dare not run the risk of compounded problems caused by our inattentiveness. I submit that this type of Executive foresight has already become a hallmark of the Nixon administration.

Already several of the tasks which the Environmental Quality Council can undertake have become urgent necessities: advancing interjurisdictional coordination of programs, appropriating adequate funds for a broadbased attack on these problems, and arousing greater awareness on the part of the Nation as to the tremendous scope and the nature of the environmental difficulties. I am confident that this Council can provide the necessary guidance and impetus toward the achievement of these ends.

In light of the prospects for progress which the new Environmental Quality Conference projects, I commend the action of the President to the attention of my colleagues.

YOUTH CAMP SAFTEY SURVEY ACT

Mr. DANIELS of New Jersey. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 763) to provide for a study of the extent and enforcement of State laws and regulations governing the operation of youth camps.

The Clerk read as follows:

H.R. 763

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Youth Camp Safety Survey Act".

SEC. 2. The Secretary of Health, Education, and Welfare shall undertake a study of State and local laws and regulations governing the operation of youth camps to determine—

(1) the extent of such laws and regulations; and

(2) the effectiveness of the enforcement of such laws and regulations by State and local authorities.

SEC. 3. As used in this Act, the term "youth camp" means—

(1) any parcel or parcels of land having the general characteristics and features of a camp as the term is generally understood, used wholly or in part for recreational or educational purposes and accommodating for profit or under philanthropic or charitable auspieces five or more children under eighteen years of age, living apart from their relatives, parents, or legal guardians for a period of, or portions of, five days or more, and includes a site that is operated as a day camp or as a resident camp; and

(2) any travel camp which for profit or under philanthropic or charitable auspieces, sponsors or conducts group tours within the United States, or foreign group tours originating or terminating within the United States, for educational or recreational purposes, accommodating within the group five or more children under eighteen years of age living apart from their relatives, parents, or legal guardians for a period of five days or more.

SEC. 4. Within one year from the date of the enactment of this Act, the Secretary shall submit to the President a comprehensive and detailed report of his findings, including such recommendations as he may deem necessary or desirable to insure the safe operation of youth camps.

SEC. 5. (a) The Secretary shall establish in the Department of Health, Education, and Welfare an Advisory Council on Youth Camp Safety to advise and consult with him in the preparation of the report required by section 4 and in the development of the recommendations included therein. The Council shall consist of the Secretary, who shall be Chairman, and eighteen members appointed by him, without regard to the civil service laws, from persons who are specially qualified by experience and competence to render such service. Prior to making such appointments, the Secretary shall consult with appropriate associations representing organized camping.

(b) Members of the Advisory Council, while serving on business of the Advisory Council, shall receive compensation at a rate to be fixed by the Secretary, but not exceeding $100 per day, including traveltime; and while so serving away from their homes or regular places of business, they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b-2) for persons in the Government service employed intermittently.

SEC. 6. The Secretary of Health, Education, and Welfare shall make a study of the operation of camps and campgrounds conducted by Federal agencies. The Secretary shall include in the report required by section 4 a comprehensive and detailed report of his findings from the investigation carried on under this section, together with such recommendations as he may deem necessary or desirable to insure the safe operation of such camps and campgrounds.

SEC. 7. There is authorized to be appropriated $175,000 to carry out the purposes of this Act.

The SPEAKER. Is a second demanded?

Mr. GROSS. Mr. Speaker, I demand a second.

The SPEAKER. Without objection, a second will be considered as ordered.

There was no objection.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 71]

Adams	Fish	Moss
Addabbo	Flynt	Murphy, Ill.
Anderson, Calif.	Ford, William D.	Murphy, N.Y.
Anderson, Tenn.	Foreman	Nelsen
Ashbrook	Frelinghuysen	Nichols
Ashley	Friedel	Nix
Barrett	Galifianakis	Obey
Bates	Gallagher	O'Konski
Berry	Gilbert	Ottinger

Dwyer	Michel	Wilson, Charles H.
Eckhardt	Mikva	Winn
Eshleman	Miller, Calif.	Wydler
Fallon	Morse	Zion
Farbstein	Morton	Zwach
	Mosher	

The SPEAKER. On this rollcall 278 members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PERMISSION FOR SUBCOMMITTEE ON HOME FINANCING, COMMITTEE ON BANKING AND CURRENCY, TO SIT DURING GENERAL DEBATE TODAY

Mrs. SULLIVAN. Mr. Speaker, I ask unanimous consent that the Subcommittee on Home Financing of the Committee on Banking and Currency may be permitted to sit during general debate today.

The SPEAKER. Is there objection to the request of the gentlewoman from Missouri?

There was no objection.

YOUTH CAMP SAFETY SURVEY ACT

The SPEAKER. The gentleman from New Jersey (Mr. DANIELS) will be recognized for 20 minutes, and the gentleman from Iowa (Mr. GROSS) will be recognized for 20 minutes.

Mr. PERKINS. Mr. Speaker, this bill deals in the most precious commodity we have—the lives of our youngsters. I want to commend, therefore, the work of our colleague, the gentleman from New Jersey (Mr. DANIELS), in bringing this bill to the Committee on Education and Labor and enabling us to bring it to the floor of the House. I invite the attention of the Members of the House to the fact that this bill was approved unanimously by the Select Subcommittee on Labor, of which the gentleman from New Jersey is chairman, and subsequently was ordered reported by the full committee by unanimous voice vote. This is a tribute to the legislative skills of our colleague.

Since 1940 the American Camping Association, a voluntary organization of individuals, agency camps, school camps, church camps, and private camps, has been developing standards for accrediting camps. It is significant that the American Camping Association favors this bill.

Camps are artificially created environments whose administrators must plan carefully to guarantee that all the basic needs of group living are provided in a safe, clean, and healthful manner. Many camp activities have inherent in them a degree of hazard such as swimming, archery, riflery, and horseback riding, which fact makes it imperative that camps live up to their obligations "in loco parentis."

The committee expressed the desire that this study would not only involve the existence or nonexistence of State laws and regulations, but would also concern itself with the important aspects of implementation. State laws and regulations can be magnificent, but if the people who have the responsibility for enforcement are not doing it properly, these laws can prove meaningless.

The committee wishes to emphasize that the power to legislate does not necessarily mean that that power should always be exercised by the Federal Government. In this instance, it is the committee's belief that each State can best implement the findings of the Youth Camp Safety Survey Act through the workings of its own State legislative process.

It is suggested that the findings of this study be widely disseminated and that they be specifically provided to the National Conference of Commissioners on Uniform State Laws. This group is composed of Commissioners from each State, the District of Columbia, and Puerto Rico. These Commissioners, usually numbering three from each jurisdiction, are under express legislative authority in 33 cases and under general executive authority in other cases. The State legislatures are, of course, free to accept or reject the work of the national conference in whole or in part.

Mr. DANIELS of New Jersey. Mr. Speaker, the fact that approximately 7½ million children between the ages of 6 and 18 attend approximately 11,500 youth camps indicates that camping is a big nationwide industry. Today, it is common for a family in one State to send children to a camp in another State. Due to this tremendous migration of children from State to State each summer and a lack of information concerning camp safety standards, it is incumbent upon the Federal Government through its commerce power to fill this breach by conducting a field study to provide knowledge of camping laws and regulations, and most importantly, information concerning the effectiveness of their enforcement.

This bill directs the Secretary of Health, Education, and Welfare to undertake a study of State and local laws and regulations governing the operation of youth camps to determine the extent of such laws and regulations and the effectiveness of their enforcement by State and local authorities and report to the President with recommendations. The bill further directs the Secretary to study the operation of camps and camp grounds operated by Federal agencies and to include in the report findings and recommendations. An advisory council on youth camp safety would advise the Secretary in the preparation of the report and in the development of recommendations.

An appropriation of $175,000 is authorized.

The need for this bill was demonstrated at the hearings by the following statistics: 26 States have only regulated sanitation of youth camps; approximately 15 States have some safety legislation; only three or four States make any reference to camp personnel; 24, or nearly half, the States have relatively little or no regulation in the way of camp legislation.

It is hoped that with the enactment of H.R. 763 many States would be stimulated to follow the example of Michigan and Colorado. These two States have passed the best camp safety laws in the Nation. Before Michigan enacted its camp legislation, the State averaged two to four, and in 1959, six, drowning deaths per summer. From 1963, with the enactment of the State's new program of reporting, inspection and enforcement of State standards, there has been only one drowning fatality.

In 1965, there were five fatalities in Colorado camps. In 1967, with camp standards which included immediate reporting of severe illness or death, licensing and annual inspection, Colorado reported only one severe illness and no fatalities. These two examples graphically indicate that it is possible to significantly reduce and control the hazards in camping for children.

I wish to emphasize that the youth camp safety survey act in no way attempts to standardize camping. It is not the purpose of this study to either encourage or discourage in any way any camping program, specific religion, camp philosophy or camp activity. The purpose of this study is simply to find how best to reduce camp accident and disease statistics.

This bill—which was reported unanimously and with bipartisan approval from both the Select Subcommittee on Labor and the full Committee on Education and Labor—would provide national leadership to germinate the necessary interest and information so that the State legislatures, camping organizations, and parents could all benefit from this comprehensive study of youth camps.

The well-being of our youngsters is our highest priority. I urge all my colleagues to pass H.R. 763.

I might state that the bill merely asks for a very modest authorization for $175,000. If we save the life of one child, I think it is worth the authorization that we seek by this bill.

The SPEAKER. The Chair recognizes the gentleman from Iowa (Mr. Gross).

Mr. GROSS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, let me say to the gentleman from New Jersey (Mr. Daniels), that since the States of Colorado and Michigan have adopted regulations that have practically eliminated fatalities at camps and provided for better sanitary facilities and so on and so forth, it seems to me that is the best argument anyone could make in opposition to this bill, which has all the earmarks of being nothing more than one of these foot-in-the-door propositions of the Federal Government invading the province of the States, which ought to be taking care of the regulations governing the operation of camps within their boundaries.

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I am delighted to yield to the gentleman if he will tell me why we should embark upon the expenditure of $175,000 for another advisory council in the Federal Government and for this purpose.

Mr. DANIELS of New Jersey. In answer to the gentleman, I would like to say this. In my remarks I indicated that there are 24 States in this country that have little of no regulations whatsoever so far as camp safety is concerned.

It is not the purpose of this legislation for the Federal Government to establish standards with respect to camps. It is merely the intent of this legislation to prod the States, particularly those States that do not have any legislation, with reference to sanitation and with respect to inspection and health safety to do something worthwhile to protect the life and limbs of our children.

I remember a number of years ago when I sent my two children to a camp in upstate New York and on the day I picked them up in the Catskills my daughter had a rash all over her body. This could have been prevented if we had some kind of adequate State camp legislation.

Mr. GROSS. That could have happened even with passage of this legislation and even by putting a Federal inspector in every camp in the country.

Mr. DANIELS of New Jersey. That is not the purpose of the act.

Mr. GROSS. It could still have happened; could it not?

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield further?

Mr. GROSS. I yield to the gentleman.

Mr. DANIELS of New Jersey. It is not the intent of this legislation to put a Federal inspector in every camp. It is the intent of this legislation merely to make a study and report to the President as to what might be done to germinate the States to take some effective action.

Mr. GROSS. At that point, then what happens?

Mr. DANIELS of New Jersey. At the termination of the study we expect the State would do the proper thing.

Mr. GROSS. I would expect the States would do that in the absence of this legislation. Do you mean to tell me that the States of Colorado and Michigan will not pass on to other States the regulations and experience that they have?

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from New Jersey.

Mr. DANIELS of New Jesery. Let the record speak for itself. What has happened is that 24 States have done nothing in this field, in spite of the fact that Michigan and Colorado have done something worthwhile. Is that not true?

Mr. GROSS. But there is no compulsion in the bill.

Mr. DANIELS of New Jersey. No.

Mr. GROSS. Is it expected there will be Federal compulsion tomorrow, next year, or some other time?

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield.

Mr. DANIELS of New Jersey. There is no intent to compel any State to take affirmative action.

Mr. GROSS. We are looking down the road at a taxpayers' revolt in this country. If we do not start saving $175,000 here and there and $175 million here and there, we are going to be bankrupt and the gentleman ought to know it. Why embark on a program of this kind? Other States can write to Colorado and Michigan to find out what they did to correct the situation. You do not provide for any compulsion in this bill, and I am glad that is the case.

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield further?

Mr. GROSS. I yield to the gentleman from New Jersey.

Mr. DANIELS of New Jersey. As I said before, and I repeat most emphatically, we do not provide any compulsion. It is merely suggested that the findings of this study be widely disseminated, and that the findings be specifically provided to the National Conference of Commissioners on Uniform State Laws. We do not have to spend $175 billion. This bill merely asks for a modest appropriation of $175,000. If we save the life of one child in this country by having the proper safety and sanitation legislation, I think the appropriation of $175,000 is a very, very small sum to pay, while protecting not only that child's life, but all the other 11½ million children that attend camps in this country.

Mr. GROSS. What are you going to do about protecting them on the way to the camp? What are you going to do about protecting them on the highways?

Mr. DANIELS of New Jersey. That is the responsibility usually of the parents.

Mr. GROSS. What is that?

Mr. DANIELS of New Jersey. When my children went to camp—and that was 20 years ago—it was my responsibility to see that they got there safely.

Mr. GROSS. Is it not the responsibility of the parent to look over the camp before sending his children there, or to inquire as to how it is operated? Is that not the responsibility of the parent as well? What you are attempting to do here is to spend $175,000 on some $100-a-day consultants, apparently.

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield further?

Mr. GROSS. I yield to the gentleman from New Jersey.

Mr. DANIELS of New Jersey. Surely it is the responsibility of the parents to see that the camp to which they send their child is a worthwhile camp, but often such information is not available. You know, when you send for a brochure, you get back a very glossy, fine, beautiful looking brochure that tells you what a wonderful camp this place is. That camp is miles and miles away from your home—say out in Colorado, New Mexico, or California—and there is no way a parent can go there except at terrific expense.

Mr. GROSS. What is the proposed Federal Advisory Council going to do about that?

Mr. DANIELS of New Jersey. About what?

Mr. GROSS. About wet-nursing the parents of a child that is being sent to a camp. How many additional wet nurses will this require?

Mr. DANIELS of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from New Jersey.

Mr. DANIELS of New Jersey. No wet nurses are provided in this bill whatsoever.

Mr. STEIGER of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. I appreciate the gentleman's yielding.

Mr. GROSS. Do you have trouble in Wisconsin, too? Are you incapable of communicating with Michigan and Colorado, particularly Michigan, to find out how they do such a good job of taking care of the camps in those States?

Mr. STEIGER of Wisconsin. I cannot respond as to whether there is communication between Michigan, Colorado, and Wisconsin on this problem. I can suggest to the gentleman that I do support this legislation, and I do so, because I think the hearings clearly indicate that this is one field about which very little is known. It is one of those fields in which there is, in my judgment at least, a legitimate reason to undertake a detailed study of the kinds of rules and regulations, the kind of action that needs to be taken by the various and sundry camps throughout this country in order to do a better job than we are now doing.

I want to say to the gentleman from Iowa—and I share his concern about spending $175,000 at a time of very tight fiscal situation—there are now hundreds of thousands, literally, of children in the United States, who are attending camps of all types throughout this country, and the number of accidents that are taking place in those camps has increased over a period of time.

Mr. GROSS. You do not think this bill is going to eliminate all accidents and sicknesses, do you?

Mr. STEIGER of Wisconsin. No; I do not at all. There is no question about

that. But it will, I hope, at least provide a blueprint with which one can operate at the State level, or any other level that is appropriate, to find out what it is that you must do to make the kinds of alterations in structure and the kinds of changes in rules and regulations in the camps so that the children will be protected.

Mr. GROSS. The State of Michigan and the State of Colorado can tell the gentleman. As the gentleman can note in the report of his own committee, those States have set in motion certain changes that seem to have done the job. Why then do we have to extract $175,000 from the taxpayers to pay $100-a-day consultants? The information is available in Michigan, and I am sure they will dispense it if the gentleman writes them and asks for it at the cost of a 6-cent stamp and a little elbow grease to write the letter.

Mr. STEIGER of Wisconsin. The gentleman from Iowa is well aware of the fact that it often is not done as well as we think it ought to be. I wish that it were possible.

Mr. GROSS. But the gentleman is bragging about the job they have done in Colorado and Michigan. What more does the gentleman want?

Mr. STEIGER of Wisconsin. What I want is, first, a more detailed analysis of both the Michigan and Colorado arrangements, and, second, I want a central point at which we can pull together the kind of information needed.

Mr. GROSS. And how long is it going to be before the gentleman's committee comes in with a bill to put some kind of Federal adviser at $100 a day in every camp in the country, once this foot-in-the-door Advisory Council is approved?

Mr. STEIGER of Wisconsin. That is not my intent, and I do not think it is the intent of the gentleman from New Jersey.

Mr. GROSS. The gentleman from New Jersey has not said that. The gentleman from Wisconsin has said it, but the gentleman from New Jersey happens to be the chairman of the subcommittee. If we drop $175,000 into the hands of $100-a-day consultants, and there are a few conferences in plush surroundings around the country, the $175,000 will be gone. Does the gentleman intend then to come back and ask for more money for this purpose?

Mr. STEIGER of Wisconsin. I will say in complete candor, first, I do not intend to come back with a bill to propose Federal standards on all camps throughout this country. I do not think that is appropriate, and I would not support this bill if that were the intent. But, second, based upon the hearings and the testimony before the committee, I believe this is an appropriate thing to do.

If the gentleman from Iowa will yield further, I will ask the gentleman from New Jersey as to whether or not there has been such an opinion expressed on this legislation.

Mr. GROSS. I yield to the gentleman from New Jersey.

Mr. DANIELS of New Jersey. Mr. Speaker, the Secretary of Health, Education, and Welfare did submit a report, and I will read from a letter from the Secretary:

> A study of State and local legislation and regulations with respect to the operation of camps such as that proposed by this bill is a necessary initial step in assuring basic protections, safety and standards, in their operation.

However, they do not specifically endorse this bill, because they say they have authority to conduct the study provided for in the bill and to seek the advice of experts. But the fact remains that HEW has not done anything whatsoever in this particular area. However, they feel that a study of this type is a good idea.

Mr. GROSS. The gentleman has not answered the question as to when the next step will be taken to expand what is being proposed here today. The gentleman has not given assurance to the House that this will be the end of this business when the $175,000 is expended.

Mr. Speaker, I yield 5 minutes to the gentleman from Missouri (Mr. HALL).

Mr. HALL. Mr. Speaker, I am in favor of saving the lives of all little children that we can. I would not be in the well of this House as a qualified physician had it not been for extensive experience as a camp director in my youth, and in the summertimes I worked my way through college and medical school in this manner.

At the same time, as far as my qualifications are concerned, I directed the Midwestern American National Red Cross waterfront and camp safety program for many years. I continue to serve on the Health, Camping, and Safety Committee of the National Council, Boy Scouts of America.

I think perhaps this is a "sacred cow" piece of legislation which transgresses federally on the problems of the various States of the Union. It has been aptly described as a foot-in-the-door technique.

I agree with my colleague from Iowa, it does, indeed, cite the successes of some of the States, which problems and findings are available to all others.

Mr. Speaker, in addition to that, there is a source which has not been mentioned, and is not included in the reports or any of the hearings which are available, and has not been discussed on the floor today. This is the self-policing effort of the various camping and youth agencies.

I am well aware of the activities of the American Camping Association, and I appreciate their recommendations and the need perhaps for collating this information. But I do not believe that we should establish a commission in perpetuity which is unbudgeted, wherein the Department says, "We already have the authority," without going to such organizations as the National Health Camping and Safety Council, the Boy Scouts of America, the Girl Scouts of America, the YMCA, the Camp Fire Girls and others.

Long before camps are established, including all those listed herein in the commission report, those camps are engineered, and the sites are surveyed by the regional officers and camping directors prior to approval of purchase. Long before then, other camps and other organizations are available for cross-reference, capital improvements, financing, layouts, safety, and so forth. There are loans from one national camping fraternity or organization to another of its engineers, as well as site and camp selection, camp program, waterfront safety program directors, and others.

Last year I journeyed, in the heat of the adjourning 90th Congress, to dedicate a new Girl Scout camp in the district which I am privileged to represent, which had had all of the loans of the various other agencies insofar as the regional and national camping authorities are concerned.

Mr. Speaker, in addition to the fact that this is a well self-policed area, which needs no additional spending for another commission or another study in perpetuity, there are certain Government agencies which have direct responsibilities, if we would but let them alone, or give the oversight and encouragement that is our responsibility for them to do their jobs.

Insofar as the question of transportation of children across State lines, the question of sanitation, the question of diseases spread during summer camps are concerned, where is the U.S. Public Health Service, the commissioned officers corps and the regional directors and those who have responsibilities for quarantine safety and the prevention of disease, as well as sanitation intrastate, and interstate? I say, if many of those who are "bleeding hearts" and social worker advisers and psychiatric workers, would do less toward destroying a professional uniformed commissioned corps of the Government, the U.S. Public Health Service, and would let them function and provide for them as they conceive their professional missions and objectives, then we would be in better condition to prevent some of the horrendous examples that are given in this report.

Certainly we cannot and will not, after this report is received and studied, ever attempt to put a federally authorized truckdriver in charge of every camp bus, or an adviser in every camp to regulate it nationally, whether it be danger of drowning, snakebite, falls off cliffs, or overexposure from poor layout, planning, execution, or other local responsibilities.

But as to the report, Mr. Speaker, there is a third point I want to make in noting my opposition to this bill. It is that it includes also the survey of religious camps. Now, we are opening up a tremendous "can of worms" when we go into inspecting the short-time summer camps of the various religions which are held for summer Sunday school and instructional purposes and for vacation Bible school and all other religious purposes. I believe that is a matter which will come out in the study commission's report, but the power to legislate must never mean the power to be exercised in control by the Federal Government.

The SPEAKER. The time of the gentleman has expired.

Mr. GROSS. Mr. Speaker, I yield the gentleman 1 additional minute, and commend him for the statement he has made for he has drawn upon years of experience in connection with youth camps.

Mr. HALL. I thank the gentleman for yielding me the additional time.

Mr. Speaker, history is replete with examples where commissions of this

type have been organized by the Federal Government and where studies and reports have been made, and then the exercise of the control is legislated thereafter. With such well self-policed bodies and such perfectly organized groups such as the Boy Scouts of America—and I stand here probably as proud as anyone wearing the Silver Antelope recognizing the service to youth in general and by all organizations, by the Boy Scouts of America, predicated on experience in camping in the great middle western area—it seems to me absurd that we would at this time take up this sort of a bill, to spend this kind of money, by organizing this type of commission.

Mr. STEIGER of Wisconsin. Mr. Speaker, will the gentleman yield to me?

Mr. HALL. I am glad to yield to the gentleman.

Mr. STEIGER of Wisconsin. Mr. Speaker, I want to make sure that the gentleman is clear that the American Camping Association testified before the committee on this legislation and indicated their support for this bill. In addition to that, they pointed out that only about one-third of the camps in the United States fall within the purview of the rules and regulations of that association.

Mr. HALL. Mr. Speaker, the purview would be well within the policing of the organizations themselves. This is indeed the very reason why States have not intervened in many instances, that is, in order not to take over the functions of the organizations.

Mr. DANIELS of New Jersey. Mr. Speaker, I yield 1 minute to the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Speaker, I intend to support this legislation. I think that we could perhaps assuage the fears of the gentleman from Iowa if we created some legislative intent here. It is the intent of the committee that any rules or regulations promulgated by this study commission will be published in the Federal Register at least 30 days before they become effective so that we have a chance to see them rather than to have this commission, like many others, issue guidelines that no one ever sees until they become effective. It is the intention of this body that any rules and regulations shall be published in the Federal Register for public inspection. I believe we would strengthen this legislation with this understanding.

Mr. STEIGER of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman.

Mr. STEIGER of Wisconsin. I will say that I do not think it is the intent of the bill, but the gentleman from New Jersey (Mr. DANIELS), the author, is here, and can provide for an interpretation of the regulations. So I would share the gentleman's thought as to the intent.

Mr. PUCINSKI. My friend from Wisconsin has dealt with these agencies long enough to know that somebody has to set up ground rules for the operation of this commission. All I say is that when these ground rules are set up they must be published first in the Federal Register so that we can see what they intend to do. I want it clearly understood this is the intent of the committee and the House.

Mr. DANIELS of New Jersey. Mr. Speaker, I yield 5 minutes to the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. Mr. Speaker, this area of youth camp safety is one that has gained public attention recently. The gentleman from Iowa makes a very persuasive argument which, by the way, was also persuasive to the members of our subcommittee. This is not an area where we should seek or desire Federal regulations or laws to control youth camps, but since this has attracted public attention and there is a lack of State regulation in many States, it is much like a vacuum that is going to be filled in one way or another. I think the members of the subcommittee felt the best way for it to be filled was not by passage of Federal regulations but to encourage States, such as Iowa, that have no State regulations over camping to do the job that they should do. For that reason, as is stated in our report very clearly:

> The committee wishes to emphasize that the power to legislate does not necessarily mean that power should always be exercised by the Federal Government. In this instance, it is the committee's belief that each State can best implement the findings of the Youth Camp Safety Survey Act through the workings of its own State legislative process.

So, the very thing about which the gentleman from Iowa worries is something which we worried about in our subcommittee. It was our conclusion that the State legislature is the best place to attack this problem. My suggestion was included in this report to the effect that any of the Commissions' findings should be sent, among other places, specifically to the National Conference on Uniform State Laws and that they turn their attention to recommending a uniform code to their legislative leaders looking toward the enactment of uniform State codes.

Mr. Speaker, the gentleman from Iowa (Mr. GROSS) asks:

> How soon will it be before you will be back here with proposed Federal legislation to put into effect rules and regulations at every camp across this country?

I can answer the gentleman in this manner: The proposals are already being made. The other body has proposals for safety laws providing Federal regulations for every little camp created for summertime enjoyment. The gentleman has asked the question and I answer the question of the gentleman from Iowa, if we do not make this move to encourage the State legislatures to undertake this obligation of policing their own camps, some law such as that which is now pending in the other body will pass and we will have the Federal presence in each one of these camps.

I do not believe we can continue to argue, "Let us not have the Federal Government do it; let the States do it," and then sit by idly watching the States do nothing. I think the only way we can fulfill the kind of desire which the gentleman from Iowa has and which I share with him, is to encourage the States, to take action.

Mr. Speaker, in my opinion this bill would forestall the imposition of Federal rules and regulations.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ERLENBORN. I yield to the gentleman from Iowa.

Mr. GROSS. Would it be too much to expect the House to consider a sense-of-the-House resolution or a concurrent-sense-of-Congress resolution calling attention of the States to the fact that Colorado, Michigan, and other States have done a good job of regulating summer camps instead of always authorizing money for the support of programs such as this that suddenly balloon into costs involving millions of dollars. What this amounts to here today is another "foot in the door" for bigger and better expenditures next year and ad infinitum.

Mr. ERLENBORN. I thank the gentleman for his contribution. If a sense-of-Congress resolution would accomplish the job of getting the States to move in this area, I would certainly join with the gentleman in sponsoring it and would be happy to vote for it. I do not think it necessarily will. I feel that the approach of obtaining a compilation of State laws and some recommendations as to what State laws should provide and which seem to be doing the job is a better approach.

Mr. STEIGER of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. ERLENBORN. I shall be happy to yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. Mr. Speaker, I want to make sure that the RECORD is clear on the point which was raised by the gentleman from Illinois (Mr. PUCINSKI). I think as far as I am concerned and insofar as the minority is concerned, clearly these rules and regulations will be compiled and ought to be a part of the Federal Register.

Mr. ROSENTHAL. Mr. Speaker, I rise in support of H.R. 763, the Youth Camp Safety Survey Act. This bill is very similar to the original legislation on this subject which I introduced last year.

The problems of youth camp safety are not new, as almost any parent can testify. There are many opportunities, each summer, for children to participate in organized activities to provide them with experiences different from their everyday school experiences. Each year over 6 million children participate in over 12,000 youth camps.

But parents, and children themselves, have never had adequate means to judge the many camps in existence for their suitability, their safety and their operational standards. Instead, they have had a variety of State and local regulations, with varying degrees of enforcement, and the self-imposed standards, some of them laudable, for private camping associations.

In 1967, Senator RIBICOFF and I introduced legislation for a Federal youth camp safety program which provided both standards for all youth camps and assistance to cooperating States to carry out improved youth camp safety programs.

That legislation was the subject of a report from the Department of Health, Education, and Welfare which supported its aims but said that the Department lacked sufficient information on youth camps to judge the need for a comprehensive safety program.

In response to that report, I introduced

the Youth Camp Safety Survey Act of 1968 to provide the information which HEW said was missing. I was, and remain, convinced that such information is already available and that we should proceed now with a program for Federal assistance to the States to improve youth camp safety.

I consider, therefore, H.R. 763 an interim measure which must eventually be perfected by legislation to set Federal standards and assist States in meeting them.

I am pleased to see that the subcommittee chairman, Congressman DANIELS, who has led the fight within this committee for youth camp safety, has proposed in H.R. 763 that the Secretary of Health, Education, and Welfare shall not only survey youth camp safety standards but also provide Congress with the Department's recommendations to insure the safe operation of such camps.

This bill also provides for the establishment of an Advisory Council on Youth Camp Safety which will advise and consult with the Secretary of Health, Education, and Welfare in the preparation of the report and the recommendations on youth camp safety.

I am confident, Mr. Speaker, that the prompt approval of this bill by the House will be an important step toward better youth camp safety. Millions of parents must decide each year, on inadequate information, which camps their children should attend and what health and safety provisions will protect them. In many cases these camps are located long distances from the family home, making thorough inspections by parents impractical or impossible. In many cases, also, the camps chosen are located in other States with unfamiliar laws and uncertain enforcement procedures.

Parents, need, and children deserve, better protection than they presently have. With the passage of this bill, the opportunities for better safety for children and better discharge of parental obligations will be greatly enhanced.

Mr. DANIELS of New Jersey. Mr. Speaker, I have no further requests for time.

The SPEAKER. The question is on the motion of the gentleman from New Jersey that the House suspend the rules and pass the bill H.R. 763.

The question was taken.

Mr. HUNT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 151, nays 152, not voting 129, as follows:

So (two-thirds not having voted in favor thereof) the motion was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. Gilbert and Mr. Addabbo for, with Mr. Hébert against.

Mr. Brasco and Mr. Diggs for, with Mr. Utt against.

Mr. Kirwan and Mr. Tiernan for, with Mr. Kuykendall against.

Mr. Madden and Mr. Farbstein for, with Mr. Ashbrook against.

Mr. Charles H. Wilson for, with Mr. Berry against.

Mr. Miller of California and Mr. Biaggi for, with Mr. Burke of Florida against.

Mr. Fallon and Mr. Gray for, with Mr. Colmer against.

Mr. Ronan and Mr. St. Onge for, with Mr. Price of Texas against.

Mr. Moss and Mr. Burton of California for, with Mr. Henderson against.

Mr. Reid of New York and Murphy of New York for, with Mr. Lennon against.

Mr. Barrett and Mr. Blatnik for, with Mr. Smith of California against.

Mr. Brademas and Mr. Adams for, with Mr. Burleson of Texas against.

Mr. William D. Ford and Mr. Gallagher for, with Mr. Davis of Georgia against.

Mr. Hanna and Mr. Helstoski for, with Mr. Dorn against.

Mr. Podell and Mr. Nix for, with Mr. Watkins against.

Mr. Friedel and Mr. Culver for, with Mr. Rivers against.

Mr. Carey and Mr. Clark for, with Mr. Nichols against.

Mr. Clay and Mr. Scheuer for, with Mr. Long of Louisiana against.

Mr. Powell and Mr. Celler for, with Mr. Morton against.

Mr. Anderson of California and Mr. Dawson for, with Mr. Galifianakis against.

Mr. Morse and Mr. Halpern for, with Mr. Scherle against.

Until further notice:

Mr. Stubblefield with Mr. Bray.

Mr. Hagan with Mr. MacGregor.

Mr. Stuckey with Mr. Foreman.

Mr. Jones of Alabama with Mr. Landgrebe.

Mr. Obey with Mr. O'Konski.

Mr. Eckhardt with Mr. Conte.

Mr. Brooks with Mr. Bates.

Mr. Anderson of Tennessee with Mr. Dickinson.

Mr. Jarman with Mr. Morton.
Mr. Jones of North Carolina with Mr. Hansen of Idaho.
Mr. Young with Mr. Brown of Michigan.
Mr. Landrum with Mr. Sebelius.
Mr. Flynt with Mr. Thompson of Georgia.
Mr. Steed with Mr. Robison.
Mr. Stephens with Mr. Wampler.
Mr. Preyer of North Carolina with Mr. Watson.
Mr. Blanton with Mr. Wiggins.
Mrs. Chisholm with Mr. Smith of New York.
Mr. Burton of Utah with Mr. Pettis.
Mr. Collier with Mrs. Dwyer.
Mr. Cowger with Mr. Wydler.
Mr. Frelinghuysen with Mr. McKneally.
Mr. Lukens with Mr. McDade.
Mr. Michel with Mr. Winn.
Mr. Zion with Mr. Meskill.
Mr. Harvey with Mr. Denney.
Mr. Zwach with Mr. Eshleman.
Mr. Fish with Mr. Steiger of Arizona.
Mr. Weicker with Mr. Gubser.
Mr. Mailliard with Mr. Mosher.

Messrs. DEL CLAWSON, LATTA, and WAGGONNER changed their votes from "yea" to "nay."

The result of the vote was announced as above recorded.

The doors were opened.

GENERAL LEAVE

Mr. DANIELS of New Jersey. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill H.R. 763.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the request of the gentleman from New Jersey?

There was no objection.

REVISING PAY STRUCTURE OF POLICE FORCE OF NATIONAL ZOOLOGICAL PARK

Mr. THOMPSON of New Jersey. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 2667) to revise the pay structure of the police force of the National Zoological Park, and for other purposes.

The Clerk read as follows:

H.R. 2667

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subchapter VI of chapter 53 of title 5, United States Code, is amended by adding at the end thereof the following new section:

"§ 5365. Police force of National Zoological Park

"(a) The Secretary of the Smithsonian Institution shall fix the per annum rates of basic pay of positions on the police force of the National Zoological Park in accordance with the following provisions:

"(1) Private—not more than the rate for GS–7, Step 5;

"(2) Sergeant—not more than the rate for GS–8, Step 5;

"(3) Lieutenant—not more than the rate for GS–9, Step 5;

"(4) Captain—not more than the rate of GS–10, Step 5.".

(b) The table of sections of subchapter VI of chapter 53 of title 5, United States Code, is amended by adding—

"5365. Police force of National Zoological Park."

immediately below—

"5364. Miscellaneous positions in the executive branch.".

SEC. 2. (a) Section 5102(c)(5) of title 5, United States Code, is amended by adding, immediately after the semicolon at the end thereof, the following: "and members of the police force of the National Zoological Park whose pay is fixed under section 5365 of this title;".

(b) Section 5109(c) of title 5, United States Code, is repealed.

(c) The first section of the Act entitled "An Act relating to the policing of the buildings and grounds of the Smithsonian Institution and its constituent bureaus", approved October 24, 1951 (65 Stat. 634; Public Law 206, Eighty-second Congress; 40 U.S.C. 193n), is amended by striking out "That the Secretary" and inserting in lieu thereof "That, subject to section 5365 of title 5, United States Code, the Secretary".

SEC. 3. (a) The foregoing provisions of this Act shall become effective at the beginning of the first pay period which commences on or after the date of enactment of this Act.

(b) No rate of basic pay shall be reduced by reason of the enactment of this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. GROSS. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. THOMPSON of New Jersey. Mr. Speaker, the purpose of this bill is quite simple in that it is bipartisan. There has been no objection to it at any level.

The purpose of the bill, essentially, is to bring into line the salaries of the police of the National Zoological Park with those of the Library of Congress and bring them fairly close to parity with the other police such as the Metropolitan Police of the District of Columbia and the adjoining areas.

Mr. Speaker, the National Zoological police are now 21 percent under the Supreme Court Police, 22 percent under the Capitol Police, 42 percent under the U.S. Park Police and 26 percent under the non-Federal sector average.

The result of this has been that there has come about a tremendous turnover of these highly trained men at the National Zoological Park. Oddly enough, they receive less money than manual laborers, but they must satisfy the requirement for employment of having at least 3 years of police experience.

The Director of the Smithsonian would have under this legislation the authority to adjust the wages upward in order to bring them on a parity with the other police forces in the area. But even at the highest level they would still receive no more than the first step of the Metropolitan Police force.

This bill is sponsored by the chairman of the Committee on House Administration (Mr. FRIEDEL), and on the other side it is sponsored by the gentleman from Ohio (Mr. Bow), who is a Regent of the Smithsonian.

Mr. SCHWENGEL. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield such time as he may consume to the gentleman from Iowa (Mr. SCHWENGEL).

Mr. SCHWENGEL. Mr. Speaker, the purpose of H.R. 2667 is to raise the salaries for the police force at the National Zoological Park to enable the Smithsonian Institution, the parent organization of the zoo, to be able to recruit and retain qualified zoo police personnel.

The salaries currently payable to the police force at the National Zoological Park are lower than for the other police organizations in the District of Columbia, and we are told there is a pressing need for the salary adjustments that could result from passage of H.R. 2667.

The bill removes the jurisdiction of the Classification Act of 1949, as amended, from all positions in the zoo police force, so that they would no longer by law come under the classification standards of the U.S. Civil Service Commission for such positions.

The legislation would however set up a four-level pay schedule for the zoo police generally along the same lines of the pay scale of the Classification Act. In so doing the bill would advance each of the four zoo police ranks two steps from their present levels.

Thus, those with the rank of private who currently are classified in grade GS–5 would receive a salary at the GS–7 level. Sergeants would move from GS–6 to GS–8; lieutenants from GS–7 to GS–9; and the captains from GS–8 to GS–10. In addition, the Secretary of the Smithsonian would receive authority under the bill to place any position on the force in any of the five steps which would comprise each of the four grade levels.

The zoo police would continue to be eligible for benefits such as retirement, life and health insurance.

A bill with identical provisions, H.R. 7195, 90th Congress, was passed by the House last year, on October 7, 1968, but was not passed by the other body prior to adjournment.

Assurances were given that this legislation, which will result in only a modest increase in cost, is very much needed to enable the Smithsonian Institution to maintain an adequate police force at the National Zoological Park and I would urge it be approved by the House.

I include the following statistical information in connection with the bill:

1. Twenty-nine positions are involved.

2. Annual salaries presently for zoo police is approximately $190,000.

3. Estimated annual increase under the conversion system the Smithsonian intends to use is approximately $28,500.

4. Comparison of starting salaries among area police systems.

	Metropolitan and Park Police	Capitol (after 2-weeks training)	Zoo	
			Present	Under H.R. 2667
Private	8,000	7,562	5,732	6,981
Sergeant	10,175	9,950	6,321	7,699
Lieutenant	11,710	11,343	6,981	8,462
Captain	13,852	13,532	7,699	9,297

5. The National Zoological Park Police force performs various functions which can be compared with other police forces in the city, particularly the Park police. They are there to prevent crime, to prevent disorder from crowds, to direct traffic, to arrest violators, control parking, give first aid, and provide information to visitors.

6. Because of inequities in police salaries, the turnover for zoo police since 1964 has been about 50%.

Mr. BOW. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield such time as he may consume to the gentleman from Ohio (Mr. Bow).

Mr. BOW. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, as a Regent of the Smithsonian I support this legislation and would like to give my reasons for this support.

GROWTH OF ATTENDANCE AND EXHIBITION FACILITIES

The development of many additional exhibition facilities and greater visitor public attendance at the National Zoological Park reflects the increasing need for a police force with special qualifications and associated performance to assure the continued preservation of peace and protection of the public. The growing public interest in the National Zoological Park is evidenced by the fact that during fiscal year 1967, there were approximately 4,937,629 visitors using the park's facilities. In fiscal year 1968, these figures, partly as a result of the disturbances in the city during the spring of 1968, varied only slightly with 4,824,714 visitors recorded. There were 4,055,673 visitors during fiscal year 1959. This represents an average visitor increase of 17.9 percent since the last pay grade raise granted to the policemen of the National Zoological Park.

In 1962, the Congress authorized a major construction and improvement program to renovate the exhibition facilities and to remove heavy arterial traffic from the center of the National Zoological Park. This program has resulted in a material increase in visitor population since that time and we may expect a continued rise in the number of visitors as the exhibitions increase.

This large number of visitors and vehicles in the 176-acre park demands a highly experienced and responsive National Zoological Park Police force. The 3,000 animals and the wild and natural habitat of the area add significantly to the extraordinary police activities. A 24-hour vigil is mandatory, and exposure is heightened because the area is not lighted and approximately 50 percent of the terrain is wooded.

EXPERIENCE REQUIRED

The constant and large assembly of our citizens in a limited area with wildlife requires special zeal and attention unique to the National Zoological Park. Because of the heavy responsibilities for the protection of the public, including a substantial portion of young people, the National Zoological Park Police requires 3 years of police experience which has given the candidate a broad knowledge of police operations, practices, and techniques, prior to employment as a private in the National Zoological Park Police force.

JURISDICTION AND DUTIES

The police force of the National Zoological Park functions as do its counterparts in the city. The force is needed for enforcement of the law, and has the same responsibility within its jurisdictions as do other enforcement groups within their respective jurisdictions. It is there to prevent crime and crowd disorder, to direct traffic, control parking and to render first aid.

Their most valuable service is the deterrent of potential lawbreakers. The second most valuable service is the observation, reporting, and correction of conditions in the park—concerning the safety of visitors, employees, and animals. Parking and traffic control are a heavy load, as with other police departments. Police patrols protect property, animals from abuse, and the safety of visitors.

The range of services performed by the National Zoological Park policeman is much greater than that commonly found in other law-enforcement jurisdictions. Every policeman on the force is expected to serve as an information source, to enforce park regulations designed to protect the public as well as the animals, to be concerned with public safety against such hazards as overhanging branches, loose rails, icy walks; to respond to snake bites; to provide antivenom kits upon request to hospitals, to use weapons in an emergency or an animal escape; to check building temperatures and to be alert for animals which appear sick or injured; and to conduct an investigation of all accidents. They serve as the reception point for many official visitors, both foreign and from the States, as well as operating the communications center. These responsibilities require special training at the National Zoological Park for familiarity with practices, personnel, animals, and buildings.

LOW PAY—HIGH TURNOVER

As a result of the relatively low pay scales authorized for its police force, the National Zoological Park has experienced grave difficulties in recruiting policemen and retaining an adequate force. Since 1964, the turnover rate has been over 50 percent; directly attributed to changes for higher salaries elsewhere. Half of the policemen leaving, secured positions in other than police work, which resulted in a significant loss to the trained police community. We believe the following chart clearly indicates one of the principal reasons for the high turnover rate:

PRESENT POLICE SALARY PERCENTAGE DIFFERENCE (ABOVE NATIONAL ZOOLOGICAL PARK POLICE)

National Zoological Park Police	Supreme Court	U.S. Capitol	U.S. Park Police	Non-Federal sector average
Private	21	22	42	26
Sergeant	34	48	51	42
Lieutenant	33	62	46	44
Captain	46	76	52	35

That reason is low pay. The National Zoological Park policemen receive 21 percent less pay than the lowest paid recognized police force in the Washington, D.C., metropolitan area. A further example of the reasons why recruitment and retention is so difficult is shown below:

COMPARISON OF PRESENT POLICE SALARIES AT THE NATIONAL ZOOLOGICAL PARK WITH OTHER KINDS OF WORK

Position	Starting salary		Experience required	After 6 months	After 1 year	After 2 years
	Per hour	Per year				
Policeman (private)	$2.76	$5,732.00	3 years of police experience	$5,732.00	$5,924.00	$6,115.00
Manual laborer	2.73	5,678.40	None	5,907.20	5,907.20	6,136.00
Trades helper	2.92	6,073.60	Passage of simple written test	6,323.20	6,323.20	6,572.80

These situations presently exist, and clearly show the financial plight of the National Zoological Park policemen. The policeman must present himself for work in a neat and trim manner befitting a representative of the agency—which requires out-of-the-pocket expenditure for the maintenance of uniforms—only to find that he is—after 6 months—making $175 less per year than a manual laborer. The manual laborer after 2 years is still earning at least $21 more per year than the policeman. This has been a continuing cycle, since the manual laborer receives annual cost-of-living increases under the Federal wage board system, which the policeman is not entitled to, since he is a general schedule employee. In the case of the trades helper, he starts out—after passage of a simple written test, with no experience required—earning $307 more per year than the policeman—who must have 3 years of police experience. After 1 year this trades helper is making $399 more per year than the policeman. This same trades helper usually is able to advance to the journeyman level after 4 years and would be making $7,800 per year. It may be noted that a policeman who spends 18 years in the rank of private can only attain $7,456 per annum at this time. We believe the above situations clearly demonstrate why the recruitment and retention of policemen at the National Zoological Park is so difficult. An environment of high morale and esprit de corps is extremely difficult to establish and maintain under such circumstances, and it becomes obvious why we have experienced such a large loss—50 percent—of trained officers to the police community.

The following table indicates the present and proposed National Zoological Park Police salary comparisons with counterpart law-enforcement jurisdictions in the Washington metropolitan area:

POLICE SALARY COMPARISONS (SALARY RANGE OF EACH RANK)

Present National Zoological Park Police, rank, grade, and salary range	S. 883 and H.R. 2667 for more comparable salaries for National Zoological Park Police	Supreme Court	Capitol	U.S. Park Police	Non-Federal sector, average of 10 towns
Private, GS-5, $5,732 to $7,456	$6,981 to $7,913	$6,938 to $8,835	$6,965 to $9,950	$8,000 to $10,300	$7,227 to $10,020.
Sergeant, GS-6, $6,321 to $8,221	$7,699 to $8,727	$8,448 to $10,755	$9,353 to $12,338	$9,570 to $11,610 (detective)	$8,972 to $12,159.
Lieutenant, GS-7, $6,981 to $9,078	$8,462 to $9,590	$9,317 to $11,861	$11,343 to $14,328	$10,175 to $12,215 (sergeant)	$10,076 to $13,677.
Captain, GS-8, $7,699 to $10,012	$9,297 to $10,537	$11,250 to $14,319	$13,532 to $16,517	$11,710 to $13,850 (lieutenant)	$10,421 to $15,493.

It may be noted that the present starting salary for a private in the U.S. Park Police is $8,000. By contrast the starting salary for a private of the National Zoological Park Police Force is $5,732, a difference of $2,268—in other words, 40 percent less than his counterpart.

We believe the only valid comparison for salary purposes is to compare the work and responsibilities of the National Zoological Park Police privates with the work and responsibilities of the U.S. Park Police private.

On this basis, we have made a point-by-point analysis of the National Zoological Park Police private with the private in the patrol division of the U.S. Park Police. This original study was made in 1964, by the chief of our classification section; and has now been updated as of February 18, 1969. If I may, I would like to submit this in part for the record.

I will point out the conclusions which are readily apparent from this study. First, the study finds that there is no basis for comparing the total National Park Police operations with the National Zoological Park Police. We compare, instead, with the patrol division and we emphasize the comparison of the basic duties of the police privates in both cases. It was concluded that the private on either force may be confronted with serious crime at any time, and that the laws and statutes enforced and the qualifications and training required are comparable in all respects, with the exception of pay. It was noted that the National Zoological Park Police receive less on-the-job training because they must have had 3 years' of police experience prior to joining the force.

The fact that serious crimes, of the same nature generally occur in both jurisdictions is evidence of the comparability of the responsibility of the two police forces. The number of arrests on the part of the National Park Service Police is understandably larger since that police force is about 10 times the size of the National Zoological Park Police. Also, it is to be considered that the zoo is more heavily policed with the consequential greater deterrent effect.

In considering crime statistics it is significant to note that without the patrolling of police and the resulting deterrence to vandalism and crime, there would of course be a far higher incidence of vandalism, abuses of animals, thefts from parked automobiles, and accidents to visitors caused by their own misbehavarior.

We have made appropriate adjustments in our comparative study to recognize the difference in size of the National Zoological Park Police and the National Park Service Police. Consequently, the supervisory officer salaries have been adjusted—our sergeant to compare with their detective, our lieutenant with their sergeant, and our captain with their lieutenant.

DIRECT BENEFITS

The pending legislation would remove all positions in the police force of the National Zoological Park from the provisions of law—Classification Act of 1949—which requires the application of Civil Service Commission position classification standards. This action would avoid conflict with any regulations and standards issued by the U.S. Civil Service Commission.

The pending legislation would confer upon the Secretary of the Smithsonian Institution authority to fix the salaries of all positions in the police force of the National Zoological Park, within the limitations of H.R. 2667 and S. 883.

The Smithsonian Institution endorses the principles of this pending bill, recognizing that it does not fully meet the objective of Congress, which is to establish comparable salaries for like work.

Favorable consideration of this bill, however, will be most helpful in attracting and maintaining the quality of police force needed at the National Zoological Park.

Mr. GROSS. Mr. Speaker, I yield back the balance of my time.

The SPEAKER pro tempore (Mr. ALBERT). The question is on the motion of the gentleman from New Jersey that the House suspend the rules and pass the bill H.R. 2667.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. THOMPSON of New Jersey. Mr. Speaker, I ask unanimous consent that all Members desiring to do so may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

SHARING PROGRAM OF THE DEPARTMENT OF MEDICINE AND SURGERY, VETERANS' ADMINISTRATION

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 9634) to amend title 38 of the United States Code in order to improve and make more effective the Veterans' Administration program of sharing specialized medical resources.

The Clerk read as follows:

H.R. 9634

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5053(a)(1) of title 38, United States Code, is amended by deleting "for the exchange of use" and inserting in lieu thereof "for the mutual use, or exchange of use,".

The SPEAKER pro tempore (Mr. ALBERT). Is a second demanded?

Mr. TEAGUE of California. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

GENERAL LEAVE TO EXTEND

Mr. TEAGUE of Texas. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days to extend their remarks on the veterans' bills which will be considered this afternoon.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. TEAGUE of Texas. Mr. Speaker, this bill seeks to amend the language in section 5053(a)(I) of title 38, to conform to that used in the Public Health Service Act to achieve a more effective and improved administration of the sharing program conceived as a part of Public Law 89–785, which was sponsored by the Committee on Veterans' Affairs in an effort to approve education and training within the Department of Medicine and Surgery of the Veterans' Administration. Because it appears that the present law precludes agreements for the mutual use of community resources except in those cases where reciprocal exchanges of a Veterans' Administration resource is a part of the program, this legislation is necessary.

The measure was presented in a formal submission to the Congress.

There would be no additional cost as the result of this act.

The Veterans' Administration has many agreements with medical schools calling for the the exchange of the use of specialized equipment, but in order for such agreements to work, the Veterans' Administration is required to have something to give the medical school in return. Under the proposed bill a medical school could have a cobalt unit and if the bill were in effect, the Veterans' Administration could use it, assuming a sharing agreement existed between the two installations. Today, however, the Veterans' Administration would have to have some service or some equipment which the school desired in order for the Veterans' Administration to use the cobalt machine without paying for it.

The SPEAKER pro tempore. The Chair recognizes the gentleman from California (Mr. TEAGUE).

Mr. TEAGUE of California. Mr. Speaker, I yield such time as he may use or require to the ranking Republican member of the subcommittee, the gentleman from Tennessee (Mr. DUNCAN).

Mr. DUNCAN. Mr. Speaker, I rise in support of H.R. 9634. This bill will improve the Veterans' Administration's procedures for sharing special medical resources with community medical resources.

The 89th Congress enacted legislation which permitted the Veterans' Administration to share specialized medical resources with community medical facilities. The legislation was designed to permit the Veterans' Administration to acquire community medical resources for their patients and to improve medical education and training of Veterans' Administration doctors. Because of a literal interpretation of the law, however, the Veterans' Administration can only acquire the use of community medical resources when there is a reciprocal use of VA resources by the community.

The language of H.R. 9634 will permit the Veterans' Administration to acquire the use of community medical resources, regardless of whether the Government is furnishing resources or services in return.

The Veterans' Administration has requested this language and I am advised

that its enactment would result in no additional cost to the Government. I urge that it be passed.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Texas that the House suspend the rules and pass the bill H.R. 9634.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

MEDICAL BENEFITS FOR OLDER VETERANS

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 693) to amend title 38 of the United States Code to provide that veterans who are 70 years of age or older shall be deemed to be unable to defray the expenses of necessary hospital or domiciliary care, and for other purposes, as amended.

The Clerk read as follows:

H.R. 693

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 622 of title 38, United States Code, is amended by inserting "(a)" immediately before "For", and by adding at the end thereof the following new subsection:

"(b) Notwithstanding the provisions of subsection (a) of this section, the Administrator may not require any statement under oath from an applicant referred to therein who is seventy-two years of age or older for the purpose of determining inability to defray necessary expenses, and such applicant shall be deemed to be unable to defray the expenses of necessary hospital or domiciliary care."

SEC. 2. Subsection (g) of section 612 of title 38, United States Code, is amended to read as follows:

"(g) Where any veteran is in receipt of increased pension or additional compensation or allowance based on the need of regular aid and attendance or by reason of being permanently housebound, or who, but for the receipt of retired pay, would be in receipt of such pension, compensation, or allowance, the Administrator may furnish the veteran such medical services as he finds to be reasonably necessary."

SEC. 3. Subsection (h) of section 612 of title 38, United States Code, is amended by inserting immediately after the words "by reason of being" the following: "permanently housebound or".

SEC. 4. Subsection (a) of section 610 of title 38, United States Code, is amended (1) by striking out "and" at the end of clause (2); (2) by striking out the period at the end of clause (3) and inserting in lieu thereof "; and"; and (3) by adding at the end thereof the following:

"(4) any veteran for a non-service-connected disability if such veteran served in the active military or naval service in Mexico, on the borders thereof, or in the waters adjacent thereto during the period beginning on May 9, 1916, and ending on April 6, 1917."

SEC. 5. (a) The provisions of section 201 of the Revenue and Expenditure Control Act of 1968 shall not apply with respect to employees of the Veterans' Administration and such employees shall not be taken into account in applying the provisions of such section to the other departments and agencies of the executive branch.

(b) Section 4 of the Act entitled "An Act to amend title 38 of the United States Code to provide nursing home care and contract hospitalization for certain veterans living in Alaska and Hawaii, and for other purposes", approved October 21, 1968 (Public Law 90-612, 82 Stat. 1202), is hereby repealed.

(c) Subsections (a) and (b) of this section shall take effect on the date of the enactment of this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. TEAGUE of California. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Texas (Mr. TEAGUE).

The TEAGUE of Texas. Mr. Speaker, section 1 would provide that a veteran who is 72 years of age or older no longer be required in order to gain admission to a Veterans' Administration hospital for a non-service-connected disability to sign, under oath, a statement of inability to defray the necessary expenses of hospital or domiciliary care. Inasmuch as present practice relieves all individuals who are on the non-service-connected pension rolls from filing the financial data required of other applicants, regardless of their age, and service-connected veterans are admitted as a matter of right, it would appear that this section is a logical extension of the present practice and one which can be described as providing uniformity and equity for our older veterans.

Section 2 authorizes the Administrator to furnish outpatient care and such other medical services as he finds to be reasonably necessary to any veteran who is in receipt of pension or compensation based on need of regular aid and attendance or who is permanently housebound. Inasmuch as care for service-connected veterans in this category is already administered on the most liberal basis, the only substantial change would occur in the pension field and is restricted to those individuals who are the most severely disabled. The air-and-attendance group is so helpless or blind as to need the regular aid and attendance of another person. The housebound are so disabled as to require them to remain in their homes constantly.

The Veterans' Administration has a well-defined program of prehospital care and posthospital care, developed at the urging of the Committee on Veterans' Affairs, which is, in effect, outpatient care providing for preparation of the veteran prior to being admitted to the hospital and followup after hospital treatment. Section 2 is a logical, workable, and equitable extension of the existing program for an exceptionally needy group of disabled veterans.

Under present law, drugs, and medicine prescribed by a physician are furnished to veterans for their service-connected disability, they are also furnished to the veteran during periods of hospitalization and during periods of prehospital and post hospital care regardless of whether his disability or disease is service-connected or non-service-connected in character. In addition, under existing law, pensioners who are in need of regular aid and attendance are furnished drugs and medicine prescribed by a physician. Section 3 seeks to extend this provision for furnishing drugs and medicine at Veterans' Administration expense to those veterans who are receiving additional compensation or pension by reason of being permanently housebound. As in section 2, it seems to the committee that this is a logical extension to a worthy group of disabled veterans.

Section 4 provides non-service-connected medical care for any veteran who served in the active military or naval service on the Mexican border during the period beginning on May 9, 1916, and ending April 6, 1917. The committee believes that this is but a long overdue recognition of the important and valiant service of this deserving group of veterans.

The limitations imposed by Section 201 of the Revenue and Expenditures Control Act of 1968—Public Law 90-364—insofar as they place a ceiling on the number of employees the Veterans' Administration may have, are repealed by section 5 of this act. The original provisions of Public Law 90-364, were modified by section 4 of Public Law 90-612, by providing that the original limitation on employees should not apply to the Veterans' Administration in any month in which the number of such employees does not exceed the number of employees employed by the Veterans' Administration on June 30, 1966. The testimony before the subcommittee on hospitals is replete with references to the fact that the ceiling on employment is a great detriment to the successful operation of the hospital system of the Veterans' Administration.

During the past several years the introduction of certain medical care programs has been planned. These programs were specially designed to meet the requirements of veterans receiving hospital or outpatient care. In many instances they were designed to afford these patients the most up-to-date treatment available.

Included were: Alcohol treatment units, blind clinics, cardiac catheterization, clinical radioisotope, day hospitals, day treatment centers, electron microscopy, epilepsy centers, foster home care, hemodialysis units, intensive/coronary care beds, mental hygiene clinics, organ replacement centers, prosthetic treatment centers, psychiatric medical infirm units, pulmonary emphysema units, pulmonary functions unit, reference labs, speech pathology, stereotactic brain surgery, and supervoltage therapy.

Certain of these, such as hemodialysis units, organ replacement centers, and intensive/coronary care beds have life saving missions. Others, such as day hospitals, day treatment centers, foster home care, and mental hygiene clinics, are designed to further improve programs for the care of the psychiatrically disabled. They are to provide further support to the increasing effort to reduce or prevent hospitalization by providing outpatient care.

Alcohol treatment centers are designed to serve a large and growing problem and supervoltage therapy is planned to offer improved treatment to veteran patients with cancer.

During fiscal year 1969, more than 100 of these programs had been scheduled for activation. To comply with Public

Law 90–364 it was necessary to delay them.

The patient-employee ratio of VA hospitals, 1.5, is approximately one-half of that found in well-run community hospital facilities. It compares with a level of four patient-employee relationship in the best facilities operated in conjunction with medical schools. Regardless of the amount of money available and the shortage of medical and paramedical personnel, it is essential in the judgment of the committee that this personnel ceiling be lifted insofar as the Veterans' Administration is involved if an efficient operation is to be maintained. Unless action of this sort is taken there can only be one certain result and that is a deterioration of medical care provided in the Veterans' Administration hospitals.

The committee has noted with interest the following portion of the text of the Administration's review of the 1970 budget—as inserted in the CONGRESSIONAL RECORD of April 16, 1969, by the chairman of the Appropriations Committee:

> Consistent with the employment limitation objectives, the President is asking the Congress to repeal section 201 of the Revenue and Expenditure Control Act of 1968, which imposses restrictions on hiring in the executive branch. This Administration is in full agreement with the objective of section 201, but experience administering the arbitrary formula it imposes provides ample evidence that it is an inappropriate tool for achieving its objective. The section 201 limitation imposes especially harsh penalties on agencies with high turnover rates. And it takes insufficient account of the urgency or priorities of public service or of the manpower requirements of programs the Congress has approved since 1966.

It is clear from the foregoing that the action of the committee with respect to employees of the Veterans' Administration is completely in line with the plan to repeal the mentioned section 201 limitations with respect to the executive branch as a whole.

Section 1, providing admission of veterans 72 years of age or older to a Veterans' Administration hospital without signing the statement of inability to pay is estimated to cost something less than $1,825,000 the first year. Section 2, providing outpatient care for aid and attendance pensioners and the housebound group of pensioners would cost approximately $9,503,000 the first year. Section 3, authorizing the furnishing of drugs and medicine for the housebound pensioners would cost $3,400,000 the first year. Section 4, authorizing hospital care for the Mexican border veterans is not susceptible to an estimate of cost, the VA advises. Section 5 would not result in any additional benefit costs.

Mr. ROUDEBUSH. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I yield to the gentleman from Indiana who sponsored this legislation.

Mr. ROUDEBUSH. Mr. Speaker, I rise in support of H.R. 693, which is under consideration here today. Not only do I strongly advocate and support the purpose of the bill, to allow those veterans aged 72 years and older, to use VA hospitals and domiciliary homes, without the necessity of proof of financial need, but for another most important reason.

That reason appears on page 3 of the bill in section 4. This section helps a limited number of our American veterans who had service on the Mexican border.

These men have never had the rights and benefits that should have been due them for their vigorous combat service.

At least, this legislation will recognize their service for eligibility to use VA hospitals.

I have long fought for this provision and others for these veterans. On January 3, 1969, I introduced H.R. 583, which would permit these hospital benefits and others not covered by this legislation.

My colleagues, this benefit is long overdue and I heartily recommend your support.

The SPEAKER pro tempore. The Chair recognizes the gentleman from California (Mr. TEAGUE).

Mr. TEAGUE of California. Mr. Speaker, I support this bill even though I question the wisdom of eliminating the requirement of veterans over 72 years of age filing a financial statement under oath.

There are more good things decidedly in the bill than bad so I do support notwithstanding that reservation.

Now, Mr. Speaker, I yield to the ranking Republican on the subcommittee, the gentleman from Tennessee (Mr. DUNCAN).

Mr. DUNCAN. Mr. Speaker, I rise in support of H.R. 693. This bill in its amended form will liberalize the medical care and treatment program for older veterans and for veterans with more serious disabilities. Additionally, it will exclude the Veterans' Administration from the personnel ceilings imposed by the Revenue and Expenditure Control Act of 1968.

Existing law requires that most veterans, irrespective of age, to sign a statement of inability to defray the necessary expense of hospital or domiciliary care, prior to admission to a VA hospital for treatment of a non-service-connected disability. This is the so-called pauper's oath. Excluded from this requirement are veterans with a service-connected disability and those in receipt of pension.

Older persons who are eligible for medicare may be hospitalized in community facilities irrespective of their personal financial circumstances or their ability to pay for the necessary hospitalization. Section 1 of this bill would merely eliminate the execution of the so-called pauper's oath in the case of a veteran who is 72 years of age or older.

Section 2 of the bill will authorize outpatient treatment for veterans who, because of serious disability, are in receipt of an aid and attendance allowance or a housebound allowance, of compensation or pension. To be eligible for the aid and attendance allowance, a veteran must be so helpless or blind as to require the aid and attendance of another person. The housebound group are so disabled as to require them to remain in their homes almost constantly. This section of the bill not only provides a well-deserved benefit to this seriously disabled group of veterans, but it enables the Veterans' Administration to provide needed care and treatment on an economical basis than would otherwise be possible in a hospital bed.

Section 3 of the bill will permit the Veterans' Administration to furnish drugs and medicine to the so-called housebound group. This benefit is already available to the aid and attendance group. Its extension to the housebound group is compatible with the concept of providing outpatient care to this group.

Section 4 of the bill will authorize nonservice-connected medical care for veterans of Mexican border service between May 9, 1916, and April 6, 1917. Despite the arduous nature of the Mexican border campaign, veterans thereof are not classified as war veterans and are therefore not generally eligible for Veterans' Administration hospitalization. Such recognition, Mr. Speaker, is long overdue.

Section 5 of the bill will exclude the Veterans' Administration from the personnel ceilings imposed by section 201 of the Revenue and Expenditure Control Act of 1968. The continued operation of the Veterans' Administration, particularly in its hospital system, under these restrictive personnel ceilings will seriously hamper its ability to render prompt and high quality service and care to the Nation's veterans. Although the administration has requested the repeal of this section for all agencies of Government, the committee believes that the situation requires immediate action in the case of the Veterans' Administration.

This bill is sound legislation and I urge that it be passed.

Mr. ROGERS of Florida. Mr. Speaker, today the House is considering, under suspension of the rules, six bills which are of particular interest to the veterans of this great Nation, and especially those veterans who must receive medical care.

These six bills will expand the medical care services which can be rendered to veterans through nursing homes, outpatient facilities, and State veterans homes.

In addition, one bill will improve and make more effective the Veterans' Administration program of sharing specialized medical resources, and another will eliminate the so-called pauper's oath for any veteran who is 72 years of age or older and who seeks to gain admission to a Veterans' Administration hospital.

Mr. Speaker, I support this legislation and I am hopeful the House will pass favorably on each bill today.

Mr. SAYLOR. Mr. Speaker, I rise in support of H.R. 693. This bill will eliminate the so-called pauper's oath, or statement of inability to pay for hospitalization, in the case of a veteran who has reached the age of 72 and is seeking admission to a Veterans' Administration hospital for treatment of nonservice-connected disabilities. This same veteran, as well as his contemporaries who had no military service, if they are covered by medicare can be hospitalized in any community hospital irrespective of financial need. It is somewhat ridiculous to require a pauper's oath from a veteran whose sacrifice during time of

war have maintained the security of his Nation.

I urge that this bill be passed.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Texas that the House suspend the rules and pass the bill H.R. 693, as amended.

The question was taken.

Mr. ROUDEBUSH. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 302, nays 3, not voting 127, as follows:

[Roll No. 73]

So (two-thirds having voted in favor thereof), the rules were suspended and the bill, as amended, was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Bates.
Mr. Kirwan with Mr. Frelinghuysen.
Mr. Addabbo with Mr. Meskill.
Mr. Gilbert with Mr. Reid of New York.
Mr. Brasco with Mr. Halpern.
Mr. Biaggi with Mr. Pettis.
Mr. Miller of California with Mr. Gubser.
Mr. Celler with Mr. Morse.
Mr. Philbin with Mr. Berry.
Mr. Rivers with Mr. Bray.
Mr. St. Onge with Mr. Conte.
Mrs. Sullivan with Mrs. Dwyer.
Mr. Charles H. Wilson with Mr. Brown of Michigan.
Mr. Lennon with Mr. Martin.
Mr. Henderson with Mr. Foreman.
Mr. Murphy of New York with Mr. McKneally.
Mr. Nichols with Mr. Kuykendall.
Mr. Ronan with Mr. MacGregor.
Mr. Galifianakis with Mr. Sebelius.
Mr. Stubblefield with Mr. Burke of Florida.
Mr. Steed with Mr. Eshleman.
Mr. Fallon with Mr. McDade.
Mr. Farbstein with Mr. Wydler.
Mr. Davis of Georgia with Mr. Cowger.
Mr. Colmer with Mr. Lukens.
Mr. Carey with Mr. Harvey of Michigan.
Mr. Burleson of Texas with Mr. Collier.
Mr. Barrett with Mr. Morton.
Mr. Anderson of California with Mr. Mosher.
Mr. Jones of Alabama with Mr. Dickinson.
Mr. Long of Louisiana with Mr. Price of Texas.
Mr. Moss with Mr. Michel.
Mr. Murphy of Illinois with Mr. Denney.
Mr. Stuckey with Mr. O'Konski.
Mr. Stephens with Mr. Scherle.
Mr. Gallagher with Mr. Fish.
Mr. Brooks with Mr. Ashbrook.
Mr. Brademas with Mr. Landgrebe.
Mr. Blatnik with Mr. Robison.
Mr. Macdonald of Massachusetts with Mr. Sandman.

Mr. Adams with Mr. Steiger of Arizona.
Mr. Anderson of Tennessee with Mr. Wampler.
Mr. Ichord with Mr. Thompson of Georgia.
Mr. Obey with Mr. Winn.
Mr. Podell with Mr. Weicker.
Mr. Nix with Mr. Powell.
Mr. Preyer of North Carolina with Mr. Watson.
Mr. Hanna with Mr. Smith of California.
Mr. William D. Ford with Mr. Dawson.
Mr. Flynt with Mr. Utt.
Mr. Eckhardt with Mr. Zion.
Mr. Culver with Mr. Zwach.
Mr. Tiernan with Mr. Conyers.
Mr. Young with Mr. Helstoski.
Mr. Jarman with Mr. Scheuer.
Mr. Friedel with Mr. Gray.
Mr. Clay with Mr. Diggs.

The result of the vote was announced as above recorded.

The doors were opened.

The title was amended so as to read: "To amend title 38 of the United States Code to provide that veterans who are 72 years of age or older shall be deemed to be unable to defray the expenses of necessary hospital or domiciliary care, and for other purposes."

A motion to reconsider was laid on the table.

OUTPATIENT CARE FOR CERTAIN SERVICE-CONNECTED VETERANS

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3130) to amend title 38, United States Code, to provide that the Administrator of Veterans' Affairs may furnish medical services for non-service-connected disability to any war veteran who has total disability from a service-connected disability.

The Clerk read as follows:

H.R. 3130

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (f) of section 612 of title 38, United States Code, is amended by adding the following new paragraph:

"(3) where a veteran of any war has a total disability permanent in nature resulting from a service-connected disability.".

The SPEAKER pro tempore. Is a second demanded?

Mr. TEAGUE of California. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Texas (Mr. TEAGUE).

Mr. TEAGUE of Texas. Mr. Speaker, this measure would make available to any war veteran who has a permanent total disability resulting from a service-connected disability, complete medical services, which in effect means outpatient care for a non-service-connected disability.

While outpatient treatment for veterans is restricted to service-connected disabilities, the prehospital and post-hospital care program now operative in the Veterans' Administration medical system—at the urging of the Committee on Veterans' Affairs—applies in thousands of instances to non-service-connected cases. The "pre" system permits a workup prior to admission to a hospital, "post" authorizes a followup of the care and treatment prescribed in the hospital. The operation of the pre- and post-hospital care program was at one time described as being the equivalent of the construction of three 1,000-bed general hospitals.

Despite the view of the Veterans' Administration substantial evidence exists to believe that the extension of the outpatient service of veterans such as this group would cause a further decline in the inpatient care program of the Veterans' Administration hospital system and would have an overall effect in reducing cost.

The Veterans' Administration estimates, however, that the enactment of this legislation would cost approximately $8 million the first year.

The SPEAKER pro tempore. The Chair recognizes the gentleman from California (Mr. TEAGUE).

Mr. TEAGUE of California. Mr. Speaker, I support this bill.

Mr. DUNCAN. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of California. Mr. Speaker, I yield such time as he may require to the gentleman from Tennessee, the ranking minority member of the subcommittee (Mr. DUNCAN).

Mr. DUNCAN. Mr. Speaker, I rise in support of H.R. 3130. This bill will authorize outpatient medical care to any totally disabled service connected veteran for the treatment of any non-service-connected disability.

Under existing law, service connected veterans, irrespective of the degree of disability, are entitled to outpatient treatment for their service-connected disabilities only. On the other hand, all war veterans are entitled to outpatient treatment under the so-called prebed care and posthospital care program. The so-called prebed care program in particular has made subsequent hospitalization unnecessary in many cases. It is believed that the extension of outpatient services to the totally disabled service connected veteran for the treatment of any condition will further relieve the burden upon the Veterans' Administration hospitals. Certainly, the ready availability of outpatient treatment on a timely basis will in many cases make later hospitalization for the same condition unnecessary.

Mr. Speaker, this is good legislation and I urge that it be passed.

Mr. PICKLE. Mr. Speaker, I rise in support of H.R. 3130, and would also like to make a few remarks concerning two other veteran bills just considered by the House.

H.R. 3130 would extend to any war vetern who has a permanent, total disability resulting from a service-connected disability, complete medical services including outpatient care for a non-service-connected disability.

I believe this step is an important one, and one wholly in keeping with our commitment to provide a war veteran a complete range of needed medical care. This policy is already being followed for a veteran who has been hospitalized—regardless of whether the cause for the hospitalization is service connected—and it is only logical that it would be provided in this instance.

The two other measures concern the community nursing home program. The two bills extend the periods of time authorized for veterans who need this type of care, both for those suffering from a service-connected disability, and for those otherwise eligible for hospitalization.

Just within the past year, I personally have had the opportunity to see the tremendous success of the community nursing home program, and I am not surprised that the statistics released by the Veterans' Administration reaffirm its value.

The program was established to benefit veteran-patients who have progressed to the point that they no longer need hospitalization, but do still need nursing care. The community nursing home program enables these veterans to be cared for in a private nursing home which is close to their homes and families, and the benefits of the program are many.

First, and most importantly, the patient is generally in an environment more conducive to his recovery. I understand this has been the most successful medical feature of this program, and it is one which is certainly worth promoting.

In addition, the program works to conserve medical energies, and allows VA hospitals to be maintained for those in greatest need. As soon as a patient is able to move to a nursing home, this program encourages just that.

Finally, I would note that this program has, in fact, resulted in a savings to the Government. The general cost for care in a community nursing home, under contract with the VA, is about $16 per day. This compares with an average hospital cost of over $50 per day.

It is also important to note that the nursing homes have been most responsive to the program. At one point, there was a serious question as to the application of the Service Contract Act to those homes accepting VA patients, but even when that matter was in doubt, most homes proceeded to accept VA patients whenever requested.

Mr. Speaker, the first of these community nursing home bills, H.R. 692, would extend from 6 to 9 months the time a non-service-connected veteran may spend in a private nursing home. This amendment will not affect a large number of veterans, but I believe it is a reasonable increase and one which is supported by some of the experience which has developed under the program.

The other bill, H.R. 2768, would authorize community nursing home indefinitely for a service-connected disability. The VA has indicated strong support for this amendment, and feels it will work a significant relief on the demands for VA hospital facilities.

Mr. Speaker, I am pleased to support these bills. The ideas behind these changes are most worthy and beneficial.

Mr. SAYLOR. Mr. Speaker, I rise in support of H.R. 3130. This bill will extend total outpatient services for the treatment of any condition to those veterans who are totally disabled from service-connected causes.

Under existing law, these severely disabled veterans are eligible for treatment on an outpatient basis for their service-connected conditions only. Considerable savings will result in the long run if these veterans can be treated on an outpatient basis early enough to forestall the need for later hospitalization. Certainly, no one can question the merit of extending this added medical benefit to those who became totally disabled as a result of military service during time of war. I strongly support the bill and urge that it be passed.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Texas that the House suspend the rules and pass the bill H.R. 3130.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

CARE IN COMMUNITY NURSING HOMES

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 692) to amend section 620 of title 38, United States Code, to extend the length of time community nursing home care may be provided at the expense of the United States.

The Clerk read as follows:

H.R. 692

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (a) of section 620 of title 38, United States Code, is amended by striking "six" in the last sentence and inserting in lieu thereof "nine".

The SPEAKER pro tempore. Is a second demanded?

Mr. TEAGUE of California. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Texas (Mr. TEAGUE).

Mr. TEAGUE of Texas. Mr. Speaker, Public Law 88–450 authorizes the Veterans' Administration to operate within its own medical system 4,000 nursing care beds. At the same time it provided in section 620 of title 38 authority for the Veterans' Administration to transfer a hospitalized veteran patient who has reached the nursing home care stage to a public or private institution for nursing care at Federal expense for a period generally not to exceed 6 months. Both of these provisions have had the desired effect of removing from active hospital beds operated by the Veterans' Administration those patients who no longer need hospital care but truly need nursing care. It also had an effect on reducing the hospital load throughout the entire Veterans' Administration medical system. The program, both that administered by the Veterans' Administration, as well as that operated in community nursing homes under VA auspices, has worked extremely well. Statistics on the operation of this program between January and June 1968 are shown in the tables which I include as a part of my remarks.

DISPOSITION OF PATIENTS PLACED IN COMMUNITY NURSING HOMES AT VA EXPENSE BETWEEN JANUARY AND JUNE 1968

Source: "Operations of Veterans' Administration Hospital and Medical Program," House Committee Print No. 1, 91st Cong., 1st sess.

Particular attention should be given to the figures indicating that for a 6-month period only 28 patients had to be extended beyond the basic 6-month period. It thus seems that the purpose of this bill; namely, to extend the period in which a veteran may be treated in a nursing home at Veterans' Administration expense from 6 to 9 months, is a most desirable measure which cost would be minimal in view of the benefit received. The experience and statistics quoted above support this extension of 3 months.

The Veterans' Administration estimates that the cost for the first year would be approximately $5,954,000.

At this point I include a telegram from the Veterans of World War I:

WASHINGTON, D.C.,
May 29, 1969.

HON. OLIN E. TEAGUE,
Chairman, House Committee on Veterans' Affairs, Washington, D.C.:

This is to advise of the strong support of the Veterans of World War I U.S.A. for H.R. 692 and H.R. 693. H.R. 692 badly needed to extend the period of nursing care from 6 to 9 months for those veterans in community nursing homes. H.R. 693 will permit all World War I veterans to enter a VA hospital without signing oath of inability to pay. Our average age is 76 and this provision is badly needed. We support the provision of the bill which provides drugs for housebound veterans and applaud the committee for including veterans with Mexican border service for eligibility for hospital care. The provision to repeal the personnel ceiling on VA has our wholehearted support and is badly needed if the VA medical program is to maintain a proper level of quality care.

VICTOR V. MILLER,
National Commander, Veterans of World War One.

Mr. Speaker, I yield to the gentleman from Texas (Mr. ROBERTS), a member of the subcommittee who listened to all of the testimony, so that he may give the House an explanation of the bill.

Mr. ROBERTS. Mr. Speaker, I am happy in the role which I played in the Subcommittee on Intermediate Care headed by our late colleague, the gentleman from Tennessee, Mr. Everett, which led to the enactment of Public Law 88–450.

One of the features of that law authorized the Veterans' Administration to place in community nursing homes patients who had been in Veterans' Administration hospitals, in most instances for a considerable period of time, for 6 months of care in a community nursing home at the expense of the Veterans' Administration. The program has worked extremely well. The nursing homes have been cooperative in meeting the standards and conditions of the Veterans' Administration, and this feature of Public Law 88–450 has relieved the Veterans' Administration of considerable pressure and permitted an increase in the general medical and surgical turnover rate.

Hospital costs in the Veterans' Administration today range as high as $50 per day and on an average approximate $40. In contrast, the Administrator of Veterans' Affairs may only pay a maximum of $16.50 per day for nursing home care. The savings are obvious.

The bill which I am happy to support today extends the 6-month period to 9 months during which time a patient may be maintained in a community nursing home at the expense of the Veterans' Administration. It seems a logical step forward, and it was supported throughout the hearings which were held over a period of 8 days in the months of April and

May of this year. The measure was conceived by the veterans of World War I, and received the support of all the veterans' organizations.

It was approved unanimously in the subcommittee and unanimously out of the full committee. Mr. Speaker, I hope my colleagues will support this measure.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. ROBERTS. I yield to the gentleman from Iowa.

Mr. GROSS. I thank the gentleman for yielding. What standards are applicable to these community nursing homes?

Mr. ROBERTS. The VA has a complete set of standards that provide they must be acceptable to the VA. They are highly acceptable. The nursing homes take care of these eligible veterans in really better shape in many cases than they would be taken care of in a hospital, because they are where their families can come to see them. It is a highly satisfactory arrangement. They do have to meet those criteria. There is no problem with that at all. They have to have registered nurses and doctors available.

Mr. GROSS. In sufficient numbers to provide quality care for our veterans?

Mr. ROBERTS. Yes.

Mr. GROSS. The gentleman is assuring the Members of the House that the community nursing homes are equipped to take care of veterans with the same facilities or with comparable facilities that they have in the Veterans' Administration hospitals.

Mr. ROBERTS. In fact, I think the committee would be almost unanimous in saying that most of the veterans, after they have had their surgery and are in a recovery period, would prefer to be at home or be in a nursing home than be in a medical-surgical hospital.

Mr. TEAGUE of Texas. Mr. Speaker, I would like to add that, from my experience, the standards are very high.

Mr. GROSS. Mr. Speaker, if the gentleman will yield further, I want the assurance of the committee that they are not being moved out anywhere to substandard conditions for care.

Mr. TEAGUE of Texas. The committee can certainly assure the gentleman that that is a fact.

Mr. MATSUNAGA. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I yield to the gentleman from Hawaii.

Mr. MATSUNAGA. I commend the gentleman and his committee for bringing this measure up, but there is another bill pending in the gentleman's committee which provides for the voluntary payment over and above the $16.50 by relatives, friends, organizations, States or municipal governments, or by the veterans themselves, who are willing to make such overpayments. As the gentleman knows, particularly in Hawaii and Alaska, $16.50 is not sufficient. You just cannot find any day-care center which will take in a veteran for $16.50 a day. The bill which I introduced would not cost the Federal Government one penny more. It would merely allow a veteran who would otherwise be denied the needed care, to be placed in a nursing home through the generosity of friends or of the State government or of the municipality. Can the gentleman tell us whether his committee is going to report that bill out?

Mr. TEAGUE of Texas. Mr. Speaker, I would say to the gentleman I think his bill has merit, but I would like to yield to someone on the subcommittee that has listened to the testimony.

Mr. ROBERTS. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I yield to the gentleman from Texas.

Mr. ROBERTS. Unfortunately, Alaska and Hawaii being high-cost areas, we simply have not been able to arrange a contract within the rate which has been established for this purpose. I think we are going to have to have some more hearings before we are in a position to recommend to the House an exemption from the existing rates. It is my personal opinion that ultimately we will be able to work out something for the gentleman from Hawaii.

Mr. MATSUNAGA. I thank the gentleman. As the gentleman knows, I did appear before the subcommittee of which he is a member and at that time it was indicated that perhaps further hearings were necessary to get the viewpoints of the administration. I would deeply appreciate it if the gentleman, the chairman of the whole committee, will see to it that the subcommittee carries on that hearing, because as it is, the law is no good for Hawaii or Alaska. While it is of benefit to veterans in the other 48 States, veterans in Hawaii and Alaska get no benefit because of the high cost prevailing in those two States. The bill which I introduced would not cost the Federal taxpayer a single penny more. I appreciate the gentleman's efforts in this regard.

Mr. TEAGUE of Texas. The gentleman is aware that the committee has had a continuing interest. We did pass a bill at the last session of the Congress, I believe it was the gentleman's bill, which gave Alaska and Hawaii certain exceptions. The chairman of the subcommittee assures me that they are still considering the bill.

Mr. MATSUNAGA. I thank the gentleman.

Mr. TAYLOR. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I yield to the gentleman from North Carolina.

Mr. TAYLOR. Mr. Speaker, how does the expense per bed operation in the nursing home compare with the per bed operation in the hospital?

Mr. TEAGUE of Texas. It is about $16.40 as against $40 in a VA general hospital.

Mr. TAYLOR. The result of this legislation would be to provide service needed for veterans and at the same time save the Government some money?

Mr. TEAGUE of Texas. That is very true. It has had a tremendous effect on the availability of beds in our hospital system for veterans acutely ill.

Mr. PEPPER. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I yield to the gentleman from Florida.

Mr. PEPPER. Mr. Speaker, if I may ask the gentleman from Texas, if I understand correctly, this bill provides that a veteran, who has been in the hospital and whose condition is improving, can be put in a nursing home, and he can stay in that nursing home for 9 months instead of 6 months as previously provided?

Mr. TEAGUE of Texas. That is correct.

Mr. PEPPER. What I wish to ask the able gentleman is this. Suppose a veteran becomes old and disabled and is not particularly ill with any emergency illness, but he is nevertheless old and feeble and disabled. He has not been in the hospital and the hospital will not take him because he is a chronic case and not an emergency case. What, if any, provision is there in the law now for taking care of that veteran in either a veterans hospital as long as he lives or in a nursing home as long as he lives and continues to be disabled?

Mr. TEAGUE of Texas. This is the thing we did in Alaska and Hawaii, and we have not reached the point where we can take care of that situation generally. I would guess further down the road it will probably happen. Right now we cannot handle that kind of load in the system.

Mr. PEPPER. The reason why I ask the question is because I have a feeling—and I am sure it must be shared by many other Members—that one of the problems which will be increasingly facing us today with both veterans and civilians is that type of case: the chronically ill person, usually as the result of old age, who is not eligible for a domiciliary home because he is not ambulatory and who is not eligible for a nursing home because he has not been in a hospital. And we do not have today, other than State and local welfare or charity, any provision to take care of that gentleman.

I understand our distinguished colleague has a bill giving further services to the service-connected disabled, but I want to ask the able gentleman—and I know he has already given consideration to the problem—if he will continue to give consideration to the veteran, and we hope the civilian also, with respect to taking care of the permanently disabled, maybe to provide care in a nursing home through other than charity.

Mr. TEAGUE of Texas. I think these hearings comprising over 1,400 pages would prove the committee, under the chairmanship of the gentleman from Florida (Mr. HALEY), has had complete hearings.

Mr. PEPPER. I thank the gentleman.

Mr. JONAS. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I yield to the gentleman from North Carolina.

Mr. JONAS. Mr. Speaker, in answer to the statement of the gentleman from Florida, much of which I agree with, I think it is obvious that many of the patients in veterans hospitals can receive ample treatment in nursing homes and at a much lower cost than is now required in the veterans hospital. But the fact is that under the regular VA program, the Veterans' Administration has 4,000 nursing home beds available for use for that very purpose, in addition

to what is provided in the legislation now before the House. Is that not correct, I ask the gentleman from Texas?

Mr. TEAGUE of Texas. That is correct.

Mr. Speaker, Public Law 88–450 did, as the gentleman has suggested, authorized the Veterans' Administration to operate as many as 4,000 nursing care beds. As of April 30, the average daily census in these beds was 3,769. The same public law authorized the Veterans' Administration to place in community nursing homes veterans who needed nursing care and the average daily census as of April 30, for this type of care was 2,947.

Mr. JONAS. That is true. I want to ask the gentleman from Texas if it is not a fact that the Administrator now has authority, in his discretion, to extend the period of time a veteran can be cared for in a community nursing home beyond 6 months.

Mr. TEAGUE of Texas. That is true. But he has used it only in the most severe cases.

There were only 28 such instances in the first 6 months of 1968.

Mr. JONAS. Would this bill make it automatic and a requirement that the period be extended from 6 to 9 months?

Mr. TEAGUE of Texas. This would give the Administrator authority to determine if the man should be extended. Actually doctors at the VA hospital estimate the length of time a veteran will need nursing care.

Mr. JONAS. He has that authority now.

Mr. TEAGUE of Texas. Well, he wanted an indication, or more liberal authority to do that.

Mr. Speaker, I should like to yield to the chairman of the subcommittee to comment on that.

Mr. HALEY. Mr. Speaker, as the gentleman from Texas said, the Administrator has the authority now to extend this time, and he seems to be reluctant to use it. He thinks he needs a little broader authority.

I reiterate what the gentleman from Texas said just a moment ago, that he only extended that to 28 veterans, I believe, in the last year. If he needs a little broader authority, I think this will give it to him.

Mr. JONAS. The reason why I raised the question is I did not construe his letter to the chairman of the committee as seeking any broader authority. As a matter of fact, his letter indicates that the Veterans' Administration is opposed to this bill. I was trying to find out why the VA would oppose it. I now find my opinion confirmed that the Administrator of Veterans' Affairs has the exact authority that is provided for in this bill.

Mr. TEAGUE of Texas. I doubt there is a Member of the House who is more aware of how this kind of thing operates than the gentleman who has been speaking. The gentleman well knows what happens in the executive branch of the Government. We sent 68 hospital bills down there, and all but two, suggested by the VA, came back negative. It was not the VA that was negative; it was the Bureau of the Budget. Probably the rest of our bills will come back negative. I do not think they will approve a bill that costs a dime.

Mr. JONAS. The letter I read in the report was signed by W. J. Driver, Administrator of Veterans' Affairs.

Mr. TEAGUE of Texas. Which was cleared by the Bureau of the Budget and which had to so clear. The Administrator is not allowed to send one up that is not cleared. The gentleman is aware of that.

Mr. JONAS. I was trying to find out the basis on which the legislation was needed. The Administrator says he has authority to do exactly what is in the legislation.

Mr. TEAGUE of Texas. If the gentleman will talk with the VA officials privately he will find out they are for this legislation, and they were told by the Bureau of the Budget to be against it.

Mr. DUNCAN. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I am glad to yield to the gentleman from Tennessee, who also has worked hard on this legislation.

Mr. DUNCAN. At the present time a veteran cannot get more than 6 months care, unless he wants to go through all of the redtape and all the way to the top of the Veterans' Administration, and then he can get it extended to 9 months. This automatically would give it to him without all of this difficulty of going all the way to the top.

Mr. TEAGUE of Texas. But he has to be found medically to need it.

Mr. JONAS. Who will pass on it, if he automatically will get the extension?

Mr. DUNCAN. That is a medical determination by the Veterans' Administration.

Mr. JONAS. Will he not have to make the same application and go through the same redtape?

Mr. DUNCAN. That will be determined by the VA doctor where he happens to be located, where they put him in the nursing home.

As the chairman has said, it has been true that the Veterans' Administration has declined a lot of worthy cases, that I know of.

Mr. JONAS. I am not arguing against the bill. But I believe the membership of the House ought to know that with respect to this bill, and the one we had a rollcall vote on earlier today, that Mr. Driver, Administrator of Veterans' Affairs, states that the VA opposes the bills. As to the previous bill, Mr. Driver stated that the VA opposed it because it was discriminatory and not because the Bureau of the Budget opposed it. I think the membership of the House ought to realize that this legislation is opposed by the VA, according to Mr. Driver's letter.

Mr. TEAGUE of Texas. Does the gentleman think our committee should wait and do nothing, just wait for the executive branch to tell us what to do? I believe these 1,400 pages of hearings proves that the subcommittee really worked on this, and knows what it is doing. I have a lot more faith in them than something coming from the Bureau of the Budget. We are not going to sit still and wait for the executive branch to tell us what to do.

Mr. JONAS. I do not advocate that you do that or that you follow every recommendation of the administration or that you take an adverse position when the administration opposes something; but I was just trying to find out in what respect this particular bill would change existing law when the Administrator of Veterans' Affairs has already stated in his letter that he had authority to what the bill authorizes.

Mr. ROBERTS. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. Yes. I yield to the gentleman.

Mr. ROBERTS. What would happen at the present time is that they take a fellow at the expiration of the 6-month period back from a community nursing home to a medical and surgical hospital and put him in a Veterans' Administration hospital. They put him back there for a 6-month tour, which is something that they do not have to do. That is what we are trying to avoid by making it a voluntary situation.

Mr. TAYLOR. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I am glad to yield to the gentleman from North Carolina.

Mr. TAYLOR. Mr. Speaker, H.R. 692, and other bills on the House Calendar today, would liberalize hospital services for veterans, especially for veterans of World War I, and I am for just that.

My voting record shows that I believe in economy, but in my opinion, during recent years the Bureau of the Budget has been too strict with veterans hospitals, and those of us in Congress need to let the Veterans' Administration and the Bureau of the Budget and the President know how we feel in regard to providing hospitalization for needy veterans in veterans hospitals and nursing homes.

In my opinion, it is not only in the interest of veterans, but it is in the national interest and in the interest of the war in Vietnam and in the interest of any future wars in which we may engage that veterans who meet the financial test and who need hospitalization be provided the medical care needed as veterans in a veterans facility with dignity and not be sent to local welfare departments.

Let me remind you that the average veteran is not getting something for nothing. He paid a price for the hospitalization which he may need and may have to seek.

Mr. DENNIS. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of Texas. I am glad to yield to the gentleman.

Mr. DENNIS. I got the impression a moment ago that something was said that we are actually saving money in this bill. I want to call your attention to page 7 of the report where, if I understand correctly what the Administrator is saying in his letter that the gentleman from North Carolina referred to, he said there will be an additional cost in the next 5 fiscal years resulting from this legislation that will total about $37 million. I wonder how that corresponds with the money-saving suggestion which was made here before.

Mr. TEAGUE of Texas. I yield to the gentleman from Texas (Mr. ROBERTS) for an explanation of this.

Mr. ROBERTS. Each person occupying one of these immediate-care beds

would be in a medical-surgical hospital bed, which would cost us $40 to $50 a day rather than a maximum of $16.50 a day. So for every dollar of cost that you are spending in this way you are spending about 20 times as much. Each of those people has to be put in there by the Veterans' Administration. They can put them in a medical-surgical bed for $40 to $50 a day or put them in a local nursing home for only $16.50.

Mr. DENNIS. If the gentleman will yield, this extends the nursing home period, does it not?

Mr. ROBERTS. Yes. But that is the period I made just before this. If he is still in after 6 months and he needs the medical care, then they put him back into a medical-surgical bed for 1 day. That is all that is required. That is to keep him in. And then they put him back in for another 6-month period.

Mr. DUNCAN. Mr. Speaker, I rise in support of H.R. 692. This bill will extend the length of time community nursing home care may be generally provided for veterans from its present 6 months to 9 months.

Under existing law, Mr. Speaker, the Veterans' Administration is authorized to transfer a hospitalized veteran-patient who has received maximum hospital care but is still in need of nursing care to a public or private nursing home for a period generally not to exceed 6 months. This community nursing care program, which was enacted in the 88th Congress, has had the desired effect of freeing beds devoted to active hospital care much sooner than would otherwise be possible were it not for the nursing care program.

This has been a good program, Mr. Speaker. It has saved the Government's money and it has served to fill a long-standing void in the program of care and treatment for veterans. Experience has dictated that this program can be more effectively administered if the 6-month time limit is extended to 9 months. Therefore, I support the bill and urge my colleagues to do the same.

Mr. SAYLOR. Mr. Speaker, I rise in support of H.R. 692. This bill will extend the time limit during which veterans with non-service-connected disabilities can receive community nursing home care at Veterans' Administration expense from its present 6 months to 9 months.

Experience has dictated that the 6-month limitation on community nursing care is inadequate in the case of many veterans. Despite the fact that the Administrator has the authority under existing law to extend this time limit, he has exercised this authority in only 28 cases during the last 6 months. This bill will permit such nursing care for such time as is needed up to a maximum of 9 months, without the necessity of administrative action after 6 months. I urge that the bill be passed.

Mr. TEAGUE of Texas. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Texas that the House suspend the rules and pass the bill H.R. 692.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

NURSING HOME CARE FOR SERVICE-CONNECTED DISABLED VETERANS

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 2768) to amend title 38 of the United States Code in order to eliminate the 6-month limitation on the furnishing of nursing home care in the case of veterans with service-connected disabilities, as amended.

The Clerk read as follows:

H.R. 2768

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That next to the last sentence of subsection (a) of section 620 of title 38, United States Code, is amended by striking out "except where in the judgment of the Administrator a longer period is warranted in the case of any veteran" and inserting in lieu thereof "except (A) in the case of the veteran whose hospitalization was primarily for a service-connected disability, or (B) where in the judgment of the Administrator a longer period is warranted in the case of any other veteran."

The SPEAKER pro tempore. Is a second demanded?

Mr. TEAGUE of California. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. TEAGUE of Texas. Mr. Speaker, section 620 of title 38, United States Code, authorizes the placement in a community nursing home at the Veterans' Administration's expense—generally for a period of 6 months—hospitalized veterans who are no longer in need of hospital care and whose primary requirements are for nursing care. This bill would authorize such community nursing home care for veterans hospitalized for a service-connected disability without limitation as to the length of time such care may be provided. Service-connected disabled veterans are admitted as a matter of right for their service-connected disabilities to all Veterans' Administration hospitals. Veterans with non-service-connected disability are admitted on a bed available basis.

The committee concludes that in view of the demonstrated reduction in the workload of the Veterans' Administration hospital system, which the basic provisions of section 620, title 38, has accomplished, that the logical step contemplated by this bill would further reduce that workload and also reduce the cost for medical care in a Veterans' Administration hospital. Benefits of this bill now range as high as $50 a day for hospital care in contrast to approximately $16.50 a day for community nursing care.

The Veterans' Administration estimates that approval of this legislation would increase the daily nursing care load in community nursing homes by approximately 350 at $1,500,000 annually.

Mr. Speaker, I yield such time as he may require to the gentleman from Florida (Mr. HALEY).

Mr. HALEY. Mr. Speaker, I am happy to support this bill which I introduced at the request of the Disabled American Veterans.

Service-connected disabled veterans have a right under existing law to a hospital bed when they have a condition which warrants hospitalization. This has been true since the Veterans' Administration hospital and medical system was first created in 1924. Hospital care, including nursing care and doctors fee costs, is as much as $50 a day in Veterans' Administration hospitals and on an average is $40.90 for general hospitals and $21.63 for psychiatric hospitals. Nursing home care in facilities operated by the Veterans' Administration has an average per diem cost of $15.60 in contrast to $13.24 for nursing care provided in a community home at the Veterans' Administration's expense. The Congress has set an overall limit on nursing care costs in community homes of 40 percent of the rate for general care in a Veterans' Administration hospital. This means approximately $16.50 per day at the present time.

My bill provides that in the case of a service-connected disabled veteran who has been hospitalized in the Veterans' Administration hospital system, that veteran may be transferred to a community nursing home without regard to the present 6-month limitation but may be treated in such community nursing home for his service-connected condition so long as he requires such care. It seems to me that this is a case of setting correct priorities. No Member of the Congress objects, I am sure, to giving service-connected disabled veterans the medical care and treatment which their condition warrants. This bill is an extension of that philosophy and will in my judgment close a gap, and in view of the right which a service-connected disabled veteran has to a hospital bed will very likely lead to savings when this program is fully implemented.

Mr. TEAGUE of California. Mr. Speaker, I yield such time as he may consume to the gentleman from Tennessee (Mr. DUNCAN).

(Mr. DUNCAN asked and was given permission to revise and extend his remarks.)

Mr. DUNCAN. Mr. Speaker, I rise in support of H.R. 2768. This bill would permit the veteran with service-connected disabilities to receive unlimited nursing care in a community nursing home if the need for such care is clearly demonstrated.

Under existing law, Mr. Speaker, service-connected disabled veterans are subject to the same 6-month limitation on community nursing care as non-service-connected disabled veterans. On the other hand, such service-connected disabled veterans are admitted to VA hospitals as a matter of right for treatment of their service-connected disabilities. Such hospitalization, of course, may continue for as long as treatment is necessary.

As a result, many service-connected disabled veterans are occupying an active hospital bed with its attendant costs, despite the fact that their disabilities have stabilized to the point where they only require nursing care.

The committee believes that the elimination of the 6-month limitation on community nursing care for service-connected disabled veterans will make more hospital beds available for the treatment of acute conditions and at the same time would permit many veterans to receive needed care in facilities closer to their homes. H.R. 2768 will accomplish this purpose. I urge that it be passed.

Mr. SAYLOR. Mr. Speaker, I rise in support of H.R. 2768. This bill will benefit the service-connected disabled veteran. It will extend community nursing care to the service-connected disabled veteran without regard to any time limitation.

Under existing law, the service-connected disabled veteran who has received maximum hospital benefits is entitled to up to 6 months of care in a community nursing home in the same manner as is the non-service-connected disabled veteran. This bill would remove that 6 month limitation in the case of the veteran with service-connected disabilities and permit him to receive such nursing care as is necessary.

Aside from the fact that this bill will permit the veteran to receive such care in a nursing home in his local community, it will permit the Veterans' Administration to provide the needed care at a cost of $16.50 per day instead of the $40.90 per day for care in a Veterans' Administration general hospital. I urge that the bill be passed.

The SPEAKER pro tempore (Mr. ALBERT). The question is on the motion of the gentleman from Texas that the House suspend the rules and pass the bill H.R. 2768, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

A motion to reconsider was laid on the table.

CARE OF VETERANS IN STATE HOMES

Mr. TEAGUE of Texas. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 9334) to amend title 38, United States Code, to promote the care and treatment of veterans in State veterans homes.

The Clerk read as follows:

H.R. 9334

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 641 of title 38, United States Code, is amended to read as follows:

"The Administrator shall pay each State at the per diem rate of—

"(1) $3.50 for domiciliary care,

"(2) $5 for nursing home care, and

"(3) $7.50 for hospital care,

for each veteran of any war receiving such care in a State home, if, in the case of such a veteran receiving domiciliary or hospital care, such veteran is eligible for such care in a Veterans' Administration facility, or if, in the case of such a veteran receiving nursing home care, such veteran meets the requirements of paragraph (1), (2), or (3) of section 610(a) of this title, except that the requirements of clause (B) of such paragraph (1) shall for this purpose refer to the inability to defray the expenses of necessary nursing home care; however, in no case shall the payments made with respect to any veteran under this section exceed one-half of the cost of the veteran's care in such State home."

SEC. 2. (a) Subchapter V of chapter 17 of title 38, United States Code, is amended by adding at the end thereof the following new section:

"§ 644. Authorization of appropriations

"(a) There is hereby authorized to be appropriated $5,000,000 for the fiscal year ending June 30, 1970, and a like sum for each of the nine succeeding fiscal years. Subject to the conditions set forth in subsection (b) of this section, sums appropriated pursuant to this section shall be used for making grants to States which have submitted, and have had approved by the Administrator, applications for assistance in remodeling, modification, or alteration of existing hospital or domiciliary facilities in State homes providing care and treatment for veterans.

"(b) The amount which may be granted to a State home for purposes of subsection (a) shall not exceed 50 per centum of the estimated cost of the project, nor may any one State receive in any fiscal year more than 20 per centum of the amount appropriated for that fiscal year.

"(c) Grants under this section shall be made on such terms and conditions prescribed in regulations by the Administrator.

"(d) Sums appropriated pursuant to subsection (a) of this section shall remain available until the end of the second fiscal year following the fiscal year for which they are appropriated."

(b) The analysis of chapter 17 of title 38, United States Code, is amended by inserting immediately below

"643. Applications."

the following:

"644. Authorization of appropriations.".

SEC. 3. Section 5034(1) of title 38, United States Code, is amended by striking out "one and one-half" and inserting in lieu thereof "three".

The SPEAKER pro tempore. Is a second demanded?

Mr. TEAGUE of California. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

Mr. TEAGUE of Texas. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, following the Civil War, a tier of Northern States built and operated State soldiers homes which were for the care and treatment of Federal veterans of the War Between the States. Each home, naturally, set up its own criteria for admission and some homes permitted the veteran to bring his wife with him at the time he was admitted. Originally they were conceived as old soldiers homes and operated as such. Lately they have developed into a more sophisticated type of care providing the full spectrum of care—domiciliary, hospital, and nursing. The program has expanded, in recent years, to cover homes constructed in Georgia, West Virginia, and Oklahoma.

Historically, the Federal Government has made a contribution for the care of each such State home veteran, who is eligible under the provisions of title 38 for care in a Veterans' Administration hospital. That level of payment today stands at $3.50 per day for medical care and the same amount for hospital care but a $5 rate is provided for nursing home care, the difference being that hospital care has only recently been added to the State home system.

One of the provisions of Public Law 88–450 was to create this special rate for nursing home care for State homes, and in addition it authorized a $5 million appropriation to be used on a matching fund basis for the construction of new nursing home facilities.

Basic data on these homes is shown in the material which follows:

BED CAPACITY OF STATE HOMES, MAR. 20, 1969

State and county	Name of home	Total	Domiciliary	Nursing home	Hospital
California: Napa	Veterans Home in California	2,381	1,507	402	472
Colorado: Rio Grande	Colorado State Veterans Center	150	130	20

MEMORANDUM

MARCH 6, 1969.

To: Chief Medical Director (10).
From: Director, extended care service (126).
Subject: Nursing home care facilities, State soldiers' home (supersedes memorandum dated February 6, 1969).

1. Under 38 U.S.C. 641 the following State homes have been approved by VA Office of Jurisdiction to provide nursing home care:

	Number of beds
California: Napa County	428
Colorado: Homelake	20
Illinois: Quincy	357
Indiana: Lafayette	152
Iowa: Marshalltown	93
Kansas: Fort Dodge	22
Massachusetts:	
Chelsea	241
Holyoke	75
Michigan: Grand Rapids	469
Missouri: St. James	93
Nebraska: Grand Island	96
New Hampshire: Tilton	20
New Jersey:	
Menlo Park	88
Vineland	100
New York: Oxford	7
Oklahoma:	
Ardmore	80
Sulfur	88
Pennsylvania: Erie	64
Rhode Island: Bristol	138
South Dakota: Hot Springs	42
Vermont: Bennington	22
Washington:	
Orting	50
Retsil	80
Wisconsin: King	245
Total	3,070

NOTE.—Cumulative ADNL through January was 2,115.

2. Construction projects approved and completed: Thirteen States have been given tentative approval for 18 construction grants under 38 U.S.C. 5031–5037.

[Dollar amounts in thousands]

State	Number of beds	VA participation (estimate)	Total project (estimate)
Georgia: Augusta	192	$982	[1] $2,065
Illinois: Quincy	200	1,359	2,717
Iowa: Marshalltown	80	532	[2] [3] 1,070
Kansas: Fort Dodge	88	400	[4] 800
Missouri: St. James	60	499	998
Montana: Columbia Falls	22	158	316
Nebraska: Grand Island	100	744	[1] 2,012
New Hampshire: Tilton	50	371	743
New Jersey:			
Menlo Park (No. 1)	100	1,030	[3] [4] 2,073
Menlo Park (No. 2)	100	892	1,783
Vineland (No. 1)	100	592	[1] 1,297
New Jersey—Continued			
Vineland (No. 2)	100	$858	$2,305
Oklahoma: Norman	50	230	460
Rhode Island: Bristol	30	364	[2] [3] 753
Vermont:			
Bennington (No. 1)	22	123	[1] 252
Bennington (No. 2)	40	401	1,124
Wisconsin:			
King (No. 1)	200	1,181	[1] 2,881
King (No. 2)	200	1,545	[4] 3,344
Total	1,734	12,261	26,993

[1] In operation, 614 beds.
[2] Completed by June 30, 1969, 110 beds.
[3] Under contract.
[4] Completed by June 30, 1970, 300 beds

3. A project application for Massachusetts is in process:

[Dollar amounts in thousands]

State	Number of beds	VA participation (estimate)	Total project (estimate)
Massachusetts: Holyoke	157	$1,200	$4,220

4. The following 12 States have contacted the VA and expressed an interest in securing financial assistance under 38 U.S.C. 5031–5037:

State	Number of beds	Purpose
California	170	Remodeling.
Colorado	80	Under consideration.
Indiana	168	Planning stage.
Iowa	120	Under consideration (2d project).
Michigan	300	State appropriations.
Nebraska	100	Under consideration (2d project).
New Jersey	100	Under consideration (5th project).
Pennsylvania	175	Under consideration.
South Carolina	150	Planning stage.
South Dakota	100	Do.
Washington: Retsil	80	Under consideration.
Wisconsin: King	200	Under consideration (3d project).
Total	1,743	

PROJECTION

Average VA share per bed of projects approved to date: 7,024.

Potential additional beds: 1,743.

Potential additional VA participation: $12,243,000.

5. Your attention is invited to increased interest by States in (*a*) operating nursing care beds, and (*b*) number of veterans provided nursing care in State homes:

Period	ADNL	Number of approved NHC beds	Percent occupied by veterans
July 1966	939	2,246	42
July 1967	1,426	2,310	62
July 1968	2,028	2,835	72

Only one construction project (22 beds) for nursing care was completed and reflected in above data.

CRITERIA FOR ADMISSION OF VETERANS TO STATE HOMES (FOR NURSING AND MEMBER CARE) AS OF MAR. 21, 1969

Location of State home	How much of the veteran's income does the home collect? Yes or no	Criteria (A)	What are the State homes requirements with respect to veteran's assets such as bank account, bonds, and cash? (B)	What are the State homes requirements with respect to veteran's property such as home, automobile, etc.? (C)	Are veterans, when admitted, required to make assignment of life insurance to the State home? (D)	In responding to cols. A, B, C, and D, indicate disposition in event of veteran's death in the State home (E)	What charges other than those covered in cols. A, B, C, and D are made to the veteran or his family or representative by the State home? (F)	Is the State home affiliated with a medical school? (G)
Augusta nd Milledgeville, Ga.	No		Not asked this question	None	No	None	Glasses, $25; dental, charge for material.	No.
Boise, Idaho	Yes	Above $65 to maximum of $40 per month. Income over $105 per month not disturbed.	Not considered in determining eligibility or monthly rate of charge.	do	No	To next of kin. If no kin or claim within 5 yrs., to State treasurer.	None	No.
Chelsea, Mass	Yes	Aid and attendance pen allowance.	If assets exceed following veteran encouraged to seek other service: Domiciliary, $2,500; acute hospitalization, $5,000; chronic hospital care, $10,000.	If real property exceeds cash values cited in col. B, encouraged to seek other services.	No	As willed by patient	3d party coverage for care, etc., on assignment by patient.	Negotiating.

CRITERIA FOR ADMISSION OF VETERANS TO STATE HOMES (FOR NURSING AND MEMBER CARE) AS OF MAR. 21, 1969—Continued

Location of State home	How much of the veteran's income does the home collect? Yes or no	Criteria (A)	What are the State homes' requirements with respect to veteran's assets such as bank account, bonds, and cash? (B)	What are the State homes' requirements with respect to veteran's property such as home, automobile, etc.? (C)	Are veterans, when admitted, required to make assignment of life insurance to the State home? (D)	In responding to cols. A, B, C, and D, indicate disposition in event of veteran's death in the State home (E)	What charges other than those covered in cols. A, B, C, and D are made to the veteran or his family or representative by the State home? (F)	Is the State home affiliated with a medical school? (G)
Holyoke, Mass	Yes	Aid and attendance pen allowance.	None	None	No	As willed by patient	3d party coverage for care on assignment by patient.	No.
Buffalo, Wyo	Yes	Not to exceed $200, but in all cases veteran retains $50 per month.	Financial statement required of all veterans who are admitted to home.	If no income and has assets, encouraged to convert assets to cash to make monthly paymets.	No	According to will or to next of kin under applicable State laws.	None	No.
Quincy, Ill	Yes	Graduated scale from $5 to $150 per month.	None	None	No	None unless liquid assets exceed $5,000, then maximum of $150 per month for period he paid less.	do	Yes.
Sandusky, Ohio	No		Eligibility established according to p. 2 of VA form 10–P–10 query.	do	No	As willed by patient Valuables and money by probate court.	do	No.
Grand Rapids, Mich	Yes	Over $60 to maximum of $126 per month.	Assets listed and evaluated as to sufficiency for support. Assignment to home made and retained unless claimed by next of kin.	Real estate and car listed; however, no assignment of such property required.	No	Assigned at time of admission and retained by house unless claimed by next of kin.	do	No.
Home Lake, Colo	Yes	$36 a month maximum from other income. None from compensation and pension income.	None	None	No	If no heirs to personal property located in 6 months, property sold for benefit of State general fund.	None except for non-veteran.	No.
Marshalltown, Iowa	Yes	If personal estate is $1,500 or more and no dependent., he pays total support. If $500 or less, charges as follows: 1st $20, none; $30, 40 percent; $70, 75 percent.	do	Home is counted as asset only if it is rented. Car not allowed as an asset.	No	Not required to sign over home. All assets after burial expenses go to next of kin.	Veteran buys his own clothes and personal items.	No.
Menlo Park and Vineland, N.J.	No		Veteran must be necessitous, insufficient income or assets to maintain himself.	Without dependents is not permitted to have property or car. Married veteran can have home and/or car if used by wife.	No	None	None	No.
Lisbon, N. Dak	No		No special provisions. Individual cases reviewed.	No restrictions	No	If no heirs or will, become property of board of trustees.	do	No.
Columbia, Falls, Mont	Yes	Approximately 20 percent	None	None	No	If no heirs or will, to State.	do	No.
Lafayette, Ind	Yes	$377 per month. Less if income not adequate. 1st $30 of compensation and pension exempt; 80 percent of balance collected.	Not admitted if liquid assets $3,000 or more—this waived if special care required—upon advice of advisory committee.	Permitted to retain property such as home, car, etc.	No	Claim for unpaid maintenance made by State. If dependent parent or minor child, no claim.	do	No.
Grand Island, Nebr	Yes	Maximum, $125 per month. Women must pay $14 minimum. $40 allowed for personal needs by State law.	Must be dependent wholly or partially on charity. Income in excess of $40, reasonable amount charged for maintenance.	See col. B	No	Personal effects and valuables as willed. Property disposed of per State laws.	do	No.
Tilton, N.H	Yes	Income from all sources in excess of $115 per home.	Not admitted if real or personal property exceeds $1,500, or if receiving unemployment compensation.	$1,500 limitat?on covers property, cash, bonds, etc. Cannot own or operate car.	No	As designated on State home application.	Cost of prescriptions	No.
Minneapolis, Minn	Yes	1st $40 exempt; on increments of $5 income, percent ranges from 10 percent on $45 to 40 percent on $100; 90 percent in excess of $100.	Veteran ineligible if total of all assets and property owned exceeds $2,000.	See col. B	No	Will is made upon admission. No claim by home.	None	No.
Norman, Okla	Yes	If veteran has dependent, no charge regardless of income. If no dependent, no charge if income $64 or less per month.	None	None	No	Claim against estate for difference between per diem cost and what veteran paid.	do	No.
Ardmore and Sulphur, Okla.	Yes	In excess of $64, charge varies from 1.2 percent to maximum of 50 percent, depending on income per month.	do	do	No	May make claim to cover difference between per diem cost and amount paid.	do	No.
Rocky Hill, Conn	No		Home acts as custodian for bonds, bankbooks, and cash. No investigation by home of resources.	do	No	Claim against estate billing home cost less Federal aid and medicare recieved.	do	No.
Erie, Pa	No		If total assets exceed $10,000 veteran not admitted.	See col. B; no dependents and income excess of $225 per month, not admittted.	No	All assets held 1 yr. If no claim, placed in welfare fund.	do	No.
Bristol, R.I	No	Not presently but planning to collect percentage in excess of $45 monthly.	Remain in veterans name but deposits and expenditures supervised by home.	No restrictions on property: cannot retain car.	No	Advised to make will. Assets become property of State.	do	No.

CRITERIA FOR ADMISSION OF VETERANS TO STATE HOMES (FOR NURSING AND MEMBER CARE) AS OF MAR. 21, 1969—Continued

Location of State home	How much of the veteran's income does the home collect? Yes or no	Criteria (A)	What are the State homes' requirements with respect to veteran's assets such as bank account, bonds, and cash? (B)	What are the State homes' requirements with respect to veteran's property such as home, automobile, etc.? (C)	Are veterans, when admitted, required to make assignment of life insurance to the State home? (D)	In responding to cols. A, B, C, and D, indicate disposition in event of veteran's death in the State home (E)	What charges other than those covered in cols. A, B, C, andD are made to the veteran or his family or representative by the State home? (F)	Is the State home affiliated with a medical school? (G)
Napa County, Calif	No		Liquid assets should not exceed $4,000. Needs 9 of dependents are considered.	Real assets not in excess of $5,000. Needs of dependents considered. Must swear inability to defray cost of care elsewhere.	No	Per will if made 1 yr prior to admission. If intestate, after 5 yrs. assets to post fund unless calimed by kin.	None except for dentures if veteran can afford to pay for them.	No.
Retsil, Wash	No		$1,000 limitation of total assets as property, car, cash, bonds, etc.	See col. B	No	To next of kin. If no heirs after 2 yrs. to State.	Charge of 50 cents a week for personal laundry	No.
Orting, Wash	No	Not presently but planning to collect percentage in excess of $45 monthly.	do	do	No	To next of kin. If no heirs after 2 yr., to State.	None	No.
Hot Springs, S. Dak	Yes	Nothing to $49; $5 from $50 to $59; $10 to $69; $17.50 to $79; maximum, $75 on $150 or more a month.	Not able to earn living, less than $1,800 income, unable to support self and dependents.	Property not a factor; may own and use cars.	No	If no will or legal dependents, home is sole heir.	If more than $3,000 cash accumulated while at home must pay maximum monthly cost until cash assets reduced to $3,000.	No.
St. James, Mo	Yes	From $2 to $200 graduated scale of 17 to 45.5 percent. Over $200 per month, 50 percent.	3 percent in excess of $750 cash added to monthly income.	3 percent of real estate over $5,000 added to monthly income.	No	As willed or to next of kin.	None	No.
Oxford, N.Y	Yes	All income in excess of $30 per month.	Required to place assets in joint ownership with home.	Generally disposed of prior to admission. Retains sufficient funds for tax payments.	Yes	Assets in excess of amounts claimed by home to State.	do	No.
Bennington, Vt	Yes	All over $100 if single and no dependents, otherwise none.	Must give evidence of no adequate means of support. All assets, property are considered.	See col. B	No	To next of kin or heir if will exists, otherwise to State.	do	No.
Fort Dodge, Kans	Yes	Maximum of $120 a month. Minimum of $35 for comfort items. If hospitalized 60 days or more, $35 reduced to $15 a month.	Not admitted if cash, bank account, or bonds exceed a figure 6 times current living expenses.	If assessed value of real property exceeds $2,000, not admitted. No request for surrender of property. Late-model car might be considered.	No	According to State laws	do	No.
King, Wis	Yes	1st $20 exempt; $30, 40 percent; $50, 60 percent; $70, 75 percent; over $70, 100 percent. If pension payments suspended due to excess assets, per diem cost may be charged to estate.	All assets in excess of $1,000 must be turned over to home.	See col. B	No	If no legal dependents, to the State.	do	No.
Jackson, La	Yes	Not to exceed $60 per month if single.	None	None	No	None	do	No.

Source; D.M. & S. Circular 10-67-157, dated July 3, 1967, Updated per telephone survey, Mar.21, 1969.

The bill would amend pertinent provisions of title 38 to increase the payment for hospital care in a State home insofar as the Federal Government is concerned, from $3.50 to $7.50; authorize a $5 million appropriation on a matching fund basis for 10 years to assist the States in remodeling and modifying or altering existing hospital and medical facilities at State homes and increase ratio on nursing care beds from the present 1½ per 1,000 war veterans population of the State to three.

It should be borne in mind that domiciliary costs in the Veterans' Administration now average $6.63 per day in contrast to $3.50 which the Government pays to a State home for similar care; that for nursing care in a State home at $5 per day, the Veterans' Administration figure on an average is $15.60 in its own facilities and for a community nursing home, $13.24. If the proposed hospital rate of $7.50 is enacted into law, this will contrast with a VA cost of $21.63 a day for psychiatric hospitals and $40.90 for care in a general hospital.

The Veterans' Administration estimates that the first-year cost of the bill would be $2,803,000. This would be increased by $2,500,000 in 1971 because of the funds for remodeling and alteration and another $2,500,000 in 1972 for the same reason.

Mr. Speaker, the gentleman from Florida (Mr. HALEY) is an extremely hard-working member of the Committee on Veterans' Affairs. He chairs the Subcommittee on Hospitals in a most effective way and he and his colleagues have just concluded 8 days of hearings on the bills which the House has considered today. The Subcommittee on Hospitals deals with very complicated questions affecting the largest Government hospital and medical system in the world which provides for the care and treatment of nearly 100,000 veterans each day. Members of the committee know of the intricate problems which are involved in the health field generally and in particular, the Veterans' Administration.

The gentleman from Florida, because of his many years of service on this subcommittee, has an excellent knowledge of the problems of this system. He is devoted to the veterans of this country and has been unsparing of himself in conducting these hearings just concluded and his activity in this instance is typical of what he has done throughout his entire service on the Committee on Veterans' Affairs.

My thanks to the gentleman from Florida and all the members of the Subcommittee on Hospitals for a difficult job well done. The other members of the subcommittee are:

Messrs. WALTER S. BARING, THADDEUS J. DULSKI, RAY ROBERTS, GEORGE E. BROWN, JR., W. J. BRYAN DORN, DAVID E. SATTERFIELD III, ROMAN C. PUCINSKI, EDWARD R. ROYBAL, G. V. (SONNY) MONTGOMERY, JOHN J. DUNCAN, WILLIAM H. AYRES, E. ROSS ADAIR, JOHN P. SAYLOR, SEYMOUR HALPERN, JOHN PAUL HAMMERSCHMIDT, Mrs. MARGARET M. HECKLER, Messrs. JOHN M. ZWACH, and ROBERT V. DENNEY.

Now, Mr. Speaker, I yield such time as he may consume to the gentleman from Texas (Mr. ROBERTS) for a further explanation of the bill.

(Mr. ROBERTS asked and was given permission to revise and extend his remarks.)

Mr. ROBERTS. Mr. Speaker, one of the oldest medical programs is that provided in the State homes located generally across the northern portion of the United States. These homes, which were built following the end of the Civil War, started out as old soldiers' homes. They now provide domiciliary care, nursing care, and hospital care.

From the beginning of this State system, the Federal Government has made a

contribution for the care and treatment of those veterans who are eligible for hospital care in the Veterans' Administration. The present bill increases the hospital rate for State homes from the present $3.50 Federal contribution to a maximum of $7.50 per day. In view of the going rate in Veterans' Administration hospitals of $40, and in some instances $50 a day, it is readily apparent that the Veterans' Administration is getting a real bargain in an arrangement of this sort.

Another feature of this bill is the authorization of a matching fund program of $5 million annually for a period of 10 years to assist the States in modernizing their facilities for domiciliary care. This is similar to the provisions enacted as a part of Public Law 88–450 which authorized another matching fund program for nursing care construction.

Mr. Speaker, I think this bill is meritorious and is one which all Members of Congress who are interested in care of our veterans in State homes can cheerfully and logically support.

Mr. TEAGUE of California. I yield myself such time as I may consume.

Mr. Speaker, for the reasons that the gentleman from Texas (Mr. ROBERTS) has so well pointed out, this bill has my complete support.

I now yield such time as he may consume to the gentleman from Tennessee (Mr. DUNCAN), the ranking member on the subcommittee which considered this bill.

Mr. DUNCAN. Mr. Speaker, I rise in support of H.R. 9334. This bill will increase the Federal payments on behalf of veterans who are eligible for Veterans' Administration hospitalization but are receiving hospital care in State veterans facilities. It will also provide an incentive to those States operating domiciliary homes to update their facilities by authorizing a matching fund program for the remodeling or renovation of hospital or domiciliary facilities at State homes. Finally, it will increase the ratio on nursing care beds which the Federal Government will help finance from the present 1½ per 1,000 war veterans population to three nursing care beds per 1,000 war veterans population.

Under existing law, Mr. Speaker, the Veterans' Administration is authorized to pay each State at the per diem rate of $3.50 for domiciliary or hospital care and $5 for nursing home care for each war veteran receiving such care in a State home. Section I of H.R. 9334 will increase the rate payable for hospital care to $7.50 daily. This is proper, Mr. Speaker, since hospital care is far more costly than either domiciliary or nursing home care. Even the $7.50 daily payment as proposed by this bill is more reasonable than the $40.90 daily cost for care in a Veterans' Administration general hospital.

Section 2 of the bill will authorize a $5 million annual appropriation for 10 years to assist States in remodeling and modifying or altering existing hospital and domiciliary facilities at State homes. Funds would be disbursed on a matching basis with States desiring to remodel their existing facilities. Because the State homes are assuming a share of the Federal burden for the care and treatment of veterans at an extremely reasonable cost, the committee believes it appropriate that the Federal Government share in the cost of modernizing these State facilities.

Mr. Speaker, I support the bill and urge that it be passed.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. TEAGUE of California. I yield such time as he may consume to the gentleman from Iowa (Mr. GROSS).

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding.

I would ask the gentleman what does the Federal Government now do by way of using Federal funds to remodel State-operated veterans' homes, soldiers' homes, as they are sometimes called?

Mr. TEAGUE of California. Mr. Speaker, I am going to ask the chairman of the subcommittee, or perhaps another member of the subcommittee, to answer that question.

Mr. HALEY. Mr. Speaker, if the gentleman will yield, at the moment it is my understanding that the Federal Government participates to a limited extent in the construction of new facilities. This will allow them to modernize buildings and plants that have been in existence for 40 or 50 years. We believe this is a good bill that will permit such a facility to be modernized rather than to build a new facility. We believe we can do that to an advantage.

Mr. GROSS. The gentleman is saying that Federal support has been given to State-operated veterans' homes over a long period of time; is that correct?

Mr. HALEY. For a long, long time the Federal Government has been in this program; yes.

Mr. GROSS. I thank the gentleman.

Mr. SAYLOR. Mr. Speaker, I rise in support of H.R. 9334. This bill will increase the Federal payment to State homes on behalf of veterans who are hospitalized therein.

The present daily payment per veteran is $3.50. This bill will increase this payment to $7.50. The equity in this legislation is readily apparent when one compares the cost of hospitalization, $40.90 daily, in a Veterans' Administration hospital with the $7.50 daily proposed by this bill.

Since States are helping the Veterans' Administration assume its burden of providing hospitalization for the Nation's war veterans, it seems logical that the Federal Government should assume at least a reasonable part of this expense. I urge that the bill be passed.

Mr. MONAGAN. Mr. Speaker, I rise today to urge passage of H.R. 9334, a bill which among other things increases the Federal payment for hospital care in a State home for veterans from the present level of $3.50 per day to $7.50 per day. This legislation is sorely needed and marks an important step forward in having the Federal Government contribute its fair share to State veterans facilities like those in Connecticut at Rocky Hill.

Connecticut, with a bed capacity of 1,225 in its veterans home and hospital facilities, ranks second in the Nation in bed capacity for such State institutions.

My interest in having the Federal Government provide adequate reimbursement to State institutions is not new. In 1960 I introduced legislation to change the method of payment to a more equitable per diem payment, and set the per diem rate at $2.50 per day. In 1964 I supported the passage of Public Law 88–450 setting the per diem rate for hospitalization or domiciliary care in a State home at $2.50 and the per diem rate for nursing home care at $3.50. In the 90th Congress I introduced H.R. 7236 to raise the per diem rate for domiciliary care to its present rate of $3.50. While I was encouraged to see the passage of the substance of my bill, I recognized then as I do now that the Federal share must be increased substantially to ensure the continued maintenance of excellent care now provided.

I think the provisions of the bill before us today, in more than doubling present per diem reimbursement rate, authorizing a $5 million appropriation to assist the States in remodeling or altering existing hospital and domiciliary facilities at State homes and increasing the ratio on nursing care beds goes a long way in bringing the Federal contribution in line with the current costs of operating the State facilities.

The service provided to our most deserving citizens by State institutions is very valuable and I urge the House to unanimously adopt this bill today without prolonged debate.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Texas that the House suspend the rules and pass the bill H.R. 9334.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

CADET COL. HECTOR GUTIERREZ JR.

(Mr. KAZEN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. KAZEN. Mr. Speaker, in these days of student rebellion and campus turmoil, when our Nation finds many of its colleges and universities wracked with dissent and disorder, violence, and bloodshed, I take great pride in commending one of the outstanding institutions of higher learning in the Nation, Texas A. & M. University, not only for having a distinguished record in its Reserve Officers Training Corps program, but also because of the peace and tranquillity that reigns over the Texas Aggie campus, where the majority of the civilian student body has shown a strong support of the ROTC, at a time when the ROTC program has been the target of campus radicals.

Today, Mr. Speaker, I take this opportunity to specifically pay tribute to a distinguished student leader, Cadet Col. Hector Gutierrez, Jr., of Laredo, Tex., 1969 commander of the corps at Texas A. & M. University, a university that developed as a land-grant college, steeped in a history of a highly successful mili-

tary program that has provided a record number of officers for our Armed Forces, and has given our country some of our most distinguished military leaders.

A young man whose parents have instilled in him love for his country, Cadet Col. Hector Gutierrez, Jr., has distinguished himself as a responsible student leader seeking to uphold reason, while rejecting force, firm in his resolve to maintain true freedom on the campus, thus assuring that the will of the vast majority of the student body is respected and upheld.

I congratulate his parents, Mr. and Mrs. Hector Gutierrez, Sr., his former teachers at Nixon High School, the faculty, and his fellow students at Texas A. & M. University, for their share and role in the molding and development of this outstanding and patriotic young man, whose love for his country and faith in the democratic processes, make of him a most worthy model of American youth, one of whom we can be justly proud.

I am pleased to share with my colleagues and the readers of the RECORD, this most interesting article from the May 1969 edition of the Texas Aggie.

When an NBC news team went to the campus of Texas A&M University last winter to film part of a special report on ROTC, they may well have expected the same sort of anti-ROTC feelings they had encountered at some of the Ivy League schools.

If they did, they were soon disillusioned. The handful of dissenting students who, for the benefit of NBC cameras, painted peace symbols on the statue of a former Texas Governor and A&M President Lawrence Sullivan Ross were all disillusioned.

Non-ROTC students washed away the peace symbols and then guarded the statue throughout the night so that the following day the NBC crew would shoot scenes around an undefiled statute of an A&M hero.

The newsmen also witnessed at work one of the most unique student bodies in the nation—one not split by the dissension that rankles campuses from coast to coast. The key word at A&M is "solidarity."

Symbolizing this solidarity between the civilian student body and the ROTC is the popular 21-year-old cadet colonel, Hector Gutierrez '69, who commands the 2,525-man Corps.

The morning after the statue painting incident David Wilkes, '69, president of the Civilian Student Council, telephoned Gutierrez to offer his support. Wilkes told Gutterrez that the twenty-odd "dissenters" could not speak for the 13,000-member student body.

"We are," Wilkes said, "backing the Corps all the way."

Support for the ROTC Corps by the student majority, just at a time when the usefulness of the ROTC program is being seriously questioned and downgraded in other universities, and, at a time when a minority tried to imply that the majority of the students were anti-ROTC has "utterly confounded the NBC people." Gutierrez maintains. "They just could not understand it."

When viewed in the light of the pacifistic complaisance of the majority of students on such campuses where a militant minority may run amok for weeks at a time, it is not difficult to see why newsmen who had been witnesses to these tragedies would be amazed at a united student body.

Gutierrez' answer to trouble on the A&M campus is ". . . a proud 'NO!' Our students have managed to put down any attempt at violence."

The kind of student leadership that is needed to help maintain pride in the ROTC-civilian student tradition at A&M is exemplified in Hector Gutierrez.

Says Army Colonel Jim H. McCoy '40, ROTC commandant and professor of military science at A&M, "Hector has more than proved the validity of our choice. He has patience, assumes responsibility, and acts with vigor."

Gutierrez, the oldest of a family of two sisters and three brothers, was the valedictorian in 1965 at the Loredo Nixon High School. His parents, Mr. and Mrs. Hector Gutierrez Sr., commenting on their son's early interest, say, "Hector never seemed to care very much for sports, although he did play tennis. He was very interested in anything the students did, and in the student council."

Besides being first in his graduating class, he was president of the Nixon Student Council and commander of the Nixon ROTC.

"We can't account for his interest in ROTC," says Mr. and Mrs. Gutierrez, "but we do try to teach our children to love our country."

Gutierrez Sr. is a car salesman in Laredo, and Mrs. Gutierrez is a secretary at Laredo Air Force Base.

Gutierrez Jr., who serves in several student functions at A&M, is a senior mathematics major who has not yet decided what his lifetime career will be. Perhaps he will pursue a career in the Air Force, or, after serving his four-year military commitment, attend a "good business school."

Of one thing Gutierrez is certain: When he leaves the university in May, there will be someone capable of filling his shoes as Corps commander.

"Although we are no longer a military school," (A&M is coeducational) Gutierrez explains, "the Corps is throught of on the same level of The Citadel and Virginia Military Institute."

A Corps commander is selected after nomination by senior student leaders during his junior year. The selection is then approved by A&M President Earl Rudder '32, Dean of Students James P. Hannigan, McCoy, and Air Force Colonel Vernon L. Head, professor of aerospace studies.

The nominees' military class, scholastic, leadership, and disciplinary records are screened and interviews are conducted by the ROTC faculty to determine aspirations as a student leader, outlook on student life, and on life in general. Final approval of the commander is by the university president who bases his decision on leadership ability, academic standing, character, personality, and campus student activities involvement.

A typical day for the Corps commander begins at 6:15 a.m. After a 7 a.m. breakfast, Gutierrez checks at the Military Science Building, the Trigon, for information about the day's activities which flow through him to the Corps.

Classes consume most of his day, but during the open periods, Gutierrez usually is at the Trigon maintaining Corps-ROTC liaison. He normally meets with McCoy once a week and confers more frequently with his own Corps Staff.

Gutierrez files mail for Corps Staff members, brigade, and wing commanders around 3 p.m., then gets a uniform ready for Ross Volunteer drill at 5 p.m.

After dinner, Gutierrez farms out projects to his 15-member staff and meets with segments of it to iron out details. Some of the problems that may be dealt with include deciding when to have inspections and formations, how to better recognize corpsmen and students who have excelled in their school work and most important, how to improve the Corps.

"In five years," Gutierrez, predicts, "the Corps will have 5,000 members." He says that the cadets of the future will be the same caliber cadets who became generals and Medal of Honor winners, and presidents of corporations.

Voluntary Corps membership has been in effect since 1965. The Corps member spends about two or three hours a day on ROTC activities. Gutierrez says that although some cadets may leave the Corps to devote more time to their regular studies, "everybody in the Corps can still be an Aggie. It depends on how hard you work at it."

McCoy says that Gutierrez has "instigated changes for the better in the Corps, some of which were deemed impossible."

One change involved the cropping of the freshmen ROTC cadets' hair. Previously, the frosh wore their hair cut short, "convict style," for the first year. Now, freshmen are still given short haircuts, but within the boundaries of good taste.

He has also led efforts to assist freshmen in adjusting to Corps life. "While there has been no lessening in discipline, we have emphasized that freshmen be treated more as individuals," the cadet commander says.

Life on the College Station campus may seem strange to students visiting A&M from another school. Strolling across campus, the visitor may be hailed by a student who imparts—without being asked—such information as who he is, what he is majoring in, and what his hometown is, and then expects the visitor to deliver the same information. This is just the A&M students' way of "whipping out," or, greeting each other, and it happens hundreds of times every day on the A&M campus.

Another custom that shows the solidarity better than any other example is the Silver Taps tribute paid by the students to a deceased A&M student. On the night of the funeral, lights on the campus are turned out in a brief memorial ceremony. The entire student body meets in front of the Academic Building at 10:30 p.m. A squad from the Ross Volunteers fires a 21-gun salute, and then, Taps is played three times.

"I also have always taken special pride in Muster Day," Gutierrez says. "There has been a Muster Day since 1903 when the anniversary of the Battle of San Jacinto was observed. There is a memorial service for all the Aggies who have died since the previous Muster Day. Their names are called and someone answers 'Here!' because to us, they will always be part of the university."

Gutierrez spent the summer of 1968 in Poland and Russia by participating in Experiment in International Living, a nonprofit educational exchange organization devoted to fostering mutual understanding and friendship among the peoples of the world.

He studied Polish before going abroad. "I found," he says, "that I could love people who shared a completely different political ideology. I lived with a Polish family, and I had the opportunity to visit a Communist nation not as a tourist."

The 5-foot 7-inch Mexican-American says he weighed 150 pounds when he went to Poland, and gained 20 pounds there. "We had potatoes every day."

He says that in Poland, the trend is for only the older generation to go to Church. Poland has a large Catholic population. "But people of all ages had questions about America."

Gutierrez spent two weeks in Moscow before returning to the United States. Now, he is broadening his experiences there by studying the Russian language.

DON HEATH.

OUR NATION'S RESPONSE TO THE INCREASINGLY URGENT PROBLEM OF POPULATION GROWTH

(Mr. KASTENMEIER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KASTENMEIER. Mr. Speaker, on May 28, I introduced legislation dealing with our Nation's response to the increasingly urgent problem of population growth.

While major attention has been focused on the rampant population growth in the underdeveloped world, the present rate of increase in our own country cannot be maintained indefinitely without severe social and economic dislocation.

This bill, which has been introduced in the other body by Senator TYDINGS, is meant to coordinate and improve the current inadequate efforts of the Department of Health, Education, and Welfare in its implementation of our domestic population program. Establishment of a National Center for Population and Family Planning within HEW, will at long last make possible coordinated, cohesive family planning programs. In addition, this bill will increase the funds available for family planning projects, and stimulate research in methods of contraception. It will also expand and improve the research and service activities of public and private nonprofit agencies. More specifically, the Secretary of HEW will be required to develop a 5-year plan which will provide voluntary family planning services for over 5 million low-income women during their childbearing years. By focusing responsibility in one office whose sole activity is family planing, economies in both funds and efforts will be realized, disciplined planning will be encouraged, and the Congress will be able to better scrutinize and evaluate the administration of our family planning programs.

Mr. Speaker, the rewards from this legislation will be measured in terms of reduced poverty and increased family stability and individual opportunity. The success of our efforts in this field should spur and encourage less-fortunate nations to devote greater effort to their own programs and thereby contribute to the alleviation of the worldwide problem of burgeoning population growth. It is still not too late to avert the disastrous consequences to all mankind of the unchecked population explosion. But if we are to succeed in this enormous task, we must act quickly and decisively. The relatively modest authorizations called for here represent an investment in the future happiness and prosperity of all of us, and of our children. I urge all of my colleagues to give the highest priority to this bill, and by their support express their faith that we can find solutions to the problems we have ourselves created.

FOREIGN COMPETITION FACING U.S. SHOE MANUFACTURING INDUSTRY

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BURKE of Massachusetts. Mr. Speaker, today I call the attention of the Members of the House to a petition that is being circulated by Congressman WILLIAM BATES, assisted by Congressman WYMAN, and myself and 22 other Members of Congress, asking for signatures by the Members of Congress to a letter which is being addressed to the White House bringing to the attention of the White House the acute intensive foreign competition now facing the U.S. shoe manufacturing industry. Since 1960 imports of footwear have increased 600 percent.

Imports equaled almost 28 percent of the total domestic production in 1968. We have every reason to believe that if unchecked, this rate of increase in shoe imports will continue and cause a loss of job opportunities for American shoe workers.

Mr. Speaker, I might point out to the Members of Congress that there are 253 Members of this House who have footwear industries located in their districts. Unless we do something, the footwear industry is going to disappear from the American scene. Thousands of jobs will be lost. Once our defense industry slows down in many of these districts, we will need other industries to act as economic cushions. Many small towns are going to suffer severely.

Mr. WYMAN. Mr. Speaker, will the gentleman yield?

Mr. BURKE of Massachusetts. I yield to the gentleman from New Hampshire.

Mr. WYMAN. Is it the gentleman's opinion that in the practical sense any real relief is expectable from a voluntary approach to import restrictions? Does he really believe our foreign competitors will voluntarily reduce their profitable export of shoes and leather to the United States?

Mr. BURKE of Massachusetts. I believe that this approach is the approach that the footwear industry has asked for and that the shoeworkers have asked for in America and we are following their recommendations and hope something will be done. Further, it is our hope that some of these countries will stop accelerating their exports of footwear to this country because if it does not stop it, it means that many of the shoe firms are going to close. This is the approach they have asked us to make and I am going along with their thinking upon it.

The gentleman from New Hampshire (Mr. WYMAN) has been very cooperative in this matter and, actually, he is acting in the place of Congressman BATES right now.

Mr. Speaker, it is my hope that we will be able to obtain the signatures of a majority of the Members of the House on this petition. I will have it available so that other Members of the House may be able to sign and I would be happy to have their signatures.

AMERICA'S ROLE IN THE VIETNAM WAR

(Mr. RIEGLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RIEGLE. Mr. Speaker, it was with the deepest dismay that I read yesterday the remarks of South Korean President Park concerning America's role in the Vietnam war.

Frankly, America neither seeks nor needs President Park's advice with respect to our responsibility in South Vietnam. After 35,000 Americans have died in the swamps and jungles of South Vietnam, let no outsider presume to lecture the United States or its leaders as to the terms or timing of a Vietnam settlement.

For the record, America's enormous losses in Vietnam were produced not only by our own mistaken policies, but equally by the appalling undercommitment of free Asians to the war they encourage us to continue.

South Korea, to its credit, has 50,000 troops in South Vietnam. But we have over 54,000 U.S. troops stationed in South Korea—and we have been informed that if we withdraw our troops from Korea, they will withdraw their troops from Vietnam. Further, the United States pays every dime of the expense of the Korean troops in Vietnam. This includes wages, food, equipment, transportation, and all the rest. We have also been informed that when we are tired of paying these bills, the Korean troops will leave Vietnam.

I will not lengthen the record with a detailed accounting of the almost seven and three quarters billion dollars in military and economic assistance we have given the Koreans in recent years—amounting to well over $350 million last year alone—nor recite the figures of the enormous economic windfall the Vietnam war has provided Korea. But, if President Park is to speak to us, let him say that after 17 years of postwar assistance from the United States—with over 54,000 American troops still garrisoned there, and with a native population more than twice as great as North Korea—that the South Koreans are finally able to at least patrol all of the 151-mile-long DMZ separating North and South Korea. Today, America continues to actively patrol 18 miles of that front; which has cost us 37 Americans in the last 5 years. I ask President Park, after 17 years, to tell us how much longer it will be before our men can turn your self-defense back to you and come home to their families?

This is one man in this Congress who is outraged at the way we have squandered American blood and treasure in Asia—and I deeply resent the suggestion from Asian leaders that we should do no less. In fact, they should do more—much more—and quickly.

There is another voice than that of President Park to which we should be listening—the voice of the American people. It is a voice which is loud and clear with a very plain message. I hope to God, that through our new American leadership, we are going to deliver that message to the non-Communist Asians; namely, that the free ride is over—and that we have better things for our young men than to be fed into an endless Asian meatgrinder, fighting wars the Asians will not fight for themselves.

THE CONDUCT OF THE WAR IN VIETNAM

(Mr. SIKES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SIKES. Mr. Speaker, the American public has been told that senseless military actions in the hills and valleys of Vietnam have delayed successful nego-

tiations at the Paris peace talks. This has a familiar ring. A little more than a year ago we were being told it was the bombing of targets in North Vietnam which was delaying the return of peace. We stopped the bombing. We seem to be no nearer to peace than we were at that time. We have tried time and again to find a basis for meaningful negotiations. In further attempts to bring peace, the United States has accepted Hanoi's choice of a site for negotiations. We then agreed to recognize the National Liberation Front as a party to the negotiations. We have even dropped President Johnson's Manila communiques stipulation that no allied troops could be withdrawn from South Vietnam until North Vietnamese troops were removed.

While these concessions were being granted, the Communists have yielded nothing. Instead of showing any indication of a sincere desire for peace, they continue to stall the negotiations at the conference table, and to launch harassing military actions in South Vietnam. Theirs is a waiting game. They know full well they cannot win—except at the conference table. Any limitation on actions of U.S. forces in the field plays into their hands, while demands mount at home for the U.S. Government to end the war and bring its troops back.

Just what is senseless military action? Our efforts for months have been primarily defensive. They have been limited to checking Communist buildups and to point defense of areas under attack by the Communists. The defense of major civilian and military areas in South Vietnam and of our own installations can hardly be called senseless. The inexcusable part is that we have been fighting a war which is largely defensive throughout our involvement in South Vietnam. The Communists have always taken heart from this fact and deduced that they could outlast us.

The Communist strategy in South Vietnam appears to be clear enough. They are seeking the establishment of a coalition government in Saigon. If they can obtain the replacement of hard-line anti-Communist members of the present Government with others who are soft on communism, plus some who are representative of the National Liberation Front, they will have gone a long way toward setting the stage for a takeover in a few years from within.

Who is to judge whether military actions in Vietnam are senseless? There are those who have spent a lifetime in study and in training for war and who are experienced in combat. Is it not better that they judge what is essential for the security of our forces? There are those at high levels who have all the facts at their fingertips which are necessary to decide the implementation of policy for the advancement of the free world cause. Are they not in best position to determine whose judgment to trust on essential military operations?

Or shall we accept the judgment of experts without portfolio whose comments may confuse the American public, and certainly will give heart to the enemy. There is a time for talking and a time for listening. There seems to be little doubt that some of the "experts" have been talking when they should have been listening.

STUDENT ANTIVIOLENCE ACT

(Mr. CRAMER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CRAMER. Mr. Speaker, I have today introduced a bill aimed at giving law-abiding students legal standing to file a complaint with the Justice Department when they are denied free access to their school's facilities by disruptive students.

The measure also permits the Attorney General or the Deputy Attorney General to proceed on his own motion without such a complaint whenever he determines that prosecution by the United States is in the public interest and necessary to secure substantial justice.

I believe it helpful to briefly review the body of Federal law in this area inorder to demonstrate the difficulties and shortcomings that presently exist should the Justice Department determine that Federal prosecution against one or more individuals is warranted and to show thereby the pressing need for enactment of this new legislation.

CRAMER ANTIRIOT ACT

Section 2101 of title 18 of the United States Code is the Antiriot Act which I had the privilege of authoring. This provision prohibits travel in interstate commerce, or the use of any facility of interstate commerce, by any person with the intent to incite, organize or promote a riot or to commit any act of violence in furtherance of a riot, or to aid or abet any person in furthering a riot. Violators are subject to a maximum fine of $10,000 and 5 years imprisonment.

The obvious shortcoming of this measure as applied to campus disturbances is that it is only applicable when interstate travel or interstate facilities are used to further the riot. The bill that I have introduced today does not hinge on the interstate commerce clause of the Constitution but achieves its Federal nexus through the expenditure of Federal funds at educational institutions.

FIREARMS

Section 231 of title 18 prohibits the teaching or demonstrating of the use of firearms or explosive or incendiary devices or techniques with the intent that the same will be used in a civil disorder which may obstruct commerce or the conduct of any federally protected function. It prohibits the transportation or manufacture for transportation of any such device with the intent that they be used in furtherance of a civil disorder.

The weakness in this law is that it applies only to "teaching or demonstrating" but does not impose a penalty for their actual use in a disturbance.

Section 924 of title 18 imposes a penalty of not less than 1 year nor more than 10 years for using or carrying unlawfully a firearm to commit or during the commission of any felony which may be prosecuted in a court of the United States. The bill that I have introduced today carries a like provision as it relates to the use or threatened use of any firearm or destructive device in a campus disturbance. My bill further provides, however, that any term of imprisonment imposed thereunder shall run consecutively with any other penalty imposed as a result of the bill's violation and not concurrently. This is consistent with my bill, H.R. 6197, which amends the entire Firearms Act to accomplish the imposition of consecutive penalties. H.R. 6197 is presently lingering in the House Judiciary Committee with no hearings scheduled.

FEDERALLY PROTECTED ACTIVITIES

Section 245 of title 18 is designed to protect the civil rights of persons participating in or receiving benefits from various federally protected activities. Interference by force or threat of force with these rights carries a range of penalties extending to life imprisonment if death results. The bill that I have introduced today amends this section in two important respects.

First, and foremost, as presently constituted, section 245 requires a showing that a person's rights have been interfered with because he is participating in or enjoying the benefits of any program or activity receiving Federal financial assistance. The inherent weakeness in this language is that the Government must show that a student's rights were interfered with solely because he is attending a school receiving Federal assistance. This is not the reason a student is being denied the right to attend classes and pursue an education by campus revolutionaries. I have amended this section by adding "or while" immediately after "because." In this way, a student acquires a cause of action if his rights are interfered with while he is participating in or enjoying the benefits of any program or activity receiving Federal financial assistance. And this, I submit, makes a lot more sense and enforcement possible in student disorder cases.

Section 245 also presently makes it a Federal crime to interfere, intimidate or willfully injure by force or threat of force any person "in order to intimidate such person from participating in or enjoying the benefits of any program or activity receiving Federal financial assistance." Here, too, the law misses wide the mark because of the unlikelihood that the campus revolutionary is taking over a building or starting a fire simply to intimidate the law-abiding student from attending classes. The addition of the words "or while" as stated above obviates the need for seeking a prosecution under the extraordinarily complicated and difficult set of facts required by the present language.

My bill also amends section 245 in another important respect. I have added an entirely new subparagraph which clearly makes it a crime to interfere with any person attending a school receiving Federal financial assistance. The law as presently written, read in conjunction with the addition of the words "or while," may be construed to prohibit such interference. Passage of this bill with its precise new language, however, will make it absolutely certain that Congress intended

interference with a student attending a school receiving Federal financial assistance to be a crime.

I have named this bill the Student Antiviolence Act. It is a student-oriented measure which gives conscientious students a legal weapon to combat the radical groups and individuals who are attempting to deny him an education.

Industrious, serious-minded students are presently being denied the right to attend classes and pursue an education in instances where campus revolutionaries are taking over buildings and generally disrupting the institution. College administrators are in many instances reluctant to take stiff disciplinary action against these disruptive students. I believe passage of this measure will bring to the fore the majority of college students who are opposed to this disruptive activity but are presently without adequate means to do something about it.

I wholeheartedly subscribe to the proposition that colleges and universities should have the primary responsibility for dealing with this problem. This bill preserves this responsibility by requiring the Attorney General to make a finding that, before instituting prosecutive proceedings, such action is in the public interest and necessary to secure substantial justice. This finding must be made when a complaint is filed by a student or faculty member as well as when the Attorney General undertakes an action on his own motion.

Mr. Speaker, the Federal interest in this Nation's educational institutions is significant both in terms of money and public policy. Congress, which appropriates millions of dollars annually for America's educational institutions has a concurrent responsibility to insure the taxpayer that this money is not being wasted. Passage of this measure will help protect this interest.

I have a tremendous amount of faith in the integrity and responsibility of America's youth, and I believe they should have the means to rid their campuses of the radicals who are attempting by force and intimidation to deny them an education. This bill provides such a means.

The bill provides a penalty of not more than $1,000 and imprisonment for not more than 1 year or both consistent with present antiviolence acts in title 18, chapter 245. As I have already mentioned, it provides a separate penalty of not more than $10,000 and imprisonment for not more than 10 years, or both for anyone convicted of using a firearm or any other destructive device in a campus disturbance. This latter provision closes a loophole which presently exists in the Firearms Control Act.

Following is the complete text of the bill:

H.R. 11802

A bill to amend section 245 of title 18, United States Code, to make it a crime to deny any person the benefits of any educational program or activity where such program or activity is receiving Federal financial assistance

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Student Antiviolence Act of 1969".

SEC. 2. (a) Section 245 of title 18 of the United States Code is amended by adding at the end of subsection (b)(1) the following new subparagraph:

"(F) participating in or enjoying the services, facilities, privileges or advantages of any primary, secondary, or higher educational institution, public or private, or participating in or enjoying the benefits of any educational program or activity receiving Federal financial assistance; or"

(b) That portion of subsection (b)(1) of such section 245 which precedes subparagraph (A) is amended by inserting "or while" immediately after "because".

(c) Such section 245 is further amended by striking "or" at the end of subparagraph (b)(1)(E).

(d) Such subsection (b) of section 245 is further amended by inserting immediately after "or for life." the following: "In addition, any person who violates subsection (b)(1)(F) through the use or threatened use of any firearm or destructive device, as defined in section 921 of title 18 of the United States Code, shall be fined not more than $10,000, or imprisoned not less than one nor more than ten years, or both. This penalty shall run consecutively with any other penalty imposed as a result of violation of this section."

(e) Such section 245 is further amended by adding at the end thereof the following new subsection:

"(d) Whenever one or more persons are denied rights protected by subparagraph (F) of subsection (b)(1), a complaint asserting the denial of such rights may be filed with the appropriate United States Attorney. The Attorney General or the Deputy Attorney General shall prosecute in accordance with subsection (a)(1) of this section. The Attorney General or the Deputy Attorney General may proceed on his own motion without such a complaint whenever he determines that prosecution by the United States is in the public interest and necessary to secure substantial justice."

FRAUD IN AMERICA—III

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, when CBS broadcast its shocking and terribly inaccurate, and partially false show "Hunger in America" last year, it failed to acknowledge the fact that persons who appeared on the show had been paid, as is required by law.

The question is whether the FCC will require CBS to acknowledge its violation of law, and to cease and desist from further violations of it.

The FCC ought to take such action because that law has a good reason for existing.

Suppose that the precedent set by CBS is allowed to stand. In such a case a television network could make payments of any amount to persons who appear on news programs, without acknowledging payment. There would be no way to insure that the public knew whether it was seeing spontaneous news, or carefully arranged and well-paid-for acting, or lecturing, or performing, or simply, personal views. In principle, the payments CBS made are the equivalent of bribes. If such payments can be made without challenge, then it is certain that the public will in the future have no way of knowing whether they are seeing news, or manufactured scenarios. There will be no way of knowing whether a scene is faithfully depicted, or whether it is juiced up to satisfy the visual requirements of the medium, or the artistic desires of the director, or the ratings desires of the sponsors, or the shock values prized by the producers.

I do not have any doubt that CBS produced misinformation and staged scenes in its "Hunger" show because they wanted higher ratings—not because they did not know any better. After all, it is ratings alone that sell shows, and news shows are hard to sell, because they do not normally get good ratings. The news division of a network typically is relatively starved for operating money, because they do not often show a profit. The pressure is on them, just like in every other department of a network, to produce a product that sells. It is understandable why, under such pressure, a producer would resort to staging scenes, writing sensational material, paying persons interviewed, and all other manner of actions in order to hypo interest in his shows. But the crucial difference is that entertainment is one thing and news is another. Catering to ratings is not a public service, but a commercial function, and the networks seem to have lost sight of this crucial difference.

Predictably, when challenged on the accuracy of its show, CBS at first reacted by getting their local station to contact me to request a meeting between myself and the producers. Nothing so direct as a request to me—they wanted to let me feel a little pressure from them, to let me know that I was hurting my neighbor by knocking something he had broadcast—even though he and I both knew that he had no control over the content of the program.

Then CBS decided to answer by citing a few proofs here and there. And when these were refuted, bigger chiefs on the baronial totem wrote longer letters, until finally they just decided that I would not be reasonable. In fact, all I wanted, and all I want now, is some reason to believe that CBS is willing to acknowledge its error, and willing to show some sense of public responsibility and some respect for decent journalistic practice. If that is unreasonable, then I suppose I must plead guilty.

But I cannot afford, nor do I think the people of this country can afford to accede to CBS' conception of reason and responsibility. If they are immune to accountability, and if they can freely manufacture events and then report them, and then get awards for fiction reported as fact, 1984 is closer than anyone imagined. These networks control virtually every bit of information that is reported on television. That monopoly was never envisioned by the writers of the Communications Act of 1934. One can only hope, in the absence of legislation, that the networks will exercise some degree of responsibility. But if CBS is an example, that hope is slender indeed. I believe that Congress must examine its legislation, and determine whether or not we have any assurance that the networks are serving the public interest. I do not believe that we have any such assurance. The monopoly held over the air by the barons of the glass skycrapers, the arbiters of the public airwaves, ought to be examined carefully and closely by a Congress that has every reason to know the

abuses that have been perpetrated in the name of news, and for the sake of marketing.

CAN RESUMPTION OF BOMBING OF NORTH VIETNAM BREAK THE PEACE STALEMATE IN PARIS?

The SPEAKER pro tempore (Mr. MONTGOMERY). Under a previous order of the House, the gentleman from Illinois (Mr. PUCINSKI) is recognized for 60 minutes.

Mr. PUCINSKI. Mr. Speaker, since the bombing pause began on April 1, 1968, the United States has suffered a total of 14,639 American soldiers killed in action on the battlefields of South Vietnam.

This is almost one-half of the total number of losses that this country has suffered since the war began, or at least since our involvement in this war began on January 1, 1961.

In other words, in 14 months—from April 1, 1968, to May 24, 1969, which is only last week—the United States lost 14,639 soldiers, while our total losses for 8 years—from January 1, 1961, to May 24, 1969—were 35,530 U.S. soldiers killed.

Since January 1, 1961, through May 24, 1969, the number of allied dead in Vietnam totaled 118,029, of which 35,530 were U.S. soldiers, 3,056 were free world forces and 79,554, were soldiers of the Republic of South Vietnam.

Most Americans are not aware of the fact that during this bombing pause the United States has suffered almost one-half of its total losses. Now are they aware that since the peace talks in Paris got started on May 9, 1968—5 weeks after the bombing pause went into effect—we lost 12,579 American soldiers killed in combat in South Vietnam, or almost one-third of our total losses of 35,530 since January 1, 1961.

President Nixon, on May 14, made a very generous offer to North Vietnam when he spelled out his eight-point program for peace in Vietnam.

There is no question in my mind that every single American and, yes, I would dare say that every free man in this world wants to see the conflict in Vietnam come to an end just as quickly as possible. Mr. Nixon quite properly reflected his own desire to end the conflict as well as the desire of his fellow Americans.

I think only when we see these tragic losses of 14,639 American soldiers killed during the bombing pause and fruitless peace talks can we realize the futility of trying to deal with the Communists.

Since President Nixon made his very generous and honest offer for peace on May 14, there has been no significant affirmative response from North Vietnam and I believe that even the most altruistic and optimistic observer will have to agree that we are now in a hopeless and helpless stalemate in Paris.

There is not one iota of forward movement toward peace in Paris. The casualty rates continue to climb and every week more and more of our boys are dying in the jungles of South Vietnam.

Mr. Nixon quite properly stated in his speech on May 14 that if this needless suffering continues, this country will have to reappraise its position.

Mr. Nixon made his offer 3 weeks ago and there is no evidence whatsoever that the enemy is in any way ready to talk meaningful and significant peace.

So perhaps, Mr. Speaker, the time has come when we ought to follow the President's admonition and reexamine our position.

What is that position?

Today, North Vietnam is a sanctuary for the Communists—free of any losses from our bombers, free from bombing—free from any damage, and free from the ravages of aggression they are waging in South Vietnam.

I despair at the naivete of those who would have you believe that somehow or other when we stopped bombing North Vietnam we created a morale problem in North Vietnam.

I saw last week in one of our national magazines a statement that Ho Chi Minh is having trouble keeping up the morale of his people in their support of his war since the bombing stopped. I submit that this kind of warped reasoning is nothing more than an alibi for those who a year ago preached the doctrine of stopping the bombing and promised the American people that if we would just stop the bombing, peace would be restored to Vietnam immediately.

We remember well the speeches made by some of the most outspoken leaders in the other body—and there were some in this body—who said more than a year ago: "If you just stop the bombing, we will bring the war to an end. That is all we need. Just show some good faith to the Communists and they will sit down at the peace table and we can have peace, that glorious peace that we all seek."

Well, they were wrong; dead wrong. And the 14,639 American soldiers who have given their lives since the bombing pause began are a tragic monument to how wrong they were.

Mr. Nixon would be well advised to take a hard look at the situation today when he meets with President Thieu in Midway next week. I pray he does not follow the advice of these false prophets in Congress who never were able to understand the real menace of world communism.

Everybody in this country wants to find some way to get out of the war in Vietnam, and I join with them. But I submit perhaps the time has come when we ought to make it crystal clear to the North Vietnamese that our patience is not inexhaustible, that we are not going to let this slaughter continue, and that if there is not any forward movement and meaningful movement for peace in Paris, this country may very well have to exercise its option of resuming the bombing of the North.

There are those in the Pentagon, I am told, who believe the United States could withdraw from combat duty in the swamps of Vietnam almost immediately 100,000 of our soldiers, and eventually we could withdraw all of our troops from combat duty in South Vietnam if we did resume the bombing of the North.

And why do they feel that way? Because when we stopped bombing North Vietnam on April 1, 1968, we automatically released for combat duty 400,000 North Vietnamese troops that had been pinned down in North Vietnam on antiaircraft duty and supervising civilian repair crews working on the damage that we inflicted—400,000 troops that were tied down in North Vietnam.

It is rather significant that while we were bombing North Vietnam, the enemy casualties that we recovered in South Vietnam were for the most part Vietcong, young peasants who joined the Communist cause. I think it is of the greatest significance that today, the casualties that we recover in South Vietnam are North Vietnamese soldiers in North Vietnamese uniforms, carrying North Vietnam credentials and, in many instances, maps and charts.

There can be no doubt that since the bombing pause started, the North Vietnamese have plunged at least 100,000 of the 400,000 North Vietnamese soldiers that were relieved from home duty in North Vietnam into South Vietnam to wage aggression against our soldiers.

These fresh and well-trained North Vietnamese Communist troops, relieved from duty on the homefront since this bombing pause started, are now in Vietnam killing our soldiers.

That is why in the short span of only 14 months, we have seen American casualties mount to the extent that now we have almost half of our total casualties in Vietnam inflicted during the bombing pause alone.

The past 14 months during this bombing halt are a tragic litany of truce violations by the Communists.

Not only have they moved more than 100,000 North Vietnamese troops into South Vietnam to kill our soldiers, but we have ample evidence that there are large concentrations of North Vietnamese troops in the demilitarized zone itself, restoring Communist arms into what was supposed to have been a neutral buffer zone. The Defense Department reports more than 5,000 sightings of enemy activity in the DMZ, even though one of the conditions of the bombing halt was that there would be no armed activity in the DMZ.

So, Mr. Speaker, we have a right to ask what should be our policy toward restoring peace in Vietnam?

The withdrawal of American troops at the same time that we resume bombing of the north would have a twofold effect: First of all, it would placate American discontent with the war and deny Ho Chi Minh his greatest weapon—his belief that American discontent will force us to falter in Southeast Asia—and second, resumption of bombing would let the Communists know they are in for a long siege of attacks upon their cities. Only then, I believe, can we impress upon the Communists the need for some meaningful progress toward peace in Paris.

There is ample evidence that by forcing the Communist to return north to defend their land against renewed bombing, South Vietnam's army of more than 1 million soldiers could carry on its struggle without American ground troops if we leave them American air cover. President Thieu stated publicly he be-

lieves his armies can defend South Vietnam without American ground troops if we leave him our air cover.

In the absence of any pressure on North Vietnam, one has a right to ask himself today why should Hanoi agree to any kind of terms other than their own terms in Paris?

Their cities are not being burned. There is no damage being done to North Vietnam. Families of North Vietnamese soldiers killed in action are not told about casualties. When a North Vietnamese soldier is killed in South Vietnam, there is no publication or notification. The people of North Vietnam are oblivious to any losses that North Vietnam is suffering in South Vietnam. There is no public criticism of the war and Ho's tightly controlled Communist press has the North Vietnamese believing they are winning the war. Most important, there is no pressure on Ho Chi Minh himself to bring the conflict to an end as there is on our own President.

The damage is being done in South Vietnam. It is the poor people of South Vietnam who are suffering the full ravages of Communist terror and subversion. It is South Vietnam that is being methodically destroyed by the Communists.

Frankly, Mr. Speaker, our own home situation is rapidly deteriorating. I agree with the commission that concluded yesterday that Vietnam is one of the main causes of discontent and the unrest on our American university campuses.

There is no question in my mind that this long, hard, costly war has created serious domestic problems.

There is no question in my mind that most Americans would rather see the monstrous cost of this war diverted to our domestic needs.

We have great needs when we see people suffering hunger in this country, and schools in need of aid, and housing and hospitals and all the other things that we need.

This war, if we include the 1970 budget, will cost the American people $108 billion. It is the second costliest war in the history of the United States.

So there is rapid deterioration on our own home front, and there is suffering on the home front in South Vietnam, while Mr. Ho Chi Minh sits back comfortably in Hanoi waiting until the whole structure collapses.

Ho Chi Minh won the struggle against the French in Paris—not on the battlefield of Vietnam. The Communists were able to get so much turmoil stirred up in France against the French involvement in Vietnam that the French Government was faced with collapse, and so the French pulled out of there helter-skelter and left a vacuum for the Communists to fill.

Ho Chi Minh is counting on history to repeat itself and on the American will at home to collapse and on our commitment to help South Vietnam also to collapse. He believes once this happens his victory will be complete.

It is the tragedy of our time that learned men in this country, responsible Members of the Congress, cannot understand that once South Vietnam falls to the Communists, the whole of Southeast Asia follows. Even at this late date there are those who question the domino theory, completely unmindful and oblivious to the fact that what the Soviet Union wants to do in Asia is to create a cordon sanitaire of Communist captive nations, very much like they have in Europe today. And when they are through with Southeast Asia, the Soviet Union then intends to set up a cordon sanitaire of captive nations in the Middle East.

This is why the Soviet Union has rearmed all the Arab States. Every single Arab army today has been thoroughly rearmed by the Soviet Union, and Soviet military leaders are today in command of these Arab armies.

And that is why 80 percent of all arms being used by North Vietnam against our troops are supplied by the Soviet Union.

The Soviet Union's timetable is to destroy the will to resist in Southeast Asia. When they have completed that test, then they will move into the Middle East and destroy Israel, because only Israel stands in the way of Soviet expansion in the Middle East. And then the Soviet Union will have its cordon sanitaire of European captive nations, a cordon sanitaire of Middle East captive nations, a cordon sanitaire of Southeast Asia captive nations; and her goal of world domination will be complete.

There are those who today admonish and urge peace at any price, unmindful that nothing has changed in the Soviet Union.

For the past 20 years, the Soviet Union has kept this world in turmoil.

The United States has been compelled to spend one trillion four hundred billion dollars in the last two decades on defense and armaments to protect itself against Soviet conspiracy and Soviet infamy. And the Soviet Union plays its options at will. They create turmoil wherever they want to, whenever they want to, and the United States for 20 years has been reacting, never quite able to pull this country together to understand the great threat and the great menace of Soviet colonialism.

Even today, in this bitter debate on Vietnam, there are those who say, "President Thieu has to accept the fact that he will have to learn to live with a coalition government or go it alone." I think it is to his everlasting credit that he is strong enough and bold enough to renounce the imposition of a Communist coalition government unless such a government is elected by the free will of the people of South Vietnam.

Why, the whole tragic story of Soviet colonialism has been written in coalition governments forced upon the smaller nations of Europe. I wish that those who urge upon South Vietnam a Communist coalition government would look at the tragic history of Europe. How do they think 180 million people were plunged into Communist captivity, except through Communist coalition governments?

The Soviet Union today has complete control of Poland, of Czechoslovakia, of Estonia, of Latvia, of Lithuania, of Hungary, of Rumania and of Bulgaria. All of these started out as coalition governments.

What some of these naive Americans cannot understand is that the Communists have indestructible patience. They want only a foothold in a coalition government, and then they create their turmoil, and they have nothing but time, and they take that time to break down the will of the righteous elements of a coalition government until they create such total panic and chaos the government finally falls and the Communists take over.

One need only look at the coalition government of Poland. Why are 38 million Poles today in Communist bondage? You show me one single nation of Europe today whose people willingly voted for a Communist government. These captive nation's are today victims of Communist oppression against their will because there were voices in America after World War II, as there are voices today, who said, "Let us put Communists in a coalition government in Poland to work out the postwar problems.

Premier Mikolajczyk went to Poland in good faith after World War II. He went there thinking that somehow or another perhaps he could help work out a program for postwar Poland in a coalition government. Well, the rest is history. Halena Wasilewska headed a group of Communists who were brought in from Moscow, trained in the art of disorder and subversion, and they very quickly tied Mikolajczyk into all kinds of knots and tied that coalition government into such hopeless turmoil that he fled in disgust. Poland became a captive slave of Russia. The same can be said of every one of the captive nations of Europe.

Today there are voices in this Congress and in this country who say, "Well, let us try some of the same in Vietnam."

President Thieu was correct when he said that China stands as an excellent example of what happens when we surrender to Communist expediency.

Mr. Speaker, those who today urge acceptance of a Communist coalition government in South Vietnam are, perhaps unwittingly, following the footsteps of those who preached this same doctrine after World War II and saw half of Europe plunged into the Soviet orbit, then saw China plunged into the Communist orbit, and then saw Cuba plunged into the Communist orbit.

Mr. Speaker, it seems to me that through all of these years they have not learned a thing. I submit to you, Mr. Speaker, that it is difficult today for those who see the clear danger of the Soviet Union's grand design for ultimate conquest in this world, to get any exposure for their views when it is popular to talk only about peace at any price. Too often the voices of those who see the clear and apparent danger of Communist subversion are ridiculed or totally ignored.

I say to you, Mr. Speaker, that the American people need to know the facts.

President Nixon was correct when he said that if this needless slaughter continues, we will have to reappraise our situation.

If, indeed, there is any merit to those who say that by resuming the bombing of North Vietnam we will force them to divert most of their troops back to the north, making it possible for the South Vietnamese to take over the bulk of the fighting and if there is any merit to the suggestion that we can withdraw large numbers of our combat troops from South Vietnam once the bombing has been resumed, then we ought to study it.

President Thieu has said that with his army of one million soldiers and 600,000 home guards the South Vietnamese are more than able to defend themselves, if we leave them American air cover. My judgment is that the American people would agree it would be better to leave the South Vietnamese air cover if we can withdraw our ground troops because our greatest losses have been on the ground, our greatest losses have been in the search and destroy missions.

I think, Mr. Speaker, one of the great distortions of our time and one of the great tragedies of our time is the statement that the South Vietnamese soldier is not a good fighter. The South Vietnamese soldier is more than able to carry his share.

I was in Vietnam. I saw the South Vietnamese troops. Even the New York Times, which is now carrying a series about the South Vietnamese soldiers, says, if you read the articles carefully, that the bulk of South Vietnamese troops are well trained and highly motivated even though the Times tries to suggest they could not defend their country alone. If we need any further proof of the gallantry of the South Vietnamese soldier, let us look at the casualty lists. The South Vietnamese have lost twice as many soldiers on the field of battle as all of us combined. South Vietnam has lost 79,443 soldiers.

Mr. Speaker, I believe we ought to let North Vietnam know that our patience is not inexhaustible. We want to be out of Vietnam as quickly as possible. We want a lasting peace as quickly as possible. We want to contribute to that peace as much as possible. However, I cannot think of anything more tragic than for us to walk away from Vietnam today and let the Communists take that country over.

In my judgment, we ought to take a hard look at this proposal and seriously let North Vietnam know that if there is no meaningful progress made toward peace in Vietnam, this slaughter of our American troops will not be permitted to continue unilaterally. If necessary, we will reluctantly have to resume the bombing.

There are those who call that escalation.

On the contrary, if we can in fact pull our combat troops out of South Vietnam and replace them with resumption of bombing of the north, my judgment is that most Americans would agree to such a quid pro quo.

It is my hope that as the President prepares to leave for Midway to meet with President Thieu, he will reaffirm his statement that if the needless suffering continues, we will have to reappraise our situation. I hope that the President will make it clear to North Vietnam that we have a right to expect from them some meaningful contribution toward peace and, if that is not forthcoming, then perhaps, if suffering exists in South Vietnam, there ought to be some suffering in North Vietnam.

I have every reason to believe that the South Vietnamese are well-trained soldiers. We have made a huge contribution to their training. They do have enough soldiers now for a 15-to-1 ratio against the Vietcong. Our generals tell us in this kind of guerrilla warfare, you need a 15-to-1 ratio in order to offset effectively the activities of a Vietcong subversive. That ratio has now been reached. So it is entirely possible that we might indeed see the day come when American combat troops can pull out of Vietnam if bombing of the North is renewed. Hanoi must understand it will not break our will or break the will of the South Vietnamese. They then have but one alternative, and that is to sit down and make some meaningful contribution to working out a peace solution in Vietnam.

Mr. Speaker, I have every reason to believe that the Government of South Vietnam wants peace. I know our Government wants peace. I believe that the whole world wants peace. What we have to do now is impress on Hanoi the fact that it is not going to continue indefinitely waging aggression against our people without suffering the consequences itself, I believe this is the only road to lasting peace. The stalemate in Paris cannot and must not continue.

RETIREMENT OF HON. WILLIAM J. DRIVER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. HALPERN) is recognized for 5 minutes.

Mr. HALPERN. Mr. Speaker, it is with sincere regret that I have learned of the resignation of William J. Driver. As the Administrator of Veterans' Affairs, Bill Driver has been one of the most efficient and capable men ever to head the Veterans' Administration. His 4 years as head of this vast agency has seen many advances in the field of veterans affairs. His able administration of the third largest agency of our Federal Government has been a credit to all agencies and departments.

Bill Driver has been the kind of man that epitomizes what the Federal worker should be. He has been loyal and devoted to those he served—the 26 million veterans of this Nation. He has shown great compassion in his understanding of the needs of our veterans, and has made outstanding proposals to bring about needed changes as well as new ideas and programs.

His administration has been marked with a better understanding of the desires of the people of this country in providing benefits which are more meaningful to those who have given so much in defense of our country. We had new concepts of what service could mean with such programs as sending representatives right to the battlefields of Vietnam, even before our servicemen had completed their tours of duty, in order that they could take advantage of the many benefits which had been provided for them by Congress.

I express my appreciation to Bill Driver for a job well done—for a job in which he gave much more than was demanded because he was concerned and involved with the problems of our veterans.

I have enjoyed my close relationship with Bill Driver during his time in office. We shall miss him, and we sincerely hope that his successor will follow in his steps by providing the leadership demanded of this exacting post.

I extend my thanks and wish Bill Driver continued success in his future undertakings.

TREATYMAKING POWER: CONSTITUTIONAL AMENDMENT FOR THE INCLUSION OF THE HOUSE OF REPRESENTATIVES—SEQUEL

The SPEAKER pro tempore (Mr. MONTGOMERY). Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 15 minutes.

Mr. FLOOD. Mr. Speaker, in June 1967 the Presidents of the United States and Panama announced the completion of negotiations for the proposed new Panama Canal treaties, which agreements would cede U.S. sovereignty over the Canal Zone to Panama, make that small and unstable country a partner in the management, and defense of the canal, and eventually give to Panama not only the existing canal but also any new canal constructed in Panama at the cost of our taxpayers to replace the existing canal.

The total expenditures of our country on the Panama Canal enterprise, including defense, from 1904 through June 30, 1968, were $6,368,009,000 and the total recoveries during the same period $1,359,931,421.66, leaving a net investment of more than $5,000,000,000.

As this projected treaty giveaway of U.S. territory and property was undertaken without constitutional authority, the reactions in Congress were dynamic, with some 150 Members of the House introducing or cosponsoring resolutions opposing such surrender and Members of the Senate also strongly opposing the monstrous proposal. The result was that the treaties were never signed. As they have never been repudiated they may be reactivated at any time.

The giveaway proposal did, however, focus wide attention on the composition of the treaty power of the United States and the importance of the House of Representatives being made a part of that power.

One of the major reasons why the House should have equal power with the Senate in the making of treaties is the provision in article IV, section 3, clause 2 of the U.S. Constitution which provides as follows:

> The Congress shall have power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States.

The wisdom embodied in this clause of the Constitution is that our Federal do-

mains and property cannot be given away or impaired by the President and the Senate alone through the treaty process. Except for this provision, treaties could be made ceding to other countries major sections of the United States like Texas, California, and other parts of the vast Southwest as well as Alaska and Hawaii. In the grave responsibility now vested alone in the President and the Senate there certainly should be constitutional provisions to include the House of Representatives in the making of treaties.

On February 5, 1969, I introduced House Joint Resolution 394, 91st Congress, proposing an amendment to the Constitution of the United States to require the advice and consent of the House of Representatives in the making of treaties. This was followed on February 19 with a statement by me to the House on the treaty power emphasizing the fact that the historic reasons for noninclusion of the House of Representatives in the treaty making power no longer apply and why it should be included. I followed this on March 6 with a letter to Members of the House of Representatives requesting my colleagues to introduce or cosponsor like resolutions. Many have done so indicating wide support.

In looking up the role of parliaments in foreign affairs in other countries, I find that though the practice of treaty ratifications varies, the trend seems to be toward requiring parliamentary approval, even in some countries behind the Iron Curtain. Incidentally, I note that, under article 49 of the Constitution of the Soviet Union, the Presidium of the Supreme Soviet ratifies and denounces international treaties of the U.S.S.R.

In order that Congress and the Nation may have the information developed since my February 19, 1969, statement, I quote my March 6 letter and part IV of a summary of the powers of parliaments concerning the conclusion of treaties contained in the January 1969 issue of the Interparliamentary Union Quarterly.

The indicated documents follow as part of my remarks:

MARCH 6, 1969.

DEAR COLLEAGUE: The closure of the Suez Canal during the June 5–11, 1967, Arab-Israeli War diverting traffic around Southern Africa, was followed by the announcement on June 26 by the Presidents of the United States and Panama of the completion of negotiations for three proposed treaties ceding sovereignty over the U.S.-owned Panama Canal Zone to Panama, thus serving to focus wide attention on the make-up of the treaty power of our government, with some 150 Members of the Congress introducing resolutions opposing the adoption of such proposed treaties.

The indicated agreements, negotiated without the authorization of the Congress, violated Article IV, Section 3, Clause 2, of the U.S. Constitution, which provisions vests the power to dispose of territory and other property of the United States in the Congress and not in the President and the Senate alone.

In studying the history of the treaty-making power, I find that the original reasons for excluding the House of Representatives from this function of government no longer apply and that the time has come when the House should be made a part of this power. A summary of the history of the non-inclusion of the House of Representatives will be found in the June 12, 1967, pamphlet by the Library of Congress Legislative Reference Service on the "Treaty-Making Power in the Constitution", quoted by me in a statement to the House in the Record of February 19, 1969, pp. 4006–4010.

To meet the situation, I have introduced H.J. Res. 394, copy attached, and would urge all my colleagues in the House of Representatives to introduce or to co-sponsor like resolutions.

Sincerely yours,

DANIEL J. FLOOD,
Member of Congress.

H.J. RES. 394

Joint resolution proposing an amendment to the Constitution of the United States requiring the advice and consent of the House of Representatives in the making of treaties

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution only if ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"ARTICLE —

"No treaty with respect to which the advice and consent of the Senate is required by section 2 of article II of this Constitution may be made without the advice and consent of the House of Representatives, two-thirds of the Representatives present concurring."

INTERPARLIAMENTARY UNION CONSTITUTIONAL AND PARLIAMENTARY INFORMATION: THE ROLE OF PARLIAMENT IN FOREIGN AFFAIRS

PART IV. PARLIAMENTARY POWERS CONCERNING THE CONCLUSION OF TREATIES

Foreign policy becomes specially manifest in the conclusion of treaties, in war and peace. This is doubtless why the role played by Parliament in the conclusion of treaties is, after decisions on war and peace, most frequently provided for in Constitutions of countries replying to the questionnaire.

Chapter I. Parliamentary influence on treaty negotiations

In general it is not possible for Parliament, neither legally nor practically, to take part in the negotiations leading up to the conclusion of treaties, because everywhere the negotiation of treaties is a matter exclusively in the competence of the Government. This holds true even though, as has been described above (Part I, chapter 5d), (p. 13), Members of Parliament have in several cases acted as members of governmental delegations, or even as agents of the Government, to prepare or conduct negotiations.

Moreover, there seems to be no instance of a Parliament which can legally bind the Government to enter into treaties.

Quite generally parliamentary influence may be brought to bear through the ordinary processes of debate and question.

Furthermore, through the right to pass resolutions Parliament is in a position to exert political influence on treaty negotiations (cf. Part II). By such resolutions or recommendations Parliament may even suggest to the Executive that it should negotiate and conclude certain treaties on certain subjects; in Belgium and the Netherlands the suggestion may even extend to the scope within which the treaty must be concluded. Although these suggestions are not legally binding upon the Government, the latter would, more often than not, take them into consideration, especially if later on parliamentary approval of the treaty has to be obtained.

Finally in the United States, as probably in other Parliaments, prior cooperation on the part of individual Members of Congress has been found to be helpful in obtaining ultimate Senate ratification of treaties.

Chapter II. Approval requirements

In many countries negotiated treaties are subject to the approval or consent of Parliament before ratification. (There seems to be no case where the consent of Parliament must be obtained before the text of a treaty has been finally negotiated. In Japan, Art. 73 of the Constitution provides that the Cabinet has power to conclude treaties, provided, however, that it is required to obtain prior or, depending on the circumstances, ex post facto approval of the Diet. It is to be assumed that "prior approval" in this context relates to ratification as the final act of the conclusion of treaties.

The Japanese provision thus appears not to deviate from the general pattern that parliamentary approval is required only after a treaty has been negotiated.

Such approval of Parliament is required in 20 of the 25 countries from which answers were received: Austria, Belgium, Cameroon, Canada, Finland, France, Federal Republic of Germany, Greece, Ireland (in exceptional cases), Italy, Japan, Jordan, Libya, Netherlands, Norway, Senegal, Somalia, Switzerland, United States and Yugoslavia.

In *Ireland* approval of the Dail is required only where an agreement (not being one of a technical or administrative charter) involves a charge on public funds.

In the other countries the situation is different: there is no participation of Parliament at all in the conclusion of treaties in Pakistan.

In Poland treaties are ratified by the Council of State, a body elected by the Diet from amongst its Members and acting as the "collective head of State."

In Great Britain it is the usual practice of the Government (known as the "Ponsonby Rule") not to proceed with ratification until a period of 21 days has elapsed from the date on which the text of the treaty is laid before Parliament. (This rule applies only to treaties requiring ratification). Thus, Parliament is given a chance to debate a treaty, if the opposition or a large majority so request. Such debates, however, seldom end in a vote.

In India treaties are not subject to the approval of Parliament, except where the treaty itself provides for its ratification by Parliament. When necessary; Government may bring forward legislation (in the form of a bill) for implementing a treaty or a motion for its ratification.

In Israel where treaties are not subject to the approval or consent of Parliament, the only reference to the submission of a treaty for parliamentary approval occurs in the Fundamental Law where it is provided that the President of the State shall sign all international agreements which have been approved by the Knesset. However, no provision in law has been made which requires such approval so that a request for approval is within the discretion of the Government. This was done only once in the case of the Genocide Convention. Since international agreements are not binding on the Israel courts, internal laws must often be enacted to give effect to treaty provisions.

When submitting such Bills, the Government usually accompanies the Bill with an explanation to the effect that the adoption of the law will enable the ratification of the treaty.

Unlike all other countries where parliamentary approval of treaties is required by the Constitution, in Canada there is neither a constitutional provision nor any strict conventions about the participation of Parliament in the ratification or acceptance of

international agreements. In 1926, however, the House of Commons adopted a resolution the final paragraph of which reads that the House considers that:

"Before His Majesty's Canadian ministers advise ratification of a treaty or convention affecting Canada, or signify acceptance of any treaty, convention or agreement involving military or economic sanctions, the approval of the parliament of Canada should be secured."

The Rt. Hon. W. L. Mackenzie King who moved this resolution said in a speech in 1928 in the House of Commons:

"I submit that the day has passed when any government or executive should feel that they should take it upon themselves without the approval of parliament, to commit a country to obligations involving any considerable financial outlays or active undertakings."

And in an important statement made in 1941 he summarized the Canadian practice as follows:

"The present practice is that, except in the case of very unimportant agreements or in the case of great urgency, the Senate and House of Commons are asked to approve formal treaties, conventions and agreements, before they are ratified by or in respect of Canada."

Thus, in Canada all treaties and agreements require parliamentary approval, except (i) in the case of very unimportant agreements, (ii) in the case of great urgency, and in addition (iii) agreements which are in the form of an exchange of notes.

Agreements are made in this form either because they are too unimportant for a formal agreement, or because they are intended to be of a temporary character.

As the Canadian example shows not all kinds of international agreements are likely to be subject to parliamentary approval. Even in countries where all treaties require approval by Parliament as in Canada (see above), Japan, Libya, the Netherlands, Norway, Switzerland, and the United States, some exceptions are usual.

In Japan and Switzerland agreements or conventions of merely technical or administrative character are exempt from this requirement.

In the Netherlands the approval of the States-General is not required for (i) a convention for which a law has provided for no approbation being necessary, (ii) a convention solely concerning the execution of a convention already approved, (iii) a convention which does not contain important financial obligations, if the duration of the convention does not exceed a period of one year, or (iv) in case of time pressure. In the latter case, the convention is subsequently to be submitted for approval.

In Norway treaties of any importance are subject to the approval of Parliament or, as it is stated in the answer, the King has no right to sign a treaty without the consent of the Storting. Explicitly, however, the consent of Parliament is required for treaties (i) of "special importance," (ii) which necessitate new legislation, (iii) which necessitate a decision of the Storting, i.e. appropriation of money.

In the *United States* at last, the constitutional provision refers solely to "treaties," but there is another form of international agreement, called simply an executive agreement, that is resorted to frequently for diverse purposes and does not require the concurrence of the Senate. It is also generally conceded that the President has that authority in his capacity as the sole organ of foreign relations, or as commander-in-chief of the armed forces, but the large majority of executive agreements are made pursuant to prior statutory authorization.

Executive agreements are binding upon the national government and have been so recognized by the Supreme Court. They do not have the same force in domestic law as treaties. They are not resorted to as a device to circumvent the Senate's treaty-making role, and are not often challenged by the Senate, or by the Congress as a body, because the exigencies of modern international relations require expeditious actions and agreements which would not be feasible under treaty procedures.

Chapter III. Categories of treaties subject to approval

There is, probably, not much difference between these seven countries where all treaties are subject to approval, and some of those countries where parliamentary approval is required only for certain categories of treaties as enumerated in the Constitution.

According to Art. 50 of the Austrian Constitution political treaties and other ones as far as their text is amending or supplementing laws can only be concluded by authority of the National Council. When approving such a political treaty or one amending or supplementing laws the National Council may decide that this treaty shall be executed by the adoption of laws.

Under Art. 68 of the Belgian Constitution, treaties of commerce or treaties which could burden the State or be binding on Belgians individually are to become effective only after having received the assent of the Chambers, and no territorial change may take place except in pursuance of a law.

In Cameroon, according to Art. 12 of the Constitution, treaties on matters of federal law shall before ratification be submitted to the Federal Assembly in the form of a bill.

Art. 33 of the Finnish Constitution Act provides that treaties must be approved by Parliament insofar as they contain stipulations falling within the domain of legislation or otherwise requiring, according to the Constitution, the consent of Parliament. The latter alternative includes for instance territorial changes and appropriations.

In France and Senegal the Constitution[1] requires approval, by way of legislation, for peace treaties, treaties of commerce, treaties relating to international organization, involving a charge on public funds, modifying provisions of a legislative nature, relating to the status of persons, or involving territorial changes.

Art. 59 of the Basic Law of the Federal Republic of Germany provides that treaties which regulate the political relations of the Federation or relate to matters of federal legislation require the consent of Parliament.

In Greece, according to Art. 32 of the Constitution, treaties are concluded by the King and communicated to Parliament together with the necessary explanations. However, treaties of commerce and all treaties involving concessions which, pursuant to other provisions of the Constitution, may be enacted only by legislation, require the consent of Parliament.

In Ireland distinctions are made in Art. 29 of the Constitution between different categories of treaties. In general, every international agreement to which the State becomes a party shall merely be laid before Dail Eireann. However, any agreement involving a charge upon public funds requires approval by Dail Eireann. Neither provision applies to agreements of a technical and administrative character. Beyond that, no international agreement shall be part of the domestic law of the State save as may be determined by the Oireachtas (President of Ireland and both Houses of Parliament).

According to Art. 80 of the Italian Constitution, the ratification of treaties being of a political nature, or providing for arbitration, or involving territorial changes, charges on public funds or modifications of legislation, has to be authorized by a law.

Art. 33 of the Constitution of Jordan provides that treaties of peace, alliance, trade, navigation, and treaties involving territorial changes or adversely affecting sovereignty, or incurring financial commitments, or affesting the general or private rights of Jordanians shall not be brought into force unless approved by the National Assembly.

In Somalia Art. 67 of the Constitution provides that the Assembly shall authorize by law the ratification of political, military and commercial treaties or of treaties which involve a modification of the law or financial commitments not included in the budget.

In Yugoslavia, according to the Constitution, the Federal Assembly ratifies international treaties on political and military cooperation and international treaties which require the enactment of new, or amendment of the existing, laws. Other international agreements are ratified by the Federal Executive Council (the Government).

The following table is intended to facilitate comparison. It should however be pointed out that: the controlling power of a Parliament depends on the information available and on its watchfulness rather than on the categories of treaties that have to be expressly approved by it; the categories overlap largely. Thus, for instance, the term "political treaties" covers much of what is enumerated in other lists, and the same is true with formulations like, "relating to federal legislation", "shall be part of the domestic law", or "involving a charge upon public funds".

The table lists the categories of treaties and the countries where treaties falling under those categories (are laid on the table or) require the approval of Parliament or of one of its Chambers.

1. (a) All treaties with certain minor exceptions (approval): Canada, Japan, Libya, the Netherlands (as to procedure, see below), Norway, Switzerland, United States.

(b) All treaties ratified by a special parliamentary body: Poland (Council of State).

(c) All treaties requiring ratification laid on the Table: Great Britain, Ireland (Dail Eireann).

(d) Treaties providing for their ratification by Parliament: India, Yugoslavia.

2. (a) Political treaties, treaties regulating the political relations: Austria, Federal Republic of Germany, Italy, Somalia.

(b) Treaties on political and military cooperation, military treaties: Somalia, Yugoslavia.

(c) Alliances: Belgium (only notice given), Jordan, Switzerland.

(d) Treaties relating to international organization: France, Senegal.

(e) Treaties adversely affecting sovereignty: Jordan.

3. (a) Treaties relating to matters of (federal) legislation or to be part of domestic law: Cameroon, Finland, Federal Republic of Germany, Greece, Ireland.

(b) Treaties modifying existing law or necessitating new legislation: Austria, France, Great Britain, Italy, Senegal, Somalia, Yugoslavia.

4. (a) Treaties affecting rights or status of persons: Belgium, France, Greece, Jordan, Senegal, Yugoslavia.

(b) Treaties providing for arbitration or judicial regulations: Italy.

5. Treaties involving a charge upon public funds: Belgium, Finland, France, Ireland, Italy, Jordan, Senegal, Somalia, Yugoslavia.

6. Treaties of commerce: Belgium, France, Greece, Jordan, Senegal, Somalia.

7. Treaties involving territorial changes: Austria, Belgium, Finland, France, Greece, Italy, Jordan, Senegal, Yugoslavia.

Chapter IV. Procedure for approval

As has been seen already in the preceding chapters, not only the types of treaties requiring approval vary considerably, but also the ways in which treaties are submitted to the Parliament for approval. Apart from Great Britain and Ireland (to the extent that no approval is required) where treaties are

[1] Art. 53 of the French Constitution and Art. 77 of the Senegal Constitution.

merely laid before Parliament (in Great Britain as a Paper laid by command of Her Majesty—Command Paper), the following solutions can be distinguished:

"(i) In Belgium, Cameroon, France, Federal Republic of Germany, Greece, Italy, Jordan, Libya, Senegal, Somalia and Yugoslavia a treaty is submitted to Parliament in the form of a bill, that is, as an annex to a bill pronouncing approval of the treaty or authorizing its ratification; in Yugoslavia the text of the treaty is an integral part of the law by which the Federal Assembly directly expresses ratification. The bill is referred to committee and dealt with under the usual legislative procedure."

In France as well as in Cameroon and Senegal the bill authorizes either ratification of the treaty or, if the agreement does not require ratification, approval. In Greece it can be a bill authorizing the Government to negotiate and conclude a certain treaty under certain conditions or bill approving a treaty already concluded.

In Canada approval is sometimes contained in a statute, particularly if enabling legislation is required; more usually, it is in the form of a joint resolution adopted by both Houses.

"(ii) In the Netherlands the approval of the States-General may be either explicit or tacit. Under the explicit procedure a bill to approve a treaty is introduced, debated and passed in accordance with the ordinary legislative procedure. Under the tacit procedure the Government lays the text of the treaty before both Houses together with a letter asking for their agreement. Approval is assumed to have been given if within a period of thirty days no request has been made for approval to be given explicitly in the form of a bill. Such a request must be sponsored by one of the Chambers or at least one fifth of the members of both Chambers.

"(iii) In Austria, and in Canada usually (see above), as well as in Norway, Switzerland and the *United States*, a treaty is approved in the form of a resolution adopted by Parliament."

In *Ireland* (in case of an agreement involving a charge on public funds) the approval of Dail Eireann is signified by the adoption of a resolution.

In Norway, the Government presents the negotiated treaty to the Storting together with explanations. The matter is referred to a committee which reports to Parliament, with a recommendation.

In Switzerland a treaty is submitted to Parliament in the form of a simple federal decree (arreté fédéral simple) or, if the treaty is concluded for an unlimited duration or for a period exceeding fifteen years, in the form of a federal decree of general application (arrêté fédéral de portée générale).

In the *United States* a certified copy of the signed treaty is submitted to the Senate accompanied by an "executive communication" from the President requesting ratification by the Senate. The decisions made by the Senate after its deliberations in committee and in the Chamber, as provided for in detail by Rule XXXVII of the Senate, the concurrence of two-thirds of the present Senators being required, are reduced to the form of a resolution of ratification, with or without amendments or reservations, as the case may be.

"(iv) In Finland and Japan, a treaty is submitted to Parliament with the request (or motion) for approval and that approval is given by a vote, without adopting a resolution. In Finland, a treaty involving territorial changes requires approval by at least two-thirds of the votes cast. Furthermore, in Finland at least, matters relating to treaties must first be considered by the Foreign Affairs Committee."

In many countries treaties modifying existing legislation or necessitating new legislation or where the subject matter of a treaty is to become domestic law—have to be approved through enacting legislation.

Thus, in Finland, the Government submits to the approval of Parliament one or more bills purporting to bring the existing legislation in accordance with the provisions of the treaty. In Great Britain, when a treaty has been ratified, it may be necessary to introduce consequential legislation. In Ireland, when a treaty is to become part of the domestic law of the State, this has to be determined by both Houses of Parliament by enacting legislation. In India, when necessary, the Government may bring forward legislation for implementing the treaty or a motion for its ratification. In Israel, where international agreements are not binding on the Israeli courts, internal laws must often be enacted to give effect to treaty provisions. When submitting such bills, the Government usually accompanies the bill with an explanation to the effect that the adoption of a bill will enable the ratification of the treaty.

In some countries the Constitution provides for special procedure where a treaty is not reconcilable with the Constitution. In Austria, in such a case, the National Council in the resolution approving the treaty must expressly state that the treaty amends the Constitution, the resolution requiring a two-thirds majority. In the Netherlands, the law approving such a treaty must likewise be adopted by a two-thirds majority. In France and Senegal, if the Constitutional Council (in France) or the Supreme Court (in Senegal) declares a provision of an international agreement to be contrary to the Constitution, ratification may be authorized only after the Constitution has been amended.

There is no instance of a Parliament in which treaties have to be considered in secret sittings. However, in all Parliaments except that of India the House may so decide in accordance with the general rules. According to the answers received, this has never happened or is very exceptional. Probably, in committee it happens more often that treaties are considered in confidential or secret meetings (cf. above, Part III).

It may be mentioned here that there are only two Parliaments which, directly or through a special body, ratify treaties, namely the Parliaments of Poland and Yugoslavia.

In Poland, as has been mentioned above, international agreements are ratified by the Council of State acting as the collective Head of State on a motion presented by Government. This body is elected by the Diet form amongst its Members and in all its activities is subordinate to the Diet. The resolution on the ratification as adopted by the Council of State is published in the Journal of Laws as a document of ratification. In actual practice there was one instance of the Diet ratifying a treaty of special importance, the Warsaw Pact, on May 19, 1955. In this case, the motion for ratification was presented to the Diet by the Council of State. The matter was referred to the Committee for Foreign Affairs which, after preliminary examination, reported on it to the Diet. The Diet, at its plenary meeting of May 19, 1955, adopted the resolution as to the ratification of the Warsaw Pact. On the basis of this resolution, the document of ratification was drawn up by the Council of State and published, in regular form, in the Journal of Laws.

In Yugoslavia, as has been mentioned before, the Federal Assembly ratifies, according to the Constitution, international treaties on political and military cooperation, and international treaties which require the enactment of new legislation or amendment of existing legislation. Other international agreements are ratified by the Federal Executive Council (the Government). This is expressly provided for in Art. 164 (9) of the Constitution, although the instruments of ratification of international agreements, according to Art. 217 (3) of the Constitution, shall be issued by the President of the Republic.

Chapter V. Extent of powers of parliament when approving treaties

(a) *Power to Amend Treaties:* In general, Parliament has only the power to approve or reject a treaty, since the treaty submitted to Parliament has been finally negotiated. No amendment to the bill approving a treaty may affect the contents of the treaty. However, if a treaty should ever be rejected. Parliament could indicate its objections.

In Finland Parliament may, if it is still possible, request the Government to take measures to modify the provisions of the treaty in accordance with the decisions of Parliament, and if the treaty allows for reservations, Parliament may request the Government to act according to the decision of Parliament.

In the *United States*, as the only exception, the Senate is not limited to either approving or rejecting a treaty. When the Senate intends that its ratification be limited, it normally adds reservations, or proposes amendments to the treaty, in the resolution of ratification. If amendments are proposed by the Senate, the treaty must be renegotiated by the President and, when agreed to by the parties, resubmitted to the Senate for ratification, unless the only changes are the incorporation of the amendments proposed by the Senate—in which case the previous resolution of ratification (in which the amendments were proposed) usually is sufficient.

(b) *Significance of Preambles:* The preamble to a treaty may be helpful for its interpretation, in particular if it has to be construed by the courts. It is however generally held in the answers received that parliamentary approval necessarily extends to the preamble and that such extension has no special significance.

With regard to the preamble to the bill or resolution approving a treaty, it is generally held that such a preamble does not have any significance or the interpretation of the treaty in as much as it cannot bind the other parties to the treaty.

According to the Finnish Constitution, it is doubtul whether treaties can be interpretated through legislative measures.

In India and Ireland, preambles to Acts of Parliament are not common. In Ireland, preambles may be used by the Courts as an aid to interpretation if the meaning of the text of the Act is not clear and unambiguous. The Indian answer holds that it can affect interpretation of the provisions of the bill to the extent they are not clear or are ambiguous.

A preamble to the bill authorizing ratification is not possible in France, Italy, Senegal and Yugoslavia. In Italy, however, Parliament when passing a law may come to a resolution inviting the Government to act in a certain sense, though the resolution would not have binding force.

In Switzerland, it is held that the text of the law (including a preamble) approving, or authorizing ratification of, the treaty may affect the interpretation of the treay.

The German Bundestag when adding a preamble to the bill approving the German-French treaty did not intend to influence interpretation of the treaty but only wished to clarify its approval as far as other treaties and external relations were concerned. Thus, it was meant to interpret the bill of approval, not the contents of the treaty.

Similarly, in the United States preambles to resolutions generally are useful for purpose of construing the resolutions, as indicating the intent of the legislative body in taking the action. If the Senate intends that its ratification be limited, it normally adds reservations or proposes amendments to the treaty in the resolution of ratification. In the case of the Nuclear Test Ban Treaty, however, the Senate inserted a preamble to its resolution of ratification designed to require that subsequent amendments to the treaty be submitted to the Senate for ratification.

Chapter VI.—Referendum on treaties

In respect of referendum, reference is made to chapter 10 of Part I (p. 27–28).

Special mention has to be made here only of Norway where Parliament may decide that a consultative referendum should be held before a treaty of great importance is ratified. When an intense public debate arose out of Norway's request for membership in the European Economic Community, Parliament decided that a consultative referendum should be held before a final decision would be taken.

ITALIAN NATIONAL DAY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. RODINO) is recognized for 10 minutes.

Mr. RODINO. Mr. Speaker, June 2, 1946, is a significant date in the varied and tumultuous history of the Italian people. On that day, at the polls, the Italians put their trust in a republican form of government to lead them on the road to peace and prosperity. By providing a democratic framework in which the Italians could freely exercise their individual talents and put their creative energies to work, the Republic proved to be best suited to the Italian character and temperament. Indeed, in less than a generation, not only have the Italian people rebuilt a war-torn economy, but they have accomplished an economic miracle often compared with that of Germany. Handicapped by a lack of natural resources, they have managed to transform the north into one of the most vital industrial centers of Europe. And thanks to ingenious agricultural and industrial programs, the gap between the north and the south is being rapidly filled. Italian products flood world markets at highly competitive prices. Today, Italy's currency reserves, set at $5.4 billion, are the world's highest after the United States and West Germany.

Postwar Italy has also become one of the stanchest allies of the United States in Western Europe. Under the able leadership of men of vision such as Alcide de Gasperi, Italy has endeavored to secure a lasting peace in Europe by promoting the cause of an economically and politically integrated Europe, including Great Britain, in close alliance with the United States. It was at Messina that the plans for a common market were elaborated, and at Rome that the treaty establishing the European Economic Community was signed in 1957. Italy has also linked her security with that of the United States and has welcomed NATO on her shores. The skill and tact of NATO's present Secretary General Manlio Brosio, have been instrumental in enabling the organization to surmount crises and successfully adapt to changing conditions. Italy has promptly adhered to the nonproliferation treaty, and her active participation in world organizations and conferences reflects her concern for world peace.

Therefore it is with pride and admiration that I wish to pay tribute to the Italian people on the 23d anniversary of the founding of the Republic, and also to Italy's exceptionally capable and charming ambassador to the United States, Egidio Ortona. The sentimental, historical, and cultural ties which have bound the United States and Italy in the past have been reinforced and revitalized by the realization on both sides of the Atlantic that not only do we share a common heritage, but that we also share a common future.

ANDRETTI WINS BIG IN THE "INDY 500"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. ROONEY) is recognized for 15 minutes.

Mr. ROONEY. Mr. Speaker, it is my privilege today to lay claim to a distinctive honor which none of my colleagues can claim in this first session of the 91st Congress. That is, Mr. Speaker, that a member of my constituency in the 15th Congressional District of Pennsylvania piloted the winning car at the Indianapolis Speedway in the 53d annual running of the Indianapolis "500" on Memorial Day 1969.

I say "piloted the winning car" because that is what Mario Andretti, the fearless racing driver from Nazareth, Pa., did. Mario virtually flew around the 2½-mile speedway track, recording the fastest average time in the history of the Memorial Day classic—156.867 miles per hour. His average speed was nearly 4 miles per hour faster than the previous record of 152.882 miles per hour set just a year ago by Bobby Unser.

Mario Andretti took the checkered flag at Indianapolis last Friday afternoon after successfully completing the 200-lap race in his back-up car. Nine days earlier, his No. 1 car crashed on the speedway. Mario escaped from that crash with his life, having suffered only facial burns. Undaunted, he demonstrated the racing form of a real champion in Friday's race.

The victory was tremendous in many respects. Andretti received record prize money for the feat—$205,727.06—as he became the first Indy 500 driver ever to top $200,000 in winnings in a single race. Andretti also succeeded where others had failed—he provided car-owner Andy Granatelli with his first "500" victory after 23 years of trying as driver, mechanic and more recently as owner of racing cars.

The community of Nazareth in the Lehigh Valley of Pennsylvania, Mario's adopted home, is proud of its champion. I am honored to have this opportunity to recognize his spectacular feat in this Chamber and to renew the sincere congratulations I wired Mario and his family Friday afternoon.

KING'S OFFICIAL RECORD MUST BE MADE PUBLIC

The SPEAKER pro tempore. Under a previous order of the House, the gentlemen from Louisiana (Mr. RARICK) is recognized for 30 minutes.

Mr. RARICK. Mr. Speaker, one of our colleagues is disgruntled because on May 26 I pointed out to the House the incredible dedication of a law school at the University of California in honor of Martin Luther King, Jr. I referred to King as an errand boy of international communism. I was not on the floor when this vituperative personal attack was leveled against me, and any objective discussion is precluded inasmuch as the complaining Member failed to address himself to any facts on King but rather confined his remarks to emotional oratory.

Having read documentation on King and having examined the RECORD available to this House, I reiterate my remarks of May 26 and suggest the following action.

I call on King's apologists to join me in demanding that the present administration authorize J. Edgar Hoover and the Justice Department to make public their files on the activities, the confidants and the financial sources of Martin Luther King, Jr. Certainly there is nothing to hide and our people are entitled to a full disclosure of the entire record to either substantiate or disprove previously published information which I insert following my remarks to be placed here in the RECORD:

[From the CONGRESSIONAL RECORD, Aug. 16, 1967]

DISCARD RIOTS

Mr. RARICK. Mr. Speaker, many excuses and explanations are being fed to the American people as to why the riots, looting, and bloodshed have occurred in our cities.

Seldom is it even suggested that so-called civil rights legislation and promoted race mixing—not poverty—is the cause.

Unless our people through their elected leaders stop this forced amalgamation the result can but be either a society of semi-slavery under so-called social laws, or a race war—in either event, neither can benefit America.

I trust our colleagues will read a letter recently received from Bishop C. Fain Kyle of Box 1366, Richmond, Calif., who as a Negro presents his views on the created race problem.

I also include a news release from the August 15 Washington, D.C., Evening Star:

"DISCARD,
"Richmond, Calif., August 11, 1967.

"Hon. JOHN R. RARICK,
"Member of Congress,
"Washington, D.C.

"MY DEAR SIR: Where there is no vision, the people perish! Your Negro writer was one of those able to foresee from the very beginning that these civil-rights agitators posing as crusaders would eventually and inevitably provoke a general frightening race war in this country through their hatred, bigotry and defiance manifested through these nonsensical demonstrations.

"Said foresight resulted in the establishing of the above-named anti-demonstration organization which was chartered by the State of California on November 19, 1963.

"In our first press release, we issued the following statement: 'There is no doubt but what there are in existence certain evils and inequities that need to be dealt with, but open rebellion on the part of any people is certainly not the answer and should not be tolerated in America, where we have constitutional government, and where it is every citizens constitutional right to seek redress in the courts of the land if he has been dealt wtih unfairly, or exposed to lawless violence.'

"Perhaps you can help to arrange for your humble servant to be invited to appear and testify before one of the congressional committees so that the American people can be thoroughly informed by hearing from an American-born Negro who is a very definite part of that 97 percent of the Negro popula-

tion in this country which now and always have been opposed to demonstrations, riots, insurrection and anarchy.

"For the consideration which shall be given to this letter, please accept my sincere thanks in advance.

"Respectfully,

"BISHOP C. FAIN KYLE.

"RICHMOND, CALIF.—Bishop C. Fain Kyle is Executive Director, Dedicated Independent Society Committee Against Racial Demonstrations, Inc., Presiding Bishop; Conservative Christian Churches of America, Inc., National Chairman, Christian Conservative Party, Inc., President, Conservative Broadcasting Corporation, Inc., and State Chairman, California Recall Committee, Inc.

"Each one of the above named Nonprofit Corporations recently went on record charging Dr. Martin Luther King as being directly or indirectly responsible for the chaos, anarchy, insurrection and rebellion brought about through agitation, demonstrations and rioting throughout the United States in recent years, months, weeks and days.

"This includes the Selma and Montgomery mess, shame and murders in Alabama, the Americus, Georgia, debacle and murder, riots, injuries, arson and murders in the State of Mississippi, lawlessness in Chicago, Springfield, Massachusetts, and the fair city of Los Angeles, where the nation witnessed the greatest catastrophe of its kind in history took place in Watts.

"King was severely criticized, condemned and censured by all of these organizations for being the inspiration or instigator directly or indirectly of all these sordid affairs. King was further condemned for his hypocrisy in posing as a non-violent leader and Christian Minister, when in reality just about every move King has inevitably resulted in both violence, bloodshed and murder.

"The organizations further censured and condemned King for his noticeable failure or refusal to go or even send word to Los Angeles ordering the rioters in Watts to cease and desist from all violence and lawlessness which King knew to be wrong, both morally and legally.

"Furthermore, these organizations took note of the fact that instead of King trying to do something, anything to bring a halt to the recent Los Angeles war in Watts which has brought shame upon our nation, that King left the country for a sort of vacation speaking engagement in Jamaica, West Indies, during the time the lawlessness in Watts was at its peak.

"According to the five organizations which authorized Bishop Kyle to issue this news release, the whole world should now be aware that King is a false, hyprocritical wolf in sheeps clothing, who, knowingly or unknowingly, is being used by the Communists to provoke a general frightening "race war" in this country that could very well result in the destruction of America.

"During the past several years, Bishop C. Fain Kyle has repeatedly warned and sought to alert the American people (both Negro and White) that King is the most dangerous man in the world today, that such disasters as the one that recently struck Los Angeles are inevitable under his kind of leadership, and that in due time the entire nation will become locked in a hopeless, devastating 'race war' unless King, who has openly defied Municipal, County, State and Federal Court edicts and injunctions, and gotten away with it—is shorn of his power and imprisoned for his criminal acts and deeds for defying the courts of the land."

[From the CONGRESSIONAL RECORD, Oct. 4, 1967]

REV. MARTIN LUTHER KING: MAN OF PEACE OR APOSTLE OF VIOLENCE?

Mr. ASHBROOK. Mr. Speaker, one of the most incredible cases of American naivety can be found in the strange story of Rev. Martin Luther King. While alert Americans generally seem intent on discovering the facts, discussing the issues, and developing a dialog in scores of social, economic, political, and religious areas and debating the pros and cons of the Bishop Pikes, the Rap Browns, and the George Lincoln Rockwells, there is a strange silence and lack of debate when it comes to Martin Luther King.

It it almost as if he is being consciously protected by the press which normally accepts accolades for presenting both sides of a story and piercing with rays of informative reportoral light all proper facets of national life. King is a national figure, this cannot be denied. He is one of the only men who can go from jail cell to a conference with the President of the United States. His name is known; his cause is said to be civil rights. For one reason or another, however, very little is known about the real Martin Luther King. I believe that if his true character were known, he would not be able to command a corporal's guard to follow him.

While preaching nonviolence, I believe the record clearly shows him to be an apostle of violence. While gaining major support from clergymen, I believe he has preached an expedient, totally materialistic line which is the antithesis of religious teachings. He has openly associated with the most radical elements in our society. I believe he has done more for the Communist Party than any other person of this decade.

These may sound like strong words, Mr. Speaker, but the facts are even harsher. I have heard Reverend King speak. On one occasion he may have a soulful melancholy that is, without doubt, most impressive. On another, he can rant with the best of the demagogs, and while more sophisticated than Stokely Carmichael or Rap Brown, he says, in effect, the same thing. He makes no pretense at keeping his skirts clean or his house in order. He does not have to because the past 10 years have demonstrated that the liberal community and the news media of our country will either not note or meekly forgive his indiscretions.

Take the year 1967 alone. At a time when Detroit and Newark had just witnessed a virtual guerrilla war and a chaotic lawlessness without equal in modern times, King was urging a massive dislocation of northern cities. Instead of intervening as a moderating influence he took up the cause of the rabble-rousers and threatened these dislocations which, he averred, would force the Congress to provide financial assistance for slum Negroes. Yes, he would force us. Force us in this free society. Force is a word he understands well. He added:

"This is something like a last plea to the nation to respond to nonviolence. There is a great deal of bitterness (in the slums). If there is not provided a channel of constructive action, this bitterness will lead to desperation riots and social disruption."

At a time when the incendiary statements of Brown and Carmichael were sparkling the riot-prone tensions, did King emerge as a national leader seeking to soothe these passions? No, he attended as keynote speaker the most radical assemblage of anti-Americans ever put together, and as the Communist Daily Worker approvingly and glowingly reported:

"He described vividly the racism that can praise in its history books a white Patrick Henry who sounded the call against the British redcoats while it condemns H. Rap Brown who insists that black victims of oppression in America should fight for their freedom."

Imagine that—comparing the rabble-rousers, the looters, the social misfits in America to patriots like Patrick Henry. He was further quoted as saying "Maybe the bluecoats in the ghetto are our redcoats."

The convention, the National Conference for New Politics—NCNP—heard chantings of "Kill Whitey, Kill Whitey" and the most revolutionary anti-American doctrine that could be imagined and yet the August 29–September 4, 1967, confab had the supposed "man of peace" Mr. King as their keynoter. It represented a major breakthrough for the Communist Party and King helped. For years, the Communists have chafed at the doctrine of separation which tended to keep them out of respectable liberal gatherings. In the 1930's, the liberals worked hand in hand with the Reds but the growth of anti-communism in the Nation has brought about a change in the 1950's and 1960's. Except for the more radical groups, liberals in general have tried to keep Communists from participating in their causes and at their conventions. King has consistently worked with Communists and has helped give them a respectability they do not deserve. The NCNP in Chicago represented such a breakthrough in the Red goal of "nonexclusion" that they editorialized gleefully in their organ, the Daily Worker, on August 22, 1967.

Reverend King is the hero of many militant Negro leaders although denounced by others in the black power structure. He has allied with Cassius Clay. When you study his speeches closely you are struck by the obvious fact that while ostensibly condemning racism, he himself preaches a black racism. One of the leading black racists in the country is Rev. Albert C. Cleage, Jr., who just after the terrible riot told his Central United Church of Christ in Detroit:

"There is no escape for you and when white people try to tell that good niggers can get through this golden door of integration, don't believe it. We don't even want that door because that's destroying us."

Cleage went on to say:

"We are dealing with an enemy who is not going to accept us into American life."

In extolling King, he noted:

"Dr. King led black people to understand that integration could never come to pass. He helped black men understand that 'the man' is an enemy."

In his flagrant disregard for law and order, Reverend King has given credibility to one of the most dangerous dogmas than can be promoted in an orderly society. He simply arrogates to his own inspiration the whim to disobey any law which he loosely terms unjust. Court orders, State, and Federal laws, municipal ordinances—they must all fall in front of his supposition that he has a divine right to break the law. His conduct is clearly criminal in this regard and certainly has helped develop the idea among rioters and looters that they can obey their own concepts of good and bad laws and act accordingly.

Like most power-hungry tyrants, he has gone one step too far. In disobeying a court order, he was sentenced to jail. On appeal to the Supreme Court, he was surprised to find that a usually supine and hopelessly liberal Court rose up in indignation and slapped his wrists in a strong indictment of his illegal activity. Said the Court in affirming his jail sentence on June 12, 1967:

"This Court cannot hold that the petitioners were constitutionally free to ignore all the procedures of the law and carry their battle to the streets. One may sympathize with the petitioners' impatient commitment to their cause. But respect for judicial process is a small price to pay for the civilizing hand of law, which alone can give abiding meaning to constitutional freedom."

Mr. Speaker, this succinct statement should be burned into the consciousness of all of those who have at one time or another fallen for the pious pronouncements of Martin Luther King. Carrying the battles to the streets, as the court phrases it, is not a constitutional right. It is, in reality, criminal conduct and should not be condoned by any thinking American. I repeat again the Court's most emphatic statement:

"But respect for judicial process is a small price to pay for the civilizing hand of law,

which alone can give abiding meaning to constitutional freedom."

At the height of the rioting fury which was sweeping the country, King joined three other civil rights leaders in issuing a cautious call for an end to violence because, among other things, it is self-destructive to the Negroes' interest. This was on July 26, 1967. Two days later King was visiting Cleveland, Ohio, on an inspection tour. He tersely expanded on his theme of violence being self-destructive when he said:

"I can't recommend burning down Cleveland. We end up getting killed more than anyone else and our businesses get burned."

No statement, Mr. Speaker, could more clearly expose the irresponsible, cynical nature of the subject of these remarks. This is typical of the manner in which he advocates "nonviolence." Burning, looting, and killing are not immoral or wrong, it would seem. Merely destructive to the self-interest of this particular minority group.

Reverend King expresses indignation over Vietnam. In this he is joined by many millions of Americans. Few of us are pleased at what is happening there but we are not disloyal to our Nation. Reverend King showed his true colors in April of this year in a major speech he delivered on Vietnam. I believe that any thinking American who will study his words must conclude as I have that he is disloyal to the United States. He maligned his country with lies and accusations that come straight from the Communist Party line. A strong statement you say. Listen to what he said. He praised Ho Chi Minh as the only true leader of the Vietnamese people. He condemned the United States as the "greatest purveyor of violence in the world today," and likened our Nation to Hitler's Germany. He condemned the late President Diem as "one of the most vicious modern dictators" and threw out wild charges like the United States may have killed 1 million children in Vietnam. He conjured up an American napalm war in Peru so he could denounce it. He said we have no honorable intentions in Vietnam and our minimal expectation is to occupy it as an American colony. These are but a few of the wild accusations of the Nobel Prize winner many people have been led to believe is a man of peace.

Even the ultraliberal Washington Post could not stomach King's blatant lies and propaganda. In an editorial entitled "A Tragedy," they roundly condemned King by saying:

"A TRAGEDY

"Dr. Martin Luther King's Vietnam speech was not a sober and responsible comment on the war but a reflection of his disappointment at the slow progress of civil rights and the war on poverty.

"It was filled with bitter and damaging allegations and inferences that he did not and could not document. He flatly charged the Government with sending Negroes to fight and die in extraordinarily high proportions relative to the rest of the population. But Negro troops constitute 11 per cent of the enlisted personnel in Vietnam (10.5 per cent of the population was Negro in 1960). Negro casualties are higher than this (22.5 per cent of killed in action) because of higher Negro enlistment for elite corps and higher rate of Negro re-enlistment. No doubt these figures reflect in part the fact that civilian employment opportunties are not as great for the Negro. But they also reflect, in part, the zeal and courage of Negro soldiers. And they reflect the fact that in this war the Negro in uniform is not limited to work battalions.

"Dr. King says the United States may have caused a million civilian casualties in Vietnam—mostly children—but he did not give any supporting authority for this statement.

"He stated flatly that 'our officials know' that less than 25 per cent of the members of the National Liberation Front are Communist—but he neglected to say what officials or where they said it.

"He contends that Ho Chi Minh knows that the bombing and shelling we are doing is 'part of traditional preinvasion strategy,' but gives no credence to our express declaration that no invasion is intended.

"He has no doubts that we have no honorable intentions in Vietnam and thinks it will become clear that our 'minimal expectation is to occupy it as an American colony.' He feels that men will 'not refrain from thinking' that our 'maximum hope is to goad China into a war so that we may bomb her nuclear installations.' It is one thing to reproach a government for what it has done and said; it is quite another to attribute to it policies it has never avowed and purposes it has never entertained and then to rebuke it for these sheer inventions of unsupported fantasy.

"He has even conjured up an American napalm war in Peru so that he could denounce it.

"Dr. King is right to reproach America for not ending discrimination and poverty. But these are failures for which every Administration in the history of the United States deserves more reproach than this one. It is strange irony indeed that the Government which has labored the hardest to right these ancient wrongs is the object of the most savage denunciation, the most unreserved criticism and the most unfair blame.

"Dr. King has done a grave injury to those who are his natural allies in a great struggle to remove ancient abuses from our public life; and he has done an even graver injury to himself. Many who have listened to him with respect will never again accord him the same confidence. He has diminished his usefulness to his cause, to his country and to his people. And that is a great tragedy."

To those liberals and bleeding hearts who have not intelligently discerned what King has been saying and doing, during his decade of prominence, this may have come as a tragedy. To those of us who have followed him closely and have been aware by both public and confidential documentation, of his questionable activity, it comes as no surprise at all. In 1967 the real King surfaced and yet where is the criticism he should be getting?

These are but a few highlights, Mr. Speaker, in the disappointing story of Martin Luther King. I say disappointing because he has had a rare oppotrunity to aline himself with an important cause and work for solutions to social ills through our democratic process. This he has not done. He has had the opportunity to work with men of good will but all too often he has alined himself with the most radical and un-American elements in our country. I now present in detail some of the background of Martin Luther King.

THE VIOLENT NONVIOLENCE OF DR. KING

"I have a deep commitment to non-violence"—Dr. Martin Luther King, Jr.

On May 4, 1963, police dogs and firehoses were used to quell a demonstration by lawbreakers in Birmingham, Ala. There had been violence plain and simple. Martin Luther King and his righthand man, Rev. Fred L. Shuttlesworth, threatened that these demonstrations would continue until there were not only promises of an end to segregation but "action." There was, they said, "no intention of relaxing pressure without such action. We negotiate from strength" and "will consider" calling off the demonstrations after the action. This was the mood of the well-known nonviolence of Dr. King.

The day following action by police dogs and firehoses, the New York Times reported that residents of Birmingham heard from the lips of King, the man who preached peace in the streets but led the lawless bands:

"Today was D-Day. Tomorrow will be double D-Day."

One seldom hears Martin Luther King's name without the "nonviolent" slogans coming in successive breaths. But quite often the nonviolence of King leads to violence of riot proportions. The big lie technique is clearly used. Repeat "nonviolence" over and over so the public will believe it and then practice violence or the encouraging of violence.

Violence accompanied King during his early days in Birmingham. It was present during the death of a fellow pastor at, of all places, a Baptist convention. It was with him in Albany, Ga. It returned with him to Birmingham and Albany. It followed him to St. Augustine, and they were together in Chicago. It is not an exaggeration to say he leaves a trail of violence in his wake.

In addition to the physical presence of Martin Luther King in flammable cities, there is the presence of King's words and ideas in every tension area across the United States. The power of Dr. King to promote violence was recognized early. Arrested for loitering in 1958, King was charged with irresponsibility by a judge who said:

"It is regrettable that this case arose . . . there was serious danger of an incident."

On many occasions, like Chicago in 1966, he goes to the scene of violence and instead of trying to settle troubled waters, he adds to the riot-producing tension.

Early statements of King reveal continued use of the phrase "direct action programs." His philosophy and purpose as outlined in his book. "Why We Can't Wait," amount to this. Note his forked tongue semantics. He admits that there is an effort to create a "crisis packed situation" but he concludes he is not a "creator of tension." He stated: "The purpose of our direct-action program is to create a situation so crisis-packed that it will inevitably open the door to negotiation. . . . Actually, we who engage in nonviolent direct action are not the creators of tension. We merely bring to the surface the hidden tension that is already alive. We bring it out in the open, where it can be seen and dealt with."

In August of this year, at a time of serious racial tension, he said virtually the same thing—again with a certain amount of double talk. King said:

"Negroes will be mentally healthier if they do not suppress rage but vent it constructively and its energy peacefully but forcefully to cripple the operations of an oppressive society."

Read that one over several times and try to tie together the words "rage" which somehow is to be "vented" to "cripple" an "oppressive society."

Louis Waldman, a leading Negro labor lawyer in Chicago, answered King's statement this way:

"The philosophy and purposes of Dr. King's program . . . is to produce 'crisis-packed' situations and 'tension.' Such a purpose is the very opposite of nonviolence, for the atmosphere-of-crisis policy leads to violence by provoking violence. *And the provocation of violence is violence.* To describe such provocation as 'nonviolent' is to trifle with the plain meaning of words.

"The perpetual crisis technique has been used by the Communist movement governout the world, both Communist governments and parties follow it. . . . It was used by Hitler in Germany, both on his road to power and after power came to him . . . It is disruptive of democratic society and institutions.

"Whether Dr. King knows it or not, or wills it or not, the policy of perpetual crisis, of provoking 'tensions' as he calls it, and of civil disobedience, are disastrous to the Negro people themselves, to civil liberties and to constitutional government. Such a policy flies in the teeth of the very purpose of our Constitution, which is clearly stated

in the Preamble to be, among other things, 'to insure domestic tranquillity.' "

This is a damning indictment from a man who praises nonviolent approaches to problems of civil rights, and it comes not from a racist, but from a Negro who has been a champion of civil rights for decades.

Most Americans call the bloodshed, looting, fire bombing, and vandalism by its true name, violence, and to argue that these results of the King-led, -organized, and -backed marches, demonstrations, sit-ins, lie-ins, and the like are the fault of those who react against them is to argue not only against logic but also the law. The Supreme Court, in Hague against CIO, 1939, said:

"The privilege of a citizen to use the streets and parks for the communication of views on national questions must be regulated in the interests of all . . . and must be exercised in subordination to the general comfort and convenience, and in consonance with peace and good order."

This opinion of the Court was reaffirmed as late as 1966. Former Supreme Court Justice Charles E. Whittaker makes the point that it is an "ancient and honored legal maxim that all men are presumed to intend the natural consequences of their acts." From this maxim comes severe condemnation of Dr. King for the broad areas of unrest and lawlessness which he promotes under the title of civil rights. Largely through the connivance of the liberal community, King has generally escaped the responsibility he deserves for the logical consequences of his civil disobedience pronouncements.

THE UNJUST LAWS

King explained his ideas on civil disobedience in terms of just and unjust laws, and how they are to be broken, during an interview on the March 28, 1965, "Meet the Press":

"I do feel that there are two types of laws. One is a just law and one is an unjust law. I think we all have moral obligations to disobey unjust laws.

"I think that the distinction here is that when one breaks a law that conscience tells him is unjust, he must do it openly, he must do it cheerfully, he must do it lovingly, he must do it civilly, not uncivilly, and he must do it with a willingness to accept the penalty."

To King the only guide whether or not to violate the law is his own particular whim or caprice. He and he alone will decide. Note that there is no mention of the fact that following one's conscience may violate the conscious obedience to the law by many other citizens. To King it makes no difference, if one accepts the penalty.

In the recent Birmingham decision, already cited, which upheld fines and jail terms for King and others who defied a court injunction against a civil rights march, the majority of the Supreme Court agreed that:

"Civil liberties, as guaranteed by the Constitution, imply the existence of an organized society maintaining public order without which liberty itself would be lost in the excesses of unrestrained abuses . . . Respect for the judicial process is a small price to pay for the civilizing hand of law, *which alone can give meaning to constitutional freedom.* (Emphasis added.)"

As usual, Reverend King tried to equate his own illegal contempt of court to Negro injustice. Appearing on the nationwide June 18, 1967, ABC program "Issues and Answers" he found the prospect of his 5-day jail sentence and the U.S. Supreme Court decision which ordered it upsetting to all Negroes. He warned the decision would "encourage riots and violence in the sense that it all but said that Negroes cannot redress their grievances through peaceful means without facing the kind of decision that we face."

This is directly false. In addition to his usual "invitation" to riots and violence, he tries to evade the real issue. He was not engaging in "peaceful means." He was engaging in illegal means, flouting the judicial process. The court decision was not saying anything to Negroes, it was a statement of the law of the land which was clearly applicable to every American. The true King can be seen in this twisting of the facts, his effort at personal martyrdom and the veiled threat of riots and violence which he uses in virtually every situation.

The value of committing acts of civil disobedience "openly," "lovingly," as it were, is commented on by Attorney Waldman, previously cited:

"Apparently, Dr. King thinks that in violating laws 'openly' he and his followers are more virtuous than those who violate laws secretly. As a matter of fact, the reverse is true. The open violation of law is an open invitation to others to join in such violation. Disobedience to law is bad enough when done secretly, but it is far worse when done openly, especially when accompanied by clothing such acts in the mantle of virtue and organizing well advertised and financed plans to carry out such violations. The secret violator of law recognizes his act for what it is: an antisocial act; he may even be ashamed of what he is doing and seek to avoid disapprobation of his neighbors. But the open violator, the agitating violator, acts shamelessly, in defiance of his neighbor's judgment and his fellow man's disapproval."

Dr. King defines unjust laws as "those in which people are required to obey a code that they had no part in making because they were denied the right to vote."

When pinned down about communities where Negroes have the right to vote, and asked whether there was still the "right" to disobey, King expanded his code for lawlessness even more:

"There may be a community where Negroes have the right to vote, but there are still unjust laws in that community. There may be unjust laws in a community where people in large numbers are voting, and I think wherever unjust laws exist people have a right to disobey these laws."

Here King jumped from Negroes to all people and from people without voting privileges to even those who do have the constitutional methods of change open to them. To him, the majority might always be wrong, the minority always right. Acceptance and promotion of this philosophy can only lead to the disintegration of American society. From it follows the chaotic situation where any one who believes, or even feels, that a law is unjust merely disobeys. The denial of freedom to the majority of Americans who obey the law is proportional to the number of persons who set themselves up as final judge and then disobey. While professing Christianity and humility, King strikes a harder blow at fundamental concepts of justice than any would-be dictator or other demagog in contemporary American history.

On the same "Meet the Press" program referred to earlier, Tom Wicker of the New York Times asked:

"How are we to enforce law when a doctrine is preached that one man's conscience may tell him that the law is unjust, when other men's consciences don't tell him that?"

King responded:

"I think you enforce it, and I think you deal with it by not allowing anarchy to develop. I think the chief norm for guiding the situation is the willingness to accept the penalty, and I don't think any society can call an individual irresponsible who breaks a law and willingly accepts the penalty."

This is more King jibberish and feigned piety. To commit murder, for example, and then willingly go to prison to pay the penalty cannot change the nature of the transgression—it is still wrong.

Willingly or not, the question is still, in Judge Whittaker's words:

"Can anyone reasonably believe that a disorderly society can survive? In all recorded history none ever has. . . . History also shows that, in each instance, the first evidence of the society's decay appeared in its toleration of disrespect for, and violation of, its law. There is no good reason to believe that similar toleration will serve us differently."

WHEN CIVIL DISOBEDIENCE BECOMES NECESSARY

Inflammatory statements, threats and actual instances of civil disobedience are evident throughout the career of Martin Luther King. In December 1959, King called on southern Negroes to practice civil disobedience, if necessary, and to break, openly, any State or local law "not in harmony with Federal law. This," he continued, "is the creative moment for a full scale assault on the system of segregation. We must practice open, civil disobedience."

In the fall of 1961 King spoke on the role of the Negro student, stated his hollow call for nonviolence and in the next breath called for "disobeying the unjust laws."

Two years later in Birmingham, King warned that city of more massive demonstrations:

"I hope civil disobedience will not be necessary but, if something is not done quickly, if Congress filibusters the civil rights bill and does not pass the public accommodation section, Negroes will have to engage in massive civil disobedience."

Ten days later he said he feared violence and warned agains that if the civil rights bill did not pass it "may lead to a night of darkness and violence."

I personally heard his threats at Howard University in 1964 during the time when Congress was debating the civil rights program, and I can assure you that he spoke not as a man of peace but as a man of violence.

In February of 1966, King and his men decided to assume "trusteeships" of a six-flat tenement in Chicago as part of a campaign to improve living conditions for the residents. King had no authority; his power was only that which is derived from police-state tactics. He simply took over. His reasoning: "morality" is more important than the law and property rights, the action was "supralegal," above the law.

In early April 1966, a circuit court judge enjoined King and his associates from entering the building, interfering, or collecting rent from the tenants, all of which they had done. There can be no denial of King's influence and the results of his "nonviolent" demonstrations and "direct action" programs.

The New York Times of July 16, 1962, stated that Reverend King "threatened a new drive for Negro rights" in Albany, Ga. Ten days later, leader King, according to the Times, set a day of penance following a night of rioting during which Negroes were arrested as they marched on city hall, hooting, laughing, and throwing bottles, bricks, and rocks at law officials. August 11, the police chief of Albany testified that the situation had been under control until King returned to the city to be tried for an illegal demonstration.

Another example of the "nonviolent direct-action" programs of Dr. King was exposed in July 1966 in the syndicated column by respected columnists, Robert Allen and Paul Scott. Their exposé reported that King and company were contacting, and enlisting, Chicago street gangs and "bringing them into the civil rights movement to fight 'the power structure'."

From a report said to be circulating through the U.S. Department of Justice, the columnists quoted these statements: King's lieutenants telling gang leaders that "the real foes are Mayor Daley, policemen, slumlords, bankers, businessmen, and school administrators"; or haranguing that this is an "unjust society"; and that "the gang members are being incited to violence instead of being taught nonviolence"; that "gang lead-

ers have little or no understanding of civil rights, but do know how to use force." King, they said, had personally met several times with gang leaders who have a combined following of 1,000.

During the same month that King was reported to be enlisting the gangs, Chicago police battled some 300 Negroes for 2 straight hours of rioting.

Some time later, August 9, the Chicago Tribune reported that:

"The Chicago Lawn area was the scene Friday night of civil rights disorder as the Reverend Martin Luther King, Jr., led Chicago marchers into the community to promote open housing for Negroes."

The Chicago riots of July 1966 deserve elaboration. Here is a selected sequence of events: The July 12 riot broke out just 2 days after King's mass civil rights rally.

The Baltimore Sun, July 10, 1966, reported:

"In an interview . . . Dr. King acknowledged that his 'end slums campaign in Chicago is an implementation program for the concept of "black power",' but under a more palatable name.

"Dr. King acknowledged that his presence in Chicago, the street rallies, sit-ins, marches, and door-to-door campaign to sign up members of protesting [units] have more far-reaching aims than the immediate dramatization of problems of impoverished Negroes."

The next day King and Mayor Daley held a "showdown" meeting in the mayor's office. On July 14 the New York Times reported that the near West Side was tense after a police car was stoned by more than 100 Negro youths. Martin Luther King attributed the disturbance to the Mayor's refusal to make concessions to his civil rights program. This is his typical style. Rarely has Reverend King chastized looters, arsonists, and conspirators for violence. He always justifies their actions and, directly or indirectly, encourages them.

The report continued:

"Dr. King . . . spoke at the headquarters of the West Side Organization, where a sign on the wall said: 'Burn, baby, burn, boycott, baby, boycott.' Roving bands of youths and some adults . . . broke windows, looted stores, and stoned police cars and small police vans."

During the weekend of the 16th, 17th, and 18th, Governor Kerner called out the National Guard when police could not control rioting that in 3 nights included burning, looting, two deaths, 100 injuries, 300 arrests, and extensive property damage.

A few days before the riot, King stated that disrupting the flow of Chicago's traffic—a tactic of Dr. King's—would be "rough" on city officials "when they have to get 200 people off the Dan Ryan (expressway) but the only thing I can tell them is: Which do you prefer, this or a riot?" Another "nonviolent" pilot project was thus in action.

It is doubtful that the city officials made the final choice.

Chicago's Mayor Daley, as reported in the New York Times, "asserted angrily that the strife was 'planned!' Dr. King's aides were in here for no other reason than to bring disorder to the streets of Chicago," he concluded.

Following contact with the gangs mentioned earlier, it is disturbing to note that press accounts of the riots stated that Negro street gangs fanned the flames in the riot and were given credit for spreading violence to greater limits.

The Chicago Tribune reported that prior to the riots, King had shown films detailing the violence of Watts. Asked by the Tribune about this, King replied:

"The films showing the Watts riots were to demonstrate the negative effect of riots."

The films add another dimension to the activities of King that are well known by law enforcement officials. Their general reaction to King is summed up by FBI Director J. Edgar Hoover in this statement:

"Unfortunately, some civil rights leaders in the past have condoned what they describe as civil disobedience in civil rights demonstrations.

"Martin Luther King, Jr., for example, after arriving in Chicago, Ill., early in 1966 in connection with the civil rights drive there, commented about the use of so-called civil disobediance in civil rights demonstrations and said:

" 'It may be necessary to engage in such acts. . . . Often an individual has to break a particular law in order to obey a higher law.'

"Such a course of action is fraught with danger for if everyone took it upon himself to break any law that he believed was morally unjust, it is readily apparent there would soon be complete chaos in this country."

When the riots broke out on July 12, did Martin Luther King enter the scene as a moderating influence? Absolutely not. On the second day of the riot, July 13, a rally was held at a local church and King appeared with one Chester Robinson, executive director of the West Side Organization, who made highly flammatory accusations about the Chicago police. King's respectability added to the occasion. Robinson, incidentally, is an ex-convict with an extensive arrest record dating back to 1949. Such are the men King finds himself with time and time again.

The first amendment guarantees the right to assemble peaceably and to petition the Government for a redress of grievances, but it does not allow any latitude for disobedience. It is absurd to even imagine a situation where a law protects the right to disobey a law. To say this is to say that law is not law.

Throughout, the actions of Dr. King have been termed "civil" disobediences, but Justice Whittaker makes this point: "What we are confronted by, and must deal with, are active, overt, willful mass violations of our *criminal* laws. That conduct is not 'civil disobedience' in any dictionary or acceptable sense of those words. The understandable desire to avoid openly admitting advocation and commission of *crime* cannot excuse us from calling that conduct what it is. Active and overt acts willfully committed in violation of our *criminal* laws are criminal violations and not *'civil disobedience.'* "

The final result of disobedience is not only gross violations of law during riots and marches, but in this opinion of Justice Whittaker, encompasses a general furthering of lawlessness throughout the country. "Toleration and appeasements" of the "many misguided preachments and activities of Dr. King are heavily contributing causes of the general disrespect for law and hence of the crime that is now rampant throughout our Nation."

I believe it is fair to conclude that Martin Luther King has been an apostle of violence and lawlessness, not peace and nonviolence. His method has been criminal conduct and conspiracy, not civil disobedience. To call it anything else would be the same perversion of the truth that King has engaged in for years.

A MINISTER BUT OF WHAT?

Although Dr. King asks the world to believe that he is a man of God and appeals to "higher laws" in justifying his acts of law breaking, it is incredible that he should expect the people of the United States to be so gullible as to accept the Biblical and historical precedents he conjures up as valid. They are not.

To use Biblical passages as a pretext for his call to lawlessness, King must first deny the context in which the Apostles lived and preached. They had no system of appeals. There was no guarantee of freedom. There was no free speech. The parallel is invalid.

In the opinion of the dean of Talbot Theological Seminary, Rev. Dr. Charles L. Feinberg:

"Those who point to Biblical examples of resistance to authority forget the spiritual principles involved there, and are unmindful that they in that day had no such legal provisions for redress for their grievances such as we have today."

That Dr. King should disregard the total context of the New Testament, and the Book of Acts in particular, can hardly be believed.

It is also incredible that King would attempt to compare the civil disobedience of today with the Boston Tea Party. To make this comparison is, again, to forget that there were no channels of appeal or meaningful democratic remedy available to those American patriots. It is interesting to note that the Boston Tea Party and other acts against authority by the colonists were the beginnings of the overthrowing of a foreign government. We must assume that Dr. King knows this basic historic fact. His views and tactics on this point are hardly American.

Dr. King uses these methods to push into areas and communities where the residents, from mayor to fellow clergyman, say he is not wanted or needed. Some of the greatest condemnation of Martin Luther King has come from men of the church.

In 1964, delegates to the American Council of Christian Churches passed a resolution, "noting with regret that the Reverend Dr. Martin Luther King, Jr., civil rights leader and Nobel Peace Prize winner, had been represented before the world as a peace-loving Christian minister crusading in the interest of Negro life."

In 1966, Dr. J. H. Jackson, Negro leader of the National Baptist Convention, said that civil disobedience and nonviolence would not carry the civil rights movement any higher and might even lead to disrespect for law and order and to possible violence.

In 1965, a Negro alderman in Chicago, Ralph H. Metcalf, criticized King and his group, said King had "ulterior motives" in moving into Chicago with his programs and leveled the blast at King that:

"This is no hick town. The leaders can handle the situation. We have adequate leadership here."

Metcalf said that King would not be "objective."

The Chicago Tribune of June 30, 1967 reported:

"The Chicago chapter of the National Association for the Advancement of Colored People, long critical of the civil rights tactics of the Rev. Martin Luther King, Jr., has formally split with Dr. King's group. . . ."

The article added that King's group and the NAACP have been at odds over King's tactics last year in the open housing march.

Episcopal minister, Dr. Robert B. Watts, of La Jolla, Calif., is another clergyman who has scored King's disobedience stand and his apparent belief that the end justifies the means. Dr. Watts declared that no one, "however exalted he may be or regard himself, has the right to say that what was wrong before becomes morally right if the acting party is willing to be punished if caught." The doctrine of morally justified civil disobedience should be rejected, he added.

Perhaps one of the strongest statements from a fellow clergyman came in April of this year. The blunt, descriptive attack on King came from the Rev. Henry Mitchell, leader of a group of West Side Chicago ministers. Here is the account as reported by the Chicago Tribune:

"The leader of a group of west side Negro ministers declared yesterday that Dr. Martin Luther King should "get the hell out of here" because his civil rights marching in Chicago last summer (1966) 'created hate.'

"'If he wants to march on the west side, let him march with rakes, brooms, and grass seed,' said Rev. Henry Mitchell . . .

"He said the ministers represented the sentiments of 50,000 Chicago Negroes who want 'peace, love, and harmony,' don't approve of civil rights marches, and 'just want to live in their communities and upgrade them.'"

Justin E. Walsh wrote in the monthly magazine, Rally, about those who use the pulpit for their strange social and political pronouncements. It seems to fit Martin Luther King, Walsh said:

"Thus the pulpit becomes a political rostrum from whence God Himself directs the defeat of Barry Goldwater, the march on Selma, or a teach-in protesting American involvement in Viet Nam. The sacral and profane become confused, religion is reduced to an adjunct of political agitation, and church attendance falls because Americans do not indorse such schemes, will not listen to preachers who do.

Possibly the answer can be found in I Corinthians 1:27. It quite prophetically says:

"But God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty."

In his constant preaching that the ends justify the means, King is not speaking in the Judeo-Christian heritage belief. This is crass materialism and Marxism. It is expediency not principle. It is frightening to contemplate the many leading clergymen that consciously join his cause or acquiesce by their silence. Even worse, he is being currently depicted as a modern Christian hero by a Catholic catechism series. The total picture of Martin Luther King brings one fundamental question to mind: He says he is a minister. A minister of what?

SOME OF KING'S ADVISERS AND ASSOCIATES

When one considers the backgrounds of some of Martin Luther King's advisers and associates, it is hardly surprising that some of King's activities work to the detriment of true civil rights progress and that he ends up mouthing the Communist line.

A UPI release of October 10, 1965, reported a meeting which King had with U.N. Ambassador Arthur Goldberg concerning the war in Vietnam. The release stated that "King was accompanied to the meeting by Bayard Rustin, his special consultant," and others.

On February 10, 1966, Director Hoover of the FBI had this to say about Rustin:

"At the University of Maryland last year, at a law enforcement institute held for police officers of Maryland, Virginia, and Washington, D.C., the university invited Bayard Rustin to be one of the speakers. Bayard Rustin was convicted for sodomy, a violation of the Selective Service Act and was an admitted member of the Young Communist League."

Unfortunately, this is not the only case where the backgrounds and/or activities of some of those close to King certainly harm the civil rights movement in the eyes of the public.

Rev. James L. Bevel, one of King's assistants in the Southern Christian Leadership Conference, is another of King's cohorts whose activities certainly do not reflect the sentiments of sincere civil rights exponents. Bevel was a sponsor of Vietnam Week, mentioned above, and was given leave by King to serve as national director of the Spring Mobilization Committee To End the War in Vietnam, one of two committees which planned and organized Vietnam Week. The House Committee on Un-American Activities stated that "Communists are playing dominant roles" in the Spring Mobilization Committee.

Bevel was the signer of a public appeal for funds to furnish the DuBois Clubs "Freedom Center" clubhouse in Chicago and has joined as coplaintiff with the DuBois Clubs in their suit to restrain the Subversive Activities Control Board from holding hearings on the DCA as petitioned by the Attorney General. FBI Director Hoover has publicly stated that the W.E.B. DuBois Clubs were started by the Communist Party U.S.A. as a youth front.

In addition, Bevel was a sponsor of the Chicago conference on December 28 to 30, 1966, to discuss the idea of a nationwide student strike and other forms of demonstrations protesting the U.S. effort to resist Communist aggression in South Vietnam. According to the HCUA report, "Communist Origin and Manipulation of Vietnam Week":

"Organizers of the conference have openly admitted that representatives of the following Communist organizations took part in the conference: Communist Party U.S.A.; W.E.B. DuBois Clubs of America; Progressive Labor Party (the Peking-oriented faction of the U.S. Communist movement); Socialist Workers Party (the Trotskyist Communists); Young Socialist Alliance (youth branch of the Socialist Workers Party); Youth Against War and Fascism (youth arm of the Workers World Party, a Trotskyist splinter group); National Guardian (published by Weekly Guardian Associates)."

Rev. Fred L. Shuttlesworth, according to the Cincinnati Enquirer of June 9, 1963, was elected to the presidency of the Southern Conference Educational Fund, Inc., and when contacted by the Enquirer in Birmingham, Ala., concerning the nature of the SCEF, stated:

"I have the highest regard for this organization (SCEF) for the work it has done since I have been a member of the board, and I have seen nothing on the part of any persons, with whom I have been associated, to give any substantiation to these charges."

Shuttlesworth has been a close associate of Martin Luther King and the New York Times of January 11, 1966, lists him as secretary of the Southern Christian Leadership Conference. Like King, he has been associated with a number of cited Communist fronts. He was a speaker at the 25th annual convention of the United Electrical, Radio & Machine Workers of America which, as indicated before, wash expelled from the CIO by the 1949 convention on grounds of Communist domination.

When unable to attend, he sent a statement to be read at the rally held by the New York Council To Abolish the House Committee on Un-American Activities, a cited Communist front.

He was one of 200 guests at the National Guardian's 15th anniversary dinner on November 26, 1964. The Guardian is a cited Communist publication.

According to the Mine-Mill Union of July 1965, the official publication of the International Union of Mine, Mill & Smelter Workers, Shuttlesworth was scheduled to speak at the 59th Mine-Mill International Convention, August 16, 1965, in Denver, Colo. This union was expelled by the CIO in 1950 on grounds of Communist domination.

Reverend Wyatt T. Walker, another of Martin Luther King's associates, also has several Communist fronts listed in his name. In 1962 he was cochairman in charge of conference facilities for a lawyers' conference on civil rights held in Atlanta, under the sponsorship of the National Lawyers Guild's Committee To Assist Southern Lawyers, and the National Bar Association's Civil Rights Committee in cooperation with King's Southern Christian Leadership Conference. The National Lawyers' Guild, as previously stated, has been cited as a Communist front.

Walker was a sponsor of the Yasui Welcoming Committee which in turn was sponsored by the National Guardian, a Communist front.

As in the case of Shuttlesworth, Walker was a sponsor of the National Committee to Abolish the Un-American Activities Committee, a Communist front.

Of all those associated with Martin Luther King and the SCLC, perhaps none have had such a close relationship with the Communist Party as Hunter Pitts O'Dell. A UPI release which appeared in the New York Times of July 27, 1963, reported that King stated that O'Dell had worked twice for the SCLC. King acknowledged that O'Dell "may have had some connections in the past" with communism but King added that:

"We were convinced that he had renounced them and had become committed to the Christian philosophy of nonviolence in dealing with America's social injustices."

King said O'Dell left the movement on June 26 by "mutual agreement" because of concern that his affiliation with the integration movement would be used by "segregationists and race-baiters."

The surest indication of O'Dell's break with the Communist Party would be, of course, his willingness to appear before a congressional committee and give the U.S. Government the benefit of his party experience. Indications are that O'Dell could be of immense help in disclosing the identities of 20th-century Benedict Arnolds biding their time for the downfall of the United States.

In 1956 O'Dell testified before the Senate Internal Security Subcommittee. He invoked the fifth amendment and refused to say if he was a southern district organizer for the Communist Party. Robert Morris, counsel for the subcommittee, said information had been received that O'Dell was, in fact, a district organizer for the Communist Party in New Orleans, and that O'Dell gave "directives to the professional group" in that city and that he operated under three different names—the other two being John Vesey and Ben Jones.

RIGHT DOWN THE COMMIE LINE

April 4, 1967, Rev. Martin Luther King, Jr., rose to the speaker's platform in New York City's Riverside Church and delivered what must surely be the greatest condemnation of American policy and involvement in Vietnam ever to come from a well-known citizen. His attack was ruthless, packed with misleading innuendoes and distortions. A Presidential aid was later quoted: "a speech on Vietnam that goes right down the Commie line."

More and more, King has been branching out from civil rights into the field of foreign affairs. More and more he parrots the far left, pro-Communist line.

If there were any doubt, the April 4 speech washed it away. In this speech, King lashed out at the United States, called our Nation "the greatest purveyor of violence in the world today," charged the Nation with "cruel manipulation of the poor" and, as if written by the Daily Worker, said that U.S. troops "may have killed a million South Vietnamese civilians—mostly children." Keep in mind that these are only selections from the speech.

This speech and his involvement with the Vietnam Week protests brought down on King's head an abundance of denunciations, from civil rights leaders, legislators, military men, journalists and many Negroes who believe King has gone way, way too far.

King's Riverside speech is a hideous perversion of fact, a perversion nearly without limits. He said that Americans "poison the water" of the South Vietnamese. He stated that "we kill a million acres of their crops" and that American bulldozers "destroy their precious trees" and that "they wander into the hospitals with at least 20 casualties from American firepower for each Vietcong-inflicted injury." These are King's words. To this array of absurdities he added:

"We test out our latest weapons on them, just as the Germans tested out new medicine and new tortures in the concentration camps of Europe."

These are a few of the Communist-line invectives which King delivered on April 4. Since they were spoken, various "transcripts"

of the speech have appeared, "cleansed" versions brought forward in an apparent attempt to soothe the irate response of the great majority of Americans.

For all his vocal attempts to keep his anti-Vietnam stand and civil rights separate, and on a "personal" basis, these attempts have not worked. There is a joining of the two and King has helped direct it.

At the 1966 annual meeting of the Southern Christian Leadership Conference, the group condemned the war, called it mass murder and authorized King to "throw the resources" of the organization behind efforts to end the war. It was at this time that King said he would write to the leaders of the governments involved. Doubtless, he dropped the idea when someone told him that the Logan Act, which he would have violated, forbids an individual from dealing in this way with a foreign government.

King maintains that he has never advocated a "mechanical merger" of the civil rights and peace organizations—which at other times he says are inextricably bound together—but, mechanical or not, he did release the Reverend James Bevel from the SCLC to head the Spring Mobilization Committee To End the War in Vietnam. Incidently, Bevel's wife, Diane, not long ago got back from a Hanoi pilgrimage, so that helps understand the Bevels.

CONCLUSIONS

In November 1964, FBI Director J. Edgar Hoover called Reverend King "the most notorious liar in the country." Mr. Hoover spoke with no small amount of authority or knowledge. King has avoided a direct encounter with the famed public servant because the record is clearly unfavorable to the civil rights leader. Mr. Hoover is privy to many confidential reports on Mr. King's activities just as I am, and while their nature cannot be disclosed, I can say without equivocation that Martin Luther King does not want nor can he stand a public airing of his record. I can rest my case against King with the public utterances and actions of this man and any revelation of confidential matters is entirely unnecessary.

Why has he been immune for so many years and, in the parlance of the day, "allowed to get by with murder?" There is a peculiar double standard which the liberal community consistently applies. If any prominent person, particularly a conservative, were to identify with or share a speakers' platform with a member of the John Birch Society or some group the liberals might currently be attacking, he would be maligned forever. Let Martin Luther King openly identify with Communists and radicals, have a Communist as an adviser, engage in criminal activity, appear at the most way-out meetings in the Nation and advocate racism, revolution or civil disobedience and these same people look the other way.

In the long run, Mr. Speaker, I am sure that we don't have to worry that much about the Martin Luther Kings. Our society is open enough, free enough, and resilient enough that it can withstand demagoguery. What is frightening, however, is to see the usual guardians of the public interest, ranging from the press to the Justice Department, look the other way and virtually assure such people a green light in their operations.

The press has repeatedly referred to Reverend King as a moderate. He is not. While he is not telling Negroes to arm themselves with guns or to "burn, baby, burn" like the Rap Browns and Stokely Carmichaels, he is, in a sophisticated way, agitating for the same thing. He is going to have a massive dislocation of northern cities but no violence. He says that upsetting a city without destroying it can be more effective than a riot, whatever that means. This is the enigma of Martin Luther King. He preaches nonviolence but somehow this can end up in illegal or violent actions. Then he says he is not responsible, although he himself has often participated in illegal acts.

He has thrust himself into community after community where even the Negro leaders have asked him to stay away. Only this year, King again foisted himself into the Chicago turmoil and announced his own brand of solutions to their ills. Rev. Henry Mitchell, a leader in the area King chose as a "target" asked him to leave and charged that King "created hate." King has thrust himself onto the Cleveland, Ohio, scene and promoted a boycott of a local dairy. In that particular case, he cited as some demands on that firm actions which could be a violation of the civil rights law. He also said the firm must advertise in Negro newspapers and put money in Negro savings and loan associations to avoid a Negro boycott. All in all, this is the blackmail tactic of a would-be dictator and power-hungry demagog, not a responsible leader.

By word and deed, he has been a potent force for lawlessness in our country. He has been a scofflaw. He has arrogated to himself the right to pick and choose the laws he will obey. He has set a poor example for others to emulate. He has countenanced draft evasion. He has been disloyal to his own country.

In an age when our country needs statesmen and builders, he has been a demagog and wrecker. Many of his ideas are alien to our way of life. In America, he can constitutionally say virtually anything he wants and command any following that he can muster for legitimate pursuits. It is important, however, that he be understood in his true perspective so honest and well-meaning Americans will not be duped because they did not fully understand the man, his mission, and his tactics.

(NOTE.—This contains about one-half of the original speech which appears in the CONGRESSIONAL RECORD, vol. 113, pt. 21, pp. 27814–27827.)

[From the CONGRESSIONAL RECORD, May 16, 1968]

THE UNTOLD STORY OF MARTIN LUTHER KING, JR.

Mr. RARICK. Mr. Speaker, Mr. John S. Perilloux, of Ewa Beach, Hawaii, offers a documented story of Martin Luther King, Jr., with which he feels the American people should reacquaint themselves before the past is forgotten—and history written from half-truths.

I include Mr. Perilloux' "Untold Story" in the RECORD:

"THE UNTOLD STORY OF MARTIN LUTHER KING

"(By John S. Perilloux)

"Few men have had so many words spoken and written about them as has had the late Martin Luther King, Jr. The Reverend King was the center of a storm of controversy and violence from the time he achieved prominence in 1955, when he led a successful boycott against the bus system of Montgomery, Alabama, until the day of his death in Memphis, Tennessee, on April 4, 1968. Indeed, the controversy continues even after his death.

"Because of his success in the bus boycott King gained the respect and admiration of many Americans. Overlooked by some, and unknown to most, were the character and backgrounds of the men and women chosen by King to assist him in his assault upon such formidable obstacles as segregation and racial prejudice. Had he enlisted the support of worthier people as his immediate aides, King could have been a potent force in strengthening America and uplifting his people. However, such was not the case, and from the pinnacle of success in 1955 he descended to an all-time low in April of 1967 when he called the United States 'the greatest purveyor of violence in the world today'.

"Who was this man who has been commended as a man of peace and damned as an apostle of violence? To those liberal and bleeding hearts who have not intelligently discerned what King had been saying and doing during his twelve years of prominence this may come as a shock and a tragedy. To those of us who have followed his activities closely and have been aware of his questionable activity it comes as no surprise at all. In 1967 the real Martin Luther King stood up, and yet, where is the criticism he deserved and should have gotten?

"On January 15, 1929, Michael Luther King, Jr., was born in a 13-room house in Atlanta, Georgia. When he was six his father changed both their names to Martin. He entered Morehouse College in Atlanta at the age of 15 and from Morehouse went to Crozer Theological Seminary in Chester, Pennsylvania.

"In 1955 King became pastor of the Dexter Avenue Baptist Church in Montgomery, Alabama. On December 1st of that year a Montgomery bus driver ordered Negroes to stand so Whites could sit. One woman, Mrs. Rosa Parks, refused and was arrested. Within hours Negroes began a boycott against the bus system which was to last for more than a year. King's gift of articulateness, his willingness to defy city officials, and his apparent lack of personal motives made him the natural leader of the boycott. When the boycott ended Martin Luther King had become world-famous.

"The January 1963 issue of Fellowship reveals Rustin to be a 'friend' of Kwane Nkrumah, former Communist dictator of Ghana. The same issue of Fellowship credits Rustin with having worked to establish a 'center for nonviolence' at Dar es Salaam, Tanganyika, which has proven to be a training center for communist guerrillas. Terrorists, trained at this center, have conducted raids on Rhodesia and South West Africa.

"In September 1963, at Richmond, Virginia, Rustin said that 'more bloody Negro suffering should be encouraged so that squeamish Northern Negroes would be horrified into line'. (12) It is possible that some would be horrified. However, it is *certain* that this is part of the strategy of the communists for propagating racial warfare in the United States.

"On August 28, 1963, Rustin led a 'march on Washington'.

"On August 29, 1963, he urged that the only hope for Negroes was to 'go left'. (13)

"On February 3, 1964, Rustin was a leader of the New York City school boycott.

"On February 4 he was photographed leaving a cocktail party at the Soviet mission to the United Nations. (14)

"This, then, was the leadership of the Montgomery Improvement Association; Martin Luther King and two ex-convicts who were also communist-fronters.

"And what of Mrs. Rosa Parks, the woman who precipitated the bus boycott?

"Shortly before the incident on the bus, Mrs. Parks had attended the Highlander Folk School in Monteagle, Tennessee. (15) To fully understand the nature and purpose of this school we must go back to the early 1930's, a time when the Communist Party had great dreams and expectations for using the Negro in the Party's plans for overthrowing the government of the United States.

"It was in the 1930's that the party organized the People's Institute of Allied Religion. As part of its program this organization set up the Commonwealth College at Mena, Arkansas. It was organized around 1932 by identified communist James A. Dombrowski and fellow-traveler Myles Horton. It was cited by the U.S. Attorney General as a communist front (16) and fined $2500 for violating the sedition statute of the state of Arkansas. (17) The faculty then moved to Monteagle, Tennessee, and organized the Highlander Folk School. In addition to Dombrowski and Horton those assisting in the school's operation included Don West, district director of the Communist Party in

North Carolina (18), and identified communist Aubrey Williams. (19)

"In 1945 the U.S. Senate rejected the appointment of Aubrey Williams as administrator of the Rural Electrification Administration because of his communist affiliations. (20).

"Aubrey Williams was President of the Southern Conference Education Fund until 1963, at which time he became national chairman of the Committee to Abolish the House Committee on Un-American Activities. (21) This organization has been cited as a communist front.

"Can there be any doubt as to what was taught at the Commonwealth College where the hammar and sickle was prominently displayed? Or at the Highlander Folk School where Rosa Parks was trained

"But who had assisted King in toppling segregation on Montgomery buses? Surely, no one man, no matter how articulate or how brave, could succeed in such an undertaking alone. And who is Mrs. Rosa Parks?

"Dr. King led the boycott as the head of the Montgomery Improvement Association which had been formed by the Reverend Fred Shuttlesworth, former convict who has also been President of the Southern Conference Educational Fund, Inc. (1) The SCEF had been formed from the Southern Conference for Human Welfare. Identified communist James A. Drombrowski was administrator of the SCHW. Paul Crouch, one of its founders, and an admitted communist from 1925 to 1942, testified that the SCHW 'was intended to lead to class hatred and race hatred, dividing class against class and race against race'. (2) The Senate Internal Security Subcommittee exposed the SCHW, stating that it was 'conceived, financed, and set up by the Communist Party in 1938 to promote communism in the Southern states'. After the SCHW was exposed the Party replaced this organization with the Southern Conference Education Fund. (3)

"This new communist front continued to use the same address as the SCHW, the same publication, the same telephone number, and almost identical officers. Dombrowski continued to serve as administrator, identified communist Aubrey Williams remained on the board, and identified communists Carl and Anne Braden were made field secretaries. After conducting an investigation the Senate Internal Security Subcommittee described the SCEF as a communist transmission belt for the South. (4)

"It is extremely interesting that the President of the SCEF was at one time the Reverend Fred Shuttlesworth, founder of the Montgomery Improvement Association and Vice President of Martin Luther King's Southern Christian Leadership Conference.

"Also in the Montgomery Improvement Association with King and Shuttlesworth was Bayard Rustin. FBI reports state that Rustin joined the Young Communist League in 1936 while at the College of the City of New York and was active in this organization on the campus and elsewhere. During World War Two he was arrested several times for advocating resistance to the war and served 26 months in Federal prisons for draft dodging. (6)

"Rustin has worked closely with the War Resisters League, the World Peace Brigade, Liberation, the Medical Aid to Cuba Committee, the Committee for Non-Violent Action, the Greenwich Village Peace Center, and similar organizations, often as an officeholder. (7) He has also been active in the American Forum for Socialist Education, a communist-dominated organization. (8)

"In 1953, in Pasadena, California, Rustin was arrested on a charge of sex perversion and went to jail after pleading guilty. (9)

"There are those who might argue that Rustin had mended his ways by 1955 when Martin Luther King hired him as his secretary and adviser. Let's follow Rustin's activities since 1955.

"In 1957 the Communist Party invited him to its 16th national convention as an "observer". (10) He has been socially entertained at the Soviet embassy and in 1958 went to Russia under the sponsorship of the Nonviolent Action Committee Against Nuclear Weapons. (11)

"In March 1967 the Southern Christian Leadership Conference was organized in Atlanta. Martin Luther King was installed as President, Fred Shuttlesworth as Vice President, and the Reverend Andrew Young as program director.

"The Atlanta Constitution of July 24, 1963, had this to say about Andrew Young:

"The Reverend Young has been headquartered rent-free in Savannah in the offices of the International Union of Mine, Mill, and Smelter Workers. The Subversive Activities Control Board, an agency of the Federal government, has found the union to be communist infiltrated. Another coincidence.

"In 1957 King was photographed at the Highlander Folk School during the Labor Day weekend. Also in attendance and photographed were Rosa Parks, Aubrey Williams, Myles Horton, and Abner W. Berry of the Central Committee of the Communist Party, (22)

"Now it would seem that the Reverend King would have gotten some inkling of the backgrounds of his associates at this school and the nature and purpose of the school itself. Nevertheless, on a form letter from school director Horton, dated May 15, 1963, the Reverend Dr. King is listed as a sponsor of Highlander. (21)

"In December 1959 King called upon Southern Negroes to practice 'civil disobedience' and to break openly any state or local law 'not in harmony with Federal law'. (32)

"In 1960 Hunter Pitts O'Dell replaced Bayard Rustin as secretary and adviser to King. Let's delve a little into O'Dell's background.

"In 1956 he refused to testify before the Senate Internal Security Subcommittee, taking the 5th amendment when questioned about his communist activities. He repeated this performance in 1958. (23) In 1962 the House Committee on Un-American Activities published a report entitled 'Structure and Organization of the Communist Party in the United States'. On page 576 there is a list of those elected to the National Committee of the Communist Party, USA, as known to the House Committee in November of 1961. Among the names is that of Hunter Pitts O'Dell.

"The facts are that O'Dell was district organizer for the Communist Party in New Orleans, Louisiana, in 1956 (23), was a member of the Communist Party when Martin Luther King hired him, and was elected to the National Committee of the Communist Party while on King's payroll.

"On October 26, 1962, the St. Louis Globe Democrat printed an article stating that King had a communist on his payroll, so King claims to have fired O'Dell at this time. However, O'Dell then went to work as administrator in the New York office of the Southern Christian Leadership Conference. The SCLC, you will recall, is an organization of which Martin Luther King was President. Pressure from the press again caused King to 'fire' O'Dell, this time on June 26, 1963. In July 1963 a reporter for United Press International phoned the New York office of the SCLC and was told that O'Dell was still administrator of that office. (24)

"In 1960 there was the restaurant 'sit in' in Atlanta, led by King. (25)

"In 1961 demonstrations in Albany, Georgia, led to his arrest. He declared dramatically when arrested that he would remain in jail until the city desegregated public facilities. Two days later he was out on bail. (25)

"In St. Augustine, Florida, after getting Negroes fired up for demonstrations King went to jail amid great fanfare. But two days later he was bailed out again so he could receive an honorary law degree at Yale University. (25) In the meantime, the aged mother of Massachusetts' Governor Peabody remained in the St. Augustine jail after having been arrested in the demonstrations. White segregationists 'Hoss' Menuci and Connie Lynch were in St. Augustine whipping up mobs into a murderous fury. King was safely at Yale.

"King's American Committee for Africa sponsored and financed the American tour of communist terrorist Holden Roberto, leader of the 'war of national liberation' which began in Angola on the morning of March 15, 1961. A thousand whites were murdered and dismembered and also about 8,000 Africans. (34)

"In October 1962 King met with communist Ahmed Ben Bella of Algeria in a hotel in Harlem. (26) From the United States Ben Bella traveled to Cuba for conferences with Fidel Castro.

"In 1963 there were the demonstrations in Birmingham, Alabama. A bomb in a church, which resulted in the deaths of four Negro girls, was described as the work of white segregationists and the Ku Klux Klan. Possible. Equally possible is that it could have been the handiwork of agents provocateurs. Remember Carl Braden? He was indicted, tried, and convicted of conspiring with Negroes to bomb the house of a Negro and then place the blame on white segregationists. (40)

"On October 5, 1963, state and local police raided the office of the Southern Conference Educational Fund at 822 Perdido Street in New Orleans. Quantities of communist literature were seized. Also seized were a check from James A. Dombrowski made out to and endorsed by Martin Luther King. There were letters from King to Dombrowski and the Bradens and a photograph of King, Dombrowski, and the Bradens. The photograph had been taken at the 5th annual meeting of King's Southern Christian Leadership Conference. (27)

"King was directly responsible for a Supreme Court ruling in 1964 in the case of 'New York Times vs. Sullivan.' The case dealt with a full-page ad placed in the Times by King and other civil rights leaders. Many statements in the ad, charging that Negroes in Montgomery were being abused, were proven false. Sullivan, a Montgomery city official was subsequently awarded a $500,000 libel judgment. The Supreme Court reversed the judgment, ruling that criticism of official conduct cannot be termed libelous without showing actual malice, which is knowledge that the statement was false or reckless disregard for whether or not it was false. (28)

"In 1964 there was the march from Selma to Montgomery. Who were the participants? An entry by U.S. Representative William L. Dickinson in the Congressional Record for March 30, 1965, will help to enlighten us.

"Mister Dickinson says there were four distinct groups participating in the march. 'One group was the Alabama Negro who participated to secure rights and privileges which he felt had been withdrawn from him illegally.' A second group were the do-gooders from out-of-state motivated by compassion for their fellow human beings. He describes the third group as 'human flotsam: adventurers, beatniks, prostitutes, and similar rabble.'

"And what of the fourth group, the ones who welded the others together and gave them cohesiveness? Who were they? In the words of Congressman Dickinson, 'the Communist Party.'

"Look at the speakers on the platform in front of the State Capitol in Montgomery or participating prominently in the march or demonstrations:

"Carl Braden, a well-known communist who was convicted of conspiring to bomb a Negro's house.

"Abner Berry, one of the directors of the Communist Party. He was in and out of the Selma-Montgomery area.

"James Peck, who has a federal criminal record and who once tried to prevent the launching of our first nuclear submarine.

"Bayard Rustin, who by his own admission in the Saturday Evening Post was a communist party organizer for 12 years.

"Martin Luther King, who has amassed the staggering total of over 60 communist front affiliations since 1955 (41).

"On page 6114 of the Congressional Record for March 30, 1965, there is an affidavit, sworn to under oath, by Karl Prussion, a former counterspy for the FBI. Part of the wording of that affidavit is as follows:

" 'I hereby also state that Martin Luther King has either been a member of, or wittingly has accepted support from, over 60 communists fronts, individuals, and/or organizations which give aid to or espouse communist causes.'

"In the New York World-Telegram for July 23, 1964, there is an article on page 2 in which King says he is sick and tired of people saying the civil rights movement has been infiltrated by communists and communist sympathizers. He said there were as many communists in the movement as there are Eskimos in Florida.

"In November 1964 J. Edgar Hoover, Director of the Federal Bureau of Investigation, said King was the most notorious liar in the United States. (29)

"In 1965 King began to make critical speeches about U.S. foreign policy. The communist press gave extensive coverage to his speeches, often featuring them on the Communist Party's official newspaper, the Worker. In September of 1965 he called upon Arthur Goldberg at the United Nations and urged the United States to press for a UN seat for Communist China. He also asked for a halt in U.S. air strikes against North Vietnam and recommended negotiations with the Vietcong. (25) Has anyone ever heard of the Reverend King calling on North Vietnam to halt its subversion, murder, and terrorism in the South?

"In 1965 an organization known as the Citizens Crusade Against Poverty was founded. Respected author and writer George Schuyler had this to say about that organization:

"Its officers include the Soviet-trained Reuther, Martin Luther King, black power promoter James Farmer, radical socialist Michael Harrington, ADL sneak Dore Schary, the Vietnik Doctor Benjamin Spock, and a team of other such revolutionaries crimson enough to dye the Pacific Ocean a brilliant red. (30)

"Gus Hall, General Secretary of the Communist Party, USA, commented, "We are at a new stage in the struggle, because this is the crossroads where the civil rights struggle meets the class struggle". (31)

"In an interview on "Meet the Press" on March 28, 1965, King said, "I do think that there are two types of laws. One is a just law, and one is an unjust law. I think we all have moral obligations to disobey unjust laws". (32) And who is to decide which laws are just and which are unjust? King was advocating chaos and anarchy.

"The connections between the civil rights movement and the Communist Party became stronger in April of 1966 when all three South-wide civil rights organizations lined up in opposition to U.S. policy in Vietnam. These organizations were the Southern Conference Educational Fund, the Student Nonviolent Coordinating Committee, and King's Southern Christian Leadership Conference. They termed their merger a 'meshing of the civil rights and peace struggles.' (43)

"The riots which began in Chicago on July 12, 1966, broke out just two days after King held a mass civil rights rally in Soldiers Field. The Chicago Tribune reported that prior to the riots King had shown films detailing the violence of Watts. Asked by the Tribune about this King replied that the films showing the Watts riots were to demonstrate the negative effect of riots. (Negative effects such as rioters carrying off color TV sets?) During the Chicago rioting King reportedly sped from one trouble spot to another, but reporters noted that he seldom got out of his car. (32)

"The Allen-Scott Report of July 1966 states that King and company were contacting and enlisting Chicago street gangs and 'bringing them into the civil rights movement to fight the "power structure" '.

"In a speech in Los Angeles on February 25, 1967, King called for a 'merger' of the peace and civil rights movements. He called the Vietnam war the result of 'paranoid anti-communism.' (44)

"In a speech at the Coliseum in Chicago King again called for the merging of the peace and civil rights movements, saying, 'We must combine the fervor of the civil rights movement with the peace movement. We must demonstrate, teach and preach, and organize until the very foundations of our nation are shaken'. (45)

"In a statement delivered April 4, 1967, King called upon Negroes and Whites to register their opposition to the Vietnam war by becoming conscientious objectors to military service. (28)

"On April 4, 1967, the Reverend Martin Luther King rose to the speaker's platform in New York City's Riverside Church and delivered what was later described by the Presidential aide as 'a speech on Vietnam that goes right down the commie line'. In his speech King called the United States 'the greatest purveyor of violence in the world today'. He charged the nation with 'cruel manipulation of the poor' and said that U.S. troops 'may have killed a million South Vietnamese civilians—mostly children'. He added 'We test our latest weapons on them. Just as the Germans tested out new medicines and new tortures in the concentration camps of Europe. (32)

"On April 13, 1967 Michael Laski, Chairman of the Communist Party, USA, (Marxist-Leninist), told a press conference in New York: King knows what's going on. He is allowing himself to be utilized by the Communist Party. . . . King willingly enters into an alliance with the Communist Party. . . Mr. King receives financial support from organizations and individuals that are tied to the Communist Party. He knows what is happening, and so does James Bevel. (33)

"James Bevel just happens to be one of the top men in King's Southern Christian Leadership Conference. Bevel helped to organize the Spring Mobilization Committee and in July 1967 met with North Vietnamese and Vietcong officials in Stockholm, Sweden. Bevel's wife, Diane, visited Hanoi in December 1966 and conferred with women in Ho Chi Minh's government. (35)

"One of the strongest statements from a fellow-clergyman came in April 1967 from the Reverend Henry Mitchell. As reported by the Chicago Tribune; The leader of a group of West Side Negro ministers declared yesterday that the Reverend Martin Luther King should "get the hell out of here". His civil rights marching last summer "brought hate".

"The Chicago chapter of the NAACP, long critical of the civil rights tactics of King formally split with King's group. (46)

"From August 29, 1967 to September 4, the National Conference for New Politics held its convention in Chicago. Every subversive organization in the United States was represented. A par-list of organizations which participated include:

"Clergy and Laymen Concerned About Vietnam.

"Draft Resistance Union.

Southern Christian Leadership Conference.

"Student Nonviolent Coordinating Committee.

"W.E.B. DuBois Clubs.

"Revolutionary Action Movement.

"Socialist Workers Party.

"Progressive Labor Party.

"Communist Party, USA.

"The keynote speaker for the convention was Martin Luther King. Part of his speech follows:

"These are revolutionary times. All over the globe men are revolting against old systems of exploitation and oppression. Out of the wombs of a frail world new systems of justice and equality are being born. We in the West must support these revolutions. . . . A morbid fear of communism has made Americans the arch anti-revolutionaries. This has driven many to feel that only Marxism has the revolutionary spirit. Communism is a judgment of our failure.

"We have deluded ourselves into believing the myth that capitalism grew and prospered out of the Protestant ethic of hard work and sacrifices. The fact is that capitalism was built on the exploitation of black slaves and continues to thrive on the exploitation of the poor—both black and white.

"The way to end poverty is to end the exploitation of the poor and ensure them a fair share of the government's services and the nation's natural resources. We must recognize that the problems of neither racial nor economic injustice can be solved without a radical redistribution of political and economic power. (36)

"Lenin couldn't improve on that speech.

"On September 21, 1967, King was made an honorary lifetime member of ILWU local 10 in San Francisco. (37) The ILWU, you will remember, is the labor union which was expelled from the CIO when it was found that the ILWU was communist-dominated. The leader of the ILWU, Harry Bridges, is a communist and was ordered deported from the United States. The deportation order was overruled by Roosevelt's Supreme Court at the urging of Eleanor Roosevelt. (38)

"In November 1967 King was guest speaker at the National Labor Leadership Assembly for Peace in Chicago. In his speech King denounced the Johnson administration. (39) If communist press reports were accurate the 'left wing' of labor dominated the convention. The Worker of November 19, 1967, says, 'This was the most significant anti-war gathering of labor leaders ever held in this country. The conference radiated awareness that here was the force capable of mobilizing the decisive factor of the people, the working class, against the Vietnam war.' Communist Harry Bridges got a standing ovation when he addressed the closing session.

"On March 5, 1968, the Honolulu Star Bulletin carried an article in which King stated that flame throwers in Vietnam are fanning the flames in the cities of the United States.

"In 1967 King began planning for massive demonstrations in Washington, D.C. The demonstrations were scheduled to take place beginning on April 22, 1968. In addition to recruiting thousands of the poor, he planned to organize and train black militants involved in last summer's riots for major roles in his campaign of massive civil disobedience.

"King revealed this in private conferences with Stokely Carmichael, the pro/Vietcong, pro/Castro revolutionary, and other black militants.

"At one point in their meeting Carmichael said that the time had come to begin disrupting American cities *'to help our Vietcong comrades-in-arms'*. King, while stressing that he was vigorously opposed to the Vietnam war, argued that if such an objective were announced for his campaign it would backfire. King's plans included:

"(a) Selection of five cities in which to train 100 neighborhood leaders. The suggested cities were Chicago, Cleveland, St. Louis, Houston, and Atlanta.

"(b) Contacts would be made with the residents of the poor community. Young men who were actively involved in last summer's riots were to be sought out and trained as leaders.

"King also told Carmichael, 'To dislocate the functioning of a city without destroying it can be longer lasting, more costly to the society. It is more difficult for the government to quell it by force. The disruption of the cities you want will come much easier'.

"King also reported that ousted Congressman Adam Clayton Powell would play a major role in the Washington demonstrations. Powell himself has said, 'My return to Washington in April will help rock the entire country'. (42)

"Take a close look at this again, ladies and gentlemen. Stokely Carmichael recently returned to the United States after conferring with Fidel Castro, North Vietnamese officials, and communist revolutionaries in many countries in Africa, Asia, and Europe.

"James Bevel, who is on the staff of the SCLC which is drawing up the battle plans for the disruptions, conferred with North Vietnamese and Vietcong officials in Stockholm last July.

"Adam Clayton Powell was in California recently where he attempted to organize students, white as well as black.

"This is the groundwork for a revolution, and the only people who can possibly benefit from such a coalition are the enemies of the United States.

"In late March of 1968 King's attention was drawn to Memphis, Tennessee, where a garbage collectors strike was in progress. He went to Memphis and organized a demonstration which culminated in a riot. During the burning and looting which followed, a 16-year-old was killed. A judge issued an injunction prohibiting any more demonstrations because of the explosiveness of the situation in Memphis, but King promptly announced he had no intention of obeying. He had again decided to disobey an 'unjust law.'

"On April 4, 1968, Martin Luther King was killed by a sniper's bullet fired by someone who has not as yet been apprehended, despite a massive investigation instigated by Ramsey Clark. The odd circumstances surrounding the murder are again suggestive of an agent provocateur.

"On April 11, 1968, U.S. Representative John R. Rarick of Louisiana inserted in the Congressional Record a news item concerning King. In volume 114, part 8, page 9816, there is the following:

"[From the Yakima (Wash.) Eagle, Nov. 30, 1967]

"The first disclosure that an FBI report existed which tied Martin Luther King to communism was published in Washington Observer Newsletter No. 13 in the February 15, 1966 issue.

"At that time Attorney General Nicholas Katzenbach refused to turn over this file to the House Committee on Un-American Activities. In fact Katzenbach, in the presence of Lyndon Johnson, lied and denied to Congressman John Bell Williams that the file even existed.

"WO is now happy to report that the FBI report is not only in the hands of HCUA, but copies are also in the hands of Congressman John J. Rooney of New York.

"The lawmakers were so shocked at what they read in the FBI report that they plan to summon King before their committees and delve deeply into his involvement with communist conspirators. When the FBI agents had King under surveillance they observed him meet a well-identified Soviet espionage agent at Kennedy Airport in New York. They also secured evidence that King was receiving large sums of money from a well-known American communist agent who gives King instructions which he implicitly obeys. The Federal agents also adduced evidence of his unsavory personal conduct in Washington hotels and elsewhere and the fact that he had violated the Mann Act (white slavery). This is a violation of the U.S. criminal code, but neither Attorney General Katzenbach nor his successor, Ramsey Clark, would allow the FBI to present the evidence to a Federal grand jury.

"The record of Martin Luther King strongly indicates he had been grossly irresponsible in learning the backgrounds of his associates and associations or that he chose to use them for his own ends. The only other conclusion that a reasonable person can come to is that Martin Luther King covertly and consciously attempted to promote the cause of the Communist Party.

[From the CONGRESSIONAL RECORD, May 26, 1969]

CALIFORNIANS HONOR COMMUNIST ERRAND BOY

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous material).

Mr. RARICK. Mr. Speaker, the California taxpayers are now forced to perpetuate the memory of an international communism errand boy.

Their new University of California law building was dedicated as the M. L. King, Jr., Law Building, appropriately by outgoing Chief Justice Earl Warren.

Perhaps it is a fitting tribute to a man whose only claim to fame was disobedience of the law—save those which served his own ends and conveniences. Or was this action by the regents felt necessary to prevent the building from being burned? Makes about as much sense as UNESCO's eulogizing the bloody dictator, Lenin, as a humanist.

Perhaps this is the beginning of a trend in the naming of law schools and buildings after others famous in connection with the law—such as the James brothers, John Dillinger, or Bonnie and Clyde.

Many wonder why the present administration does not authorize the Department of Justice to tell the American people the truth about King and his lifetime of subversion and immorality and exploitation.

Or does it, too, fear it has more to gain by suppression of the truth than by telling the American people the facts.

A clipping from Parade for May 25 follows:

"Q. I understand that California's Governor Ronald Reagan would not permit a new law building at a University of California campus to be named in honor of the late Martin Luther King, Jr. Is this so?—Henry Ackerman, Berkeley, Calif.

"A. The governor voted against naming the building after King. The reason, he explained, was because King has not been a lawyer. The majority of the regents, however, outvoted the governor, and the new law building at the Davis Campus of the University of California is now known as the Martin Luther King Jr. Law Building. The building was dedicated by U.S. Supreme Court Chief Justice Earl Warren."

[From the CONGRESSIONAL RECORD, May 28, 1968]

THE KING AND HIS COMMUNISTS

Mr. RARICK. Mr. Speaker, more and more documentation on the Southern Christian Leadership Conference—SCLC—continues to be brought to light.

The leaders of this mockery of names and titles must be exposed for what they are so that our people knowingly will never be duped into emotional submission.

This must be one of our foremost duties to our constituents—to get them the facts so they can decide for themselves the truth and knowing they will remain free.

Under unanimous consent I submit a report from the American Opinion magazine in 1965 titled, "The King and His Communists" by Alan Stang, and an article from Time for May 1968 for inclusion in the CONGRESSIONAL RECORD, as follows:

"THE KING AND HIS COMMUNISTS

"(By Alan Stang, a former business editor for Prentice-Hall, Inc., and a television writer,

producer, and consultant (Mike Wallace Interviews and Biography))

"(NOTE.—Mr. Stang is a frequent contributor to American Opinion and is author of the Western Islands bestseller, It's Very Simple: The True Story of Civil Rights, a book which we heartily recommend to our readers.)

"It was Sunday morning in Alabama. It was clear. It was cool. It would be a perfect day. And the most wonderful thing about it was that a foreboding, pervasive sense of nonviolence hung heavy in the air—a premonition of nonviolence in the afternoon.

"Selma was so full of nonviolence it was fit to bust.

"At one end of the bridge were the troopers, mounted and afoot, billies in hand. Nothing much needs to be said about them. Everybody knows, don't they, that all white Alabamians, especially the police, are filled with hatred and police brutality.

"At the other end of the bridge were the others, meek, innocent, pure, abused: the 'Civil Rights' fighters. Nothing much needs to be said about them. Everybody knows that they were stuffed with love. They were full of it, crammed with it, there was no way at all you could jam in any more of it.

"The troopers tensed. The marchers marched.

"Was this going to be it at last? Were we finally going to get some nonviolence going—most people were basically so peaceful—you had to spend such a long time lying before you got any of it at all, and then what you got might not even be decent.

" 'For weeks,' Newsweek of March 22, 1965, explains, 'Martin Luther King had been escalating his Selma voter-registration campaign toward the state he calls "creative tension"—the setting for a paroxysm of segregationist violence that can shock the nation to action. . . .'

" 'The Negroes' rationale in holding night marches,' explains the New York Times of February 24, 1964, 'is to provoke the racist element in white communities to show its worst.'

"Believe me, you don't know what work is until you've tried to provoke some nonviolence.

"And then at last, O Happy Days, the troopers were charging across the bridge, kicking and clubbing and tear gassing—gosh, it was wonderful. It was great. Man you talk about nonviolence! *Newsweek* of March 22, 1965, tells it this way: '. . . At a half-walk, half-run, troopers shoved and clubbed the marchers into retreat. Behind them, the sheriff's cavalry mounted a Cossack charge into the scattering column. . . .'

"Cossacks! You get it? You remember the Cossacks. They were the crowd who used to ride down the luckless, Russian workers on orders of the Tsar. Later on, the 'workers' made a 'revolution.' You may have heard about it.

"But Alabama Cossacks didn't do it on orders of the Tsar. The only reason they were there at all it seems, was that the March had been forbidden, because of this very premonition of nonviolence, by an order from George Wallace, the Ivan the Terrible of American society, otherwise known as the Governor of the once sovereign state of Alabama—if you will pardon the expression.

"Now, what's the point to all this nonviolence? We know it's about 'Civil Rights,' of course; but why must the nonviolence get so bloody? What's the theory behind it? Well, the man behind it is of course the 'Reverend' Dr. Martin Luther King Jr., and he tells us about it all in *Saturday Review* for April 3, 1965:

"1. Nonviolent demonstrators go into the streets to exercise their constitutional rights.

"2. Racists resist by unleashing violence against them.

"3. Americans of conscience in the name of decency demand federal intervention and legislation.

"4. The Administration, under mass pressure, initiates measures of immediate intervention and remedial legislation.

"Ladies and gentlemen, here it is from the man himself. Let's spell it out—in English:

"1. 'Nonviolent demonstrators'—that's anyone who, say, has a pair of sandals and needs a bath—go into the streets to provoke the hicks.

"2. 'Racists'—that's anyone, say, who doesn't have a pair of sandals and doesn't need a bath—finally lose their heads, or are simply forced to use violence—as in Selma.

"3. 'Americans of conscience'—that's a reader of the *New York Times*, a professor at Yale, or anybody calling himself a clergyman—put on the pressure for more federal intervention to promote collectivism that leads to Communism.

"4. The Administration—I don't know who that is—under mass pressure (you know what this is), sends in more troops and passes more laws.

"In short—and remember that this is from the massive brain of the man himself—the violence that usually occurs in a King Production isn't unexpected, isn't to be avoided, isn't something to be sorry about. It is exactly what he wanted. It is the point to the whole Production.

"It is in fact, says Dr. King, the *only reason* for a 'nonviolent' demonstration: To generate pressure on the Congress to install more collectivism.

"As we have seen, the Selma March, for instance, caused the lightning passage of the 'Voting Rights' Bill, under which the federal government, rather than the states, now conducts voting registration—the point being, of course, that in any dictatorship, whether Communist or Nazi, all the power must be centralized.

"So when Dr. King sees the troopers, he isn't sorry. Land O'Goshen, no! He's glad; the 'paroxysm' is on its way! He loves to see his own supporters get their skulls cracked.

"You see, when the nonviolence broke out in Selma, for instance, the skull of King—as chance would have it—was safe in Atlanta.

"What does it all mean? What's behind it? What manner of man is Martin Luther King?

"Well, there are all sorts of opinions. The 'Reverend' Ralph Abernathy, for instance, explained on the Selma March, according to the *New Yorker* of April 10, 1965, that King was 'conceived by God.' Legend has it, we read in *Newsweek* of April 2, 1965, that after his conviction for leading the Montgomery Bus Boycott, Negroes gathered outside shouting: 'Behold the king! Long live the king!'

"Talk about cult of personality!

"Ladies and gentlemen, I'm going to make a lot of wild charges; I'm really going to throw them around. But you never know. There may be a 'Liberal' among us. Maybe even somebody from the Anti-Defamation League. So let's avoid speculation, opinion, and evaluation for the moment, and begin with a simple narration of the known facts.

"Before 1955, nothing much happened to this King of Kings. *Time* of January 3, 1964, tells us that he did try to commit suicide twice. But, then, life is lonely for prophets and such an act may not always denote emotional instability. Lots of people try to kill themselves just to get some attention.

"But then, on December 1, 1955, a nonviolent lady named Mrs. Rosa Parks, who is a Negro, refused to move to the back of the bus in Montgomery, Alabama. 'I don't really know why I wouldn't move,' says Mrs. Parks, according to *Time* of February 18, 1957. 'There was no plot or plan at all. I was just tired from shopping. My feet hurt.'

"Is it possible? Yes, it is 'possible.' But what is definite is that Mrs. Parks had no doubt been prepared for the adventure by a recent educational experience that included a course at an institution by the name of the Highlander Folk School, then located in the town of Monteagle, in the State of Tennessee. The Highlander Folk School was organized with the assistance of a gentleman by the name of Don West. Don West, of course, was at the time District Director of the Communist Party of North Carolina. The Highlander Folk School was of course a Communist Training School, teaching the overthrow of the U.S. Government—and authoritatively cited as such by several agencies of your government.

"It was of course the Montgomery Bus Boycott, launched by Mrs. Parks of the Communist Highlander Folk School, that put Dr. King on the long road to nobelfication. He would not again attempt suicide; he had all the attention he needed. You may recall that Dr. King did his work at the head of an organization by the name of the Montgomery Improvement Association (M.I.A.). The Montgomery Improvement Association had been formed by the 'Reverend' Fred Shuttlesworth. Now, the 'Reverend' Fred Shuttlesworth is probably a very wonderful gentleman I am sure, but he is also a former convict, says the Joint Legislative Committee on Un-American Activities of the State of Louisiana, and 'has been affiliated with several communist-front organizations.'

"The *New York Times* of August 22, 1965, tells us that his Cincinnati congregation—composed of Negroes—may soon ask the 'Reverend' Shuttlesworth to resign. A suit has been filed, which charges 'that Mr. Shuttlesworth had usurped the power of the church trustees and officers and assumed absolute authority over the church's property. It also alleged that he had deposited funds of the church in institutions without authorization of the trustees and that he had denied members the right to call a meeting of the congregation." And Judge Frank M. Gusweiler of Common Pleas Court has issued an injunction, forbidding Mr. Shuttlesworth from spending any church funds.

"What they basically want the 'Reverend' Shuttlesworth to do, says a committee—a 'freedom' committee (that's right)—of the worshippers, is 'to treat the officers and members of the church as intelligent human beings and not as illiterate slaves as he does now.'

"According to a spokesman for the 'Reverend' Shuttlesworth—and you will remember that all of this is from the pages of the *New York Times*—the trouble is caused by jealousy of the 'Reverend' Shuttlesworth's 'Civil Rights' activities—jealously 'inspired by white persons.'

"One of these activities, we read in the *New Yorker* of April 10, 1965, was the Selma March—conducted, as chance would have it, By Dr. Martin Luther King.

"Another former convict is a gentleman by the name of Bayard Rustin. Dr. King thinks very highly of Mr. Rustin. He describes him, according to the *Washington Post* on August 11, 1963, as 'a brilliant, efficient and dedicated organizer and one of the best and most persuasive interpreters of nonviolence.'

"In 1953, the Pasadena Police Department described him differently. Arrest record No. 33914 includes Mr. Rustin's qualifications as a sexual pervert.

"The *Allen-Scott Report* for August 16, 1963, says of the qualified Mr. Rustin:

"As a student at the College of the City of New York in 1936, Rustin joined the Young Communist League and was active in its operations on the campus and elsewhere.

"In World War II, he was arrested several times for making speeches advocating resistance to the conflict against Hitler and Mussolini. As a professed conscientious objector, he served 26 months in the federal prison at Ashland, Ky., and Lewisburg, Pa. [Emphasis mine.]

"He says he resigned from the Young Communist League in 1941. What probably happened was that he was graduated.

"*National Review* of August 20, 1963, says 'Rustin worked closely, often as an office holder, with: the War Resisters League, the

World Peace Brigade, *Liberation* magazine, the Medical Aid to Cuba Committee, the second General Strike for Peace, the Monroe (N.C.) Defense Committee, the Committee for Non-Violence Action . . . the Greenwich Village Peace Center, and any number of other groups, ad hoc committees, petitions, etc., few of which are arrestingly wholesome. . . .'

"Mr. Rustin has also been active in a group called the American Forum for Socialist Education, which is Communist dominated, says the Senate Internal Security Subcommittee.

"In 1958, Mr. Rustin got involved in a trip to Russia sponsored by a group known as the Nonviolent Action Committee Against Nuclear Weapons.

"The January, 1963, issue of *Fellowship* reveals Mr. Rustin to be a 'friend' of Kwame Nkrumah, the Communist dictator of Ghana.

"In September of the year, he was in Richmond, Virginia, where he suggested, says the *Richmond News Leader* of September 27, 1963, 'that more bloody Negro suffering should be encouraged so that squeamish Northern Negroes would be horrified into line. . . .'

"He was fresh from the March on Washington, which he conducted on August twenty-eighth to help pass the 'Civil Rights' bill, the day after which he urged that the only hope for Negroes was to 'go left.'

"On February 3, 1964, Mr. Rustin successfully conducted the New York City school boycott. On the next day, photographers recorded his departure from a cocktail party at the Russian mission to the United Nations. He has a real feel for comedy, Bayard does. He says he was there to discuss 'artistic freedom' in Russia.

"And finally, as chance would have it, Mr. Rustin somehow managed to find employment, in the year of 1955, as 'secretary' and 'adviser,' to a Very Important Person.

"The person's name was Martin Luther King—as chance would have it.

"So the three of them—ex-con and Communist-Fronter Fred Shuttlesworth, ex-con and Communist-Fronter Bayard Rustin, and the 'Reverend' Dr. King—went ahead and improved Montgomery.

"After they had improved Montgomery for more than a year, they held a meeting in Atlanta, in March of 1957, at which they formed the Southern Christian Leadership Conference (S.C.L.C.).

"The meeting probably couldn't have been called in February because Mr. Rustin, Dr. King's 'secretary' was then attending the sixteenth national convention of the Communist Party. He had been officially invited, as an official 'non-Communist' observer, you see. The observers observed in a signed statement that:

". . . The sessions of the convention were democratically conducted with vigorous discussion of all matters brought to the floor. There were many indications that no individual or group was in a position to control the convention.

"You will recall that at the time, the Animals were trying to shed the image they deserved for crushing the Hungarian Revolution. But that didn't bother Bayard Rustin and the other observers, who also said:

"Finally, we wish to protest vigorously against the continuance by Senator Eastland's Senate Internal Security subcommittee of the un-American practice of governmental inquisition into political opinions and activities. . . .

"My goodness, these 'non-Communist' observers come in handy, don't they?

"The President of the Southern Christian Leadership Conference is the 'Reverend' Dr. King.

"The Vice-President of the Southern Christian Leadership Conference is the 'Reverend' Fred Shuttlesworth. And the 'Reverend' Fred Shuttlesworth is the new President of the Southern Conference Educational Fund.

"The Southern Conference Educational Fund, ladies and gentlemen, has been described by *three* agencies of your government—the House Committee on Un-American Activities, the Senate Internal Security Subcommittee, and the Joint Legislative Committee on Un-American Activities of the State of Louisiana—as a department of the Communist Conspiracy. It was organized by Communists. It is run by Communists. It is the most important Communist organization in the South.

"Mr. Carl Braden of Louisville, Kentucky, who serves as field director of S.C.E.F., has been named under oath as a member of the Communist Party. Mrs. Anne Braden, also of Louisville, Kentucky, and editor of the *Southern Patriot*, which is published by S.C.E.F., has also been named under oath as a member of the Communist Party.

"Mr. Braden is a former convict, of course. While in Louisville, he was convicted of a felony—a little matter involving some dynamite. And Mrs. Braden was indicted for sedition. It seems she doesn't care for our form of government.

"Carl Braden is also listed on its letterhead as one of the 'national sponsors' of the Fair Play for Cuba Committee which sponsored member emeritus Lee Harvey Oswald, the 'lone fanatic'—which is a Communistic Front. Braden was one of the main speakers at the F.P.C.C. dinner in New York on April 28, 1961.

"Benjamin E. Smith and his law partner, Bruce Waltzer, take part in the general management of S.C.E.F. Both are under indictment for multiple violations of the Louisiana Subversive Activities and Communist Control Act. At a closed meeting of the S.C.E.F. on February 3, 1964, at the Roosevelt Hotel in New York, Benjamin E. Smith, explained as follows: 'Come June, armies will take the field.' 'These armies are coming to strike. The Southern Conference Educational Fund is one of those armies.' 'The Southern Conference Educational Fund occupies a unique place in the South, it furnishes a staff organization supervising others.' 'There will be strikes, sitdowns, movements, we must play our part.' 'Revolution is on its way.'

"Mr. Aubrey Williams was President of S.C.E.F. until 1963, when he got so busy as Chairman of the National Committee to Abolish HUAC—which is a Communist Front—that he decided to make himself President Emeritus. As Director of the National Youth Administration under President Roosevelt, Mr. Williams was Lyndon Johnson's boss. He also held other important jobs in the New Deal. In 1945, however, the U.S. Senate rejected his appointment as Administrator of the Rural Electrification Administration, after his affiliations with the Communist apparatus had been placed in the record.

"On March 19, 1954, Mr. Williams testified before the Senate Internal Security Subcommittee that he had made the following statement in a speech in New York on September 11, 1947:

"It is my belief that it is precisely at this point that we take our stand and defend the right of any Communist to *maintain his position as an employee of the Government of the United States . . .* [Emphasis mine.]

"In April of 1954, at Hearings held in New Orleans by the Senate Internal Security Subcommittee, Mr. Williams was identified as a Communist Party member by one witness who had been in the Party, and was identified by another witness as one who had accepted Communist Party discipline.

"It was Mr. Williams, a Communist, whom the 'Reverend' Shuttlesworth—friend and colleague of the 'Reverend' Dr. Martin Luther King—recently replaced as President of S.C.E.F., a Communist organization.

"Mr. Williams died recently. There is always something sad about the death of a man even a professional criminal and Communist like Aubrey Williams.

"The Executive Director of S.C.E.F. is Dr. James A. Drombrowski. At the S.I.S.S. Hearings in March of 1954, John Butler, former Alabama Communist Party official, testified that on July 8, 1942 he attended a meeting of Communist Party leaders in the Thomas Jefferson Hotel, in Birmingham, Alabama, at which Alton Lawrence introduced James A. Drombrowski as a member of the Communist Party. Butler said this meeting of Communist Party leaders was held in Drombrowski's own hotel room.

"The Joint Legislative Committee on Un-American Activities of the State of Louisiana has preserved a letter dated September 21, 1960, from Carl Braden to James A. Drombrowski, which shows that the 'Reverend' Fred Shuttlesworth—friend and colleague of Dr. Martin Luther King—was using the Bradens to write his news releases.

"In fact, ladies and gentlemen, on October 7, 1958, the 'Reverend' Dr. King himself wrote a letter to Anne Braden, who as you will recall is a Communist and had been indicted for sedition by the American State of Kentucky, Louisiana Committee Counsel Jack Rogers explains at a hearing that 'in this [letter] *King urges Anne Braden and her husband, Carl, both Communist party members to become permanently associated with the Southern Christian Leadership Conference. . . . Of course, the Bradens were well identified publicly as Communists long before the date of this letter.*' We offer the letter.

" 'The next document is a letter from Martin Luther King to James A. Drombrowski, dated August 16, 1960. It shows *the friendly personal relationship that had developed between these two men by that time.* It is very brief, I will read it to the Committee. It says: "Dear Jim: This is just a note to acknowledge receipt of your letters of recent date. *We, too, were more than happy to have you in our home,* the fellowship was very rewarding. I will expect to hear from you when Bishop Love returns to the country. At that time we can set the date for an Atlanta meeting. Very sincerely yours, Martin." " [*Emphasis mine.*]

"Committee Counsel Rogers testifies furthermore that Dr. King actually filed a lengthy affidavit in the Federal Court in New Orleans strongly supporting James A. Drombrowski and the Southern Conference Educational Fund as 'integrationists' of good character, and that Dr. King refused to repudiate the affidavit even after Mr. Rogers showed him absolute proof that they were all actually Communists.

"Indeed, a photograph exists which shows the 'Reverend' Dr. King along with Anne Braden, Carl Braden, and James Drombrowski (the last three all identified Reds), the back of which reads as follows in Drombrowski's handwriting: 'The 6th Annual Conference of the Southern Christian Leadership Conference, Birmingham, Alabama, September 25 to 28, 1962.'

"And there is a check, issued by the Southern Conference Educational Fund, signed by Benjamin E. Smith and James A. Drombrowski, and dated March 7, 1963, to the order of Dr. Martin Luther King Jr., in the amount of $167.74, with a notation on it: 'New York expenses'—and the endorsement, on the back of Dr. Martin Luther King Jr.

"The Committee concludes that the Southern Christian Leadership Conference—*headed by Dr. King*—is 'substantially under the control of the Communist Party through the influence of the Southern Conference Educational Fund and the Communists who manage it.'

"It is important to repeat that nothing of what we have said so far is speculation, rumor, hearsay, or opinion. All it is a simple narration of the known facts—some of them—to be found, among many other places, in a report entitled *Activities of the Southern Conference Educational Fund, Inc. in Louisiana,* issued by the Joint Legislative

Committee on Un-American Activities of that State and available now from American Opinion.

"Also of interest is the career of the 'Reverend' Andrew Young. The 'Reverend' Andrew Young was trained at the Highlander Folk School, which as we have seen is a Communist Training School.

" 'Before its charter at Monteagle was revoked,' the *Atlanta Constitution* of July 24, 1963, tells us, 'the Highlander School received support from the International Union of Mine, Mill & Smelter Workers.

" 'An officer of the union, now under indictment on a charge of filing a false non-Communist affidavit, was one of the directors of the Highlander School.

" 'The Reverend Young has been headquartered rent-free in Savannah in the offices of the International Union of Mine, Mill & Smelter Workers. The Subversive Activities Control Board, an agency of the Federal Government, has found the union to be Communist infiltrated. The Mine-Mill Union has appealed the finding to a Federal court of appeals.'

"The 'Reverend' Andrew Young, we read in the *New Yorker* of April 10, 1965, was one of the directors of the Selma March, which was headed, of course—as chance would have it—by Dr. Martin Luther King. In fact, the 'Reverend' Andrew Young is Program Director for the Southern Christian Leadership Conference—which is headed, of course, by Dr. Martin Luther King. As chance would have it.

"On the Labor Day weekend of the year 1957, at this same Highlander Folk School—a Communist Training School—many humanitarians gathered to discuss 'civil rights.' A photograph of the events records the presence of Mrs. Rosa Parks. That's *the* Mrs. Rosa Parks. The 'Reverend' Dr. Martin Luther King Jr. was there, of course, with his close friend and associate, the 'Reverend' Ralph Abernathy. A photograph records the Abernathy presence. Another photograph shows the 'Reverend' Dr. King addressing the assemblage—perhaps at the very moment when he piled praise on School Director Myles Horton, whose 'noble purpose and creative work' he says he has long admired, possibly because it has included some cash to Dr. King.

"Mr. Horton's creative work consists of having run, with Communist James Dombrowski, an outfit called Commonwealth College, which was convicted under the laws of the American State of Arkansas of displaying the hammer and sickle and openly teaching Communism—and which on April 27, 1949, was cited by the U.S. Attorney General as a Communist Front; and of operating the Highlander Folk School, a Communist Training School. His 'noble purpose' is apparently to Communize the South.

"Dr. King also mentioned Aubrey Williams—a Communist—whom he called "one of the noble personalities of our times."

"Still another photograph—the best—shows the following comrades enjoying a lecture: the 'Reverend' Dr. King; Aubrey Williams, a Communist, and then President of S.C.E.F., a department of the Communist Conspiracy; Myles Horton, friend and teacher of Communists, and director of this Communist school; and Abner W. Berry, of the Central Committee of the Communist Party.

"Comrade Berry looks bored, but the others seem to be enjoying the lecture very much. In fact, on a form letter from Director Horton, dated May 15, 1963, the 'Reverend' Dr. King is listed as a Highlander sponsor.

"As chance would have it.

"Then there is the interesting case of a gentleman who is sometimes known as Mr. Hunter Pitts O'Dell. 'The Senate Internal Security Subcommittee declared today,' we read in the *New York Times* of September 16, 1956, 'that a "smoothly coordinated" Communist underground was operating in New Orleans as late as last spring. The panel made public in support of its finding the transcripts of hearings held in that city in April."

"The subcommittee said that American Communists "sought to infiltrate labor unions, churches, farmer organizations, parent-teacher organizations, channels of public opinion and other streams of influence in our society . . .

" 'Much of the Senate panel's case was built up at New Orleans from material found by New Orleans policemen in the abandoned apartment of one Hunter Pitts O'Dell. Mr. O'Dell had been identified in previous testimony as being the district organizer of the Communist party in New Orleans.'

" 'On April 12, 1956, identifying himself as Hunter Pitts O'Dell, a New Orleans waiter,' we read in the *St. Louis Globe-Democrat* of October 26, 1962, 'he testified before the Senate Internal Security Subcommittee. He invoked the Fifth Amendment and refused to say whether he was a southern district organizer for the Communist Party.

"Robert Morris, counsel for the sub-committee, said information had been received that O'Dell was, in fact, a district organizer for the Communist Party in New Orleans; that O'Dell gave 'directives to the professional group' in that city, and that he operated under three different names—the two other names being John Vesey and Ben Jones.'

"In 1958, when O'Dell was living in Montgomery, he again declined to answer on grounds, *et cetera*.

"In 1962, the House Committee on Un-American Activities published a two-volume study entitled *Structure and Organization of the Communist Party of the United States*.

"On Page 576, there is a list of those elected to the National Committee of the Communist Party, U.S.A., as known to the House Committee in November of 1961.

"Among the names was that of Hunter Pitts O'Dell.

"With this as a reference, Mr. O'Dell went looking for a job. And in 1960 he landed one. It was quite a job.

"As chance would have it, he went to work for an outfit called the Southern Christian Leadership Conference, headed by a gentleman by the name of Dr. Martin Luther King.

"Who says an intelligent, young Negro in America can't make good?

"But 'racists' and 'imperialists' naturally began to complain: 'A Communist has infiltrated to the top administrative post in the Rev. Martin Luther King's Southern Christian Leadership Conference,' we read in the *St. Louis Globe-Democrat* for October 26, 1962.

" 'He is Jack H. O'Dell [another alias], acting executive director of conference activities in southeastern states, including Georgia, Alabama, Mississippi and Louisiana.'

"So Dr. King developed an interesting strategy.

"You may have heard of it.

"We call it lying.

"Like Bayard Rustin, Dr. King has a real feel for comedy. He developed the strategy of firing O'Dell.

"After he got fired, Mr. O'Dell was probably pretty broken up. But in America you can't keep a good man down. He landed another job, this one with the 'Reverend' Andrew Young, who as you will recall was trained at the Communist Highlander Folk School by Communists, and is program director for the Southern Christian Leadership Conference, which is headed, as chance would have it, by Dr. Martin Luther King.

"After that, O'Dell got still another job—as Administrator of the New York office of the Southern Christian Leadership Conference, which is headed, as chance would have it, by Dr. Martin Luther King.

"Legend has it that they got on great, until the odor got to be too much even for the American Press.

"Dr. King acted, swiftly, decisively.

"He fired O'Dell.

" 'King said the Negro, Jack H. O'Dell of New York, left the S.C.L.C. the second time June 26 by mutual agreement,' we read in a U.P.I. story inserted in the CONGRESSIONAL RECORD for July 31, 1963, 'because of concern that his affiliation with the integration movement would be used against it by 'segregationists and race baiters.'

"That ended it.

"Some time later, in the summer of 1963, U.P.I. had an interesting story inserted in the *Congressional Record* for July 31, 1963. It seems that the *Atlanta Constitution* had published a report that O'Dell was still working for S.C.L.C. as Director of the New York office. So U.P.I. called the office.

" '. . . *A Staff employee who answered the telephone Thursday morning told United Press International O'Dell was still with the office as administrator of the New York operation.* Later in the day the same office said he was not connected with the agency and had no knowledge of his whereabouts.

" 'King told reporters he could not understand why anyone in his office would say O'Dell worked there when he doesn't . . .' [*Emphasis mine.*]

"It's quite a strategy.

"So it's very reasonable to assume, wouldn't you agree, that Hunter Pitts O'Dell, of the National Committee of the Communist Party, may very well be working with Martin Luther King right now.

"In fact, we read in the *Boston Globe* of April 15, 1964:

"*Official warnings have again been given to King about another,* even more important associate who is known to be a key figure in the covert apparatus of the Communist Party. After the warnings, King broke off his open connection with this man, but a second-hand connection none the less continues . . . [*Emphasis mine*].

"Ladies and gentlemen, there's no need to go on. I am sure you will agree. In fact, we *can't* go on—you see, they only allow us ninety-six pages per issue of the magazine. So let's leave it at that, and remind ourselves again that all we have recorded here is a simple narration of the known facts—some of the known facts. There are others—many others—as I say. So there's no need to mention, for instance, that the American Committee for Africa, which Dr. King allows to use his name, sponsored and financed the American tour of Communist terrorist Holden Roberto, the Butcher of Angola; or that in October, 1962, King turned up in a Harlem hotel with Communist Ahmed Ben Bella, of Communist Algeria, who joined him in a statement that the two injustices of colonialism and American segregation are 'linked.'

"What do you make of it?

"As you know, it is my usual practice to garnish even the most minor assertion with a wagon load of evidence. But I now take the position—after Los Angeles—that to add to the obvious facts that the 'Civil Rights movement' was not only planned by the Communists, but was begun, is staffed, and is conducted by the Communists—and has only one real purpose: the destruction and Communization of America—would be an unforgivable redundance.

"Readers of my book—or of *Two Revolutions at Once,* by Robert Welch—will know that the Communist 'revolution' now going on in this country, under the cloak of 'Civil Rights,' consists of two parts. The first is the drive for a Soviet Negro Republic, an independent 'nation,' consisting of several Southern states—and is of course conducted by the 'Reverend' Dr. King. It is the Soviet Negro Republic that the current 'voter registration campaign' is all about—a campaign which includes the amazing spectacle of the Attorney General of the United States boasting publicly that he is forcing the sovereign states to register total illiterates.

"The second part of the Communist scheme also bears a faint resemblance to the activi-

ties of the 'Reverend' Dr. King—as chance would have it. It consists of course of forcing more and more legislation through the Congress under the cloak of 'Civil Rights,' all of it designed only to destroy the states and concentrate the power.

"Recent developments leave little doubt about the 'Reverend' Dr. King. As we have seen, he has begun a new series of the usual violent and money-making visits—but for the first time including cities of the North—complete with the usual hints of guerrilla warfare if Americans do not immediately come to heel. He has recently decided to conduct American foreign policy himself, by negotiating our defeat directly with North Vietnam, apparently having lost patience with Dean Rusk—and who can blame him? And at this writing he has just landed in Los Angeles to establish what he calls a 'community of love,' but in actuality of course simply to return to the scene of the crime. The man behind Dr. King on the television screen when he was interviewed on arrival in Los Angeles looked very much like Bayard Rustin, who of course is an authority on establishing 'communities of love.' Mr. Rustin was also allowed to accompany Dr. King to Oslo for the Prize; they go everywhere together.

"Angelenos of all colors should keep their backs to the wall, until the verified departure of the King and the Thing.

"It is unfortunately true that some American Negroes have suffered from injustice, and obviously true that the *few remnants* of this injustice must be erased.

"But ladies and gentlemen, it is equally and much more dangerously true that the 'Civil Rights movement' which is supposedly designed to erase them *is* what we have said it is, *only* what we have said it is, and *nothing else but* what we have said it is.

The interesting question remains of why Dr. King does it.

"It is remotely possible that Dr. King was not already a practicing Communist when he was selected to conduct the Mongomery Bus Boycott. That is possible.

"If this was the case, there can be no doubt that he was broken in slowly, in the usual way, step by planned step, until the ultimate revelation, when it was fully explained to him what he had become.

"Dr. King says he did it because he wanted to create a 'community of love,' whatever that is. He says he felt a moral obligation; that it was his duty. And most important, he says he wants nothing for himself. He couldn't care less about material things, you see. He's above all that. In fact, we learn from Mrs. King, in *Redbook* for September, 1961:

"There was a time when he was quite concerned about his personal appearance. Today I have to remind him that he needs a new suit. Our trip to India in 1959 to study Gandhi's independence movement made a deep impression on him. He became even more committed to non-violence and much less interested in material things. At times he has even talked seriously about whether or not he should own anything that's not absolutely necessary for the rest of the family.

"My goodness, he's quite a little gentleman.

"In fact, we read in *Newsweek* for December 21, 1964:

"To share his moment of triumph, Dr. King had brought with him the largest entourage in Nobel Prize history—some 26 relatives, friends, and aides. 'We are all of us very poor people,' said one, explaining that they had scraped together the money for the trip from savings accounts, pension funds, and 'travel now, pay later' arrangements.

"Gosh! Ain't it terrible? The poor Negroes down in the South!

"As it happens, ladies and gentlemen, the senior 'Reverend' King, a Southern Negro, had earned the money down in the South to pay for his son's college education. Mrs. Martin Luther King Jr. is a graduate of Antioch—that's right. *Commonweal* of June 10, 1960, tells us that the father of the "Reverend" Abernathy—King's colleague and cell mate—had his own *five hundred acre* plantation—in Alabama!

"You know—this makes me mad! My father did not have the money to send me to college and to graduate school. But I went. I invoked an unusual procedure—I worked. I drove a taxicab. My father also does not own a five hundred acre plantation. I bawled him out about it as soon as I got the news about the "Reverend" Abernathy. You see, I got all kinds of funny feelings in the "racial integrity." Maybe I'll go out and organize a spontaneous riot.

"It's enough to make you wish you were a Negro down in the South.

"Once again the fact is dramatically and irrevocably proved that Communism is not caused by "poverty," or by "hunger," or by "sickness," at all. The cause of Communism is so simple that many honest men have missed it, and many dishonest men have hidden it.

"Communism is caused by criminals.

"There is no other cause of Communism.

"You see—as Dr. King is well aware—there are essentially two types of degenerate thug; the big timer, and the small timer. The small timer is represented by a specimen such as John Dillinger. Sure, John liked robbing and killing and beating people up—bad mannered stuff like that—but you must admit that at the mention of his name you can't help but feel a touching nostalgia. There was a refreshing sincerity about the man; he told you straight out what he wanted. He didn't claim that he was robbing you and beating you up for your good; he was perfectly pleased to admit that he was doing it for his own good.

"That was his mistake.

"A big timer would have known that the first thing to say was that he was doing it for you. They want nothing for themselves, this type. Everything they do is for your own good. Classic specimens of this variety are called Socialists, of course, and they include for instance, the things known as Stalin and Hitler.

"Whatever the type, they believe, because of their own insignificance, that it is impossible for men to deal fairly with each other, and that a man has only two real choices; whether to be master, or whether to be slave. Like all sure losers, they blame the system for their own insignificance. They talk only of power, and deal only in force.

"All of which makes it now seem reasonable to theorize that as a smart, young man on the make, Dr. King quickly found out how the wind was blowing.

"Ladies and gentlemen, the time has come. J. Edgar Hoover is wrong. Martin Luther King *isn't* the 'most notorious liar in the country.' He's the *biggest*. He isn't notorious enough. That this man cannot be only tolerated, but honored and admired, quoted and consulted—by the President of the United States—is a travesty compared with which that nemesis of the innocent known as Earl Warren can seriously be called a judge.

"King has no real interest in the real welfare of black—or white—Americans.

"He is only interested in tricking them both into civil war—and in lifting their money.

"He doesn't mind that it is exactly because of his own activities that Negroes aren't making the progress he complains they aren't.

"He doesn't really mind that many Negroes are illiterate—as long as they register and vote for him.

"What he really wants is to be a black plantation boss giving orders to 'his people.'

"In a rational society, he would be a carny barker or a snake oil saleman in a crooked side show.

"So let's do it. Let's do it now.

"As you know, the origin of the exact science of ducknology is irrevocably lost in the mists of antiquity, although it is undoubtedly based on the master principles discovered by Aristotle—the first great extremist.

"Let's apply them.

"The Thing walks like a duck.

"It smells like a duck.

"It looks like a duck.

"It quacks like a duck.

"Ladies and gentlemen, there can be only one explanation. I can not even imagine any other explanation.

"It's a duck."

[From the CONGRESSIONAL RECORD, May 29, 1968]

MARTIN LUTHER KING—A STUDY

Mr. RARICK. Mr. Speaker, Church League of America, 422 North Prospect Street, Wheaton, Ill., on its News and Views Report for May 1968, has issued a 55-page comprehensive documentary on M. L. King, Jr., entitled "His Three-Pronged Attack On: 1. Christ and the Bible, 2. The United States of America, 3. Law and Order."

Any of our colleagues desiring comprehensive documentation will want this Church League report.

I am asking that a few portions of the report follow my remarks in the RECORD. Deleted from reproduction in the RECORD are news clippings and speeches such as Congressman ASHBROOK's from the CONGRESSIONAL RECORD of April 4, 1967, Congressman DERWINSKI's of January 22, 1968, Congressman RARICK's for March 25, 1968, and the House Appropriations Report on "Law and Order" for 1967:

"MARTIN KING'S THREE-PRONGED ATTACK

"In recent days the United States was treated to one of the biggest doses of mass hysteria and idolatry through the media of public communications in the history of any nation of the civilized world. The occasion was the demise of a Negro man by the name of Michael King, born with this simple name as recorded on his birth certificate, with the name changed to 'Martin Luther' by his father to imply an affinity for religious causes after the fashion of the famous leader of the Protestant Reformation in Germany, Dr. Martin Luther.

"Few of the masses of United States citizens had available for their study the undisputed and documented facts concerning the late Mr. King's life which would stand up under oath in any court of law or before any United States Congressional Investigative Committee—facts which, for some unknown reason, the public was denied by the same supposedly responsible mass media of communication.

"Mr. King was hailed over the ether waves, through the printed page, on the theatre screens, and in orations from the pulpit, classroom and government chambers as everything from a modern Messiah to one of the greatest leaders of all of history. Such words as 'crucifixion' and 'resurrection' were used in reference to Mr. King.

"Politicians who formerly scorned him over television and from the public platform assumed a countenance of mourning and mortification. Some public leaders who had denounced him as a rabble-rouser and an instigator of violence and revolution, suddenly eulogized him as a great apostle of peace and love.

"What is the truth concerning Martin Luther King's views on theology, his country and law and order? While being called a 'Christian' was he in reality a Christian believer as defined by Holy Scripture? While stating that he was for bringing about social

justice within the United States of America, was he actually loyal or disloyal to the United States of America? While declaring that he came into cities as an apostle of non-violence (the type which Mahatma Gandhi advocated—satyagraha), did he actually contribute to the breakdown of law and order and the rise of anarchy throughout the United States?

"The Church League of America can only come to the conclusion after looking at the record, as made by Mr. King himself, that many people who were swayed by the hysteria following Mr. King's regrettable departure from this world have a lot of catching up to do on their home-work. It is time for people to deal in facts and not in emotion. The orderly conduct of a civilized society is at stake and with it the lives and property of millions of people!

"Martin Luther King, Jr.

"Activities in his religious life

"Martin Luther King was born in Atlanta, Georgia, on January 15, 1929, into a devoutly religious home. At the age of 29 he became the minister of Dexter Avenue Baptist Church after turning down several other offers.[1] He began to work with Atlanta's Intercollegiate Christian Council. King's training had consisted of finishing his high school education at age 15, going to Morehouse College in Atlanta, and attending Crozier Seminary in Chester, Pennsylvania, where he received a B.D. degree in Divinity in 1951 and the Pearl Plafkner Award for scholarship. While at Crozier, Mr. King became president of the student body and was graduated at the head of his classes. It was here that he was influenced by Dr. Mordecai Johnson, president of Harvard, a strong believer in Gandhi, Hindu non-violent resistance leader. Finally, King obtained his Ph.D. degree from Boston University in 1955 where he was a Louis Crozier Fellow.[1]

"Was co-chairman of the Prayer Pilgrimage for Freedom.[2]

"Editor-at-large of the *Christian Century*.[3]

"Attended the National Council of Churches' General Assembly in 1960. Was a speaker at the 18th Ecumenical Student Conference on the Christian World Mission, 1960.

"President of the Southern Christian Leadership Conference.[4]

"Assistant pastor at Ebenezer Baptist Church.[5]

"Sponsor of a statement calling for peaceful resistance to Communism and for unilateral disarmament—pamphlet called 'A Christian Approach to Nuclear War' put out by the Church Peace Mission.[6]

"Was unable to attend the Baptist World Alliance youth conference in Beirut, Lebanon, July, 1963.[7]

"Was speaker at the Second Methodist Conference on Human Relations, August 26–30, 1963.[8]

"Contributor to *Motive* magazine—a Methodist youth publication.[9]

"Keynote speaker at the Union of American Hebrew Congregations convening in the Hilton Hotel in Chicago.[10]

"Honorary chairman of the Baptist Action for Racial Brotherhood Committee of the American Baptist Convention.[11]

"Listed as a speaker at 'Freedom Now' meeting sponsored by the Milwaukee civic and religious community held in Milwaukee City Auditorium, 1/27/64.[12]

"Addressed the 1964 American Baptist Convention where he received the first annual Edwin T. Dahlberg Peace Award.[13]

"Is one of the leaders of the Alabama Christian Movement for Human Rights.[14]

"Spoke at a meeting of the Central Conference of American Rabbis; asked them to join with him 'in a creative witness to our joint convictions of equality and racial justice.' Consequently, 16 rabbis and one Jewish layman participated in a civil rights demonstration in St. Augustin, Florida. The 17 were arrested on June 18, 1964.[15]

"Spoke in two Protestant churches in Communist East Berlin.[16]

"Had a 25-minute session with Pope Paul VI.[17]

"Spoke at the 61st general convention of the Protestant Episcopal Church, Rt. Rev. Arthur Lichtenberger praised him as 'one of the great men of our times.'[18]

"Because of his increasingly heavy schedule, King could not accept an editor-at-large assignment for the *Christian Century*.[19]

"Dr. Martin Luther King was to be among the speakers for the Montreat, North Carolina, Christian Action Conference, August 19–22, 1965. He was to be a keynote speaker at the meeting.[20]

"Activities in his secular life

"Became president of the Montgomery Improvement Association after graduation from college.[21]

"Married Coretta Scott, a singer, and now has four children.[1]

"Speaker at the 25th anniversary celebration of Highlander Folk School, once declared a Communist training school.[22]

"Was on the National Advisory Committee of the Congress of Racial Equality.[23] Of C.O.R.E., Senator Eastland stated in the *Congressional Record*, vol. 107, pt. 7, pp. 8956–8957, 'This organization is the war department of those who sell hate, collect donations, and sow the seeds of discord in this country. Since its inception, its creed has been lawlessness, and its tactics have followed the pattern set by communist agitators the world over.'

"Editorial contributor or member of the Fellowship of Reconciliation,[24] radical pacifist organization which opposes military defense.

"Head of the Congress of Racial Equality.[25]

"Made a speech at the War Resisters dinner honoring A. J. Muste.[26]

"Ad Hoc Committee on the Eisenhower-Khrushchev talks to Explore the Requirements of Peace—member.[27]

"Sponsor of the National Committee for a Sane Nuclear Policy.[28]

"Led a successful boycott to integrate Montgomery's city buses.[29]

"Honorary co-chairman of the Africa Freedom Day to benefit the African Defense and Aid Fund sponsored by the American Committee on Africa.[30]

"Member of the National Committee of the American Committee on Africa.[31]

"Sponsor of an appeal for Morton Sobell, convicted atom spy, in article, "1,200 clerics urges Ike free Sobel."[32]

"Writer for *Liberation*, a leftist, pacifist magazine.[33]

"Fellowship of Reconciliation—member of advisory council.[34]

"Editorial contributor, *Fellowship*, a pacifist magazine of the Fellowship of Reconciliation.[35]

"Listed as a supporter of Sobell's release from prison sponsored by the National Committee to Secure Justice for Morton Sobell.[36]

"Contributor to radical *Liberation*.[37]

"On the advisory committee of Congress of Racial Equality.[38]

"On the national committee of sponsors of the American Freedom of Residence Fund.[39]

"Launched a drive to double the voting strength of Negroes in the South before the 1964 Presidential election.[40]

Participant in the conference sponsored by the Alabama Christian Movement for Human Rights, Student Nonviolent Coordinating Committee, and Southern Conference Educational Fund. The conference was on "The Deep South: Ways and Means to Integration" in Birmingham on April 13–14, 1962.[41]

"Slated to be principal speaker at the annual reception of the New York Friends of the Southern Conference Educational Fund to be held in the Biltmore Hotel in New York City, 2/8/63.[42]

"Member of the Committee to Secure Justice for Morton Sobell according to a leaflet of February, 1963.

"Spoke for the New York Friends of the Southern Conference Educational Fund. Guests were invited to make reservations through William Howard Melish, identified by Louis Budenz as a Communist.[43]

"Sponsor of Highlander Center, 1625 Riverside, Knoxville, Tennessee, the newly formed group out of Highlander Folk School.[44]

"Photograph of King allegedly attending the Highlander Folk School is printed in the *Augusta Courier*, 7/8/63. In ansewr to a question from Lawrence Spivak on "Meet the Press," King said he was 'there' (Highlander Folk School) 'only an hour' and that he 'made a 45 minute speech.' The program appeared on T.V. on March 28, 1965.

"Spoke at Cobo Hall along with Detroit Mayor Cavanagh and Walter Reuther. It was the end of the 'Walk to Freedom' program, June 23, sponsored by the Detroit Council of Human Relations.[45]

"Endorsed a Cobo Hall meeting in Detroit on November 8–10, 1963, headed by Rev. C. L. Franklin who led the Detroit June 23 Freedom Walk. At this meeting Negro leaders from 15 Northern cities planned to establish a Northern Negro Leadership Conference.[46]

"The Justice Department furnished a rented car to transport King in Alabama.[47]

"Contributing author to *Renewal* magazine published by exploratory program in journalism of the Chicago City Missionary Society.[48]

"Contributor for *Liberation*.[49]

"Conducts workshops in nonviolent demonstrations, Said the workshops had two goals: instruction in methods of nonviolent action and speedup in voter registration.[50]

"In Oakland, California, a mass rally addressed by Martin Luther King, Jr., drew 17,000 participants.[51]

"Endorsed Lyndon B. Johnson and said Goldwaterism must be defeated.[52]

"Was a special student at the University of Pennsylvania and Harvard.[53]

"Participated in Selma March.[54]

"Aid Received from Religious Sources

'The Synod of the Reformed Church of America sent a gift of money and commendation to the Southern Leadership Conference headed by Martin Luther King.[55]

"Aid Received from Secular Sources

"Speakers at rallies in support of King and his activities were Dr. Herbert Aptheker (member of the National Committee of the Communist Party in the U.S.A.), Mrs. Alva Buxenbaum (National Chairman of the Progressive Youth Organization), and Elizabeth Gurley Flynn (late secretary of the Communist party).[56]

"Gus Hall, general secretary of the Communist Party, U.S.A., and Benjamin Davis, Secretary of the Communist Party, U.S.A., protested the arrest of King in wires to President Eisenhower.[57]

"King's attorneys charged in the Georgia state court of appeals that King's constitutional rights were violated when he was sentenced to a four-month prison term for violating probation in a traffic case.[58]

"A rally was held under the auspices of the 'Emergency Committee to Support Birmingham' to back King and his efforts in Birmingham. The principal speaker was Rev. Fred Shuttlesworth. Other speakers were James Farmer and the late Malcolm X.[59]

"Sammy Davis, Jr., gave $20,000 to King.[60]

"Was backed by a $50 contribution from the Wisconsin Democrats for 'human rights campaign.'[61]

"A photograph shows King and three officers of the Southern Conference Educational Fund, all 3 identified Communists, together. A check was made payable to King

Footnotes at end of article.

personally and deposited by him in his Southern Conference Educational Fund.[62]

"King received $50,000 in cash and pledges for use in the Southern Christian Leadership Conference by the New York Central Labor Council.[63]

"Union Boss Hoffa presented King with a $25,000 check and said that the donation 'was authorized by the international executive board and we have no intention of changing our position.'[64]

"Announcements made by King

"Asked President Eisenhower to end what King called 'a reign of terror in Montgomery, Alabama.' His charges were dismissed by the city's police commissioner as 'the rantings of a rabble-rousing agitator.'[65]

" 'I was immediately influenced by the social gospel . . . Christ furnished the spirit and motivation while Gandhi furnished the method . . . The choice today is no longer between violence and nonviolence. It is either nonviolence or nonexistence . . . I have tried to embrace a realistic pacifism.' He pays glowing tribute to Walter Rauschenbusch and Gandhi as influencing him the most.[66]

"Announced at a news conference in New York City 6/10/60 that he and Asa Philip Randolph planned to use at least 6,000 pickets at both Democratic and GOP national conventions as a protest against segregation.[67]

" 'Addressing Freedom Forum in Schenectady, New York, last week, said he favors admission of Peoples China to the United Nations.'[68]

"Spoke in Los Angeles to 'spur voter registration.'[69]

"Was critical of the F.B.I., especially in Albany, Georgia.[70]

"In a sermon delivered November 15, in New York City King is quoted as saying that reports of alleged Southern outrages against Negroes filed with the F.B.I. 'produced no action.'[71]

"Called on President Kennedy to sign an executive order to outlaw segregation.[72]

"Made a statement 'we are through with gradualism . . . we want our freedom now.'[73]

"J. Edgar Hoover told a House Appropriations Committee that communists are infiltrating the Civil Rights movement. King said that that statement was a smear and that Hoover 'has allowed himself to aid and abet the fallacious claim of Southern racists and extreme right wing elements.'[74]

"After receiving the American Baptist Convention's first annual Edwin T. Dahlberg Peace award, King, a member of the American Baptist Convention said, 'Nothing could be more tragic, than for the civil rights movement to become "all Negro" '[75]

"Spoke at a civil rights rally in Chicago on June 21, 1964. Urged continuance of demonstration, boycotts, rent strikes, and other means of protest.[76]

"Was among those who issued a statement urging Negroes and their friends to impose a moratorium on marches, mass picketing, and other mass demonstrations, until after the presidential election. The statement urged friends of civil rights to concentrate on voter registration, enforcement of the civil rights laws, and other appropriate forms of political activity. The statement declared that 'racism' had been injected into the campaign by the Goldwater forces.[77]

"Wanted the Democrats to endorse a 10-year $50 billion 'bill of rights' program to aid the 9,000,000 poverty-stricken American families.[78]

"In his July-August Newsletter, King implied that anti-Semitism may have been a factor in racial outbursts in New York City and Rochester.[79]

"Declared Barry Goldwater was a man indifferent to civil rights, peace and poverty.[80]

"Supports C.O.F.O. and said that it was 'one of the most creative instruments in the civil rights movement.[81]

"Called for a grand alliance of American intellectuals, liberals, labor union and religious leaders to fight the battles in the civil rights struggle. Said the next final step in the fight for civil rights would be for the movement 'to work in the field of political action and reform.'[82]

"Advocated Communist China's membership in the United Nations. Said it would help toward disarmament efforts.[83]

"Called for a withdrawal of all troops and mercenaries from the Congo.[84]

"Complained to President Johnson that many federal judges 'abuse and misuse' their power. He told Johnson that it was important that large numbers of Negroes be assigned top jobs in local levels of the President's anti-poverty program. He and his staff arrived in Washington in the private airplane of Gov. Nelson A. Rockefeller.[85]

"Johnson, Humphrey, Katzenbach and King conferred on voter registration. He asked the justice department to seek an injunction against the prosecution of more than 3,000 Negroes arrested in Selma.[86]

"Said, 'I would strengthen a channel that is already in existence, the United Nations . . . I would work to bring about universal disarmament and set up a world police force through the United Nations . . . I would also consider some form of world government. As we grow and come to see the oneness of mankind and the geographical oneness of the world, made possible by man's scientific and technological ingenuity, more and more we are going to have to try to see our oneness in terms of brotherhood. This does not mean that everyone has to agree at every point. There can be a world government where diversity exists, and this would lessen many tensions that we face today; and it would also enable everybody to understand that we are clothed in a single garment of destiny, and whatever affects one nation directly in the world, indirectly affects all.'[87]

"Autographs King has made

"Signer of statement calling for suspension of nuclear-weapons tests sponsored by the National Committee for a Sane Nuclear Policy.[88]

"Signer of Church Peace Mission statement calling for cancellation of nuclear-weapons tests.[89]

"Signer of open letter to the House of Representatives opposing the Committee on Un-American Activities sponsored by the Southern Conference Educational Fund.[90]

"Signer of Manifesto of Southern Negro Leaders against Passage of New Sedition Laws by the States.[91]

"Signer of a full page advertisement supporting President Eisenhower's Invitation to Khrushchev and Appeasement Line with Respect to the U.S.S.R.[92]

"Signer of statement of Negro Leaders against proposed new sedition laws sponsored by the Southern Conference Educational Fund.[93]

"Signer of paid full page advertisement in the New York *Times*, 2/8/60, sponsored by the National Committee for a Sane Nuclear Policy favoring ban on further U.S. atomic testing.

"Signer of advertisement sponsored by the National Committee for a Sane Nuclear Policy—'Agenda for Geneva' end all nuclear Tests—Total Disarmament.[94]

"Signer of telegram to President Eisenhower sponsored by the Southern Conference Educational Fund.[95] Advertisement was titled 'Must Southern Negroes Turn to the U.N.?'

"His name appeared on a leaflet advertising a mass meeting in Washington, D.C. on November 19–21, 1960 for the National Appeal for Freedom for Morton Sobell.

"Signed paid advertisement in the Washington *Post*, 7/31/58, demanding that the House Committee on Un-American Activities, 'stay out of the South.'[96]

"Signer of petition to the 87th Congress to abolish the House Committee on Un-American Activities.[97]

"Signer of clemency petition sponsored by the Southern Conference Educational Fund to President Kennedy on behalf of Carl Braden.[98]

"Signer of petition for clemency for Carl Braden—also denounced the House Committee on Un-American Activities and the Senate Internal Security Subcommittee.[99]

"Signer of letter to President Kennedy sponsored by the National Committee for a Sane Nuclear Policy to ask that the United States remain steadfast in its determination to succeed in test ban negotiations.[100]

"Initiator of petition to President Kennedy asking clemency for Carl Braden, convicted field secretary of the Southern Conference Educational Fund.[101]

"Signer of a statement sponsored by the National Committee for a Sane Nuclear Policy to guide the United States in conference negotiations with the Soviet Union on the future of Germany and West Berlin.[102]

"Initiating signer of petition sponsored by the Southern Conference Educational Fund to the President for Clemency for Carl Braden.[103]

"His name appeared on a press release of November 1961 of the National Clemency Appeal on behalf of Frank Wilkinson and Carl Braden.

"Signer of charge that 'HUAC (sic) threatens national security'—the appeal was addressed to the House of Representatives from an Ad Hoc Committee.[104]

"One of 550 prominent Americans who signed a petition to President Kennedy to pardon Junius Scales.[105]

"Signer of plea on behalf of the Communist Party leader of North Carolina convicted under the 'membership clause' of the Smith Act, Junius Scales, to pardon him.[106]

"Signer of statement opposing resumption of nuclear tests sponsored by the National Committee for a Sane Nuclear Policy.[107]

"Signer of an appeal to desist from testing while negotiating with the Soviet Union for disarmament agreements—Clergymen's Message to the President Opposing Resumption of Atmospheric Nuclear Tests.[108]

"Signed a letter asking clerics to deliver sermons and lectures on the first Sunday in January denouncing both the House Committee on Un-American Activities and the Senate Internal Security Subcommittee.[109]

"King sent a telegram to Jesse Gray, identified as an organizer of the C.P. of Harlem which said: 'You have my absolute support in your righteous and courageous effort to expose the outrageous condition that Negroes confront as a result of substandard housing conditions.'

"Associates of Dr. King

"At Morehouse College in Atlanta King came under the influence of the President of the College, Benjamin E. Mays, who has an extensive record of support of communist fronts and causes.[110]

"In the Youth March for integrated schools of Washington, D.C., in 1958 Martin Luther King was co-chairman of the group along with a veteran supporter of Communist fronts, A. Philip Randolph. Again, Rev. King made the pages of the Communist *Worker* which reported: 'Rev. King said: The Oppressed Always Marched for Freedom.' On May 17, 1959, the *Worker* devoted the entire front page and fourteen columns of print to the March. That King's Washington March was aided and engineered by the Communists is attested to by the *Worker*. On page 15 they said: 'Large number of the Left (Communist) forces actively aided in mobilizing support for the Youth March and were in vast audience.'

Footnotes at end of article.

"*Challenge,* official publication of the Young People's Socialist League (11/1/58) headlined the story and pointed out that the Marchers' White House Student delegation leader and 14 of the main youth organizers were members of the Young People's Socialist League.

"Bayard Rustin (a joiner of Communist fronts) was secretary to King from 1955 to 1960 and helped to organize the Southern Christian Leadership Conference.[111]

"At the sixth annual confernce of the Southern Christian Leadership Conference in Birmingham, September 25–28, 1962, Anne Braden, Carl Braden and James A. Dombrowski (identified as Communists) spoke.[112]

"King met with Ben Bela of Algeria in New York.[113]

"Allegation is made that the American Committee on Africa (of which King is a member of the National Committee) sponsored a tour of the United States by Holden Roberto, an African terrorist of the Angola-Congo region.[114]

"Rev. John B. Thompson, a veteran supporter of communist fronts, introduced Myles Horton, director of Highlander Research and Education Center, as the "grandfather" of Martin Luther King explaining that King has stated he owed his entering the civil rights movement to Rosa Parks, a Highlander alumna.[115]

"Has accepted and is almost certainly still accepting communist collaboration and even communist advice.[116]

"Urged the Bradens to become permanently associated with the Southern Christian Leadership Conference according to a letter dated October 7, 1959, to Anne Braden in which King also thanks Carl Braden for his participation in a meeting.[117]

"King was advised to have Hunter Pitts O'Dell dismissed from his organization because he was an identified communist. Either he failed to do so or later rehired him because just over a year ago O'Dell was again on King's payroll as director of the Southern Christian Leadership Conference office in New York City.[118]

"Bayard Rustin introduced Martin Luther King to Kwame Nkrumah, communist dictator of Ghana.[119]

"Arrests of Dr. King

"Sentenced to four months imprisonment for parole violations—Atlanta, Georgia, picture and story.[120]

"Vowed to be arrested for committing an act of civil disobedience to dramatize the integration campaign. That was his 14th arrest. He was charged with trespassing, intent to breach the peace and conspiracy.[121]

"Arrested for not having a permit to parade in Selma, Alabama. This one was his first since he won the Nobel peace prize in November and apparently was part of a plan prepared . . . by the Southern Christian Leadership Conference.[122]

"Awards for Dr. King

"In *Times* magazine in 1956 he was selected as one of the "outstanding personalities of 1956."

"Received the Spingarn Medal at the NAACP Convention in Detroit in June, 1957.

"Received the 1957 Social Justice Award given by the Religion and Labor Foundation.[123]

"Received an award from Local 6 of the Hotel and Restaurant Union after membership poll 'overwhelmingly voted him the American who made the greatest contribution in the past year to the improvement of race relations.'[124]

"Recipient of the St. Francis Peace Medal, the first Catholic reward he received.[125]

"Was given the North American Voice of Fatima award, also the Third order of St. Francis.[126]

"Named Man of the Year by *Time* magazine.[127]

"Received an honorary doctor's degree from Yale University.[128]

"Two papers, published in Oslo, one of them a church paper, urged that Dr. Martin Luther King, Jr., be awarded the 1964 Nobel peace prize. Earlier, in February 1964 eight members of the Swedish parliament nominated Dr. King as candidate to receive this award. The *Christian Century* endorsed Dr. King for this award.[129]

"Was awarded the Nobel peace prize. He 'has consistently asserted the principle of nonviolence' the Oslo Nobel Institute said in its statement announcing the award.[130]

"Awarded the John F. Kennedy Prize by the Catholic Interracial Council in Chicago.[131]

"To be honored at a dinner sponsored by the National Conference of Christians and Jews.[132]

"Accounts Dr. King has made of the civil rights movement

"Article, 'The Negro Revolution in 1964' published in the Southern Christian Leadership Conference *Newsletter,* January 1964, page 7.

"Wrote 'Why We Can't Wait' reviewed in the *Chicago Tribune,* 6/28/64.

"Author of 'Strength to Love' published by Harper and Row.[133]

"Author of 'Stride Toward Freedom: The Montgomery Story' published by Harper and Row.[134]

"Author of 'Why We Can't Wait' published by Harper and Row and reviewed in the *Christian Century,* 8/19/64, page 1045.

"Appraisals of Dr. King

" 'The subject of real headshaking is the Rev. Martin Luther King, Jr. His influence is very great. Yet he has accepted and is almost certainly still accepting communist collaboration and even communist advice.'[135]

" 'He is nothing but a dastardly misleader, and is leading the Negroes in the South down the road to bloodshed and violence.'[136]

" 'To rally the masses against imperialism we need also slogans that correctly express the nature of today's struggle for Negro rights . . . The right of Negroes to be the administrator of Civil Rights laws, interpreters of their provisions and enforcers and judges of violations, must be recognized. One of the movements that developed and shook the world in the field of Negro liberation . . . is the Martin Luther King Improvement Association. This movement inspired Negroes of other cities to conduct similar struggles. So powerful was this movement, that the young Martin Luther King emerged five years ago from an obscure clergyman to prominence as an international figure. King, Abernathy, Shuttlesworth and other prominent ministers in the South are the most authorized spokesmen for this movement.'[137]

"King was accused by President J. H. Jackson of the National Baptist Convention at Kansas City, Missouri, of 'designing the tactics that led to a fatal riot' and the death of the Rev. A. O. Wright of Detroit.[138]

"An editorial in the Oakland *Tribune* of 10/14/61 entitled, 'A Foolish Statement' indicated that King called for recognition of Red China by the United States.

"Editorial in the *Christian Century, 'Last Chance for White Alabama?'* Supports King's defiance of local court orders to cease demonstrations.[139]

"Advised by Billy Graham to 'put the brakes on a little bit' in Birmingham demonstrations. Graham was criticized for his advice by the Fellowship of Reconciliation.[140]

"Commended by the American Baptist Assembly.[141]

"Of King the late Manning Johnson, former negro communist, and later a U.S. Government witness, said:

" 'Rev. King is doing the negroes considerable harm. Rev. King has none of the qualifications, nor the wisdom to give leadership to the negroes of the South in this period. He has at the present time organized masses of negroes, and he has got them worked up to a frenzy to the extent that they are willing to follow him although he is misleading them.'[142]

"Two very favorable letters suggest that Martin Luther King's 'letter from a Birmingham Jail' should be placed on the same level as Holy Scripture.[143]

"Strom Thurmond read into the *Congressional Record* a statement giving much data on King on August 13, 1963.

" 'Two American Negro agitators were recently arrested in Birmingham, Alabama. Their names are Rev. Martin Luther King, Jr., and Rev. Ralph D. Abernathy. These two men are expert professional riot-makers. They have been in contact with advisers in direct links with the Soviet Secret Service and extremist African groups operating from Europe.'[144]

"Was denied the right to speak at the University of Maryland in 1962.[145]

"At the 176th General Assembly of the United Presbyterian Church in the U.S.A., spring of 1964, the Presbytery of West Tennessee made an overture to the effect that the church 'refrain from inviting Rev. Martin Luther King, Jr., and any and all others who share his persuasion to disregard and violate constitutional laws, to speak at its sessions.' No action was taken on the overture.[146]

"Gus Hall stated that the Communist Party leaders in the United States 'consult with and advise top Negro leaders in their Civil Rights campaigns . . . Members of the Communist Party are very active in all the Negro organizations engaged in the Civil Rights struggle.'[147]

"In a survey which was conducted by the New York *Times,* and in which 190 New York Negroes were interviewed, three out of four said that, of all their leaders King was doing the most for Negroes. Results of the survey were released on July 27, 1964.[148]

"J. Edgar Hoover called King 'the most notorious liar in the Country' and never retracted that statement.[149]

"After King spoke at the Southern Baptist Theological Seminary in May, 1961, three churches in Alabama voted to withold funds from the seminary.[150]

"Former president Harry Truman called Dr. King 'a troublemaker.'[151]

"Thomas J. Dodd, (D. Conn.) a strong supporter of King's civil rights activity in the past, spoke against him.

"Negro Bishop C. Fain Kyle issued a news release in which he charged King as 'directly or indirectly responsible for the chaos, anarchy, insurrection and rebellion brought about through demonstrations and rioting throughout the United States in recent years, months and weeks and days.' He suggested that King be 'shorn of his power and imprisoned for his criminal acts and deeds for defying the courts of the land.' "[152]

"ITEMS FROM VARIOUS NEWSPAPERS ON MARTIN LUTHER KING

"1. Called for Federal laws to ban discriminatory hiring practices by state and local courts and law-enforcement agencies, to establish uniform jury-selection procedures, and to make it a Federal crime to kill a civil rights worker.

"Also said that he would continue to speak out 'as an individual and as a minister' against the war in Vietnam. (New York Times, November 11, 1965.)

"2. Called the Vietnam war 'bad for our nation and the world,' and suggested that those opposed to it be permitted to substitute civil rights activity for military service. (Chicago Tribune, January 13, 1966.)

"3. Conferred with Archbishop John P. Cody, head of the Catholic Roman Catholic Archdiocese on racial problems in Chicago. (Chicago Tribune, February 4, 1966.)

"4. Police boosted their protection of King after a telephoned death threat, which came shortly before King spoke in a church and at-

---

Footnotes at end of article.

tacked the Chicago Board of Education for its decision to build a new high school in the Kenwood district. (Chicago Daily News, February 4, 1966.)

"5. Urged residents of the East Garfield Park district of Chicago to be 'dissatisfied' until improvements are made in housing, employment, and educational facilities. (Chicago Tribune, February 6, 1966.)

"6. Was scheduled to speak at the Illinois Wesleyan campus at Bloomington, Illinois. (Chicago Daily News, February 9, 1966.)

"7. Threatened to lead economic boycotts against local industries which refuse to hire negroes for 'bigger and better jobs.' (Chicago Tribune, February 12, 1966.)

"8. Editorial noted that King is shifting part of his emphasis from slums to job discrimination. Editorial also demonstrates that negroes are better off economically than King would have us believe. (Chicago Tribune, February 15, 1966.)

"9. Told labor leaders that his civil rights movement in Chicago will emulate labor's techniques and seek its financial support. (Chicago Tribune, February 17, 1966.)

"10. Received pledges of $20,000 to $25,000 as a starter after he asked labor unions for financial support. (New York Times, February 17, 1966.)

"11. Urged people to join his proposed 'union against slums.' (Chicago Tribune, February 18, 1966.)

"12. Said that he will meet Muslim leader Elijah Muhammad in Chicago. (Chicago Daily News, February 18, 1966.)

"13. Said that his campaign to get 'bigger and better' jobs for negroes would begin with bread, milk, soup, and soft drink companies. (Chicago Tribune, February 19, 1966.)

"14. Said that he backs dissident teachers and parents who seek the ouster of the principal of Jenner Elementary School in Chicago. (Chicago Tribune, February 22, 1966.)

"15. Met for the first time with Elijah Muhammad, leader of the Black Muslims. (Chicago Daily News, February 24, 1966.)

"16. Three civil rights organizations led by King 'assumed trusteeship,' without court authority, of a building in a slum on Chicago's west side. (Chicago Tribune, February 24, 1966.)

"17. Editorial criticized King and three civil rights organizations with which he is associated for 'assuming trusteeship' over a building. (Chicago Tribune, February 25, 1966.)

"18. The action of King and the West Side Federation in assuming what they called 'trusteeship' of an apartment building was blasted as illegal by judges, lawyers, and real estate officials. (Chicago Tribune, February 25, 1966; New York Times, February 26, 1966.)

"19. Erwin A. Salk, a Chicago mortgage banker, alleged that King's takeover of a building may be justified. (Chicago Daily News, February 26, 1966.)

"20. King was sued in Circuit Court by the owner of a building which was taken over by him and three organizations of King's followers in a self-proclaimed 'trusteeship.' (New York Times, March 5, 1966.)

"21. A top aide of King said he 'welcomed' a Circuit Court suit challenging King's takeover of an apartment. The aide said that the civil rights groups which took over the building 'welcomed' the suit, because it would enable the court 'to speak of the right of citizens and tenants to take emergency action such as we took.' (Chicago Daily News, March 5, 1966.)

"22. Sided with the Rev. William H. DuBay in urging priests to organize into a union 'in order to protect their human rights.' Rev. DuBay has been suspended by James Francis Cardinal McIntyre of Los Angeles for 'irreverence and disobedience.' (Chicago Tribune, March 6, 1966.)

"23. The Chicago Committee of One Hundred condemned King's method of assuming 'trusteeship' of a building. (Chicago Tribune, March 8, 1966.)

"24. A newspaper item indicated that tickets for King's 'Freedom Festival' are almost sold out. (Chicago Daily News, March 8, 1966.)

"25. An editorial criticized King's illegal procedures. (Chicago Tribune, March 8, 1966.)

"26. Will speak to Southern Methodist University students and faculty. He will also speak at the International Convention of Christian Churches, where he will participate in a three-man panel which will discuss the role of the church in relation to civil rights. (Dallas Morning News, March 13, 1966.)

"27. Made the following statement: 'When it is appropriate, we will encourage sit-ins, stand-ins, rent strikes, boycotts, picket lines, marches, civil disobedience and any form of protest and demonstrations that are nonviolently conceived and executed.' (Chicago Sun-Times, March 13, 1966.)

"28. Urged negroes to 'come forth out of your slum shock.' He described 'slum shock' as the condition of persons who do little or nothing to end slum conditions. (Chicago Tribune, March 13, 1966.)

"29. Chicago Alderman Charles Chew Jr. urged King not to attend a special conference of local religious leaders called by Mayor Richard J. Daley. (Chicago Daily News, March 16, 1966.)

"30. Turned down an invitation to meet Mayor Richard J. Daley on the ground that previous commitments would prevent him from attending the meeting. (Chicago Tribune, March 17, 1966.)

"31. Article states that relations between King and Mayor Daley are officially cordial, but that a state of undeclared war exists between many of their key supporters. (New York Times, March 24, 1966.)

"32. The East Garfield Park Community Organization, a key organization in King's anti-slum campaign, subjected two West Side landlords to a three-hour grilling and gave them 10 days to produce building permits for repair of ten of their buildings. (Chicago Daily News, March 24, 1966.)

"33. Stated that he was not leading any campaign against Mayor Daley of Chicago. (Chicago Tribune, March 26, 1966.)

"34. Told an audience in Paris, France that in Chicago 41% of the housing for Negroes is considered substandard. (Chicago Tribune, March 29, 1966.)

"35. King and singer Harry Belafonte were honored as heroes in Sweden. (Chicago Tribune, April 2, 1966; also article, Miami, Florida newspaper, undated.)

"36. Has been given a public service award by the Sidney Hillman Foundation of the Amalgamated Clothing Workers of America, (AFL–CIO). (Chicago Tribune, April 6, 1966.)

"37. King and his agents were enjoined from entering or collecting rents from a building which he had previously taken over in what he called a 'supralegal' move. They were also ordered to submit an accounting in 20 days of any rents collected. (New York Times, April 6, 1966; Chicago Tribune, April 6, 1966.)

"38. King stated that he would fight a court order ending his 'trusteeship' of a building in Chicago. (Chicago Daily News, April 6, 1966; Chicago Tribune, April 7, 1966.)

"39. Editorial praised the decision of a Circuit Court judge who enjoined King from confiscating a building on Chicago's west side. (Chicago Tribune, April 7, 1966.)

"40. On arriving in Miami, Florida, King stated that his staff researchers had found 'hostility and alienation' and that 'these could manifest themselves here as they have in all other urban ghettos through misguided violence and rioting.' (New York Times, April 12, 1966.)

"41. The court-appointed receiver for a building previously seized by King stated that King should educate tenants in cleanliness rather than seize slum buildings. The receiver reversed his previous decision to ask for demolition of the building after he found it in better condition than he expected. (Chicago Tribune, April 12, 1966.)

"42. Article By Arthur Krock blames 'the preachment of Dr. Martin Luther King that individuals have a right to select the laws they will obey on their judgment of which is or is not just and discriminatory' as one of several causes for a riot of negro juveniles which began at a Maryland amusement park and erupted onto the streets of Washington, D.C. (New York Times, April 14, 1966.)

"43. Ernest R. Rather, president of the Chicago Committee of One Hundred, charged that King is hurting negro property owners by distorting census figures of negroes living in substandard housing. Mr. Rather charged that King's figure of 41 to 46% is false, and that census statistics, as interpreted by department of urban renewal officials, show that less than 20% of non-whites now live in substandard housing in Chicago. (Chicago Tribune, April 18, 1966.)

"44. Was scheduled to address a pep rally in support of a boycott of Jenner Elementary School in Chicago. (Chicago Daily News, April 20, 1966.)

"45. Chauncey Eskridge is an attorney who is representing King in an appeal of a court order barring King from interfering in the operations of a building in Chicago which he (King) took over two months previously. Eskridge is himself owner of a building and he was one of the landlords subpenaed by the Illinois Commission on Low Income Housing. He claims that the violations in the building he owns were subsequently corrected. (Chicago Tribune, April 24, 1966.)

"46. Urged negroes to vote as a bloc in the Democratic primary in Alabama. (New York Times, April 30, 1966.)

"47. Disassociated himself from a 'Black Nationalist' stand taken by the new chairman of the Student Nonviolent Coordinating Committee. (New York Times, May 28, 1966.)

"48. King stated that he sees a 'long, hot summer of sustained, nonviolent action programs' for Chicago. Stated that there will be marches, sit-ins, and even tent-ins in the suburbs and at real estate firms to protest housing segregation. (Chicago Daily News, May 28, 1966.)

"49. Called for the Federal Government to spend $100,000,000,000 in the next 10 years to obtain equal rights for negroes. Also called for a halt to the bombing of North Vietnam and said that we should make clear a willingness to negotiate with the Vietcong on ending the war. Also called for the admission of Red China to the U.N. and diplomatic recognition of that country by the U.S. (Chicago Tribune, May 30, 1966.)

"50. Likened the civil rights movement in the United States to the recent uprising by Buddist monks in Vietnam. (Chicago Tribune, June 1, 1966.)

"51. Made a list of 50 demands on the city of Chicago, including fair employment practices, a guaranteed annual income for everyone, the scattering of negroes throughout the city, the setting up of 10 new towns, each with 30% negro population, and the increase of welfare payments by 10%. (Chicago Daily News, June 11, 1966.)

"52. To receive a $100,000 check for his Southern Christian Leadership Conference from the Martin Lurther King fund in Sweden. (Chicago Tribune, July 2, 1966.)

"(All items in this report are stated as they appeared in the newspaper sources as given.)"

VIOLENCE COMMISSION SHOULD STUDY EVENTS IN BERKELEY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. COHELAN) is recognized for 10 minutes.

Mr. COHELAN. Mr. Speaker, events in Berkeley, Calif., over the past 2 weeks have sickened the entire country.

There has been needless violence and over-reaction on all sides. There have been exaggerated and inflammatory statements. And there have been nearly 2 full weeks of confrontation and tension on the campus and streets of Berkeley.

At this moment it is not so important to fix the blame for the events which have transpired as it is to find a solution which will provide for the return of an environment suitable to rational dialogue and inquiry.

But in the longer run, public confidence can be maintained only if a full and impartial investigation and report of the events can be produced. Then it will be possible to learn from past mistakes how to avoid similar or even more violent occurrences in the future.

Last week I wrote to Dr. Milton Eisenhower, Chairman of the National Commission on Causes and Prevention of Violence, again asking that his respected Commission review the events of these last 2 weeks in Berkeley. I have in my letter attempted to inform Dr. Eisenhower of the incidents reported since I had first asked him for an investigation.

I believe this letter may be of interest to the readers of the RECORD, and I ask that it be included at the conclusion of my remarks.

The events in Berkeley can serve to teach us all a lesson if only we will inquire. I most urgently request the help of the Violence Commission in making the facts available.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 28, 1969.

Dr. MILTON EISENHOWER,
Chairman, National Commission on Causes and Prevention of Violence, Washington, D.C.

DEAR DR. EISENHOWER: I would like to take this opportunity to expand on my telegram of May 21 requesting your distinguished commission to initiate an investigation into the Berkeley disorders of this month.

My great concern after carefully reviewing the events of the past 13 days is that we are witnessing in our community a marked escalation of violence in student-police confrontations which may well establish an alarming precedent for future disorders both here and elsewhere around the country.

We in the Bay Area have long witnessed the growing animosity and hostility, leading in recent times to open violent confrontations.

In the last several years, we have seen the Bay Area become a crucible for student and demonstrator tactics and police response. The mood and the tactics of both sides in confrontations around the country frequently have their roots in earlier incidents here.

The level of violence in these confrontations continues to rise steadily and we were all appalled at the heights to which it rose in the Chicago convention disorders which your organization so carefully and objectively examined with significant impact on both sides.

Student disorders began with sit-ins, then gave way to the physical occupation of University buildings and finally to street clashes. Police response has ranged upward from the simple patrol of rallies to club-swinging mass arrests and now to the use of firearms as a means of crowd dispersal.

In my judgment, and now in the judgment of many of my fellow citizens, a most serious new level of violence has been reached with the present disorders in Berkeley.

If I may, I would like to outline some of the more significant incidents of the past 2 weeks. None of these has yet been subject to the scrutiny of a formal investigation so that we have a clear understanding of the facts. The news media reports, however, are generally in agreement over what has transpired in our community.

On May 15, apparently in response to a flurry of rock throwing and other incidents, law enforcement officers opened fire on a main boulevard in Berkeley with shotguns.

One young man, James Rector, positioned on the roof top of a theatre overlooking the street scene was fatally wounded by a shotgun blast. The County Pathologist, Dr. Alan McNie, attributed Rector's death after a post mortem examination "to shock and hemorrhage due to multiple gunshot wounds. . . ."

Three pellets were removed from his body and are being examined by ballistics experts for an accurate determination of their type. Preliminary and reliable reports from law enforcement and medical officers, however indicate the pellets were approximately ⅓" in diameter, about .30 calibre size, and "consistent with double aught buckshot."

Physicians at Herrick Memorial Hospital who treated several dozen wounded, including two newspaper reporters, have reported in the news media that at least four other persons were hit with pellets of the same general description.

Alameda County Sheriff Frank Madigan whose officers were armed with shotguns and are generally believed responsible for the shooting, said the men were issued only "birdshot," the size of BB's. He noted, however, that double aught buckshot shells are part of the ammunition normally carried by the officers.

Two photographs so far printed in local newspapers depict at least two of the shooting incidents.

One photograph shows an officer sighting along his shotgun barrel at the back of a man fleeing down a street nearly 2 car lengths away. The photographer, Emmit Wallace, 26, a student, told the San Francisco Chronicle that he snapped the photograph a split second before the officer fired and hit the man.

The Daily Californian, student newspaper on the Berkeley campus, has printed a photograph which reportedly shows an officer on Telegraph Avenue firing up onto the rooftop, hitting James Rector.

There has been widespread and repeated use of teargas and "pepper fog," frequently under questionable circumstances. There have been several reports from teachers at McKinley and Whittier Elementary Schools that teargas was used near their schools without apparent regard for the effect on young students in class at the time. On may 16 after the arrival of over 2,000 National Guardsmen in the area someone in a commanding position authorized a National Guard helicopter to make a gas-spraying run across the University's Sproul Plaza.

Authorities reported that the decision to use the helicopter was made under the clear and present threat of a large, menacing crowd which has been warned a few minutes earlier that gas would be dropped if it did not disperse.

A number of news media representatives on the scene, however, questioned strongly that there was any threat of any significance and also reported that the people in the area where completely ringed by National Guard troops and were unable to escape. Additionally, some even questioned that such an order to disperse was issued or at least that if so it was unable to be heard in many areas of the Plaza. The gas from the helicopter attacks spread widely over the area including private residences, local business, and even Cowell Memorial Hospital.

On May 22 nearly 500 persons were arrested during a demonstration and transported by bus to the Alameda County Rehabilitation Center at Santa Rita for detention. Among the group was Mr. Tim Finley, a reporter for the San Francisco Chronicle, who wrote a lengthy account of the treatment of the prisoners by jail deputies.

Mr. Finley's report, supported by statements from many individuals also arrested, indicated that prisoners were verbally and physically harassed by deputies, forced to lie down on an asphalt lot for several hours and only allowed to turn their heads once every half hour, and were in custody for nearly 14 hours without food.

Additionally, many persons reportedly were refused access to toilet facilities for several hours, and were needlessly and repeatedly awakened throughout the night by guards whose apparent intent was harassment for its own sake.

These are a few of the more vivid incidents which have taken place in Berkeley in the last 2 weeks. I am sure that a thorough investigation would probably uncover many many more.

As this letter is being written, Berkeley is facing the distinct possibility of another mass confrontation on Memorial Day, not less than 48 hours away.

There has been a statewide call by leaders of the "People's Park" movement for young people to come to Berkeley and join in a mass rally and march, possibly culminating in the physical removal of the park fence, which has become a symbol of the conflict. At the same time state officials are saying that they have the fullest intentions of meeting any threat to the community with whatever force they deem necessary.

I have the deepest concern for the violence potential in this confrontation and respecfully submit and strongly believe that an announcement of the Commission's intention to investigate the entire Berkeley disorders could be of significant assistance in cooling passions and preventing new violence.

At the same time, the terrible significance of what has transpired in Berkeley demands the closest scrutiny by a neutral organization with the eminence and acceptance with which I feel the Commission is held.

I would appreciate your earliest possible response to this request.

Sincerely yours,

JEFFERY COHELAN,
Member of Congress.

UNDER SECRETARY WALKER SAYS ADMINISTRATION PLANS TO DO NOTHING ABOUT HIGH INTEREST RATES

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, the Nixon administration has decided to take a "do-nothing" attitude about holding down interest rates.

This morning's Wall Street Journal quotes Dr. Charls Walker, the Under Secretary of the Treasury, as saying "the Treasury will not take a stand one way or the other on the matter" of high interest rates.

With the country faced with the highest interest rates in more than a hundred years, this is a shameful statement for a high Government official to utter.

Dr. Walker's attitude should dispel any doubt about who is running the Treasury Department. It is obviously the bankers—the big bankers.

Dr. Walker is quoted as saying:

> We believe in a market approach. The market makes better decisions than a bureacracy makes.

In other words, Dr. Walker is saying this administration is not going to do a thing that the banks do not want done. They will not even use the powerful force of moral suasion to hold down interest rates and protect the public.

It is the responsibility of high public officials—such as the Secretary of the Treasury and the Under Secretary—to do everything possible to hold down interest rates and to urge the banking community to stop gouging the public. But this administration now says it will not do that. It will not do its duty—its sworn duty—to protect the public interest.

Mr. Speaker, when these interest rates climb once again, this administration, the Secretary of the Treasury and his underlings, will share the blame right along with the big banks. They have agreed to lie down and play dead and let the banks do as they please about high interest rates.

Mr. Speaker, Dr. Walker's statement of surrender to the big banks was made in New York late last week after I had sent the Secretary of the Treasury a telegram asking that he issue a public statement demanding that the banks not raise the prime interest rate. Mr. Speaker, I place in the RECORD a copy of this telegram.

MAY 29, 1969.

DAVID M. KENNEDY,
Secretary of the Treasury, U.S. Treasury Department, Washington, D.C.

Reports persist that the large commercial banks are planning still another assault on the American people through an increase in the prime lending rate. As you know, an increase in the already usurious 7½ per cent prime rate will send a shockwave through the entire economy, raising interest rates on every item.

As Secretary of the Treasury you have the power to stop this latest effort to increase interest rates. I urge you to announce today that you and the Nixon administration are flatly opposed to any increase in the prime rate.

I urge that you demand that the commercial banks refrain from any conspiracy to jack up the rate. Such a statement, coming from the Secretary of the Treasury, would stop the increase.

Another increase in the prime rate will all but halt an already badly depressed housing market and will raise the price of goods to millions of American families. Another increase is totally unnecessary and it is noth-

ing more than an attempt by the banks to gouge the American public during a critical economic period.

The big commercial banks believe that this administration is more concerned about their welfare than the welfare of the American people. They are convinced that they can raise the prime rate without criticism from you or the administration. You now have the power to prove them wrong in this instance by coming down hard in a public statement opposed to a higher prime rate.

Mr. Secretary, I hope you will use the great powers of your high office to protect the American people. I hope sincerely that you will choose the public interest over the bank interest.

WRIGHT PATMAN,
Member of Congress, First District of Texas.

HIGH INTEREST RATES INCREASE THE COST OF LIVING

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PATMAN. Mr. Speaker, Leon Keyserling, former Chairman of the Council of Economic Advisers, has been a consistent battler against high interest rates.

Through the years, Mr. Keyserling, one of the Nation's most respected economists, has done much to clear away the fog surrounding monetary policy and to set the record straight about the effects of high interest rates on the economy.

Mr. Speaker, earlier this year, Mr. Keyserling addressed the Consumer Assembly of Greater New York, and his speech is one of the best analyses of the effect of high interest rates on inflation that has ever been produced. Mr. Keyserling plainly states that high interest rates are one of the main factors in causing inflation.

Mr. Keyserling says:

The rising interest rates, because people have to borrow, are just as much an element in the cost of living as the rising price of meat, or the rising price of bread, or the rising price of medical care, or the rising price of housing, of which the interest rate is a part.

Mr. Speaker, I place in the RECORD the text of Mr. Keyserling's address as it was published in the Co-Op Contact, a publication of the United Housing Foundation.

PRICES—INTEREST—TAXES—AND THE CONSUMER

(By Leon H. Keyserling)

My friends, I have heard the very excellent remarks of your public servant and my friend, the Attorney General. Speaking within the scope of his range of public service, he has talked about ways of protecting the consumer against the private crimes of infamous people. I'm going to talk today about the public crimes of famous people; about the public as distinguished from the private crimes in the so-called war against inflation. For although no one is more desirous than I of stopping what the consumer thinks inflation does to him, I have been trying and would like to continue to try, with your help and understanding, to stop what is done to the consumer in the name of fighting inflation.

Broadly speaking, while I appreciate the immense importance of controlling the private crimes of the infamous, I think that the public crimes of the famous, insofar as they bear upon prices and income distribution, affect the consumer as much, and maybe even more, than the private aspects of the matter.

First of all, let's try to get a few matters straight. I object not in the slightest to concentration upon the problem of inflation, which I will define very simply as rising prices, and specifically a rising cost of living. I object not at all to maximum concentration upon that problem, so long as it is not transmuted into a frenzy and a scare, under the smokescreen of which the consumer is plundered in the name of fighting inflation.

Therefore, and for this reason only, even at some risk of being misunderstood, I would like to bring a few simple matters to your attention.

First, George Washington could throw a dollar across the Potomac because a dollar could go further in those days—and ever since the price level, with some periodic interruptions, has been rising in the United States. The price level rose more during the fifty years before 1919, than during the fifty years since. And, during each ten-year period within the last fifty years, the average annual increase in prices has tended to be about the same, except during the years of the Great Depression, the reflation thereafter and the aftermath of World War II. So we are not now living in a "new age" of inflation.

Second, during the past thirty years, despite rising prices, the American people have enjoyed higher standards of living, made more rapid increases in social progress, and (with all their faults which I am ready to concede) achieved perhaps more improvements, not only in the distribution of income, but also in other social gains and civil rights, than any other people in human history at any time. It therefore does not make sense to say that a rising price level is our only problem; that we should become so concentrated upon dealing with that one problem that we forget about everything else; and that we should leave in the hands of those in public positions who are dealing with that one problem the control of the destiny of everything else that happens to us, while our attention is distracted by their crocodile tears about what inflation does to the average person.

To get down to brass tacks, the real concern of the consumer is not what price he pays, but what his income can buy. To take a simple illustration: When I was a youngster in South Carolina, a well-paid cook got six dollars a month. Now, that's not a slip of the tongue, not six dollars a week, six dollars a month. Today the same job pays about a hundred dollars a month, which is not munificent, but it's more than sixteen times as much.

Meanwhile, prices have come somewhere between doubling and tripling. So the cook can buy from about five to six times as much; sleep in a house instead of a hut; eat a varied diet rather than rice with a little cow peas over it; ride on a paved road instead of a rutted sand road; possibly even have a car; have some years of schooling though not enough, while in that time she had none; have medical care, when at that time there was none within reach, not even a practical nurse; and perhaps may be concerned with the problem of integration and the quality of the school, when at that time, in that place, there were no schools within reach of blacks or whites or anybody else.

This is merely an illustration of the fact that what raises the standard of living of particular people is the increase in the per capita output of the country, and how it is distributed among the people. If that increase were at a maximum rate, and if the distribution were proper, it would not matter what the price level were.

So why does it matter what the price level is, and why does it matter so much what the perpetrators of the public crimes do about inflation? The reason is this, and I can use as an analogy a game of bridge, or pinochle or poker. I can't play poker, because I can never learn to remember the relative values of the different combinations—it's too hard for me.

Therefore, let's get back to bridge, but it's all the same. Let's deal a hand of cards to four people, and they have certain combinations of cards, and each of those cards has a certain purchasing power in taking tricks. The Queen has a higher purchasing power than the Jack. Then, the tournament referee comes along and says, "I'm going to change the value of the cards. I'm going to reduce the purchasing power of each card. All the Aces will be worth Kings, all the Queens will be worth Jacks, all the Tens will be worth Nines, and so forth, and the Twos will be worth Ones, and this will apply to each of the four hands. In that event, there's no change in the game, and all four players are right where they were. None of the players is any better off, and none of the players is any worse off. If you changed it the other way, and raised all the Queens to Kings and all the Aces to Double Aces, and the Twos to Threes and so forth, nobody would be any better off or any worse off."

But suppose that, in the alternative, the referee said, "I'm going to change the Queens to Kings in some hands, and in other hands I'm going to change the Queens to Tens." That would redistribute the purchasing power, and that would make a difference.

This is the real problem in connection with prices. Either under falling prices, stable prices, or rising prices, there may result a better or worse distribution of purchasing power or income, and I don't need to tell this group what a better distribution is. We still have a very unsatisfactory income distribution in the United States. Too much is going to too few, and not enough to too many, in terms of the buying power of their incomes.

The next important thing to bear in mind is that rising prices, or inflation, do not automatically worsen income distribution. I can give you an example of when falling prices distributed the income worse. The best example would be the Great Depression. Prices fell tremendously, but who was worst hurt? The people who could least protect themselves, the people who got unemployed and had no income, the people who had no savings, the people who had no resources. Many of the people at the top were hurt considerably, and they were scared, but if they were well enough protected, they rode it out relatively well.

So this was an example of falling prices being damaging, not because the change in the price in itself means anything, but because the falling prices in that instance redistributed income badly.

In contrast, from 1939, which was the end of the Great Depression to, let us say 1953, partly during World War II, and partly after World War II, prices, in the main, rose. They rose very substantially, but we had one of the most profound redistributions of incomes in a favorable direction than we've ever had in the United States.

Negroes had opportunity for industrial employment which they had never had before. Women were able to work who had never been able to work before. Collective bargaining brought a better distribution of national income, and so did farm price supports, despite all the invectives leveled against them, and so did social security, and so did many other things. In this instance, a rising price level was combined with an equitable distributive program, which we called equity of sacrifice during the war, and didn't have any particular name for after the war. The rising prices were accompanied by a great improvement in the incomes, both absolute and relative, of those

lower down, and a relatively much more rapid increase in their living standards than in the living standards of those higher up.

Let us now ask: What's the trouble with the current war against inflation? The trouble with the current war against inflation is that, in the name of fighting inflation, and while shedding crocodile tears about inflation and how inflation inflicts its cruelest curse upon those who are unable to protect themselves, while uttering all these shibboleths and all these tear-jerkers, the programs which are adopted to fight inflation are inflating the fat, starving the lean, repealing many of the social gains and social thinking that we earlier achieved, and distributing income in the wrong direction on a larger scale than was ever done before by our national public policies.

Lest I seem politically ungenerous, let me hasten to add that I was talking about the Eisenhower Administration, the Kennedy Administration, the Johnson Administration, and perhaps the Nixon Administration. The great money manager in the United States (and I'm going to talk about money policy as prime examples); the great architect of income redistribution in the wrong direction, and I've said this many times, is Mr. William McChesney Martin who served as Chairman of the Federal Reserve Board under Truman, Eisenhower, Kennedy, and Johnson, and who foreseeably will serve under Nixon. I am not one of those who believes that it is always to the great credit of a man that he can serve all masters equally well. Sometimes it is not.

There is not much basic difference in the fundamental economic and social thinking of the recent Secretary of the Treasury, Mr. Henry Fowler, and the prospective Secretary, Mr. David Kennedy, or between the new Chairman of the Council of Economic Advisers, Mr. Paul McCracken, and the recent Chairmen—Walter Heller being the best known. I'm not saying this to pillory individuals. I'm saying this, and it's an optimistic note in one sense, that we have as good a chance to change some of these policies under the new Administration as under the old, and that what happens will depend upon the people, upon their understanding of the issues, and upon how vocal they are.

We organize people into groups such as this and others, in order that they may know what it's all about, but unfortunately they have been so brainwashed that they do not yet know.

Now, let's get down to the specific policies. I refer to the money policy. Since 1952, we have, with very slight interruptions, experienced a staggering increase in interest rates—tight money and rising interest rates. All of us have been told, and most of us believe, that this is the prime weapon in the war against inflation.

How can this be so? Inflation is a rise in the cost of living, in what you pay for what you get. More than half the people in the United States spend more money per year than they earn after taxes. In other words, they are net borrowers, and they borrow very heavily, relative to their incomes. They borrow to rent or to own a home, because even rent payments cover capital costs. They borrow to buy a car to go to work. They borrow to send the wife to the hospital when there's a long illness. They borrow to send a child to college. They borrow for the refrigerator or the television set. They're borrowing all of the time.

Furthermore, they're borrowing because they have to borrow, and that shows the difference between the private crimes and the public crimes. It is all very well, and I favored the bill, to reveal to consumers what interest they're paying, and also to reveal to them, as friend Colston Warne is helping so much to do, the relative values of the goods they buy. But in the final analysis, how far does it go to reveal how much the loan is costing them, if they have to pay the high interest anyway because they haven't got the money and because that's what the rate is? It helps with some, but it's not the main problem.

The rising interest rates, because people have to borrow, are just as much an element in the cost of living as the rising price of meat, or the rising price of bread, or the rising price of medical care, or the rising price of housing, of which the interest rate is a part. Yet, we are told that these rising interest rates help to fight inflation.

During the past seventeen years or so, because excessive interest costs have been increasing year by year, 150 billion dollars has been transferred out of the pockets of those who borrow money, and into the pockets of those who lend the American people back their own savings. About 9 billion a year has been transferred out of the pockets of the young couples getting married and renting houses. In this year alone, 17 to 25 billion dollars will be transferred out of the pockets of these young people and into the pockets of those who do not need income supplementation in the form of the higher and higher interest rates they receive.

This is being done to consumers through national public policies. I haven't got time to prove it here today, but this is being done by the Federal Reserve System and its local affiliates, in one way or another. It is being done by a national system, created by law, membership appointed by the President, living under theoretical Congressional supervision. In addition, there are specific interest rates, such as the interest rate on housing, and the interest rate on small business loans, and the interest rate on farm loans, and the interest rate on college loans, which are set directly by the Congress.

So we now have in operation a set of national policies—I call them national crimes—to feed the fat and starve the lean by this interest rate monstrosity.

To give you one more example of the significance of 17 to 25 billion dollars a year: If that amount of money, under different policies were used in other ways, what could it do? We're talking about welfare payments, guaranteed incomes, a minimum-income floor for people, and I'm for these measures. I won't go into the details, except to say that it is not only my estimate, but also the estimate of most economists who have looked into the subject, that 11 to 13 billion dollars a year would be enough to bring all of the 30 million people in the United States who are below the poverty-income ceiling as it is rather stingily defined, up above the ceiling. In other words, about half of the money that is being transferred by rising interest rates alone to the wrong people, if transferred to the right people, would be the quickest and shortest and most direct way of getting rid of the problem of poverty, and I think that has something to do with the problems of consumers.

Why are we told that this interest rate crime is desirable? The argument runs this way. By lifting the interest rate, people borrow less. Some people can't borrow, and if they can't borrow there's less economic activity. If there's less economic activity, there'll be less pressure on the economy, and if there's less pressure on the economy there won't be as much inflation. Therefore, while this remedy seems to be painful, it's really helpful. Thus runs the prevalent fairy tale. But let's get at the truth of the matter.

Suppose that, during World War II, you didn't have enough meat to go around. Some people were saying that there was a very simple remedy for that. Let's just let the price go up, and let the price ration the meat. The affluent people will be able to continue to buy it, and the poorer people with the large families won't buy it, and they'll go back to eating rice and beans, and then the demand for meat will be less and the price will go down. What would our response be to that kind of argument?

Yet, this is just what the perpetrators of the rising interest rates are saying. We will raise the price of money, and we will try to reduce the pressures on the economy by sharing out the people who are most vulnerable, people about whom we are shedding the crocodile tears won't get in at all. Now the proof that this is what they are saying is to be found in their current argument that national policies should deliberately promote some more unemployment "to stop inflation." Not too much more unemployment, they say, just enough of it.

Well, I haven't got time here to go into all of the reasons why this whole argument is entirely erroneous. There is, in the main, no positive connection between the amount of unemployment and the amount of price stability. I can prove that there frequently is more inflation when there's more unemployment, and so forth, but let's put this aside. Let's suppose there were something to their argument. Even then, they would be saying to the man who has a job at $4,000 a year, 'you become unemployed, and you take $1,500 a year on relief or on unemployment insurance, or $2,000 a year to make it simple. You take a 50% reduction in income, and then the inflation won't be quite so hard on the people who have nice jobs and good pay, and Leon Keyserling won't have to pay 1% more on the next Cadillac car that he buys, or on the next fur coat that he buys for his wife, because very recently she hadn't been working to support him.'

Now what kind of a people are we, when we take the word of those who say to those suffering from unemployment, which even today is terribly high among some vulnerable groups as we all know; who say to the other people whom they want to make unemployed; who say to the old people for whom they don't want to spend more money for pensions or Social Security benefits, although three-quarters of them are poor; who say to the people in the slums that they don't want to provide universal, prepaid medical care, although 40% of all consumers as we know can't afford it at costs within their means—what kind of people are we, when we listen to those who say that it would be inflationary to use enough of our vast national income to meet these pressing needs, but who at the same time insist that we should use 17 to 25 billion dollars a year of our national income to pay higher and higher interest tribute to the affluent and rich?

Some of our other natural economic policies, in recent years, have moved in the same direction of feeding the fat and starving the lean. In 1964, we undertook very massive tax reductions, and a family with an income of $300,000 a year got a 35% increase in disposable income, and a family with an income of $3,000 a year got a 2% increase. When I talked to the New Frontiers among us, they said,—"well, you have to do that. These families at the lower level pay so little taxes that when you reduce taxes of course you can't reduce theirs as much." I said, "Well, you don't start with the idea that the object is to reduce taxes. You start with the idea of whom you want to help, and if you can't help people by reducing taxes, then let's go some way that does help them, the right people. And, furthermore, you're not right anyway, because, instead of these tax reductions beginning at the top, if you had increased the exemptions from $600 to $1,800, which you should have done, this would have helped the middle income families and the lower middle income families and even the poor families, and we would have been inflating the lean instead of inflating the fat, and this would have been a good kind of inflation."

Also, when they decided upon those tax reductions for the wrong people, they starved the capacity of the government to spend

money for essential public purposes, which the consumer needs most of all. Aid to education, aid to public schools, aid to teachers, aid to the municipalities which are in trouble, aid to take the poison out of the airs and waters, aid to health services, and so forth and so on. So, they deliberately decided to stimulate the economy by handing the money out to the people who were stimulated already, and depriving themselves enduringly for at least ten years ahead, and we're seeing the results now, of the tax revenues needed to do the things the consumer needs. In short, they have squandered the money, both in the tax reductions and in the interest payments for the people who didn't need it.

This doesn't even make the economy perform better, it makes the economy perform worse, and it'll become still more unstable because of this maldistribution of income, but I haven't got time to go into that.

Now finally, they imposed a tax surcharge of 10%. You would have thought, that since the tax reductions fed the fat and starved the lean, that when they started turning the other way, they'd start to remedy some of it. But they slapped on a 10% surcharge. Everybody knows that a 10% tax increase applied "equally" to families at all levels violates the whole American principle of taxation according to ability to pay, and hurts those most who need help most.

We have consumers coming to meetings, and I hope you won't take this critically, talking about all of the little minutiae of this and that and the other things, and talking about a hundred different programs to help the consumer, and hardly bothering to really concern themselves very deeply with these two tremendous things. If you take the tax policy and the money policy together, they are distributing today easily 20 to 25 billion dollars a year, away from the kinds of consumers we're interested in, and toward the kind of people who don't need it and aren't entitled to it and shouldn't get it.

Consumers include everybody: consumers are citizens, consumers belong to all kinds of organizations, consumers are employed people, and unemployed people, and people who need health care, and people who need everything. I think the large consumer movements have got to interest themselves more in these large questions.

The war against poverty has been thus far a disappointment, in many respects, because of this open-minded desire to cover the waterfront, has led to a thousand different kinds of poverty programs, spawned by all the sociologists, the do-gooders, and street corner philosophers, done at the local level all over the country. This represents failure to distinguish between genuine democratic participation and pseudo-participation in lieu of basic public responsibility. And what's happening to the schools in the City of New York is another example. I want to see our public schools come up to uniform high standards for the training of Americans. I don't want to see the schools of Mississippi and in Brownsville and in Yorkville and in Westchester County becoming more and more dissimilar, because the parents—and the children already in those schools happen to be so different. Should we compound this, and make them more and more different in the name of a spurious participation?

In the war against poverty, we should concentrate on a few big things, jobs, income guarantees, Social Security improvements, health and welfare, and housing, to develop strategic attack pointed at the real basic elements in the problem.

Why didn't we? Because so many are interested in a diletante approach. I merely use this an an example of the fact that I think the consumer, who is everybody, has got to get back to the basic things that I have been talking about, and I'm not enamored of them because I'm an economist or a specialist. These are the big things. These are the things that mean a thousand dollars to the consumer for every hundred dollars or fifty dollars that is met by these other subsidiary aspects of protecting the consumer which I'm for also.

And, on taxes, when we look at all taxes, the sales taxes, the property taxes, the local taxes, the state taxes, instead of just the Federal income tax, the $3,000 a year family pays a larger portion of its income in taxes than the five, and the five larger than the ten, and the ten larger than the twenty, etc., even not counting the evasions. We put through a big Federal program of revising taxes, without even talking about that.

Now I suggest that we start focusing upon the two tremendous instruments of national policy affecting the consumer—the tax policy and the money policy, and we can add other things also. If we get those straightened out, or even begin to get them straightened out, or dissipate some of the clouds, or call attention to some of the public crimes, we will be making an immense contribution to the well-being of the consumer and to the well-being of the whole economy, and to the return of those progressive policies of taxation and money policy which we did follow for many years, but have certainly abandoned with magnanimous equanimity, more recently, whether we have had Republican or Democratic Administrations.

A STUDENT LOOKS AT BERKELEY

(Mr. FRASER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FRASER. Mr. Speaker, the other day the mother of a student at the University of California in Berkeley showed me a letter which her daughter had just written to her. This student is a junior and, her mother tells me, has not been politically involved. She wrote in part:

I take it you aren't hearing much about the state of affairs at Berkeley. Without going into the whole thing—the place is as if occupied by a foreign army. Two thousand national guardsmen are camping in the People's Park. Thirty-eight people were shot. One died—a spectator—a freshman. The owner of a movie theatre was blinded. A classics graduate student was shot in the face coming out of the library. Those are all I know about but some other people are in pretty bad shape. There is a 10 o'clock curfew. Helicopters circle overhead and drop tear gas—huge amounts quite indiscriminately. Public gatherings are illegal. ———'s professor was called to see why twenty members of ———'s poetry class were meeting at her house off campus. ———'s professor was arrested for vagrancy one night while driving back from a movie.

Five hundred people were arrested yesterday. Some were just eating lunch in a nearby restaurant. The bail is $750–$1,000. Guys are getting beaten in jail. A friend of ——'s was walking down Shattuck two hours after a demonstration. Police grabbed him, twisted his arm, and broke it. Yesterday two guys were beaten up in front of our house. Twenty medics were arrested. A friend of a friend who runs a nursery school said parents are calling up asking what to do because their kids wake up screaming at night. ——— was there when the cops gassed the junior high school kids as they came out of school. The local news radio station was ordered off the streets. ———, one of the good regents, said that when parents will allow things like this to happen to their own children there is a fascist state.

Local merchants, citizens, and professors are trying to do something but all they get are answers from Reagan like:

"The confrontation was a deliberate provocation by a well-organized group who had stockpiled (bricks) ammunition to use against the police."

Those aren't the exact words but you can see the attitude. This seems to be just one step farther than Chicago. It is amazing how many things can be put in jail for—taking pictures, provoking a riot (that can cover anything), insulting a police officer, being in the wrong place at the wrong time, being a medic. Once arrested no one ever heard of the writ of habeas corpus. It's sort of funny how people get punished before the trial (beaten or shot).

Mr. Speaker, the letter speaks for itself. The situation recounted in this letter is a national tragedy.

FOOD VERSUS BOMBERS

(Mr. FRASER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FRASER. Mr. Speaker, two articles on the front page of the May 31 Washington Post help dramatize the dilemma facing our Nation.

One article spoke of the cost of "closing the hunger gap" at a cost of $2.93 billion. This conclusion was reached in an unpublished Budget Bureau study. The study, according to the Post, concludes:

Every dollar spent on feeding the hungry poor, particularly small children, is returned many-fold in enhanced learning and earning capacity and productiveness later in life, and in avoidance of the social and medical costs of brain damage, blindness and other handicaps that can result from malnutrition.

The other article discussed the AMSA, an Air Force proposal for a new advanced manned supersonic aircraft. Its total cost is estimated at $8 to $12 billion. The article went on to say:

While Air Force leaders have publicly said a new bomber is "urgent" other Pentagon strategists see AMSA's main value as a way to force Russia to spend billions on air defense.

This type of economic warfare, though little discussed, is very real as the United States and Russia try to keep each other off balance.

Mr. Speaker, the Nixon budget does not contain sufficient funds to close the hunger gap. The budget does have room, however, for $100 million, added to $35 million in carryover funds, to shorten the design phase and start full-scale engineering development of AMSA. Previous allocations have averaged about $20 million yearly.

Mr. Speaker, I do not know whether or not the Soviet Union has malnourished children as we do in the United States. I do know that it is madness to build a new strategic bomber fleet to force new spending on the Soviet Union for air defenses while we continue to let hunger go unchecked at home.

MILITARY GRANT AID PROGRAM

(Mr. FRASER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FRASER. Mr. Speaker, Friday I was quoted in the Washington Post as favoring "killing" the military grant aid program. Although I am deeply critical

of this program, I have not yet reached the point of wanting to end it altogether. Because the reporter with whom I spoke is very competent, the erroneous impression probably originated with me.

Mr. Speaker, I do want to point out why I have been deeply concerned with the military grant aid program. Perhaps its most distressing aspect is the indiscriminate manner in which the aid is handed out. In administering this program we give it to authoritarian rulers of all kinds—in the name of freedom. A senior editor of Look magazine concluded recently after a trip to Greece that "we are spending around $40 million a year of American taxpayer's money for aid to a government that rules by torture."

Greece is the most current example of the amoral character of the military grant aid program. If one looks at all the countries of Western Europe today, it is striking that our grant aid goes to nations ruled by dictators. They include Spain, Portugal, and Greece.

In Latin America we continue to give aid for many years to Argentina. We cited Peru as a prime example of how our military aid would successfully alter the attitude of the Peruvian military toward democratic institutions; look at the result. Brazil, under virtual dictatorship, has received this aid for many years.

For some Americans it is enough, of course, that these governments are anti-Communist. I hope that someday we will have learned our lesson. Rulers who care little about democracy will quickly make their deals with the Soviet Union when it suits their ends. What is more, totalitarian regimes rarely encourage the political, social, and economic progress which most nations badly need.

I do not believe that the granting or withholding of military aid alone will have any great impact on events in these countries. I do believe that the United States should disengage itself from the relationship created by giving military aid to dictators who hold democratic values in contempt, imprison their opposition, censor their newspapers, and engage in various kinds of other suppression, including torture. Perhaps if our vital security interests are involved we can justify such a course, but that is seldom the case.

The United States must be true to its own sense of decency and morality. U.S. influence in the past has been augmented by demonstrating such decency and morality in the conduct of our affairs. We need to return to that standard.

Military grant aid has never been carefully scrutinized by the Congress. Many problems have beset that program: excessive staffing, personnel who embraced the views of the oligarchy in the country in which they serve, and high-level personnel who see in the military aid program a means of achieving "stability" without reference to the wishes of the people themselves.

Perhaps if military aid programs are not reformed and limited to nations whose governments respect the rights of their people, the entire military aid program should be killed. I would prefer to see reforms and policy changes, because such a reformed program of military aid would best serve the interests of the United States.

Mr. Speaker, to illustrate some of the examples I mentioned earlier of the bankruptcy of our military aid policy, I ask that the following three newspaper articles be reprinted in the RECORD. The one on Argentina appeared in today's Washington Post. The other two, on Greece and Brazil, were printed in the New York Times of Sunday, June 1.

VIOLENCE SHATTERS ILLUSION OF STABILITY IN ARGENTINA

(By John M. Goshko)

BUENOS AIRES, June 1.—As Argentina counts the casualties from last week's outburst of violence and civil strife, it is becoming clear that one of the chief victims is the image of President Juan Carlos Ongania and his government.

Propelled into the presidency by a 1966 military coup, Ongania has been touted by his admirers as precisely the sort of stern, paternalistic leader needed to bring order and stability to this country of 23 million people.

His aim, he announced on taking power was nothing less than a "revolution" that would completely remake the bases of Argentine social, political and economic life. The job, he hinted, might take 10 years or more, and in the interim the military-backed regime would decide what was good for Argentina.

Now, the image of Ongania as the man who restored order and set his countrymen back on the road to hard work and morality has been badly tarnished by a spontaneous explosion of resentment that touched almost every corner of Argentina.

Its culmination came last week in the industrial city of Cordoba, where for three days students and workers fought the army in an orgy of violence that left at least 11 people dead and more than 30 injured.

[In Cordoba today, two labor leaders charged with "public incitement to rebellion" were sentenced by a military court to seven and eight years in prison, the Associated Press reported. Light sniper fire broke out last night and continued early today in Cordoba, where troops still control the streets.]

Although order is being restored in Cordoba and elsewhere, it is clear that the forces that Ongania has so decisively dominated since 1966 are again in foment. What the interaction of these forces and the military strongman will be is, at this point, less clear.

Underlying this struggle is Argentina's continued agony in attempting to extricate itself from the shambles left by the demagogic dictatorship of Juan Domingo Peron during the 1940s and '50s.

When Peron finally was overthrown in 1955, he left behind an economy in ruins, a runaway rate of inflation and his power base, a labor movement that had been rewarded with special political and economic privileges.

UNIONS BLOCKED MOVES

During the ensuing years, this virtual veto exercised by the unions over Argentine life frustrated the efforts of successive civilian governments to restore stability. Finally, on June 28, 1966, the armed forces deposed elected President Arturo Illia and replaced him with Ongania, former commander in chief of the army.

Under the dour and conservative Ongania, Argentina has suffered from a case of political schizophrenia. His government, although clearly to the right of center, has from the outset been composed of two contesting factions.

One, the so-called liberal group, has tended to emphasize economic matters, seeking an eventual return to democracy—but only after the economy has been rebuilt along private enterprise, big-business-oriented lines. Its chief spokesman within the regime is the economy minister, Adelbart Krieger Vaasena, and it is the faction that has given the regime its chief economic direction until now.

The other faction, usually referred to as the nationalists or the corporativists, has vague ideas about turning Argentina into a highly centralized, statist-oriented country rather than falling back on the traditional model of democracy. Its focus is chiefly political, and its principal representative within the Cabinet is considered to be Guillermo Antonio Borda, the Interior Minister and Ongania's principal political adviser.

DELAYS CHOICE

Until now, the two groups have coexisted uneasily within the government, waiting for Ongania to make a choice between them.

The President, however, has steadfastly deferred any decisions about future political directions concentrating instead on economic matters and on more immediate problems of neutralizing potential political rivals.

Outwardly, the system seemed to be working. In the political sphere, the government successfully managed to break the backs of such one-time power sources as the traditional political parties and the labor movement, most of whose leaders were forced into an openly collaborationist stance.

On the economic side, Krieger's policies also seemed to be achieving dramatic results in reducing inflation, attracting new investment and generally getting the economy revved up again. This was done, however, by resorting to wage freezes and other measures that put the brunt of austerity on the working classes.

As a result, the Ongania government entered 1969 with a reputation for being among the most stable in Latin America. The majority of Argentines were described as being "relieved" at no longer having to worry about the uncertainties of politics. Abroad, the regime's economic policies were being held up by Washington and such institutions as the International Monetary Fund as a model for the rest of the hemisphere to follow.

But there were deep pockets of discontent, and eventually they came together to create an explosion much like the one that hit the de Gaulle government in France a year ago.

DISSIDENTS UNITE

As in the French situation, the two forces that merged to bring rioting and bloodshed to Argentina were the university students and the workers.

The students seemed to have become fed up with the government's attempts to assert strict control over the national university system, with the low-budget priority it assigned educational matters and with its attempts to impose a stifling Jansenist Catholic morality on Argentine intellectual and artistic life.

The workers, in contrast to most of their titular leaders, were never convinced of the need to give up their long-held privileges or to carry the major brunt of austerity. And, as their resentment deepened, they began unobstrusively but increasingly to listen not to the collaborationist leadership of the General Labor Confederation but to a breakaway rebel faction headed by Raimundo Ongaro, who preached defiance.

There were other factors as well. One was the increasing role of Catholic priests in encouraging workers to protest and attacking the social injustices of the regime. Another was the restiveness created by an abortive terrorist campaign by extreme leftist Peronists earlier this year.

The igniting spark came on May 15 when students at the University in Corrientes staged a demonstration to protest a rise in cafeteria prices. In scuffling with the police,

a student was shot to death, and the result was a wave of nationwide campus protests.

SOLIDARITY SOUGHT

The students touched a sensitive nerve in the Argentine populace. Workers and even middle-class shopkeepsrs began joining the student demonstrations in a gesture of solidarity.

As the incidents mounted and the regime replied with force and intransigence, Ongaro was able to lay the groundwork for a highly successful 24-hour general strike. In contrast to past strike efforts that the government had suppressed, worker sentiment this time was so aroused that even the rival collaborationist labor faction was forced to join the strike plan.

It was Thursday night—the eve of the strike—that the explosion came in Cordoba, a city that is both the site of an important university and the center of the Argentine automobile manufacturing industry. Police opened fire on a column of workers marching toward the center of town from the Ika-Renault auto factory, and within hours the city was in a virtual state of civil war.

THE LESSON?

Now the question puzzling observers here is what lesson—if any—has been learned from the bloodbath. Some think the regime has been shaken and will move toward a more conciliatory stance—one that might take some of the burden of austerity off the working classes and dispel past vagueness about the political future.

Others, however, think the regime will consider any effort at conciliation as an admission of weakness and a possible threat to its announced economic goals. Accordingly, they look for an even greater tightening of the dictatorship.

Many point to the example of Brazil, where similar signs of public restiveness toward a military-backed strongman regime resulted last December in a campaign of repression.

In Brazil, the effect of the clampdown was to take real power away from the President, Arthur da Costa e Silva, and place it squarely in the hands of the armed forces officer corps. Today, one can hear many predictions in Buenos Aires that much the same thing will happen here.

[From the New York Times, June 1, 1969]

GREEK MILITARY COURT CONVICTS 37 MORE OF ANTIREGIME ACTIVITY

ATHENS, May 31.—Thirty-seven Greeks were convicted today of having plotted against the nation's army-backed regime. At the same time, security forces continued a wave of arrests of suspects including a former defense chief, Vice Admiral Spyridon Avgeris.

The number of Greeks convicted of sedition by military tribunals in the last three weeks rose today to 125 when the Salonika court-martial condemned 37 out of 39 persons charged as members of the leftist antiregime organization known as Patriotic Front.

Four men were given life terms, five got between 15 and 25 years in jail, 14 from six to 13 years, nine from 13 months to 5 years, five had suspended sentences and two were acquitted.

The five-officer court in the northern Greek city returned the verdicts after an all-night sitting at the close of the 16-day trial. Total sentences passed by military courts since May 12 for political offenses added up to 802 years, plus 10 life terms.

FORMER OFFICERS ARRESTED

As the wave of mass trials apparently drew to an end—none were slated for the coming week—security forces put under arrest a number of retired officers and civilians.

An official statement said the retired officers had been arrested because they were engaged in activities "directed against public order, security and tranquillity."

Admiral Avgeris, who was ousted and retired after King Constantine's abortive attempt to unseat the military rulers on Dec. 13, 1967, was arrested in his Athens home.

Another officer given a dishonorable discharge for backing the King's bid, Col. Nikolaos Zervoyiannis, was also arrested, bringing the total number of retired officers rounded up this week and scheduled for deportation from Athens to at least 12.

Qualified sources said it was unlikely that all the arrested officers were together in a subversive plot. Their seizure and banishment to remote Greek islands was seen both as a punitive and a deterrent action.

In the last two years, some 2,000 officers were ousted from the forces as a precautionary move by the regime.

The action against the former officers was followed by large-scale arrests of civilians in Athens in the last four days. Reliable reports said about 50 persons were rounded up each night and taken to security police headquarters.

Most of them are being released after several hours of questioning, but a large number are still held at the headquarters building.

This action followed the stepping up of antiregime activity, including several explosions of home-made bombs in downtown Athens and Salonika in the last two weeks.

EX-U.S. AIDE JOINS PROTEST TO BRAZIL—GORDON AND OTHER EXPERTS ASSAIL FACULTY PURGES

WASHINGTON, May 31—A former high State Department official once closely identified with United States support for the military-dominated Government in Brazil has joined American professors in a written protest against recent faculty purges in Brazilian universities. The document was cabled to Arthur da Costa e Silva, President of Brazil today.

The former United States official is Lincoln Gordon, now president of Johns Hopkins University, who served from 1961 to 1966 as Ambassador to Brazil and until early 1967 as Assistant Secretary of State for Inter-American Affairs. He is one of 10 American specialists in the field of Latin-American studies who signed the cablegram. It was one of two such protests circulated at more than 20 colleges and universities in the United States and sent to Brazil this weekend with a total of more than 300 signatures.

"My objection to the removal of the professors is part of my general feeling of grave concern over the arbitrary use of power in Brazil since December," Dr. Gordon said in a telephone interview.

PRESIDENT RULES BY DECREE

Last Dec. 13, President Costa e Silva, a retired army marshal, dismissed the Brazilian Congress and assumed the right to rule by decree.

Since December, there have been reports from Brazil of widespread arrests and press censorship designed to silence opposition to the Government. A month ago, by Presidential decree, 68 professors were involuntarily retired without explanation from the country's two largest universities.

Dr. Gordon's first public protest over the course of events in Brazil is viewed here as a personal echo of a slow change in United States policy toward Brazil that has been going on since the former Harvard economist left the embassy in Rio de Janeiro.

United States officials say the policy of drawing back from close identification with Brazilian Governments since 1964 began under John W. Tuthill, Dr. Gordon's successor, and has accelerated since last December.

PERSONIFIED U.S. SUPPORT

For many Brazilian politicians and political observers, Dr. Gordon personified thorough U.S. support for the austere reformist government of Humberto Castello Branco, another army marshal, who assumed the presidency after a military-civil revolt toppled President João Goulart in 1964.

Dr. Castallo Branco died in 1967. Dr. Gordon's present open opposition to President Castello Branco's successor, Mr. Costa e Silva, would be likely to arouse wide interest in Brazil, but the organizers of the cabled protest said they did not believe the informally censored press would be encouraged to report their cablegrams.

According to reports from Brazil, there has been no press comment on the forced retirement of such internationally known professors as Florestan Fernandes, a sociologist; Isaias Raw, a biochemist; and José Leite Lopes, a physicist.

The same reports said that the 68 professors as a group had no common political denominator, but that all had been interested in the reform of university structures transplanted to Brazil from Europe.

These reforms, according to the reports, are opposed by other professors with personal access to members of the Costa e Silva Government.

The telegram signed by Dr. Gordon was drafted by a committee of the Latin American Studies Association, an academic association with more than 700 members, and signed by Prof. John J. Johnson, chairman of the committee on Latin-American studies at Stanford University, and Prof. Charles Wagley of Columbia University, among others.

It urged President Costa e Silva "immediately to remove the restrictions that your Government has imposed upon scholars and permit them to return to their institutions and to work in a free and open intellectual environment."

The second cablegram was drafted by a committee including Prof. Alex Inkeles of Harvard University and Myron J. Weiner of the Massachusetts Institute of Technology. It was signed by 283 scholars at 23 American colleges and universities, including Max Milikan, the director of the Center for International Studies at M.I.T.

HONEY PROMOTION AND RESEARCH BILL

(Mr. LANGEN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. LANGEN. Mr. Speaker, I am today introducing a self-help bill to aid honey producers of this Nation. Not only would this bill enable honey producers to finance a nationally coordinated research and promotion program to improve their competitive position and expand their markets for honey, but it would also protect their markets through sensible import controls.

The promotion and research features of this measure reflect a most commendable desire by our honey producers to promote their own industry at their own expense. They are not asking us for money. All they want is the enabling legislation that merely makes it possible for the honey industry to move ahead with its promotional plans at no expense to the Federal Government.

Our honey producers, wanting to maintain their markets and experience a desirable industry growth pattern, wish to assess themselves in an orderly manner in order to raise the funds necessary to carry out promotion and research. This bill would allow the produc-

ers to assess themselves at a rate that would not exceed 15 cents per 60-pound can of honey. The funds collected would be used for research, development, advertising, and such other expenses as would be deemed necessary by the Secretary of Agriculture.

Any promotion plan devised under the terms of this bill would have to be submitted to the producers in a referendum. It would go into effect only if two-thirds of the voting producers approved the plan. Individual producers who did not wish to participate at all could demand and receive a refund of his assessment. Thus, any plan would be voluntary on the part of the producers.

One feature of my bill differs with other honey promotion bills that have been introduced. Under this legislation, realistic import controls would be imposed. It would not prohibit foreign honey suppliers from shipping honey into this country, but it would hold imports generally at past percentage levels. The import section of this bill is needed. It would make little sense to encourage the American honey producers to spend their own money to expand and promote markets for their product, only to permit foreign suppliers to usurp that market at no expense to the foreign producer.

Mr. Speaker, when any industry such as our honey growers want to assess themselves to promote their own products, we should give them the opportunity. And in giving them the opportunity, we should also give them some assurance that their efforts will not be dissipated in the glut of imports. I believe this bill, which I have titled the American Honey Promotion and Research Act, will accomplish both purposes.

MILITARY JUSTICE ACT OF 1968

(Mr. PIRNIE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PIRNIE. Mr. Speaker, the crisis in the military lawyer ranks continues critical. No one who is aware of the low retention rates of the four services can question the validity of that statement. However, despite the fact that this is a recognized problem which can reach desperate proportions, action by the Department of Defense on my bill, H.R. 4296, has been delayed. Congress created the urgency by passing the "Military Justice Act of 1968"—a landmark law which becomes effective on August 1 of this year. We are, therefore, particularly obligated to see that it is implemented.

Several times in remarks to the House, I have referred to the "Military Justice Act of 1968" and the effect it will have on the military justice system. I have noted that an additional 800 military lawyers will be required to carry out the mandate of that act. In order to more fully comprehend the scope of the crisis, I suggest the reading of an article which appeared in the May 1969 edition of the American Bar Association Journal, entitled "The Military Justice Act of 1968." The authors, both career JAG officers, have detailed the changes which will occur as a result of the act. The last sentence in the article characterizes the legislation as follows:

It is a tribute to the American ideal of justice and a true demonstration of democracy in action that in the midst of war, we should see fit to extend rather than diminish the due process rights accorded to members of the armed services.

Yet this will be a hollow gesture or a terrific embarrassment if we do not provide the machinery to insure that experienced legal officers are available to carry out the requirements of the Military Justice Act of 1968. My bill seeks to do just that by providing professional pay and a continuation bonus for career military lawyers. I invite every Member to study the appended article:

THE MILITARY JUSTICE ACT OF 1968

(By James A. Mounts, Jr., and Myron G. Sugarman)

The Military Justice Act of 1968 (Public Law 90–632), which President Johnson signed into law on October 24, 1968, makes the most sweeping changes in the Uniform Code of Military Justice[1] since that code was enacted in 1951. The Uniform Code of 1951 gave the services a uniform system of due process. Now the 1968 legislation places the military system of criminal justice well ahead of most civilian systems insofar as the accused's due process rights and benefits are concerned, and it conforms much of the military procedure to the civilian. The 1968 act brings added benefits to the military accused, while at the same time increasing military efficiency by eliminating much of the need for line officers to spend time handling military justice matters.

The 1968 act represents a combination of various positions advocated by the services and by members of Congress.[2] It makes extensive changes in the Uniform Code in five areas; use and authority of military judges; court-martial procedures; accused's right to legally qualified counsel; release of accused from confinement pending appellate review (military "bail"); and appellate review.

The new law makes extensive changes in the procedures of general courts martial. The first involves the use of judges in the administration of military justice. Currently a law officer, who must be a trained lawyer, presides over a general court martial. The act changes the name of the law officer to military judge, makes the military judges of general courts martial part of an independent judiciary and authorizes an option of trial by military judge alone without court members. The act also brings about procedural changes, long advocated by The Judge Advocate General and the United States Court of Military Appeals, designed to allow the military judge to assume a true judicial role.

The act's provisions for trial by military judge alone will benefit the accused by giving him another option within the system and will increase efficiency in many cases. The accused will have the right, knowing the identity of the military judge, in all general courts martial, except capital cases, to request trial by a military judge alone, just as in the federal court a defendant may waive his right to trial by jury. The accused's request will be granted if the military judge approves. The prosecution has no right, as it has in civilian practice under Rule 23a of the Federal Rules of Criminal Procedure, to veto the accused's request, but it is limited to making arguments to the military judge as to the appropriateness of trial by a one-officer court.[3] The one-officer court option will increase efficiency by releasing many line officers from court-martial duty for their primary duties. Proceedings will move faster in those cases tried by a judge alone.

The military accused will reap a benefit from this option. If he feels a trained lawyer will hear and decide his case more effectively than a panel of his fellow service members, he may request trial by a judge alone, as did one third of the defendants in contested federal criminal cases in fiscal year 1967. If an accused fears that line officers who would make up the panel of court members might be biased against him, he will now have the option to be tried by a judge who is completely independent of the command.

A system of independent judicial officers has been prescribed for the Army since 1958 by administrative regulation; now the independent judiciary is a statutory requirement. Judges of general courts martial will be responsible only to The Judge Advocate General, or his designee, for direction and fitness reports. They will not be responsible, for example, to the Army area or post commander in whose area the trials at which they preside are conducted. The purpose of this provision is to prevent commanders from exercising any indirect influence over the procedures and results of cases.[4]

The changes in the Uniform Code increase the powers and prerogatives of military judges. These provisions will save the time of court members and improve the internal efficiency of the military justice system. They will place the military judge on a par with judges of federal district courts in many respects. When these changes are coupled with changes in court-martial procedure brought about by the act, the result will be a court martial closely resembling a federal criminal trial. The military judge will have the authority to hold pretrial and other sessions without the necessity of assembling the court martial and members. He will be able to rule on interlocutory motions raising defenses and objections; for example, on the admissibility of evidence or a confession. If the regulations of the individual services permit, he will also be able to conduct the arraignment and take the accused's plea.

Under current practice the court martial must be formally assembled and the members present before these procedures can take place—court members are excused from the courtroom while many of the above procedures take place. Now they will be able to utilize this time performing their primary functions. There will be no need to assemble the members of the court merely to have jurisdiction to proceed with the business of the court. The military judge will be able to hold posttrial sessions to adjudicate remands from appellate agencies; the act eliminates the inconvenience of gathering together court members for these sessions.

The military judge will be able to rule finally on challenges to court members on all questions of law and all interlocutory questions, including motions for findings of not guilty and for continuances, other than the factual issue of the accused's mental responsibility. No longer will these decisions be subject to being overruled by the court members. As in the federal courts, the military judge, when sitting alone, will determine all questions of law and fact arising during the proceedings and will adjudge an appropriate sentence if the accused is convicted. He will make a general finding unless requested to find the facts specially. The act also gives the military judge the authority to forbid the taking of depositions if this should become necessary.

The act streamlines court-martial procedure in many other respects. Regulations of the service secretaries may prescribe that oaths need not be administered to counsel and military judges in every case, as is currently required. Rather they may provide, for example, that the oath may be taken once for all cases in which the counsel or judge is to serve. Additionally, except in capital cases in which a guilty plea may not

Footnotes at end of article.

be accepted, the judge may enter a finding of guilty after a plea of guilty without the formality of a vote by the court members.

In the view of many, the most significant changes in military justice brought about by the new law involve the special court martial. The special court martial is the military equivalent of a civilian court that can try only misdemeanor cases. A special court martial has jurisdiction to impose a maximum of six months' confinement and a bad-conduct discharge.[5] Current law provides the accused in a special court martial with counsel who must be a commissioned officer but who need not be a qualified lawyer.[6] The services have made efforts to staff these courts with legally qualified officers, although not required by law to do so. The Air Force, for example followed a policy of providing all defendants at special courts martial with legally qualified defense counsel. All the services have permitted the accused to be represented by his own attorney at courts martial.

The act amends Article 27 of the Uniform Code to require that an accused be afforded the opportunity to be defended by legally qualified military counsel unless such counsel cannot be obtained because of "physical conditions or military exigencies". This right to qualified counsel may be waived, and it may not apply, for example, where hostilities or geographic location makes it impossible to provide a lawyer. However, under these circumstances the officer who convened the court martial must indicate in a written statement attached to the trial record the reasons that necessitated trial at that time and place.

The act also amends Article 19 of the Uniform Code to provide that a special court martial may award a bad-conduct discharge only if the accused has been afforded legally qualified counsel. In this situation the law does not permit a waiver of the right to counsel by the accused, and physical conditions or military exigencies do not excuse the requirement for representation by qualified counsel. The consequences of a bad-conduct discharge are so significant that Congress felt that servicemen should be represented by counsel in those cases.[7]

These changes in the Uniform Code place the military significantly ahead of most civilian jurisdictions. Few states and federal circuits require that counsel be appointed where the possible punishment is six months' confinement or less. The new legislation provides that counsel will be appointed at the accused's request without regard to his financial status. He also may employ his own lawyer, who need not be a member of the Armed Forces, if he desires. The act does not require that the prosecutor (trial counsel) in a special court martial be a qualified lawyer. However, the Uniform Code has required that the defense counsel be legally qualified if the prosecutor is so qualified.[8]

The act permits a convening authority to detail a military judge to a special court martial at his discretion. The intent is to permit a trained judge to preside at those special courts martial that involve complicated issues of fact and law.[9] The act requires that a military judge be assigned to a special court martial authorized to award a bad-conduct discharge, unless he cannot be detailed because of physical conditions or military exigencies. If this requirement is not met, the reasons must be stated in writing and appended to the record of trial for review on appeal. A verbatim record of trial also is required if a special court martial adjudges a bad-conduct discharge. If a military judge has been detailed to the court martial, the accused will have the same right to trial by military judge alone as does the accused before a general court martial.

The act also makes changes affecting the summary court martial, the military equivalent of the civilian magistrate or commissioner court. No counsel is required or appointed; one commissioned officer, generally not a lawyer, acts as judge, jury, prosecutor and defense attorney. Under present law an accused may refuse trial by summary court only if he has not previously been offered nonjudicial punishment under Article 15 of the Uniform Code. The act amends Article 20 to permit an accused to refuse to be tried by summary court martial in any case, even if he has refused punishment under Article 15.

This change will permit an accused to be represented by a lawyer free of charge, if he wishes fully to litigate his case, every time he is faced with the possibility of punishment, no matter how minor.[10] He may refuse Article 15 punishment and trial by summary court. The convening authority may then bring charges at special or general court martial, where the accused will be defended by a qualified lawyer. It should be noted, however, that depending on the maximum sentence possible for the alleged offense, an accused who chooses to move his case to a higher-level court may thereby increase his risk of punishment.

The act provides a method for release from confinement pending appeal. A convening authority or other authority having jurisdiction over the individual will have discretion to release an accused from confinement pending appeal of his court-martial conviction. Unlike most civilian release on bail, no bond or monetary deposit will be required. This provision is a significant step forward. In some cases an accused has served his entire term of confinement by the time his case is reversed on appeal. Those released pending appeal will be required to serve their sentences when the sentences are approved on review and ordered executed. They will obtain no credit against their sentences for the time during which they were released.[11]

The act makes significant changes in appellate procedures. The Uniform Code currently provides for at least one review of every court-martial decision. More serious cases are given additional rights of review. Under the new act the right to review is broadened in cases involving minor offenses, and the stature and independence of military appellate judges are increased.

The act changes the name of the boards of review to courts of military review and the titles of the board members to appellate military judges. Civilians may be appointed to these courts by The Judge Advocate General of an armed service. Provisions on command influence similar to those applying to military trial judges apply to members of the courts of military review.

The act amends Articles 69 and 73 of the Uniform Code to broaden the jurisdiction of The Judge Advocates General to grant rehearings and to review cases not otherwise reviewed by the courts of military review. Whereas this review is now limited to general court-martial cases not involving punitive discharges or sentences of more than a year's confinement, the new act extends it to all court-martial cases. Furthermore, the time for filing petitions for rehearing is enlarged from one to two years. The Judge Advocates General are given the power to review and either to vacate or modify in whole or in part the findings or sentence, or both, in any court martial which has been reviewed finally but has not been reviewed by a court of military review. Application for review under the new provisions must be based on grounds of newly discovered evidence, fraud on the court, lack of jurisdiction over the accused or the offense, or error prejudicial to the substantial rights of the accused.

It is important to note that, with the exception of the amendments to Articles 69 and 73, the provisions of the act do not take effect until August 1, 1969. During the intervening period a joint service committee will rewrite the *Manual for Courts-Martial* to implement the act. The new manual will have the title *Manual for Courts-Martial, 1969, Revised Edition*. In addition, regulations implementing the law in each armed service will be written. Until these regulations and the manual are completed, it will not be possible to spell out with detailed certainty just how the changes in the Uniform Code will operate in practice. It is clear, however, that the act is a major step forward for military justice. It places the military, once again, ahead of most civilian jurisdictions in terms of the rights afforded to an accused. It is a tribute to the American ideal of justice and a true demonstration of democracy in action that in the midst of war we should see fit to extend rather than diminish the due process rights accorded to members of the armed services.

FOOTNOTES

[1] 10 U.S.C. § § 801-940.

[2] The act passed the House and Senate as H.R. 15,971, 90th Congress, 2d Session. It was originally introduced in the House of Representatives by Representative Charles E. Bennett of Florida. The Senate amendments were sponsored by Senator Sam Ervin, Jr., of North Carolina. The substance of the act is drawn in large part from earlier bills introduced by Mr. Bennett (H.R. 226, 90th Congress, 1st Session, and H.R. 12,705, 90th Congress, 2d Session) and Senator Ervin (S. 2009, 90th Congress, 1st Session) and from a series of bills introduced in the 88th Congress. Other parts of the act derive in large measure from a series of Department of Defense proposals.

ROTC—NASHUA EDITOR, CLAIRE BARRY, WRITES A RINGING DEFENSE

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, Claire Barry, managing editor of the 1590 Broadcaster, a weekly "shopper" published in Nashua, N.H., has written a first-rate, ringing defense of the ROTC. The editorial makes the interesting point, that if ROTC is done away with, the military would be forced to increase its reliance on officer candidate schools, which, in turn, would deplete the enlisted ranks by several thousand and tend to force larger draft calls. The very ones who cry against ROTC are, in fact, increasing their own vulnerability to draft, that is, assuming any of them are in fit mental or physical shape to be worthy of serving their country in the first place.

I commend Claire Barry for an excellent editorial which I offer at this point for the RECORD:

ROTC VITAL TO NATION

It seems incredible that some members of the New Hampshire State Legislature would seriously consider abolishing ROTC as a part of the curriculum at the University of New Hampshire. The ROTC training program has, for many years, supplied junior officers to all

branches of the service at very little cost to the taxpayers.

The ROTC program is not compulsory. It is available to those students who wish this in-college training. The backbone of the Army is its junior officers, and when there is a shortage of these men, they must be obtained elsewhere. One source is Officers Candidate School, which, in turn, depletes the regular ranks of the enlisted men.

This necessitates a larger call-up to fill out the required number of personnel. Eliminating ROTC as a college-connected subject will only increase the number of men called up in the draft.

There is a great deal of talk about ROTC college credits, and the seemingly handing-out of these credits just for appearing in uniform at a class.

A student enrolled in the ROTC program at the University of New Hampshire receives only two credits for this class. This class consists of training, field trips, drill, and logistics, and military science, for which they are tested and receive grades. The course is not a "gut" course, as the easier courses are called by those not taking them. It also teaches the young men the value of self-discipline and working for the betterment of their country.

Is there a conspiracy afoot? First, gun laws are being passed daily which will prohibit the law-abiding peaceful citizen from obtaining and using guns of any kind. Now, an effort to undermine the basic officer supply potential by downgrading and eliminating ROTC as a college subject. For many years, members of ROTC have served their country honorably and well.

These students are willing to add this to their curriculum, and not at the expense of other subjects, which means they must work just a little harder than the non-ROTC enrollee.

There is certainly nothing wrong in the student who does not wish to participate in this course. That is his prerogative. But the choice should be left up to the individual, and made available to all students who wish to participate in this program.

ROTC trained officers have been a major supply of officers to fight with the troops in Vietnam. They have also been a part of the military scene in other major conflicts. They have been readily available and willing to serve their country.

It is a well-known fact that there are more junior officers needed than any other rank, and every year there are thousands who are graduated from college, and immediately enter into service, already trained and of immediate worth in the service of their country.

Were it not for these ROTC officers, many of the "protestors" would be drafted into service, and unable to carry out their campaign against eliminating ROTC from the college curriculum.

It is almost understandable why the cowards of the country are protesting ROTC, but for members of the venerable State Legislature to also voice this opinion is completely incomprehensible.

REPORT OF CONGRESSIONAL CONFERENCE ON THE MILITARY BUDGET AND NATIONAL PRIORITIES

(Mr. KASTENMEIER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KASTENMEIER. Mr. Speaker, I am pleased to include in the RECORD the full report of the Congressional Conference on the Military Budget and National Priorities. The proposals contained in this document came out of the Conference on the Military Budget and National Priorities held here in Washington last March 28 and 29. In 2 days of broad ranging deliberations the congressional participants, academicians, former Government officials, weapons experts, and economists discussed such major issues as deployment of the ABM and MIRV, settlement of the Vietnamese war and the burgeoning military budget. The substance of their comments is reflected in the report issued by the congressional sponsors. The report emphasizes that the fundamental problem is not military, but civilian.

The report concludes:

It is not the uniformed military which has created the present situation, but the civilian leadership and the institutions they have created to centralize and expand the performance of national security functions.

The list of distinguished participants included the following:

Richard Barnet—Co-Director, Institute for Policy Studies, Washington, D. C.; former Consultant to the Department of Defense and State Department.

Richard Falk—Professor of International Law, Center for Advanced Study in the Behavioral Sciences, Stanford, Calif.; former consultant to Senate Foreign Relations Committee.

General William Wallace Ford, U.S. Army, ret.

John Kenneth Galbraith—Professor of Economics, Harvard University; former Ambassador to India.

Richard Goodwin—Author and writer; former special assistant to Presidents Kennedy and Johnson.

George Kahin—Professor of Government and Director, Southeast Asia Program, Cornell University, Ithaca, N. Y.

George Kistiakowsky—Professor of Chemistry, Harvard University; former science adviser to President Eisenhower.

Arthur Larson—Director, World Rule of Law Center at Duke University, Durham, N. C., former special assistant to President Eisenhower and Director of USIA.

Hans Morgenthau—Professor of History, Government and International Relations, University of Chicago.

Fred Warner Neal—Professor of International Relations, Claremont Graduate School, Claremont, Calif.; former consultant in Russian affairs to the State Department.

Gerard Piel—Publisher and editor of *Scientific American*.

Marcus Raskin—Co-Director, Institute for Policy Studies, Washington, D. C.; former staff member of the National Security Council, White House.

George Rathjens—Professor of Political Science, Massachusetts Institute of Technology; former special assistant to the President for science and technology; former Director, Weapons Systems Evaluation Division, Institute for Defense Analysis.

Leonard Rodberg—Professor of Physics, University of Maryland, College Park, Md.; former Bureau Chief, U.S. Arms Control and Disarmament Agency.

Charles L. Schultze—Professor of Economics, University of Maryland; senior fellow, Brookings Institution; former Director of the Bureau of the Budget.

Jeremy Stone—Professor of Economics, visiting scholar, Stanford University; former member of The Hudson Institute.

Herbert York—Professor of Physics, University of California; former Director of Research and Engineering, Department of Defense; former Vice-chairman, President's Science Advisory Committee.

Adam Walinsky—Former legislative assistant to Senator Robert F. Kennedy.

I am also pleased to list the names of the 45 congressional signers of this report:

SENATORS

J. William Fulbright (Ark).
Harold E. Hughes (Iowa).
George S. McGovern (S. Dak.).*
Walter F. Mondale (Minn).
Gaylord Nelson (Wis).*
William B. Saxbe (Ohio).
Joseph D. Tydings (Md).
Harrison A. Williams, Jr. (N.J.).
Stephen M. Young (Ohio).

CONGRESSMEN

George Brown, Jr. (Calif).*
Phillip Burton (Calif).*
Hugh L. Carey (N.Y.).
Shirley Chisholm (N.Y).
William L. Clay (Mo.).
John Conyers, Jr. (Mich).*
Charles C. Diggs, Jr. (Mich).
Bob Eckhardt (Tex.).
Don Edwards (Calif).*
Donald M. Fraser (Minn).*
Jacob H. Gilbert (N.Y.).
William J. Green (Pa.).
William D. Hathaway (Maine).
Augustus Hawkins (Calif).
Ken Hechler (W. Va.).
Henry Helstoski (N.J.).
Robert W. Kastenmeier (Wis).*
Edward I. Koch (N.Y.).
Robert L. Leggett (Calif.)
Allard K. Lowenstein (N.Y.).
Abner J. Mikva (Ill.).
Patsy T. Mink (Hawaii).
William S. Moorhead (Pa.).
Robert Nix (Pa.).
Richard L. Ottinger (N.Y.).
Bertram L. Podell (N.Y.).
Thomas M. Rees (Calif).
Henry S. Reuss (Wis.).
Benjamin S. Rosenthal (N.Y.).*
Edward R. Roybal (Calif).
William F. Ryan (N.Y.).*
James H. Scheuer (N.Y.).
Louis Stokes (Ohio).
Robert O. Tiernan (R.I.).
Lester L. Wolff (N.Y.).
Frank J. Thompson, Jr. (N.J.).

Mr. Speaker, I commend the contents of this report to all of my colleagues. The basic issues discussed at the conference go to the core of congressional control over our military budget and the wisest allocation of our Nation's resources.

The report follows:

REPORT OF CONGRESSIONAL CONFERENCE ON THE MILITARY BUDGET AND NATIONAL PRIORITIES

I. INTRODUCTION AND RECOMMENDATIONS

On March 28, 1969, two separate but ironically related events occurred which insistently pointed to the most urgent public issue of our time: the role of the military-industrial establishment in the United States.

The first event of that day was the death of Dwight David Eisenhower, himself a hero of the American military heritage. As a departing President he had startled the nation by his Farewell Address, in which he had warned of the rise of a military establishment supported by an immense arms industry which "has the potential for a disastrous rise of misplaced power." In the eight years following President Eisenhower's speech, at least $500 billion dollars has been sunk in military expenditures, including a disastrous war in Vietnam, a misguided intervention in the Dominican Republic, and more than forty-two treaty commitments to as many countries to intervene "in case of aggression." In the same period of time, acute problems

* Indicates original sponsors of conference.

of poverty and distress have remained unresolved within the United States itself.

These misplaced priorities were the basis for the other event of March 28, the Congressional Conference on the Military Budget and National Priorities, which brought together in Washington, D.C., former government leaders, foreign policy scholars, experts on weapons technology, economists, Congressmen and Senators to investigate the actual enormity of that "misplaced power" of which President Eisenhower had warned. The non-Congressional participants in the Conference were the following:

Richard Barnet—Co-Director, Institute for Policy Studies, Washington, D.C.; former Consultant to the Department of Defense and State Department.

Richard Falk—Professor of International Law, Center for Advanced Study in the Behavioral Sciences, Stanford, Calif.; former consultant to Senate Foreign Relations Committee.

General William Wallace Ford, U.S. Army, ret.

John Kenneth Galbraith—Professor of Economics, Harvard University; former Ambassador to India.

Richard Goodwin—Author and writer; fromer special assistant to Presidents Kennedy and Johnson.

George Kahin—Professor of Government and Director, Southeast Asia Program, Cornell University, Ithaca, N.Y.

George Kistiakowsky—Professor of Chemistry, Harvard University; former science adviser to President Eisenhower.

Arthur Larson—Director, World Rule of Law Center at Duke University, Durham, N.C.; former special assistant to President Eisenhower and Director of USIA.

Hans Morgenthau—Professor of History, Government and International Relations, Claremont Graduate School, Claremont, Calif.; former consultant in Russian affairs to the State Department.

Gerard Piel—Publisher and editor of *Scientific American*.

Marcus Raskin—Co-Director, Institute for Policy Studies, Washington, D.C.; former staff member of the National Security Council, White House.

George Rathjens—Professor of Political Science, Massachusetts Institute of Technology; former special assistant to the President for science and technology; former Director, Weapon Systems Evaluation Division, Institute for Defense Analysis.

Leonard Rodberg—Professor of Physics, University of Maryland, College Park, Md.; former Bureau Chief, U.S. Arms Control and Disarmanent Agency.

Charles L. Schultz—Professor of Economics, University of Maryland; senior fellow, Brookings Institution; former Director of the Bureau of the Budget.

Jeremy Stone—Professor of Economics, visiting scholar, Stanford University; former member of The Hudson Institute.

Herbert York—Professor of Physics, University of California; former Director of Research and Engineering, Department of Defense; former Vice-chairman, President's Science Advisory Committee.

Adam Walinsky—Former legislative assistant to Senator Robert F. Kennedy.

The Conference was initiated by members of the House and Senate in the conviction that Congress must reassert its control of military policy and that it can raise the level of congressional analysis of these critical issues by making more effective use of available technical and scholarly expertise. Our purpose was to articulate the basic issues of the militarization of American society and to make concrete proposals for restoring democratic control over the military budget.

Our country is in danger of becoming a national security state. Since the end of World War II, we have spent more than one trillion dollars, or two-thirds of the total expenditures of our Federal Government, on armaments and armed forces. Today 80 percent of our Federal expenditures go for defense and defense-related costs—an amount greater than all Federal, state, and local outlays for social security, health, education, housing, and agriculture. And yet the military budget continues to increase each year, spurred by a seemingly self-propelled mechanism which operates with little or no attention to merit or national need.

In spite of these vast expenditures, and in spite of the creation of a security establishment which today dominates much of our national life, Americans feel less secure than ever before. While external threats have receded in importance, many of our countrymen believe their nation has lost its way, and they feel a growing threat from within our cities. Many now ask whether the major threat to the security and well being of this country arises from the possibility of attacks from without, or the possibility of decay and disintegration from within.

The deepening concern

It is often said that our nation is becoming a welfare state. We are much closer, in terms of the money we spend, to becoming a warfare state. Enormous military budgets are approved with the most superficial criticism and evaluation by either the Congress or the public. They have defaulted, alleging that the military knows best and that the military budget is a purely technical matter. In reality, however, that budget involves the most fundamental political choices, providing the ability to intervene around the world and setting the direction of the economy and national priorities within our own country.

As the military budget continues to rise, with strong pressure to make it rise still more rapidly in the next few years, Americans are manifesting a growing concern with the size of the defense budget and its pervasive social effects. Members of Congress and the public are alarmed at the growing militarization of our society and the extent to which we are supporting a national security establishment, while neglecting the desperate needs of many of our people for housing, health care, education, and the other elements of basic human existence. They question why new programs for missiles and anti-missiles are proposed while funds for education and job training are cut. They show growing impatience with the Vietnam war, which continues even after being thoroughly discredited.

The military establishment is losing its former image of infallibility. Clearly the disastrous war in Vietnam is responsible for this changed attitude. There is a new feeling that Congress must play a larger role in the determination of foreign and military policy, if the voice of the people is to be heard effectively and if future military disasters are to be avoided.

The ABM issue has brought before the American public the central issue of an unnecessarily-escalating technology and the relation between this technology and the arms race. It has raised questions about congressional control over matters of national security, about the uses and abuses of secrecy, about the possibility that decision-making may be passing from human beings to machines in this technological age. But this new questioning attitude is not yet sufficiently widespread to have led to any decrease in the military budget or transfer of funds to more pressing domestic programs.

The national security establishment was created in the late 1940s and early 1950s in response to what we perceived as an immediate threat to our nation's survival. Today we are learning that, much as we may differ in economic and philosophic terms with Communist countries, they are as interested in coexistence, and as concerned with economic development, as we. No other country has extended its military influence around the world in the way we have, and yet we continue to feel insecure—but now this insecurity reflects deep concern for the internal fabric of our own country. While we have been at our most powerful, in a strictly military sense, during the past few years, our prestige around the world and our influence with foreign governments have diminished markedly, as our position of leadership and our reputation for wisdom have suffered under the impact of a misguided intervention in Vietnam.

The world has been radically transformed since our national security policies were set in motion in the late forties. We believe that in an age of nuclear weapons, ABM, MIRV, chemical and biological weapons no government can any longer guarantee the safety of its citizens. We see a growing recognition that nuclear weapons can be used only to deter their use by others, and cannot be translated into effective political influence or even military power in a local conflict. We are learning that the power of our country to influence the course of world affairs is more limited than we had believed and is dependent on more than our military strength. And we see intense conflicts breaking out within what we once viewed as a monolithic Communist bloc of nations.

It has come as a painful fact to recognize that today security from attack depends on preventing conflict, not on having the ability to win it. No one can win a nuclear war, and the existence of nuclear weapons must lead us to look beyond weapons and alliances to the more fundamental demands of our national security. However, it is a sad fact that we are today no closer to establishing the conditions for enduring peace than we were twenty-five years ago, when the nuclear age began. The policies we have been pursuing have instead led to growing nuclear arsenals on both sides, the forfeiture of our influence with countries around the world, the rise of military dictatorships in many of the nations we have been supporting, and our first military failure since the War of 1812. In the eyes of many of our own people, especially the young, this country has forfeited the right to leadership of the forces of liberty and justice. While this tragic disaffection can be attributed to many sources, surely our over-reliance on military power is one of the principal elements in the discontent we see around us.

Much of this discontent must focus on budgetary questions, for it is the way we spend our public resources that reflects our national priorities and determines our nation's future. We used to believe that our country was wealthy enough to afford both guns and butter, both extensive military expenditures and investments in our domestic needs. We have now learned, through the bitter experience of Vietnam, that this is not possible. The American people will not accept substantially higher taxation, and so our national needs must be met from a Federal budget which represents a relatively constant portion of our national income. This implies, of course, that if we are to increase substantially our expenditures on domestic needs, we must correspondingly reduce our expenditures on the military. While it is proper to say that our boys overseas must have anything they need, we are now recognizing that our children at home should have the things they need too.

The Founding Fathers recognized that among our national goals were "to form a perfect union, establish justice, insure domestic tranquility" and only then, fourth on the list, "to provide for the common defense." What they understood, and what we are remembering again today, is that our national security is composed of more than the inviolability of our territory. It requires that we become a free and united society, enlarging the liberty and welfare of our peo-

ple and extending justice to all who make this country their home. Should we be diverted from these pursuits, we will have lost our national security and our reason for existence as a nation, even though our military strength be the greatest on earth.

Whither America?

Senator J. William Fulbright has pointed out that for twenty-five years we have been thinking of our nation as a world power, losing sight of the fact that it must also be a national society. We must reassert the prime importance of achieving a viable society within our land, before we can expect a moral influence upon the rest of the world. One psychoanalyst has described our national malady as necrophilia. We put billions of dollars into killing while we talk as if we love life, in effect, to death. The result is a growing alienation of our young people from such a society and rising despair among all segments of our society.

The youth of America, both black and white, is starting to react against the militarization of our economy and our nation. We will either bring the military-industrial complex under control or, once this new generation starts voting and taking an active leadership in the politics of this country, we will have a new President and a new Congress who will.

The young people see that the institutions we have created are destroying the livability of the world. They question why they are being asked to make senseless sacrifices for meaningless policies. They look at the way we are killing each other in war and on our highways, expending vast sums of money in military enterprises that create problems instead of solving them. They see the way we are destroying the environment in which we live, polluting the air and the fresh water, killing the animals and the birds, destroying the forest and the beauty of the world, all in the name of progress and profit.

The young people know this and they are not prepared to tolerate it. Either our generation will respond to them, or there will be major changes in this country when the new generation comes to power.—Senator GAYLORD NELSON

Our country has become not only a great power but a great empire. Are we prepared to pay the price of that position? The Swiss historian Burkhardt said, "A great nation has only one purpose, and that is to get more power. But what it gives up in the process is freedom." What is actually at issue, then, is the transformation of the United States into a different sort of civilization—into a national security state. The country and the Congress must ask themselves whether they can ever regain control of the agencies which form that state without reducing them substantially in size and restructuring them so that they serve national purposes more clearly. Can we ride this tiger, attempting to control it here, and setting budgetary limits there, or must we instead undertake the long and difficult task of dismantling the national security establishment? And can we simply replace one bureaucracy with another—the national security establishment with, perhaps, the domestic welfare bureaucracy? Or must we, instead, be examining how to make democracy work again, how to give people in their communities the ability to make the necessary decisions on the way their money is spent and the way they live their lives?

Congressional leadership

The Report which follows is a distillation of the discussions of the Conference and includes direct quotations from the comments of the participants. Although the recommendations of the conference generally express our views, as sponsors we do not necessarily adopt as our own each and every statement and conclusion stated in this Report.

The sponsors regard the proposals made in this Conference as important contributions to their own thinking about the formulation of American foreign policy. They believe the report deserves the attention of their congressional colleagues, members of the Executive branch, and the American people. Our responsibility goes far beyond partisan considerations.

The most urgent challenge confronting Congress today is to reassert control of the military bureaucracy and the policy decisions it has preempted. This can only be accomplished by effective congressional leadership backed by a broadly-based, informed, and concerned public constituency. Toward this end we propose:

(1) Creation of a congressionally authorized Defense Review Office, similar to the General Accounting Office, to provide authoritative information and analyses for Congress in the defense area.

(2) Establishment of a Temporary National Security Committee, on the model of the Temporary National Economic Committee of the 1930s, composed of members of Congress and private citizens. This committee should conduct a critical examination of the institutional structure of the military-industrial establishment and provide the necessary information which the Congress and the nation can use to restore balance to our national priorities.

(3) Formation of a Congressional Joint Committee on National Priorities to provide a continuing forum for the review and evaluation of existing and planned Federally-supported programs.

(4) Reduction in the use of security classifications in order to open public access to relevant information and reduce the tendency to concentrate decision-making powers in the hands of those having access to classified information.

(5) More active use of hearings in the States and Congressional Districts to help shape new perspectives on national needs and priorities and elicit views at the grass-roots level. Such hearings could provide the basis for a full congressional debate on the State of the Nation.

(6) Encouragement of privately funded research centers competent to subject defense programs to critical examination. These steps would provide some of the necessary institutional support for the reshaping and prudent reduction of the defense establishment that must occur if we are to free resources and reverse the trend towards a "national security state."

In the nuclear age, our prime objective must be to prevent conflict and establish the international conditions for an enduring peace. The United States will make a larger contribution to this work if it lessens its reliance on military power and works more vigorously at the task of building and strengthening its own society.

II. THE NATURE OF THE NATIONAL SECURITY ESTABLISHMENT

President Eisenhower's death has reminded us of his warning to "guard against the acquisition of unwarranted influence, whether sought or unsought, by the military-industrial complex."

Under the National Security Act of 1947, a group of institutions, including the Department of Defense, the National Security Agency, the Central Intelligence Agency, part of the Agency for International Development, and the Atomic Energy Commission, have established and developed the bureaucratic base for an extensive national security apparatus. This apparatus is supported and buttressed by the new breed of federally-subsidized corporations which produce hardware for the military. The labor unions too have been brought into this structure. Today more than 3.5 million civilian workers are directly involved in national security programs.

Vast and varied armaments have been built—seaborne forces, airborne forces—all in the name of flexibility and greater action. We have failed to recognize that the ability to wield this force generates a powerful temptation to use it. The very existence of these forces places greater demands upon our civilian leadership for wisdom and restraint, qualities which, as we have sadly learned in Vietnam, are sorely lacking in our political system today. And, through the system of security classification, this apparatus has been liberated from the normal restraints of public debate and congressional judgment, even as its power grows and its ability to intervene in new conflicts increases.

The Kennedy Administration took office in 1961 with the avowed aim of establishing greater civilian control over the military. Yet the harsh fact is that military considerations today play a greater role in determining American policy than at any time in our national history. In the name of efficiency we unified the operations of the armed services, introduced the techniques of computer management, and encouraged closer interactions between the military and industry. As a result, power once checked by rivalries and inefficiency is now wielded as a single force, defying effective democratic control. From this perspective we can see the present ABM fight as a test of whether or not the national security state is sunk in concrete for this next generation. If the ABM or the war in Vietnam cannot be stopped, Congress may well become no more than an ornamental debating society, and the impotence of our political institutions will be manifest.

Our problem is essentially one of uncontrolled bureaucratic power which, in the manner of all bureaucracies, governs in its own interest and in accordance with its own parochial view of not only that interest, but of the world.

The principal instrument of power of this bureaucracy is fear. It is fear that gave it this enormous power and autonomy in the '50s and '60s and caused us to consolidate and delegate power. This power was born in an age of fear, and it will be curbed only as we resist fear, only as we look upon the world, communist and noncommunist, with a certain calm intelligence.—John Kenneth Galbraith

We built the national security establishment to meet what was felt in the late '40s to be an important national need, but we now see that these institutions reinforce each other and eliminate the possibility of effective countervailing institutions. Unless we see our continued military buildup as an institutional problem, we will not be able to make any lasting change in the direction of our society or our foreign policy.

We should be clear on one point: It is not the uniformed military which has created the present situation, but the civilian leadership and the institutions they have created to centralize and expand the performance of national security functions. The military has been asked to make decisions and accept responsibilities for which it was not prepared, either by professional background or by the structure of military organizations. Too often responsibility has been abdicated to the military to make broad policy choices, to define the threats—and therefore the priorities—facing this country, and to determine the proper response to these threats. This far exceeds the more specific traditional tasks of developing battle plans and training men to carry them out. It is the abdication of civilian responsibility and the loss of balance in the exercise of national choices that have produced the dangerously distorted situation in which we find ourselves today.

It is customary for military leaders to plan on the basis of a "greater than expected threat." They assume that the Soviet Union will produce more ICBMs than one might ordinarily expect, a larger ABM system, and so on. Having made these conservative as-

sumptions, it is not surprising that they propose enormous appropriations and gigantic procurement programs. It is at the civilian policy-making level where there has been repeated failure. It is the civilians who should look beyond the projections of the military to the impact of the proposed measures on our domestic society, as well as on our foreign policy. They should be the ones to arrive at a realistic total perspective, rather than expecting it of the military.

Today, however, these civilian policymakers have become an intrinsic part of the military apparatus, more attuned to its viewpoint than to a wider national perspective. Just as the introduction of sophisticated weapons technology has civilianized the military, causing colonels to become the purveyors of abstract analyses and the silent partners of corporate managers, so the availability of these weapons in larger quantities has militarized the civilian hierarchy, leading it to seek answers to political problems in military hardware and enabling it to "project our power" over much of the globe.

The problem to which we must address ourselves is how to resist this interwoven bureaucracy, so large and entrenched, so zealous and parochial, so unrestrained by any effective counter-balancing force in our society. This vast establishment conjures margined or imagined "threats" to justify its continued existence. It is itself a threat to our society, disturbing its tranquility and threatening the survival of freedom within it. Just as we have built up this apparatus over the past twenty-five years, we must now begin the task of reducing the size and influence of the institutions which make up the national security establishment.

Growth with decay

Our prosperity and pattern of growth are built upon an industrial complex which relies on the defense budget to maintain high rates of employment and to support the bulk of technological innovation. Closely aligned with the great corporations involved in the defense establishment are labor interests and the interests of the new social classes built on education and technology.

We have created a series of new "pension classes" who are directly dependent on the national security establishment and on expenditures voted by Congress for old wars and new. The new educated class is dependent on the national security structure through the universities, which have received a large portion of their support from military-related agencies. Half of the trained engineers and scientists in this country are working for the national security establishment, providing the driving force for new weapons expenditures and generating a demand that we "keep the laboratories hot" even as tensions cool. This technical apparatus cannot easily fit into the civilian sector of our economy, and so becomes a permanent force for high defense expenditures. And the elevated status of their "high technology" has drawn our brightest minds away from the more mundane—but more urgent—problems of our domestic economy.

We have been using the new economics, with its emphasis on the use of the Federal budget to maintained economic stability and prevent cyclic depressions, without also recognizing that not all Federal expenditures are of equal value to the country. By placing the largest portion of our budget in the defense sector, we have deeply disturbed the balance which societies must maintain between the civilian and military sectors of their government and between their public and private outlays.

In our mistaken application of Keynesian economics, we have failed to recognize that the nature of our public expenditures will determine the kind of society we build with the resulting economic growth. Some expenditures contribute to a betterment of the society and enhance the quality of life for all our citizens, while others, although they may seem to contribute to the growth of the economy, in fact have detracted from our national well-being. Perhaps we need to make a more accurate accounting of our economic growth, recognizing that some expenditures subtract from the nation's welfare, even as they add to its economy.

It has been pointed out that in today's accounting both the production of cigarettes and expenditures on cancer research add to economic growth, when in fact, of course, they cancel each other out or, as at present, subtract from the health of our society. If we go ahead with the ABM and MIRV programs, they will appear in our accounting as economic growth, when in fact they will be destructive to the society, demanding further wasteful expenditures and making inevitable further decay in our cities and alienation of our people.

One must then ask whether our massive defense budget is in fact a way of dealing with foreign problems, or whether it has become instead a way of preserving a pattern of advantage within the United States. Is the defense budget a means of avoiding a confrontation with a series of domestic problems we have never solved, rather than merely a reason why we have not solved them? The swollen military budget gives us a ready-made excuse to avoid facing, as individuals and as a society, our failure to achieve justice and equality for all our citizens.

The question we must face is not what the Chinese or Vietnamese or Russians are, but who the Americans are and what kind of country this is, and what it is in our society which is leading us to go further in this direction.—Adam Walinsky

III. VIETNAM AND THE LESSONS OF INTERVENTION

The killing in Vietnam goes on. The war must be ended, and at the earliest possible date. We have put more than half a million troops into South Vietnam but have not been able to beat down the opposition of the North Vietnamese and the Viet Cong. Dr. George Wald has said they have a secret weapon: they are more willing to die for their cause than we are to continue killing them.

The Vietnam war is destroying that unfortunate country and eroding the foundations of our society as well.

We are engaged in a war 10,000 miles away for aims we can't define and which we can't win and don't seem able to end but which has contributed enormously to a malaise in the U.S. so severe that for the first time in our history the validity of some of our most cherished institutions has been called into question.—Fred Warner Neal

Even our military position has been undermined. As General William Wallace Ford has noted, "the war in Vietnam has divided our people and weakened our military strength because of that division. You cannot create disenchantment among nearly all the youth of the country and expect to have a strong military posture."

Toward a Vietnam settlement

Because of misconceptions and misunderstandings about the war, Congress has a special responsibility to begin now to tell the American public the political realities facing us and the possibilities for bringing the war to an end. Today's discussions of the war or peace aim of this country, or of the relationship the United States will have to Southeast Asia when peace comes, remain obscured by obsolete and empty rhetoric. There must be specific discussion now of our national security interest in that area. If the President is truly interested in negotiating an end to the war, such a discussion by the Congress will in fact help him, since one cannot reverse a set of assumptions on which our entire policy has been based without wide discussion by the public.

If Congress is to make such a responsible contribution to ending the Vietnam war, it must unshackle itself from the erroneous assumptions and faulty judgments of the past. Any reasonably viable political settlement in Vietnam will require a change in the underlying premises of the war, not a mere alteration in tactics. We will have to recall that it was the United States which, in contravention of the Geneva Accords, helped create and sustain a separate South Vietnamese state and chose the leadership of that state.

The myths that must be overcome include the allegation that what is basically a civil war is a case of outside aggression, that an unpopular and narrowly based military clique in Saigon can enlist the support of a majority of South Vietnamese people and that the National Liberation Front is a puppet of Hanoi without significant popular backing in South Vietnam.—George Kahin.

At this point our primary national interest is in extricating ourselves from Vietnam. The present military leaders in Saigon, however, have had a personal interest in continuing the massive U.S. military presence in Vietnam and are reluctant to see genuine progress toward a settlement that would allow our withdrawal.

As a result of past American policies in support of this military leadership, most noncommunist South Vietnamese are without political representation and are cut off from working out their own accommodation with the NLF. Many of the moderate political leaders of South Vietnam are in jail. (It was reported on the floor of the Vietnamese Senate that 16,000 new political prisoners were incarcerated during 1968.) If meaningful negotiations are to go forward, the currently-unrepresented elements must participate in working out a settlement.

If we are to exert the kind of pressure that will force the present Saigon regime to accept a peace settlement, we must begin now to withdraw our troops from Vietnam.

The creation of a coalition government for South Vietnam must be considered as a necessary transition stage, as well as a possible pattern for the final settlement achieved through national elections or a referendum held under the aegis of an interim transitional coalition. The transitional stage has been neglected in most public discussion, but it is a vital period if the government which emerges from the settlement is to be a lasting one. It is manifest that neither the Saigon government nor the NLF trust the other to carry out an election, and an initial period of shared power must precede the holding of any elections to create a permanent government. Such an interim coalition could also maintain basic administrative functions during the period of withdrawal of foreign troops.

Avoiding more Vietnams

If we are not to find ourselvs drawn into more Vietnams, the national security institutions which led us into the present quagmire must be reshaped and refocused. A new foreign policy must be evolved. Our national defense policy should be built around those core interests which are so vital that if they were violated they would threaten the very existence of the nation itself. In areas removed from our own interests, we can afford to seek or support settlements based on neutralization or on internationally agreed upon solutions which will avoid big-power intervention and eventual conflict.

Many of the "threats" for which we maintain military forces exist not because of a core interest, but bcause we have taken a particular historic position in a particular part of the world (for instance, in Berlin and Korea). We must now reconsider the extent to which the maintenance of these positions is appropriate. It is questionable, for instance, whether our decision to defend the Vietnam demarcation line ever had any

validity in the face of the Geneva Agreement. Nevertheless, it has been used to justify our military intervention.

We have believed that military and political policies that succeeded in one era of history were applicable to all places at all times. The apparent success of the policy of containment in Europe led us to believe that containment would also be successful in Vietnam, the Middle East, and elsewhere. But relations between the major powers have changed so radically, and conditions in these areas are so different from those in Europe, that entirely new perspectives are necessary. In particular, a policy directed at maintaining the status quo in the name of containing communist influence is futile.

We have learned that internal forces will control the development of new nations to a far greater extent than any elements over which we or the Soviet Union have any control. We must now accommodate ourselves to this realization and remove earlier vestiges of our misunderstanding of this country's role in the world. We can no longer permit military perspectives to obscure our perception of political realities.

A basic alteration in our policy of intervention and our foreign military commitments will be needed to correct the results of past mistakes. The defense establishment has evolved these commitments by making small, incremental decisions; these then develop a momentum of their own which involves us ever more deeply in internal disputes over which we have little control.

There is, for instance, a series of dangerous situations today in the Southeast Asia area, all attributable to decisions made without adequate knowledge of relevant political factors, without the knowledge of Congress, and apparently inconsistent with either immediate or long-term American interests. Kuomintang forces remain in Burma, Laos, and Thailand, supported by us and exacerbating the internal problems these countries face. It has been reported that our country has transported large numbers of Cambodian South Vietnamese to the Thai frontier, where they have carried out regular intrusions into Cambodian territory. (Indeed, in the recent past there have been three times as many military incidents on the Thai-Cambodian border as on the Cambodian-South Vietnamese frontier.) Such entanglements are reminiscent of those which led us into Vietnam.

Many of our overseas installations were originally created to serve military needs that no longer exist. But the Defense Department has developed new rationalizations for keeping these bases—particularly the desire to maintain a U.S. military presence as a base for political influence. Recognizing the drive among the peoples of these countries for national independence and greater democracy, we do not want our primary relationship defined by military bases or advisory missions. Our interests would often be better served if the bases and the military advisors were gone.

Away from intervention

If any branch of government is to force a re-examination of past commitments, it must be the Congress. But if Congress is to play a responsible role in our policy in the Third World, it must be informed of these situations and must play a role in creating or halting them. Secrecy in the initiation of new U.S. interventions is futile and self-defeating, and the Congress must insist on full, open, and current information, and must create mechanisms for reviewing our foreign commitments.

Congress should also insist that we begin to reduce the number of men in our standing army to a level more suited to peacetime. There are few world situations in which this country would not have adequate time to build from its large reserves and enormous productive capacity, should danger arise. The maintenance of a constantly accelerating level of technology, and of enormous armies which sit around waiting for a crisis to occur, are themselves important elements of instability and a prime cause of conflict and American intervention. We should take into account not only the risk of war, but also the need in Senator William Saxbe's term, to "take a gamble for peace." While we cannot guarantee against a disruption somewhere in the world to which we cannot instantly respond, there are other needs for these resources and more effective, multilateral approaches which this country can use to advance toward a peaceful world.

IV. ABM, MIRV, AND THE NUCLEAR ARMS RACE

The last clear chance

The strategic balance, which is now at its most stable position in years, is about to be thrown askew. The United States is beginning to deploy an anti-ballistic missile system and to install multiple, independently targetable warheads on its long-range missiles. Together, these will add new fuel to the arms race and create an environment of uncertainty and tension that will decrease our safety and make nuclear war an ever larger threat.

Today both the United States and the Soviet Union possess large, invulnerable strategic forces of nuclear weaponry. Each is confident that it has an effective deterrent to nuclear attack. Most Americans feel secure from the danger of nuclear war, and threats of nuclear bombardment, such as were uttered during the late '50s and early '60s are no longer heard. Through improved satellite reconnaissance, each side is confident that it knows what strategic forces the other possesses, and it can infer that its own deterrent is secure from destruction in a surprise attack.

This relatively stable situation can be preserved through an agreement between the United States and the Soviet union to refrain from the further construction of ICBM bases, and from the inauguration of ABM and MIRV deployment programs. Such an agreement could be an early result of the much-delayed strategic arms limitation talks between these two countries. The possibility that irrevocable steps will be taken before such an agreement is achieved lends the gravest urgency to the initiation of those talks. Once large-scale ABM deployment begins and MIRV testing has been completed, the nuclear genie will be out of the bottle, and it is unlikely that the stability we now enjoy will ever return again.

In spite of the sense of urgency felt by all informed observers, the Administration has delayed in responding to apparent Russian willingness to begin these talks. We continue, instead, to develop and install these new and dangerous weapons, apparently still operating on the obsolete notion that we can find security in a continuing arms race.

Military thinking as it still prevails in the main body of the military establishment, is obsolete; it operates with categories which were appropriate for a conventional war but are completely inappropriate for a nuclear war.

Within the framework of conventional war, the arms race was a perfectly rational instrument of national policy. The more machine guns you had, as compared with your enemy, the better off you were. When it comes to nuclear weapons, the arms race becomes a complete absurdity, once you have the ability to destroy your enemy several times over, even under the worst of circumstances. But we seem still unable to understand this basic difference.—Hans Morgenthau

We should attune our thinking to the realities of the nuclear age. Now we imagine the worst the Russians can do during the next decade, and then respond to it. We should, instead, forestall these further steps by an agreement which would halt what Robert McNamara called this "mad momentum"—while there is still time. And while these talks are proceeding, we should delay deploying the Safeguard ABM system and halt the MIRV program. This will give us the last clear chance to stop the arms race.

The search for a first-strike capacity

Halting the nuclear arms race should be the first defense and foreign policy goal of this country. Instead, we have been setting the pace in the arms race since the nuclear age began.

Since the 1950's the Defense Department has operated on the assumption that, while the Soviet Union might start a war through a ground attack in Europe, we would be the ones who would start the strategic nuclear exchange. Under this scenario our missiles would reach the Soviet Union before theirs could get off the ground. This strategy, though, requires that we buy many more weapons than the Soviet Union, since we cannot be sure that each of our weapons will function properly and strike its target accurately. The Defense Department has spent billions of dollars in an attempt to maintain such a first-strike posture.

To obtain the weapons needed for this purpose, the Defense Department has fostered three different "missile gap" scares in the last ten years. The first was the original missile gap of 1960. At a time when there was not a single Soviet ICBM deployed, this country was led to near hysteria over the prospect that the Russians might have large numbers of missiles within a very few years. Later we learned that they actually built only three percent of the missiles predicted by 1963, and they took seven years to close the missile-gap-in-reverse which we had opened up in the interim.

Then came the anti-missile gap. The impression was created by civilian officials in the Department of Defense that the Soviet Union was building an ABM system throughout their country and that we had to increase the number of warheads targeted on the Soviet Union to ensure we would penetrate it. The result was the MIRV program. We are, at a cost of more than $5 billion, introducing new types of missiles with multiple warheads, each capable of being directed with high accuracy at a separate target. The number of targetable warheads in our arsenal will increase from 2,400 to between 8,000 and 10,000, if the MIRV program is completed.

Now it has been revealed that the Soviet Union was not deploying an extensive ABM system after all, but has stopped with a small (and now obsolete) system deployed around Moscow. Nevertheless, the MIRV program continues to move forward.

This year we have been presented with a third missile gap involving the SS–9, a large Russian missile which the Pentagon is now describing as a first-strike weapon against our Minuteman force. In response to this newly-discovered gap, base on an exaggerated description of the capacity of such missiles to threaten our ICBMs, we are told we must proceed with construction of an ABM system. Since our ABM system will be at least ten times larger than the one the Russians have deployed, there will thus again be a gap in reverse, this time an anti-missle gap.

The Defense Department has seized on the buildup of SS–9 missiles to argue that we must have a defense of our land-based missiles. Even without our land-based force, we would have a sufficient deterrent, since each of our 41 invulnerable Polaris submarines can destroy more than a dozen Russian cities and inflict awesome loss of life, not to mention the destruction which could be inflicted by our fleet of B–52 bombers and the tactical aircraft we have deployed around the world.

The Soviet Union has at this time only a small fleet of missile-launching submarines, and the Safeguard ABM system will diminish still further the effectiveness of this deterrent. Faced with the imminent threat of

accurate, independently-targetable multiple warheads and a U.S. ABM system, the Soviet Union will have to multiply its missile force as quickly as possible if it is to maintain an effective retaliatory capacity.

What is the pattern here? It is one of undermining the Soviet deterrent while complaining that the other side may, in the future, undermine ours. The techniques of the Department of Defense go far beyond their traditional underestimate of costs of U.S. weapons and their over-estimate of effectiveness. The Department invariably exaggerates the Soviet threat and uses these exaggerations to get public and Congressional support for weapons that will undermine the Soviet deterrent. This means a permanent arms race.—Jeremy J. Stone.

The MIRV threat

We will not repeat here the well-known arguments regarding the dangers of deploying an ABM system that will accelerate the arms race without providing greater security for anyone. However, the dangers of MIRV are not so widely appreciated.

With missile accuracy increasing, it will soon become possible for one missile, carrying up to ten independent warheads, to destroy several of the opponent's missiles on the ground. Either side can then, by striking first, destroy the other's missile force and his ability to retaliate. To the extent that he relies on land-based missiles, his deterrent will be gone.

The MIRV issue is an immediate one compared with the ABM. The latter will take many years to be fully operational, but, once MIRV is fully tested by either country there will be no way of determining whether that country has deployed them, or in what numbers. Once testing has passed the point where deployment is possible, we can no longer have a self-policing arms agreement with the Russians. The place to halt the MIRV program is in the test phase, which began in this country in the fall of 1968 and is continuing.

We can halt our testing of MIRVs because we know that the Russians have not proceeded to deploy their ABM system, nor are they testing MIRVs themselves. The Soviet Union has been testing multiple warheads, but theirs are not yet independently targetable. Their warheads do not appear to have independent guidance and so do not pose a threat to our Minuteman missiles, which are protected in concrete underground silos and must be attacked with high accuracy to be destroyed.

Our MIRV program began in response to the threat of a Soviet ABM system. Now that the Russian ABM system no longer appears to be a significant threat, the Pentagon has adopted another and far more dangerous rationale for MIRV—that it will allow us to attack missile sites in the Soviet Union. The Defense Department wants to develop just the first-strike capability we are told to fear from the Soviet Union. Just as we have reacted with both missile and anti-missile deployments to the suggestion that they may be building a first-strike force, so they will surely respond if we should continue to seek a capacity.

We should, instead, suspend our MIRV program by halting the flight testing of MIRVs, and should consider resuming this testing only if it appears that the Russians are again pursuing an extensive ABM program. The testing of MIRVs intended for penetration of an ABM system would take no more than eighteen months, as compared to the five to seven years required to deploy an ABM system. We would know in the very early stages if they were going ahead with such an ABM program, and there would be no danger that the Russians could achieve a significant lead.

The testing of MIRVs can be easily detected by our unilateral intelligence. Long-range flight tests of ICBMs can be observed with radar and other detection devices, and the multiple warheads can be seen as they descend. In addition, the accuracy of the individual warheads must be determined by use of an extensive detection net in the target area, and this can also be observed through reconnaissance satellites and other means. Thus, if we were to halt our MIRV testing and then agree with the Soviet Union that neither side would resume such tests, this would be a self-enforcing, easily-policed agreement.

TOWARD THE MISSILE TALKS

If the Russians perceive that, through our MIRV program, we have developed the ability to destroy a substantial portion of their missile force in a first strike, they will not be able to agree, during the upcoming missile talks, to halt the further buildup of their deterrent. Just as we cannot tolerate their achieving a first-strike capability, so they cannot permit us to achieve one. If we want to halt the buildup on both sides, it is most important that the MIRV and ABM programs be halted on our side, while the talks proceed, and the Soviet Union should be asked to halt deployment of its SS–9 missile. It is of equal importance that the missile talks begin as soon as possible, before these programs have proceeded further.

The irony of the situation is that, in the forthcoming missile talks, we hope to persuade the Russians to abstain from the very weapons programs which are now being irrevocably set forward by our own Defense Department. While the talks go on, there should be a moratorium on both sides, with a halt in the further installation of new ICBMs and in the introduction of MIRV and ABM. The fears expressed by the Defense Department regarding Russian capabilities involve possible developments in the 1970s, and an agreement to halt the buildup now would insure that such fears could be put aside.

V. MILITARY EXPENDITURES

The continuously rising budget of the defense establishment provides vivid testimony that neither the Executive nor Legislative Branch is exercising proper control over our military programs and commitments. Defense expenditures have risen from $13 billion in 1950, to $43 billion in 1960, to more than $80 billion this year. There is every indication that military spending will continue to rise, unless a major change in national priorities and budget practices is effected.

This year, the Armed Services budget requests to the Secretary of Defense totalled $110 billion; these were reduced to $80 billion in the Office of the Secretary of Defense. When the Vietnam War ends, there will be strenuous pressures from the military to purchase the items omitted from this year's budget, including a large number of new ships, a new strategic missile, a new manned bomber, a battle tank, an anti-submarine aircraft, an Air Force interceptor, and a variety of other new weapons for an already bloated arsenal. Programs now approved will generate pressures for expansion as well. For instance, not only will the Army-developed Safeguard ABM system be augmented with additional radar sites and interceptor missiles, but the Navy is advocating development of its SABMIS system, a ship-based anti-ballistic missile system estimated to cost at least $6 billion, and the Air Force is working on an airborne missile defense system, to cost about $16 billion. It is clear that unless military spending is limited as a deliberate decision of national policy, the momentum of these institutions will carry the budget upward to ever higher levels.

A cessation of hostilities in Vietnam and a withdrawal of troops would make available budgetary savings of about $20 billion which could be available for domestic programs or other purposes. Considering only the present costs of approved systems and such fixed items as pay increases for military and civilian employees of the Pentagon, Charles Schultze has estimated that the fiscal 1971 military budget for non-Vietnam purposes will be $12 billion to $13 billion higher than the current budget. By fiscal 1973 or 1974, the military budget will rise by $20 billion to $25 billion, on the basis of approved programs and pay increases alone.

It has not been widely noticed that this process of absorbing Vietnam savings in other parts of the military budget has already begun. The fiscal 1970 budget submitted by the Johnson Administration included a reduction of $3.5 billion in the estimated costs of the Vietnam War. However, this first installment in the "Vietnam dividend" was more than offset by an increase of $6.6 billion in non-Vietnam military spending. This includes $4.1 billion in new defense programs and $2.5 billion in military and civilian pay raises. Thus the first opportunity to transfer our Vietnam spending to civilian programs was passed up in favor of additional spending for defense.

Thus it is clear that in the absence of any change in our defense plans the non-Vietnam military budget will rise by an amount sufficient to replace what we are spending in Vietnam. Indeed, there are reasons for thinking that actual spending will rise even higher. First, there will be an inevitable cost escalation as already-approved systems go into production. These programs include the procurement of Minuteman III, Poseidon, the Safeguard ABM, four nuclear-powered aircraft carriers, 40 destroyers, a new class of fast attack submarines, and a Navy fighter interceptor, at a total cost of at least $3.6 billion for this fiscal year alone. And the costs of these systems are certain to rise. During the last 15 years the average cost of a missile was three time the original estimated cost while the cost of aircraft averaged a little over twice as much as had been expected. Recent experience with the F–111 fighter-bomber and the C–5A cargo plane shows that these "unexpected" rises are still normal.

Second, the new weapons proposed by the Armed Services not yet approved by the Secretary of Defense, will cost large sums of money, if they are accepted in succeeding years. Further, if we go ahead with ABM and MIRV, there will be an escalation in the cost of our strategic forces as the Soviet Union reacts to these weapons and we respond to these reactions.

The future budgetary consequences of present strategic policy may prove to represent an unstable equilibrium. Either decisions will be made to reduce those expenditures, or they may themselves create a situation in which further expenditure increases will occur. To the extent that this evaluation is correct, the post-Vietnam fiscal dividend will either be significantly increased by policies that reduce military spending, or it will be significantly eroded by further additions to that spending. There may be no intermediate position.—Charles Schultze

The American economy will continue to grow even without significant inflation, generating $15 billion to $17 billion a year more in Federal revenues. Five years from now the total growth or "fiscal" dividend will provide $100 billion in Federal funds over and above those being spent today. However, the various claims on this dividend, including those from the military will make this gain illusory, at least under present circumstances.

If we assume that the income tax surcharge will be dropped once the Vietnam War is over and that existing Federal programs will increase in cost even without program improvement simply to take account of a growing population, then the $100 billion fiscal dividend by fiscal year 1974 will be reduced to about $30 billion. The increase in weapons system costs described above can easily con-

sume the $30 billion leaving nothing for new or expanded domestic programs.

Estimates such as these assume unchanged tax rates except for a dropping of the surcharge. Clearly, from the point of view of logic and economics, a United States which every five years adds to its productive output the equivalent of the output of West Germany, can do anything out of that growth it sets its mind to, including transferring a large portion of it to public uses rather than private consumption. However, as a practical political matter there seems little likelihood of raising existing tax rates very much. If we believe that domestic programs must have substantially more funds, these must come from the bloated budget of the Defense Department.

Robert Benson, a former Defense Department official, has suggested that even without any change in our foreign policy or military objectives, the Pentagon could save at least $9 billion by eliminating such programs as the manned orbiting laboratory (which duplicates work already being done by NASA), reducing inefficient turnover in the assignment of military officers and effecting other efficiencies in the use of military manpower, changing contracting practices so that greater performance and economy is required of defense contractors, eliminating unneeded and obsolete weapons systems, and cutting back some of our unnecessary overseas troop deployment. A careful and critical examination of the military budget, including a review of the purposes of our armed forces in relation to the goals of our foreign policy as well as a review of the impact of the defense establishment on the country, could result in substantial added savings. But Congress must develop the will and the structure for doing this.

A study group at Columbia University, under the direction of Professor Seymour Melman, has estimated the savings that could be achieved from such a critical study. In particular, they noted that present force levels assume we must be prepared to fight three wars simultaneously—a major nuclear war in Europe, a major conventional war in the China area, and a small war elsewhere in the Third World (for instance, in Latin America). With such an assumption, of course, almost any force level could be justified. If more realistic contingencies are assumed and the defense of our own shores is taken as the primary and proper role of our armed forces, substantial savings can be made.

Our armed forces could be cut by at least a million men. Reductions in the cost of maintaining these ready forces, as well as savings from a halt in our strategic arms buildup—and, of course, a halt in the Vietnam conflict—could lead to a reduction in defense expenditures of more than $50 billion. That would reduce the defense budget to pre-1960 levels. Clearly, a fresh examination of our defense expenditures is badly needed to enable us to substantially re-allocate our resources to pressing domestic needs.

VI. STRENGTHENING THE CONGRESSIONAL ROLE—RECOMMENDATIONS FOR ACTION

The Congress of the United States has failed to exercise its constitutional function of supervising the raising of our armed forces and overseeing their use in foreign wars. Instead, a vast national security apparatus has been created with the silent acquiescence of the Congress.

Tens of billions of dollars are appropriated for the Defense Department with little or no debate, and the views of the public on our defense programs are seldom sought. In one series of hearings before the House Armed Services Committee, covering 3,000 pages of testimony, 300 witnesses appeared; 298 came from the Defense Department and two from the National Rifle Association. With this imbalance in perspective, it is not surprising that there has been only the most superficial questioning of defense expenditures.

If the trend toward increasing militarization of our society is to be reversed, Congress must challenge the assumptions and the programs of the Executive Branch and assume responsibility for the future military affairs of this country. To do this it must have not only new institutions that will permit it to gather the information and the insights it needs, but a new view of itself and its role in American society.

Is there an information gap?

Since the defense budget sets the direction of our economy and foreign policy for years to come, its size and content should be the subject of the deepest congressional study and debate. At present, however, the budget receives only the most superficial attention from most Congressmen and Senators. Congress does not have the capacity today to make detailed comparisons of weapon systems and military programs. Furthermore, even such analyses will not provide the necessary raw material for the exercise of Congressional authority. Technical decisions on the design of weaponry can properly be made by military officers and defense officials, but the desirability of individual weapons systems cannot be assessed without examining the foreign policy obectives they are supposed to serve. With respect to ABM and MIRV, for example, the questions do not involve the specifics of hardware, but must focus on whether we are prepared to accept a situation of mutual deterrence and relative parity with the Soviet Union, or whether we are to continue to seek an offensive first-strike capability. Similarly, the issues raised by the existence of our overseas bases go far deeper than the desirability of air conditioning in the officer's quarters (an issue which has occupied a considerable portion of the time of the Armed Services Committees).

Many members of Congress feel an urgent need for more facts if they are to deal effectively with the military. With greater information, they could question more competently and persuasively the funding requests for weapons and standing forces. However, additional information alone will make it no easier for the Congress to control the military, as witness the performance of the Armed Services Committees. These committees are deluged with technical data and evaluations. Having failed, however, to develop an independent basis for judging relative priorities, they have been unable to make effective use of their surfeit of information. It is not the classified facts which the Congress needs, but a world view which can challenge the analysis of the military.

The Congress has been "mousetrapped" over the last 30 years, as the Executive Branch has evolved into a technology-based institution and developed methods of analysis which have tended to focus attention on the technical means, with the policy ends lost in a maze of figures and charts. Congress must develop its own perspective, using an independent set of operating assumptions, not those of the military.

The United States now has military installations around the world, including 429 major and 2,972 minor overseas military bases staffed by a million men. These cost us billions of dollars, disturb our international balance of payments, and create implicit commitments to the countries involved which return to haunt us when crises erupt. And yet most of these bases are maintained simply because they were set up long ago, not because a public evaluation of our national objectives indicates they are needed.

Congress should be asking why such bases should be established and what national commitments are involved in their maintenance. Such basic decisions are now made by the Executive Branch in a context which minimizes debate, avoids consideration of the costs as well as the benefits, and often does not even bring before Congress or the American people the fundamental decisions at the time they are made.

As another example, we are currently going into procurement of the F–14 aircraft for the Navy and Marine forces. Over the ten-year period in which that aircraft will be operational, the total cost of the program will be at least $20 billion. Nevertheless. Congress has not adequately examined the contingencies and military assumptions on which this new aircraft was based.

We spend $10 billion to $12 billion a year maintaining forces sufficient to fight China in a land war in Asia. This is an explicit assumption on which our military strength is based, and yet such a national policy has never been debated. (In fact, most people do not even know that it is a specific assumption with respect to our military budget.)

There is now no framework for such a debate, except that developed within the Pentagon. No other national institution is capable of performing such analyses and providing an adequate counterweight to the Pentagon assessment. A major overhaul of the congressional committee structure may be needed before such a counter-institution can develop. The current committee structure of Congress evolved before the Executive Branch adopted the tools of technology and modern economic analysis. It thus tends to look for direction inward towards the Executive Branch, with its complex programs and advanced technology, rather than outwards towards the country and the world, discovering our country's needs and providing some of its own answers. The existing committee structure could be made to work if Congress wished to take hold of the issue, recognize the need for fundamental questioning of the defense establishment, and reestablish its authority in the military area. It could then confront the Executive Branch on how well it was meeting the needs of the country. The Senate Foreign Relations Committee, in its recent examination of the ABM issue, has shown that this can be done on a single, well-focused issue. In general, though, the rigid committee framework has prevented such boundary-crossing.

When the institutions exist for confronting the Executive and the military they will provide a focus for those private citizens and research institutes which now possess information that Congress could use for its independent critique. These groups now can contribute their knowledge and insights only to individual Congressmen and Senators who become concerned about particular, discrete issues. New Congressional institutions would provide a continuing base for gathering such information and for developing the critical perspective that will permit its effective use.

Renewing the dialogue

An effective dialogue must be restored within this country on our foreign and military policies. New mechanisms must be created within the Congress to provide the kind of institutional support needed to support this dialogue. The present structure tends to compartmentalize decisions, and it must be surmounted to see the direction the country is going.

Congress can successfully challenge the military establishment only if it develops an authoritative perspective for questioning the judgment of the Defense Department. At the present time it tends to abdicate its judgment in the face of military expertise. However, the decisive questions in the field of national security are not scientific or managerial but moral and political—and on such questions the people and the people's representatives are as qualified to pass judgment as the so-called experts. Even if they do not know the technical intricacies of a piece of military hardware, they can assess the likely consequences of the use of that hardware.

And they will not be burdened with the pressures, felt within the bureaucracy, to produce any new weapon, just because it can be built.

The introduction of modern techniques of systems analysis has allowed the Pentagon to support a request for almost any weapon system and has curtailed the inter-service rivalry which formerly allowed the President to balance one service against another in restraining such requests. Congress cannot decisively win an argument on an individual program, for there is no limit to the ingenuity which can be used to justify a particular weapon or a particular base or a particular program. Instead, general policies and national priorities should be set by Congress, and requests for individual items should be required to conform to these guidelines.

For the Congress to escape from the present bureaucratic trap, it must have new ways of considering the budget. It should begin to hold local budget hearings in Congressional Districts and in the States, asking the American people how they want their money spent, whether they want to continue spending the largest portion of their tax dollar on the Vietnam War and future wars. Such grass-roots hearings in each of the Congressional Districts around the country would provide a forum for exposing social conditions in the country and mobilizing the public to insist that tax dollars be spent on the real needs of the people of our nation.

These hearings could take place each fall and winter. Then, rather than passively receiving the President's State of the Union message and waiting for his program, Congress could engage in extended debate early in the spring, conducting its own State of the Nation examination. Through this State of the Nation debate, Congress could develop its own perspective on priorities for the nation, with which it would provide directives to the various committees that apportion the Federal budget among the agencies of the Executive Branch.

Congress could develop a new kind of national budget, divided not along agency lines but apportioned according to national needs. It could insist that the Executive Branch, and particularly the Defense Department, present its budget request in terms of objectives or "missions," rather than in an agency or "forces-in-being" framework. It could ask how well our military programs serve the foreign policy objectives of the country, rather than how sophisticated hardware we are buying. It could ask how well we are doing as a nation in educating our populace and providing for the health needs of the country, and so on.

From this examination could come new views of national priorities, yielding guidelines with which the Congressional committees would confront the requests from the Executive agencies. In this way Congress would place the military budget in a setting where it would be compared with other national programs, providing the transfer mechanism presently lacking in the budget process.

One advantage of such a broad look would be a clearer understanding of how specific Federal programs affect each locality. If a particular defense program were cut back, Congress could see which areas of the country would be affected and what other Federal programs might be increased to minmize severe economic dislocations. Congress would thus open to public discussion the entire question of the Federal role in facilitating such conversions from one set of priorities to another.

Sources of expert advice

Congress and the public will need the assistance of many experts and independent research centers around the country who can bring the expertise and informed analyses of the academic community to bear on our defense budget and foreign policy. These should be funded by private foundations, so they may attain an independent view of Government programs and provide a variety of views and judgments. They need not have access to classified information to do useful work, and, indeed, they might benefit by not having this particular restraint upon their ability to criticize the defense establishment.

However, such outside centers cannot, alone, provide the full resources which Congress will need for a successful encounter with the military. There should also be a permanent Defense Review Office, analogous to the General Accounting Office, providing Congress with independent reviews of Defense Department programs. Such an agency could, for instance, alert Congress to such programs as the MIRV project and the extensive chemical and biological warfare program of this country, which many members are only now discovering. This agency would have access to top secret information and would be as informed as the advocates of these weapons programs within the Defense Department. Democracy cannot function properly in a technological age if only the Executive Branch of the Government has access to detailed technical analyses. Congress, being directly responsive to the public, must have equal means of evaluating and understanding the implications of government programs.

A Defense Review Office would provide a group of independent, well-informed civilians who would examine, on a full-time basis, the desirability of particular budgetary decisions. It might also have associated with it a senior consulting board as an advisory arm to Congress, available for informed judgement as one equalizer to the present disparity in expertise between Congress and the Executive Branch.

Breaking the secrecy barrier

Congress will have to deal more directly with the problem of military secrecy. The security classification system which has developed since 1947 must be drastically revised. Very much less information must be kept behind the bars of secrecy, in order that information will be available for the political judgments Congress and the public must make. Decisions which today are removed from public view must be brought before Congress for its overall policy judgment.

Serious examination of the entire question of classified information is needed. Congress should take a fresh look at why information is classified. From whom is the information being kept? (The Russians clearly know far more about our military operations than do the American people.) Can very much more information be made available to the public? Just whom is the classification system protecting? Can we do away with the system altogether? It is, after all, a relatively new institution in American life, and it plays a major role in protecting the national security apparatus from public criticism and control.

As one example of the misuse of classification, the MIRV program was developed and carried on for three years without the knowledge and awareness of most members of Congress. While the Armed Services Committees were informed, they did not appear to question the value or desirability of the program, nor was the rest of the Congress informed about its significance. Only when there were press leaks, long after the program had begun, did the public become aware of its existence. It is only now that its significance is becoming clearly understood.

Congress should insist on its right to know what the defense establishment is doing. It has allowed the Pentagon full discretion in using security classification, forgetting that there is a diminution in our freedom each time an additional matter of national policy is kept from the public. The deployment of major U.S. Air Force units to privileged bases in Southeast Asian countries ought to have been reported to Congress before it happened; in fact, these units were only discovered later, when they became obvious to local observers. It is not enough that such actions were reported to a select subgroup of the Congress, for this type of committee has tended to be unrepresentative of the Congress and the country as a whole.

Undoubtedly some information will always remain classified, but defense officials should not be allowed to hide policy decisions behind the assertion that national security prevents them from revealing the necessary information. Secret details are seldom essential to understanding any of the larger issues. Herbert York, a former director of Defense Research and Engineering, has suggested that "critical decisions" with respect to the triggering of nuclear devices are "passing from statesmen to technicians, from high to low levels, and from human beings to machines." After he made this remark, Pentagon officials asserted that it was unfortunate that those who made such statements had not been briefed on our most recent ideas about the national command and control system. No doubt there are secret details about this system, but the issue raised does not depend on such details but rather on the simple fact (arising from the curvature of the earth and the flight time of ICBMs) that today the time available for decision is no more than twenty minutes. The generalization that the authority in these life-and-death decisions in passing to low-level authorities cannot be hidden behind claims of secrecy. As in this case, Congress should be able to question defense officials more closely, not just about details but about fundamental policy, and not just about public issues such as the ABM system but about many other policies and weapons systems as well.

While in principle the absence of information need not prevent Congress from exercising its proper function of oversight, in practice no Congressman feels equipped to take on defense problems unless he is buttressed with full and authoritative information. The Congressman must have an answer to the assertion, by those "in the know," that "if you only knew what I know, you wouldn't feel this way." While rational arguments can be a partial answer to this, only authoritative information can be a full response to it and can effectively deal with the uncertainty which such an approach creates.

Often advice is sought from outside individuals who are believed to have had access to defense information through their security clearances. However, except on narrow issues of military technology, there is almost no information that is presently classified which cannot be obtained as well from a careful reading of the newspapers. Thus, an absence of classified information need not prevent the broad body of Congressmen from making the kind of policy judgments which they should be making.

In particular, more timely information must be available to Congress to enable its members to end the practice of voting funds for programs about which they know nothing. Congress should insist that the Executive take whatever risk is involved in releasing classified information, rather than accept the erosion of the democratic process that results when decisions on the allocation of national resources are made solely on the basis of secret information. Greater disclosure might even improve the information available to the Executive Branch, since some classified information is wrong (e.g., projections on the course of the Vietnam war) but is not subject to debate and challenge because of its classification.

Beyond committee parochialism

Unfortunately, past experience with non-Congressional bodies does not provide much hope that over a long period of time they can remain truly independent in order to provide

fundamental criticisms of the Defense Department programs. There is, indeed, serious question as to whether any group could maintain the necessary independence, over the long run, except a group of Congressmen. No other group would have the necessary constitutional authority or the base of political support. No other group could speak out without considering the views of its sponsors, nor would it have the authority to demand answers to critical questions from the Executive.

There are places in the Congress now where the access to information and the independent political support exist, and where this type of analysis and criticism should be done. There is no reason, in principle, why the Armed Services committees must spend their time examining the minutiae of military programs. Under present circumstances, though, these committees cannot be depended on to provide useful examinations of broad policy issues. For this the Congress must turn to some other mechnism or body.

A mechanism to overcome the rigidities of the present structure could be based on the precedent of the Temporary National Economic Committee, which functioned in the late 1930s. Congress could establish a Temporary National Security Committee, composed of members of Congress and qualified outside experts. The original TNEC conducted a searching study of the structure of the American economy, one that is still an outstanding source for understanding the national economy as it existed before World War II. A Temporary National Security Committee could look at the institutional structure of the military-industrial complex, at the relation between military policy and the economic interests which depend on the military establishment, and the economic and social impact of this enterprise upon American society. It would provide the American people with a detailed picture of the massive system they have created and the direction in which it is leading the country.

Congress could also create a Joint Committee on National Priorities, along the lines of the Joint Economic Committee set up twenty-two years ago, to conduct continuing, broad investigations of the implications and objectives of American defense policy and of its relative priority in the national budget. The Secretary of State could be asked to deliver a "posture statement" to the Congress, in much the same manner as the Secretary of Defense does now, defining the assumptions and objectives of our foreign policy. These statements could be reviewed and analyzed by this Joint Committee, providing a focus for the annual congressional debate on national issues, as well as material for research institutions to study and criticize.

If we must, indeed, cross the institutional barriers that now exist, it is not clear that new Congressional institutions alone will accomplish this task. Congress must act more meaningfully as a whole, with each member dealing with a much broader field than customarily falls within the domain of an individual committee. The members of Congress could then act more effectively as representatives of the people on broad issues of national policy, rather than as experts on narrow subjects making policy for the entire nation through their committee assignments. Congress as a unified body might then be able to redress the balance of power which is today so skewed in favor of the Executive Branch.

More thorough review by the Congress could generate more careful examination by the Executive Branch as well. The existence of a Joint Committee would, for instance, encourage the Bureau of the Budget to probe more deeply into military policy than it has in the past. Under present circumstances it can question the Joint Chiefs of Staff on technical questions, but not on matters of overall defense policy. The defense budget is subjected only to a *joint* review, in which Budget Bureau examiners travel to the Pentagon to examine, along with Defense Department officials, the budget submissions of the individual services; the completed budget then goes directly to the President. The Defense Department would, in this new framework, be treated like all other agencies, which must submit an *independent* review by the Budget Bureau, before their budgets are transmitted to the President.

The Congress should also, through the Government Operations Committee or another appropriate committee, begin on its own initiative to propose machinery whereby real issues of social cost effectiveness could be raised within the Executive, particularly where military needs could be compared with nonmilitary requirements of the society. Perhaps the Cabinet must evolve into an operating agency, with the ability to examine issues of national priorities in a way that will not leave the military budget "above the battle," as it is now.

One must look then, to a range of institutions to provide the analytical counterpoise to the Pentagon which is so badly needed. However, the fundamental decisions that must be made if the direction of this country is to be altered will require political actions substantially beyond these institutional changes. Indeed, structures already exist which could be used for the necessary analysis and criticism, if the political will to use them were developed. New institutions will make the task easier, but they will not eliminate the need for a gathering of those political forces which agree that the national security establishment must be brought under greater control and substantially diminished in size and influence.

One possible way of dealing with the power relationship that currently exists, and over a time altering it, would be to apply a steadily decreasing dollar limitation to the military budget, forcing defense officials to limit their operations and cut back the farflung expanse of the armed forces. The magnitude of the reductions would emerge from a reassessment of national priorities within the Congress. Just as there is no end to the possible weapons that can be sought, and no absolute criterion for deciding whether to purchase them, so there is no authoritative scientific standard which can be used to decide the amount by which the budget should be reduced each year. This is indeed more a political than a technical issue, depending upon both the perspective of the Congress on the place of American military force in the world and the rapidity with which it would like to see a transition to an economy which emphasizes our domestic needs.

WRITER ALLAN BROWNFELD SEES "GENERATION GAP" A RELIGIOUS QUEST FOR MEANING

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, I take this opportunity to draw to the attention of the House and readers of the CONGRESSIONAL RECORD, an excellent commentary on the "generation gap" written by Allan C. Brownfeld and published in the May 15 issue of Roll Call.

With sharp perception, Mr. Brownfeld puts the gap in perspective, apportioning the blame properly, in my opinion, among all generations.

Of course, man cannot live by bread alone, but our generation has allowed itself and others to forget.

The article is well worth careful reading.

THE GENERATION GAP

(By Allan C. Brownfeld)

There are those who say that the gap between the generations is illusionary, purely manufactured by the headline-writers and by those young militants who, being able to boast of little else, boast of their youth. Even there, it seems, they are not totally committed to the concept that "You can't trust anyone over 30." What they seem to mean is that "You can't trust anyone over 30 with whom you disagree." Dr. Spock remains a hero, as does Professor Herbert Marcuse. These men were past thirty before the Depression, yet the alleged "gap" between them and their young admirers seems nonexistent.

Many of the critics of the New Left and student activism, especially those in the generation of their parents, attempt to present the view that the rebellion of today is analogous to the youthful rebellion entered into by every generation. There is, such observers note, nothing unique, about what is happening today.

In his recent volume, "The Conflict of Generations," Professor Lewis Feuer expresses the view that student rebels are simply acting out their hostility against their fathers. He considers this history's proof of the Oedipus complex, and does not consider the student rebels of the 1960s different in nature from student movements which have existed at other times in history.

Professor Feuer is, of course, of the generation of the fathers, and he sees the youthful revolt in those terms. His theory should not be dismissed lightly, for there is an important element of the traditional generational revolt in the student rebels of today. But there seems to be a great deal more than that, for the times in which we live are unique and the transitional period we are now going through as we enter a technological age has been repeated only a few times in the world's history. The young people of today stand upon the bring of a new world. Many are looking romantically to the old and are challenging the future. Others are attempting to search into the past and discover the essential elements of civilization which must be carried with us into the future. Still others, faced with the challenges of an uncertain age, have turned to destruction and chaos.

Though all of us, young, middle aged, and old live in the mid-twentieth century, only the young, those who have come of age after the conclusion of World War II, are truly of this period. Those who lived through the depression or through World War II, have been frozen by the dramatic and intense experience of those days.

The Southern writer, Walter Hines Page, wrote this with regard to the generation which lived during the Civil War in the South: "It (the Civil War) gave everyone of them the intensest experience of his life, and ever afterwards he referred every other experience to this. Thus it stopped the thought of most of them as an earthquake stops a clock. The fierce blow of battle paralyzed the mind. Their speech was the vocabulary of war * * * they were dead men, most of them, moving among the living as ghosts; and yet, as ghosts in a play, they held the stage."

The young are the only ones who are, in a sense, frozen with the dramatic and intense experience of these days. They do not relate the upheavals of today to the past, for they know no past, except through the books most of them do not read, to their great misfortune. They live in the present and wonder what kind of future they may hope for in so transient and unstable a world. If there is a generation gap it is of this nature. The generations need interpreters to understand one another, and these seem few and far between.

A young man growing up in Europe one or two hundred years ago would have faced a situation in which the major decisions in his life were pre-ordained. More than likely, he would have been born in the same house in which his father had been born, almost surely in the same town. He would pursue the same means of earning a living as did his father. If the father was a tailor or a butcher, the son would also live his life in this manner. His marriage would be arranged. His own range of choice-making was very slight. Life was circumscribed by religious faith and communal custom. The individual was part of the community, the group. His responsibility was more that of playing out his role than grasping life as a horseman at the reins and riding in whatever direction he willed.

Today, man's situation is far different. Today, young people have almost unlimited choices with regard to career, location, marriage partners, and other basic elements of life style. Certainly, there are restrictions. The draft claims two years out of the lives of many young men. Some start life in humbler surroundings than others, thereby limiting upward mobility. Yet, on the whole, the young man or woman coming of age in America at this time has perhaps a greater freedom to choose his pattern of living than has any individual at any time in history.

Freedom to choose, however, becomes a very difficult task when no one provides any knowledge or information about the basis upon which such choices may be beneficially be made. At one time the family, the school, and the church spent a good deal of time pointing young people in particular directions which they considered to be valid. Today the family is in a state of disarray, the school pursues a "value free" curriculum, and the church doubts its own message, being swept away in the modern tide of relativism. Not too long ago, "The New Yorker" featured a cartoon in which one priest said to another: "I would not be so presumptuous as to tell the congregation what was right and what was wrong."

Young people today are asking the very "ultimate questions" about life, death and purpose which Paul Tillich said was part of man's nature and which the modern world says is no longer part of man's concern. Where they will find answers to such questions in what they view as a materialistic and de-humanized age, is difficult to say. In searching for values, many in the student movement have taken the negative turn toward nihilism and violence. In addition, many seem blind to the dangers of totalitarianism. But it is the nature of every vacuum that someone attempts to fill it. If it is not filled with what is good, it will be filled with what is not.

Because many young people have rejected the past as a vehicle through which the present may be understood and placed in perspective, few realize that others have gone through similar searches for value and meaning. They speak of love as if it were their own discovery. Chesterton noted that "Christianity has never been tried and found wanting, it has been found difficult and has never been tried."

In a sense which few in the older generation realize, much of the student movement is, in fact, a religious quest for meaning. This point was made by English poet Stephen Spender: "The grievances and demands of the students, the issues and confrontations, reasonable or unreasonable as they may in themselves be, excusable or deplorable—express their total rejection of the depersonalizing forces of modern society. The feeling of the young is that the claims, the powers, the 'production' of this world are opposed to the spirit, flesh, imagination, instincts and spontaneous self-realization which are life."

As we enter the technological revolution, as we move further and further into the mass society, we must be as concerned with the quality of life which young people will face in the future, as we are with the quality of the material things with which they will be able to tinker.

Man, it must not be forgotten, does not live by bread alone. It is the substance beyond bread for which young people seem to be yearning. Despite all of the faults and dangers, there is something in that search which may, in the long run, save our society, and Western civilization itself. The real generation gap may be this very search. Too many in the older generation, it appears, have given up along the way.

THE APOLLO PROGRAM AND BEYOND

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, along with my fellow citizens I am happy about the successful flight of Apollo 10 and excited about the prospects for the Apollo 11 "landing on the Moon" mission scheduled for July. The national psychological uplift we have received from each new, successful space adventure has been of great proportion, but we must not lose sight of the very real problems that exist here on earth that demand our time, talents, and money.

I have just read with some dismay that NASA is now projecting a manned mission to Mars as the next logical step in our Nation's space program. In my opinion, space projections into the 1980's are premature since there is so much we do not know about the environment of Earth and its oceans. What we really need is a reevaluation of inner space goals and priorities established elsewhere.

We have only scratched the surface in terms of problems connected with the proper utilization of our resources, and we have barely resolved the critical issues facing today's human race. Tremendous strides have been made in the technology to support man in space; now is the time to redress our efforts for the progress and salvation of man on Earth.

An editorial in the May 27 edition of the New York Times brings this point very close to home, and I include the editorial following my remarks in the hope that my colleagues will now direct their attention, with renewed interest, at the many problems here on Earth:

AD ASTRA

The triumphant splashdown—right on target and right on time—of the Apollo 10 astronauts after their epochal reconnaissance of the moon was a perfect ending to an extraordinary achievement. This was the most complex and most difficult technological feat in human history.

Yet from blastoff at the preassigned time, through the climactic hours when the lunar module swept within nine miles of the moon's nightmarish surface, to the final precise landing, it all went off almost without a hitch.

The faultlessness of Apollo 10's performance in the neighborhood of the moon was at once a demonstration of what this great country is capable of doing and a reminder of its failure to make comparable application of that capacity to the solution of problems here on earth. If Americans can reach the earth's satellite 250,000 miles away, why can't they all live in decent houses, enjoy adequate diets, receive adequate medical care and benefit from the levels of education that their native endowments permit them to absorb?

The Apollo 10 astronauts were indeed envoys of all mankind, and their triumph was ultimately a triumph for all men. But here in the United States the justified applause for this superlative achievement must be tempered by a quickened realization of the essential tasks still unaccomplished within the nation's borders.

In spectacularly demonstrating the heights this country can reach, Apollo 10 inevitably calls attention to the valleys that still crater the American landscape. This striking contrast only emphasizes the need for more adequate action and more effective efforts here on earth, even while the inspiring assault on the frontiers of space moves forward toward new and ever greater accomplishment.

MEMORIAL DAY 1969

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, Memorial Day is a day set aside wherein we pause to pay tribute to those who have given their lives in the service of their country—men who died to defend this Nation against physical takeover so that its people might live as an example of how free men are able to establish and perpetuate a free society.

The memorialization of our fallen heroes has been a long and honorable tradition since 1869. But today, in the midst of yet another war, there is a tendency by many to forget those who gave their last full measure of devotion to a country in times of national crisis. I cannot reflect upon this day without recalling those of my friends in World War II who, in the performance of their duty, made the supreme sacrifice that we might live a few more years under a system of government that is ever-changing, yet ever free.

And then when we thought world peace was within our grasp, and we believed that all the sacrifices of 292,000 combat deaths in 4 bloody years of war were to be realized, another outpost of freedom was invaded and we had to send men into combat for the fourth time in this century to a far-off place called Korea. In guarding the fragile light of freedom in that small nation, 34,000 Americans gave their lives. We then finally realized, as at no other time, that the maintenance of freedom was going to be a never-ending and frequent task that is not always easily defined or easily understood.

There is no such thing as an "explainable" war, yet if we are to live in freedom, if we are to maintain the moral leadership of the free world, if we are to bend our every fiber to help others in the world enjoy or gain the benefits of freedom, then when forced we must defend the principles of freedom wherever and however they are challenged.

This past Memorial Day must be remembered as a dedication to the youth of this country who have given their lives in defense of the principles of freedom. The majority of those who died in combat in World War II were under 30; the overwhelming majority of those who died in combat in Korea were under 25; and 48 percent of those who have fallen in

Vietnam have been under the age of 21. It is the flower of this Nation's youth that we should dedicate this day, this year.

But today when Americans are falling in defense of freedom, in defense of our commitments to the free world, and in defense of the principle of self-determination, there is an undercurrent of cowardly talk and action by another type of "youth" which denigrates all we have accomplished and all that our fallen heroes have sacrificed. Rather than take up their places in the swamps, forests, and highlands of Vietnam to defend what is right and honorable, the campus cowards tear down the institutions at home that were built and preserved by the blood of an earlier youth. I know one cannot send such people to defend freedom, as defense of freedom is too precious a job to be entrusted to the irresponsible. Instead we have sent the flower of our youth. They fight under impossible restrictions and suffer the indignities and deprecations by those at home lacking the will to fight.

In memoriam to those loved ones who have stayed behind, and to those that face the awful uncertainties of combat with courage, this Nation dedicates this past Memorial Day with the fervent prayer that on the next such day their job has been completed successfully and no more Americans are dying on battlefields.

DRAFT REFORM

(Mr. BURLISON of Missouri was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BURLISON of Missouri. Mr. Speaker, a few days ago President Nixon sent his message on draft reform to the Congress. At that time I expressed serious reservations about the plan, particularly continuation of college deferments as under past Selective Service programs.

In my May newsletter to my constituents, an analysis of the President's proposal and my response to it was stated. Following is the portion of said newsletter which relates to the draft issue, as well as editorial comment by the Cape Girardeau Southeast Missourian, a prominent newspaper in Missouri's 10th Congressional District:

[From Representative BILL D. BURLISON'S Newsletter, vol. 1, No. 4]

DRAFT REFORM

The President last week sent to Congress a proposal for revamping our military induction procedures. The plan calls for a random selection. Many of you will recall that long ago I advocated such a plan. However, my main complaint has been the special treatment accorded those who are able and willing to attend college. The President's proposal retains this discriminatory policy of college deferment. So Mr. Nixon's plan is not as "random" as we might like to think.

Space will not permit an exhaustive discussion of this issue, but let me mention just a few reasons why the college deferment is unfair and unwise.

The most obvious is the advantage given to those best equipped financially. Economic preferment should have nothing to do with when and whether a young man serves his country. Presently, a disproportionate share of our war casualties are borne by our poorer citizens. The most feasible explanation for this is that the more affluent are less vulnerable to the draft because of the "education loophole."

This system encourages students to go to college who do not have the intellectual capacity nor the motivation and who would not otherwise attend. Those who have had an opportunity to observe these students readily see the unfortunate waste of time and resources of both the families and schools involved.

In conjunction with the last mentioned point, it should be observed that the system discourages marginal students from taking academically rigorous courses, in order to make better grades insuring continued deferments. And it is widely known that some institutions and professors have shown tendencies to lower academic standards rather than send the marginal student to the draft.

A not so obvious inequity is perhaps what some would term a perverted sense of values and priorities. For example, why should a student of Greek Drama be deferred while an apprentice carpenter is not.

The argument is made that abolition of college deferments would stifle education. This is not true. Much evidence is available to indicate that the teenage student has a stronger motivation for formal education after he has a couple of more years of maturity. In addition, he has a more accurate concept of what he desires as his life's work. Maybe it could be said that some of the actions in our campuses today are some reflection of immaturity. The education benefits available under the GI Bill serve to guarantee that service will not impede education—rather the opposite is true.

It is recognized that the position here taken may not be popular. A larger and larger percentage of our people are finding college education possible, and as we parents know so well, it is usually the parents, rather than the students themselves, who most want the college deferment.

Hopefully, shortly and before the draft controversy can be resolved, the war will be over and no draft necessary. Until that time, however, our hallmark should be fairness and equity among all our people.

[From the Cape Girardeau (Mo.) Southeast Missourian, May 27, 1969]

THE DRAFT AND COLLEGE DEFERMENTS

Rep. Bill D. Burlison has put his finger on a sensitive spot in the nation's draft apparatus and he is eminently correct.

He has called college draft deferment "unfair and unwise" and has cited his reasons.

His principal complaint, the 10th District Congressman said, is the special treatment accorded those "who are able and willing to attend college."

This preferential attention is retained in President Nixon's proposal for draft reforms, Mr. Burlison observed.

He will ask why it is that a student of Greek drama should have deferred status while an apprentice carpenter does not.

The universities and colleges of this country have been a safe haven for many draft dodgers who are afraid to stand up to their responsibility as citizens.

They have used student deferments not only for undergraduate education, but to continue on with graduate degrees, all for the purpose of evading armed forces service at the time of the war in Vietnam.

This does not imply that all are dishonest. But the facts are too clear that a disproportionate number are simply academic draft dodgers, professional students as long as the war lasts and they can continue to get deferments.

Rep. Burlison is right when he says there is no content to the argument that drafting of students would stifle education.

Walls are bulging in the nation's colleges and universities. Academic life has become impersonal. Classes are huge. There are sufficient quality students that the removal of some under new procedures would not damage the quality of education.

The nation needs men and women who are qualified by education to advance its interests in all fields of endeavor. Of that there is no doubt.

But let it always be remembered that there exists within the mainstream of American life a solid, stable body of men and women who are not qualified for and have no interest in educational pursuits.

These people are just as entitled to deferment because of their contributions to American life as are those who are by temperament and inclination able to go to college. They are no less intelligent than the latter, by any stretch of the imagination.

Rep. Burlison has spoken well. There should be no college deferments anymore than there should be for any other category of American citizen.

FORTAS, A LOGICAL CULMINATION OF NEW DEAL LIBERALISM

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, David Broder, the distinguished political commentator, recently called the Fortas affair "in many ways the logical culmination of New Deal liberalism." It is a striking thought with which I agree.

In his column for May 20 as published in the Washington Post, Mr. Broder concisely traces the tragic lines of reasoning by which New Dealers grew smug and self-satisfied; how their own financial self-interest came, almost miraculously—as if by divine fiat—to coincide with the public interest. Until, at last, we come to Fortas, who appears genuinely not to understand why he should not have accepted $20,000 a year for life for the good of sweet charity.

I bring this matter to the attention of the House in all sincerity and in no sense at all of victorious, self-satisfied crowing. I do so as a warning—a warning particularly to my own party. The continuing collapse of traditional "liberalism" because of its inability to cope with the needs of our times, makes it more than likely that my party will enjoy a long period of power and responsibility.

It is important to remember that power corrupts. It is vital, especially for those who are coming newly into power, to study the record of this corruption. We are human; we are all vulnerable. It is a great temptation to be both rich and virtuous.

In that spirit, then I offer Mr. Broder's brilliant exposition for the RECORD:

FORTAS CASE DEMONSTRATED A CORRUPT STRAIN IN LIBERALISM

(By David S. Broder)

In his letter of resignation from the Supreme Court, Associate Justice Abe Fortas defended his fee from the Wolfson Family Foundation—whose head, a former law

client, had continued to consult with the Justice on his legal problems with the Government—with these words:

". . . Its program—the improvement of community relations and the promotion of racial and religious cooperation—concerned matters to which I had been devoting much time and attention . . . . Because of the nature of the work, there was no conflict between it and my judicial duties."

Official Washington was shocked by the Fortas case, but it should not have been. It has been a long time coming—more than 30 years—but, tragically, it was in many ways the logical culmination of New Deal liberalism.

Two years ago, John Kenneth Galbraith wrote in his book "The New Industrial State" that "only the innocent reformer and the obtuse conservative" can be unaware of the ways in which "the interests or needs of the industrial system are advanced with subtlety and power. Since they are made to seem coordinate with the purposes of society, Government action serving the needs of the industrial system has a strong aspect of social purpose. And . . . the line between the industrial system and the state becomes increasingly artificial and indistinct."

All the Fortas case really shows is that Galbraith's dictum applies to the Supreme Court as well as to the other branches of the Government. The evolution has been plain.

The New Deal, which brought Fortas and his friend, Lyndon B. Johnson, to Washington, was a merger of two elements, an old-fashioned political liberalism committed to civil liberties and (later) to civil rights and a new economic liberalism based on the use of governmental power to expand and redistribute the national wealth.

The economic program, which was dominant, was originally directed to the relief of the Depression problems of unemployment and poverty. Though many of its pump-priming efforts failed, the New Deal reaped the economic benefits of World War II and liberalism emerged in the postwar period as a sponsor of a variety of public programs—military and civilian, foreign and domestic—that kept the industrial system prosperous.

Like many others of his generation, Abe Fortas made the transition from public servant in that early war on poverty (he was general counsel of the Public Works Administration at 29) to private practitioner handling legal problems for the industries that profited from the Government-induced prosperity.

As Max Frankel of the New York Times said, Fortas pioneered in the pattern of "brokerage between the rich and the mighty, for both noble and profitable causes." He was, for many years, both a skilled advocate for his private clients and a cherished counselor to Lyndon Johnson, who shared his view of the compatibility of liberal politics and private profits.

In their world, there was no sharp line between private and public interests. As a lawyer and as a Justice, Fortas was also a White House insider. And the presidential assistants with whom he worked knew they could join the Fortas firm, or others like it, at handsome salaries when their White House duties were finished.

To those who said the system was suspect, the reply was always that it served the cause of liberalism, of freedom and of social justice. Just as the profits of Fortas' private law practice allowed him to serve as indigents' counsel in landmark civil rights and civil liberties cases, so the profits of the war-inflated, Government-subsidized economy permitted Democratic Presidents from Truman through Johnson to pay for the education and welfare programs they passed.

The operating principle of the liberal program from the New Deal through the Great Society was the purchase of public programs through the guarantee of industrial prosperity. It seemed a perfect marriage—but the blurring of public and private interests at its root was essentially corrupt.

That Fortas' particular involvement was with a businessman indicted and later convicted of stock fraud may be regarded as accidental. But the intimate interweaving of private and public interests symbolized by his dealings with Wolfson is all too typical of the political tradition from which we came.

The New Left campus radicals who are trying to destroy the institutions of liberalism have long contended that liberalism's achievements in the social welfare-civil rights area are simply window-dressing or accidental byproducts of what is essentially a corporate-governmental mechanism for providing profits and protection to the privileged.

By confirming the radicals' view of the system, particularly at this moment, Fortas has compounded a personal tragedy into something of a national calamity.

FARMINGTON—6 MONTHS LATER

(Mr. HECHLER of West Virginia was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, I was honored to attend Memorial Day services in the James Fork United Methodist Church in Farmington, W. Va. for the 78 men who lost their lives in the November 20, 1968, explosion and fire at the Consolidation Coal Co.'s Farmington No. 9 Mine. The impressive interdenominational services were attended by the families of the 78 men, President and Mrs. W. A. Boyle, of the United Mine Workers of America; President John Corcoran, of Consolidation Coal Co., my distinguished colleague who represents Farmington, ROBERT H. "BOB" MOLLOHAN, and Dr. and Mrs. Harvey Wells, of Morgantown, W. Va., who have been instrumental in leading the fight to protect coal miners against pneumoconiosis.

The ministers conducting the services were the host pastor, Rev. John A. Barnes; the Right Reverend Monsignor Joseph Wanstreet, of St. Peter's Roman Catholic Church, Fairmont, W. Va.; Rev. Gene Holt, West Farmington United Methodist Church; and Rev. James M. Kerr, Barrackville, W. Va., United Methodist Church.

I insert in the RECORD the memorial services program, which also lists the names of the 78 men who were honored. I also insert a series of excellent articles on the Farmington No. 9 disaster which appeared in the Panorama Sunday magazine of the May 25 issue of the Morgantown, W. Va., Sunday Dominion Post:

ORDER OF WORSHIP: JAMES FORK UNITED METHODIST CHURCH, MAY 30, 1969, MEMORIAL DAY

Prelude.

Hymn No. 440, "Sing with All the Saints of Glory."

Invocation by Rt. Rev. Monsignor Joseph Wanstreet.

Responsive Reading No. 642, "I will Greatly Rejoice," Leader: Rev. Gene Holt.

Prayer by Rev. John A. Barnes, Pastor.

Scripture Lesson: Selections from Old and New Testaments, Rt. Rev. Monsignor Joseph Wanstreet.

Anthem, "Come Unto Me," by Franz Joseph Handel, by Main Street United Methodist Choir.

Message: "Hope in the Resurrection."

Hymn No. 439, "Christ the Lord Is Risen Today."

Memorial Heading, "A Psalm of Life," by Henry Wadsworth Longfellow. Read by the Rev. James M. Kerr.

Benediction by Rev. Gene Holt.

Postlude.

Pianist, Mrs. Inez Pitzer.

In memory of—Arthur Anderson, Jr., Jack Armstrong, Thomas Ashcraft, Jimmy Barr, Orvil Beam, John Bingamon, Thomas Boggess, Louis Boros, Harold Butt, Lee Carpenter, David Cartwright, William Currence, Dale Davis, Albert DeBerry, George Decker, Howard Deel, James Efaw, Joe Ferls, Virgil Forte.

Wade Foster, Aulda Freeman, Jr., Robert Glover, Forrest Goff, John Gouzd, Charles Hardman, Ebert E. Hartzel, Simon Hays, Paul Henderson, Jr., Roy Henderson, Steve Horvath, Junior Jenkins, James Jones, Pete Kaznoski, Sr., Robert Kerns, Charles E. King, James Kniceley, George R. Kovar, David Malnella, Walter Martin.

Frank Matish, Hartzel Mayle, Dennis McDonald, Emelio Megna, Jack D. Michael, Wayne Minor, Charles Moody, Paul O. Moran, Adron Morris, Joseph Muto, Randall Ray Parsons, Raymond Parsons, Nicholas Petro, Fred Rogers, William Sheme, Robert Sigley, Henry Skarzinski, John Sopuch, Russell Snyder.

Jerry Stoneking, Harry Strait, Albert Takacs, William Takacs, Dewey Tarley, Frank Tate, Jr., Goy Taylor, Hoy Taylor, Edwin Tennant, Homer Tichenor, Dennis Toler, John Toothman, Gorman Trimble, Roscoe Triplett, William T. Walker, James Henry Walter, Lester Willard, Edward Williams, Lloyd Wilson, Jerry Yanero.

[From the Morgantown (W. Va.) Sunday Dominion-Post, May 25, 1969]

FARMINGTON: 6 MONTHS LATER

(By Wendell R. Cochran)

FARMINGTON—Metal studs for aluminum siding protrude from a house in this small mining town. Odds are that the job will never be finished.

The owner of the house and 77 of his fellow miners are "in the mine," as the locals say. "In the mine" here is short for dead, short for "trapped six months in Consol No. 9."

It was last Nov. 20 that Consol No. 9 seared its way into national prominence for the second time in 15 years with a major coal mining disaster.

Since then, many things have happened. The death of the 78 men have focused worldwide attention on mine safety. America poured out her heart to the 78 families, dumping $290,000 worth of money and materials into this town of 900.

"The community is settling back to normal," one teacher in the local high school said here recently.

But is it really?

The mine remains sealed. There is still no way to know how the 78 men died or to determine why the mine suddenly exploded early on that November morning.

The same man who said the community is settling back to normal predicted another outburst of raw emotion when the mine seals are broken and the recovery crews begin work.

As I looked at the Llewellyn portal recently I understood why the families might not be able to soberly witness the recovery operation.

I remembered the weekend after the explo-

sion: the knots of women and miners standing around listening to portable radios wishing for hopeful news, news that would not; could not come.

The scene of a mother jerking with sobs as she greeted her son who was called back from Vietnam still is vivid in the brain.

There are no scenes like that today outside Champion Store. But neither are there many visitors to the store. The store owner described the business as "about half" what it was Nov. 19.

The reason: the miners who worked at Farmington were many more than 78. But most of them lived outside of Farmington and only stopped at Champion Store for groceries or a smoke after work.

"They won't come near here now," the owner lamented. Chances are they won't again until the mine reopens.

And while it might appear that Farmington is returned to normal; the opening of the mine is the chief topic of conversation.

Rumors of the reopening have run rampant, right along with the rumors about the cause of the explosion and the distribution of the relief funds.

"First it was Jan. 15—then Feb. 15. Now it's May 15—Hell, we'll be lucky if it's Aug. 15," a man commented wryly.

On the same lot with the Champion Store is the small mine office, moved there since the explosion. Reopening is the only thought there.

A list of the order in which the miners are to be recalled is posted on the wall.

And the occasional visitors ask:

"How's it look?"

The mine officials say:

"From our samples, it look's real good for going in."

The only question of reopening is when. There are 35 square miles of untouched coal still in Consol No. 9. The company can't quit.

And it appears that many of the men who were working at Consol No. 9 in November will go back as soon as it reopens.

Some may be afraid, but they'll go back because mining is what they do.

But their sons may not. In a town where going into the mines was nearly the accepted way of life, that may be the most significant factor to have come out of the Consol No. 9 explosion.

At any rate, it is clear that Farmington and nearby Mannington have not returned to normal.

True, the press of the world is gone, leaving only a crushed film container and a crumpled strip of exposed movie film in its wake.

There are no more public outbreaks of emotion.

But the changes are under the surface and not so noticeable.

One man described it best:

"You look around for someone to go fishing with, an old fishing buddy. He's not there. He's in the mine."

[From the Morgantown (W. Va.) Sunday Dominion-Post, May 25, 1969]

SEVENTY-EIGHT MINERS MAY NOT HAVE DIED IN VAIN—PERHAPS

(By Ray Martin)

"There can be no question that the health and safety of employes in the coal mining industry must be given first priority"—John Corcoran (Dec. 12, 1968).

When all the coal dust settles and the television cameras turn in another direction as the Cassandras of the typewriter focus on yet another unsolved problem of humanity, the Nov. 20, 1968, disaster at Farmington No. 9 mine at Mannington will go into the annals of history on a par with Ralph Waldo Emerson's verse about the farmers' shot at Concord that was heard around the world.

As mining disasters go, the death toll at the Marion County mine owned by John Corcoran's firm, Consolidation Coal Co., established no records as such—save one: It was the first mine to be the scene of a second disaster. On Nov. 13, 1954, sixteen men lost their lives at what was then the Jamison No. 9 mine.

Explosions of gas and dust in coal mines have caused death and injury to miners and destruction of workings in all countries where coal is mined underground. In the United States the first reported explosion was in 1810; explosions have continued to the present.

The danger to men in a mine when an explosion occurs is not always measured by the violence created or by their nearness to the area through which flame and violence extend. As many, perhaps more, men have died from gases and lack of oxygen (known as "afterdamp") than have been killed by the blast and heat.

Mine explosions often are caused by a combination of factors, including concentration of methane in air, formation of clouds of dust, and the presence of a flame or spark. These explosion factors have varied with changes in mining methods and practices over the years, but the basic causes have always been the same.

Understanding of the causes and acceptance of ways to guard against explosions and their effects have been slow to spread from investigators to officials and then to bosses and miners. To a considerable extent there has been a belief that explosions were a mining risk that might be put off but could be prevented. Such belief is based on the human failure to maintain and observe necessary precautions.

Like the shot heard 'round the world in the 1800s, the disaster at Farmington has set in motion a tidal wave of public indignation that shows little sign of receding. The mere fact that Farmington No. 9, where 78 men remain entombed, is used as a focal point in discussions relative to mine safety and health irks some coal industry officials. As an example, Laurence E. Tierney Jr., chairman of Eastern Coal Corp., rebuked a government speaker at the American Mining Congress coal convention in Pittsburgh earlier this month, in this fashion: "That's in the past," adding that Farmington was "being used to create mass hysteria for political purposes."

A lot of things have happened since that fateful day last November. Things which tend to shatter the long-standing belief that because the miner works below ground and out of sight he and his employer are beyond the bounds of human decency and the reach of laws applicable to society as a whole.

The tragedy at Farmington No. 9, when viewed in the light of the technology required for space and undersea exploration, has spawned a virtual plethora of Diogenes' carrying a multitude of lamps in search of the truth—the truth of how and why miners could be subjected to abuses which no other American worker must endure and who is responsible.

Many of the so-called "instant experts," as the United Mine Workers Journal has labelled them, have succeeded in convincing the bulk of the American populace that the coal miner and his dignity is more valuable than a piece of machinery. This is in stark contrast to the days when coal operators would tell their miners: "Take care of that mule. I can always hire another man, but I have to buy a mule."

The modern day Diogenes' have led Government officials to concede that they have been derelict in their responsibility in enforcing laws and regulations. These concessions have showed a conspiracy with the coal industry which placed greater emphasis on coal production and the development of new uses for coal than concern for the miner who makes it all possible.

One industry group spokesman admitted that while his group had some "enlightened" members its public position had to reflect the lowest common denominator of the membership.

The current penchant for truth has led educators, such as West Virginia University President James G. Harlow, to call for a new look at the roles of mining schools.

Equipment manufacturers admit that their equipment meets the demands of their customers—equipment geared for increased production. An official of one such company said: "We gave them what they were screaming for—production. The producers could have put more impetus on safety, but they didn't, and now they're paying for it."

Such philosophy has led to language such as this appearing in proposed laws now under consideration in the Congress: "The first priority and concern of all in the coal mining industry must be the health and safety of its most precious resource—the miner."

Although coal industry spokesmen like Stephen F. Dunn, president of the National Coal Association, say: "The industry does not believe profits should be put ahead of the health and safety of mine workers," many "instant experts" and friends of coal miners assert that some members of Congress insist on the passage of legislation which puts the dollar sign ahead of the miners' health and safety.

One thing appears certain, however, and that is that before the first anniversary of Farmington No. 9's latest disaster is marked the nation will have improved mine safety and health laws of some kind. The President and a sufficient number of Democrats and Republicans in the Congress have committed themselves to this goal.

In the six months that have intervened since No. 20, 1968, West Virginia witnessed the passage of a so-called "black lung" law, which makes the disease compensable under workmen's compensation laws. The precedent is now spreading to other states.

Although the UMWA is claiming credit for passage of the law at Charleston, the miners themselves filled the halls of the Capitol and the galleries of the House and Senate chambers until passage of the bill was assured. The miners were criticized for leaving their jobs to exercise their rights and once they succeeded individuals and groups which had opposed them began to claim the victory themselves.

The coal miner and his "friends" are not only concerned about deaths in the mines from explosions. They want something done about the deaths and injuries which occur daily in the mines.

In West Virginia during the month of April, 16 workmen died in work-related accidents and there were 3,894 lost-time accidents. Thirteen of the deaths were recorded in the state's coal mining industry and 999 of the lost-time accidents were in the same industry. The state's industrial fatalities left 14 widows and 22 children under 18 years of age.

Concern has been expressed by many that the monthly report to the State Compensation Director (shown here) doesn't reflect an accurate survey of the unsafe conditions of the state's mines. It records only those cases in which compensation awards are made. The critics maintain that many times an injured employe is returned to the payroll within a 24-hour period to avoid payment of compensation, which in the case of a high accident ratio employer prevents increases in insurance premiums.

The following is a list of injuries, by class, reported during the month ended April 30, 1969:

STATE MONTHLY COMPENSATION REPORT

		Regular subscribers		Self-insurers		Total	
		Fatal	Non-fatal	Fatal	Non-fatal	Fatal	Non-fatal
A-1	Coal mining	11	621	1	362	12	983

	Total	15	3,258	1	636	16	3,894
	Grand total						3,910

Note: Number of widows left by these fatalities, 14; number of children, under 18, left by these fatalities, 22.

The six-month anniversary of the Farmington No. 9 disaster has also seen the seeds of revolution within the ranks of the United Mine Workers of America grow. For nearly 40 years no one challenged the leadership of the UMWA. In 1964, Steve (Cadillac) Kochis of Clarksville, Pa., campaigned for the UMWA presidency against W. A. (Tony) Boyle and lost.

As of the present time three rank and file miners are seeking the UMWA presidency. In addition to Kochis, two Morgantown miners are presidential aspirants. They are Elijah Wolford and Basil A. Callen.

Many miners have expressed dissatisfaction with the alleged lack of aggressiveness of the UMWA in the field of safety and health and a shortage of democracy within the union. The UMWA Welfare and Retirement Fund has also come under fire from within the union ranks and as well as externally. There is growing support for a Congressional investigation of the UMWA and its Welfare Fund.

The UMWA has been finding trouble on other fronts, too. Several courts have said the union conspired with large coal companies to drive small non-union coal companies out of business.

As the tidal wave of public indignation rolls onward, many observers hope that the dingy sign at the West Virginia border which reads: "Welcome to West Virginia, the Switzerland of North America!" will begin to have true meaning. An English journalist, seeing one of the signs, declared that it should be changed to read: "Welcome to West Virginia, the Albania of North America!"

Coal mining and its attributes of the past contributed to the Englishmen's observation. Farmington No. 9's disaster has afforded the state and the nation a golden opportunity to break with an oppressive past and join a progressive future—a future that will advance Appalachia in many respects and allow it to become an equal partner with the other states of the nation.

If this comes to pass the 78 miners who died at Farmington will not have died in vain.

[From the Farmington (W. Va.) Dominion-Post, May 25, 1969]

FARMINGTON NO. 9 AND NOW

(By George A. Crago)

The explosion and mine fire at Farmington No. 9 mine of Mountaineer Coal Co. last Nov. 20, in addition to the tragic loss of life, dealt the community a crippling blow and disrupted the economy of the area.

The mine disaster produced a chain of events which, in some respects, have not changed to any great extent six months later.

Federal and state mine inspectors check the "seals" each week, and Mountaineer Coal keeps an eye on them on a day-to-day basis.

When it was decided on Nov. 29 to seal the mine, it marked the beginning of a long vigil, making sure that the seals were not disturbed by human effort or by natural elements.

Atmospheric pressure has its effect on the coverings over the shafts and portals. In layman's language, the outside pressure and the pressure below the seals can change enough to disturb the seals, so that they must be watched and maintained constantly.

It is the effectiveness of the seals which determines how long the mine must remain closed. Recently, Leslie C. Ryan, state inspector-at-large for the northcentral section of West Virginia, reported that methane in the mine was up to about 90 per cent, well above the explosive point, and that the carbon monoxide content of the mine was "leveling off."

Mr. Ryan said that progress was being made toward the point where atmospheric conditions inside the mine would make an entry into the mine possible.

He hastened to add, however, that no one had discussed the reopening of the mine, and before that can be done, there will have to be complete accord of all parties concerned that it is safe to break the seal on a portal preparatory to entering the mine.

Federal and state inspectors and representatives of Mountaineer Coal and the United Mine Workers of America must agree on reopening the mine, just as they agreed last fall that it was not possible to extinguish the fire short of sealing the mine.

There have been indications that even after all parties are agreed on the feasibility of reopening No. 9 mine that the company will want additional time to make doubly sure that nothing will go awry.

There was the possibility, although not confirmed, that mules and horses might be used in the early stage of re-entry for hauling materials inside the mine, rather than using electrical equipment.

Mr. Ryan had pointed out that there were two possible methods of entering the mine. Using what he described as an air-lock method, workmen would pump air into a restricted section of the mine to determine that there was no evidence of smouldering debris. As each section was cleared, the barriers would be set back and another section would be inspected.

The alternative would be to start up the huge ventilating fans and send fresh air through the mine to dilute the gas and restore normal air conditions in the mine.

No determination has been made on the method to be used, the state mine inspector said.

The No. 9 mine produced 2,198,000 tons of coal in 1967, to put it in the category of the major mines.

According to Keystone Coal Buyers' Manual the mine's equipment at that time included six RT mining machines, 15 mobile loading machines, 12 rock dusting units, 10 roof bolting machines, 14 pumps, eight continuous miners, 19 mine locomotives, 224 mine cars and 21 shuttle cars, along with compressors and other equipment.

Paul Stanek, personnel director for Mountaineer Coal, said recently that there were about 300 men idled by the explosion and fire, and that all of the men now are employed or have been offered jobs in one of the company's mines. Mountaineer Coal is a division of Consolidated Coal Co.

Although not directly related to the Farmington mine disaster, the drive for "black lung" legislation gained public support from persons who had become aware of the hazards of coal mining. "Black lung" legislation was intended to provide greater benefits for miners afflicted with pneumoconiosis.

Mines throughout the state were closed as miners walked off the job in support of the black lung effort. Miners returned to the pits in this county March 9 and 10. Governor Arch A. Moore Jr. signed the pneumoconiosis measure March 11. It was hailed variously as a fair, good, or insufficient measure according to the point of view of the individual.

A related action was the designation of a special study group by W. A. (Tony) Boyle, president of the United Mine Workers, to study dust conditions in the mines of this union district.

Latest reports indicated that the union had not been successful in getting the support of the companies for this study. Company spokesmen were said to have withheld their approval until a number of administrative and operational details were worked out.

The special dust survey group included John Darcus, Carroll Rogers, Burdette Crowe, Harold Tracy and Ronald Meadows.

Still unresolved was another important matter, the distribution of the funds that have been contributed by persons and organizations from all parts of the country,

including special efforts by newspapers and television stations.

The Marion County Disaster Fund, with $90,776.68 reported in its bank account at the first of the month, and the Citizens Mine Disaster Committee with $200,003.09 on hand, resorted to a "friendly suit" in Marion County Circuit Court in an effort to determine a fair and equitable manner of distributing the money to the survivors of the 78 men who lost their lives in the No. 9 mine disaster.

The bill of particulars listed 223 persons, the wives, children and next of the kin of the men.

L. Clyde Riley, secretary-treasurer of UMWA District 31, sought the court's assistance in behalf of the Marion County Mine Disaster Fund, while Dominick J. Romine, an attorney, filed the suit on behalf of the Citizens Mine Disaster Committee.

It was reported earlier that the cases might be combined when they were considered by Circuit Court Judge J. Harper Meredith, but this action has not been verified.

The committee, in its suit, suggested two plans for distributing the money.

According to one plan, half of the money would be given on a per capita basis to the widows, or if there were no widow, to the infant children. The other half would go to the children on a per capita basis.

The second plan suggested that one-half of the money go to the widows, as in the first plan, with the remaining half to the widows and children alike. This plan would permit the widows to participate to a greater extent than under the first proposal.

While the problems relating to Farmington No. 9 remained unresolved, coal continues to pour from the other mines of Mountaineer Coal, whose president, David H. Davis, has disclosed that Robinson Run mine now is producing 7,000 tons of coal daily, and by the end of the year should reach 8,500 tons daily with employment increased to 350 men.

The company anticipates production of 10,000 tons of coal per day by 1970, and 14,000 by 1973, with a payroll of 450 workers.

Looking ahead to 1974, the goal is 15,000 tons daily, with a work force of nearly 500 men. This mine will supply coal to the new Monongahela Power Co.'s Haywood plant near Shinnston, using a four-mile-long conveyor belt, longest in Northern West Virginia.

Williams Mine eventually will be joined to Robinson Run to produce an even larger operation.

HUMOR IN SCHOOL CRISIS

(Mrs. GREEN of Oregon was granted permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. GREEN of Oregon. Mr. Speaker, throughout history, times of great crisis have produced some of our great humor. There is no question but that our schools are in a state of great crisis at the present. Newspapers daily carry the story of the latest strife to a depressing degree. I might be discouraged from reading the papers if it were not for the efforts of some of our excellent satirists who have applied their pens lightly to this subject. Their humorous insights into the turmoil surrounding us have contributed greatly to our understanding of the problems facing higher education.

Satire is the highest form of humor. It releases tension and allows problems to be placed in proper perspective. Its prick punctures self-righteousness and self-importance. Its edge cuts through to the core of our social problems. I believe solution of the problems confronting our campuses would be much more easily arrived at if the parties involved were able to look at themselves through the eyes of the satirist.

So that others may enjoy some of the excellent humor produced on the problem of campus unrest, I insert in the RECORD at this point several representative articles:

[From the New York Times, Mar. 25, 1969]

OBSERVER: INTERPRETATIONS ON A TUFFET

(By Russell Baker)

WASHINGTON, Mar. 24.—Little Miss Muffet, as everyone knows, sat on a tuffet eating her curds and whey when along came a spider who sat down beside her and frightened Miss Muffet away. While everyone knows it, the significance of the event had never been analyzed until a conference of thinkers recently brought their special insights to bear upon it. Following are excerpts from the transcript of their discussion:

Sociologist: We are clearly dealing with a prototypical illustration of a highly tensile social structure's tendency to dis- or perhaps even de-structure itself under the pressures created when optimum minimums do not obtain among the disadvantaged. Miss Muffet is nutritionally underprivileged, as evidenced by the subminimal diet of curds and whey upon which she is forced to subsist, while the spider's cultural disadvantage is evidenced by such phenomena as legs exceeding standard norms, odd mating habits and so forth.

COMMUNICATIONS FAILURE

In this instance, spider expectations lead the culturally disadvantaged to assert demands to share the tuffet with the nutritionally underprivileged. Due to a communications failure, Miss Muffet assumes without evidence that the spider will not be satisfied to share her tuffet, but will also insist on eating her curds and whey. Thus, the failure to pre-establish selectively optimum norm structures leads to . . .

TUFFET SECURITY

Militarist: Second-strike capability, sir! That's what was lacking. If Miss Muffet had developed a second-strike capability instead of squandering her resources on curds and whey, no spider on earth would have dared launch a first strike capable of carrying him right to the heart of her tuffet. I am confident that Miss Muffet had adequate notice from experts that she could not afford both curds and whey and at the same time support an early-spider-warning system. Yet curds alone were not good enough for Miss Muffet. She had to have whey, too. Tuffet security must be the first responsibility of every diner. . . .

Book Reviewer: Written on several levels, this searing sensitive exploration of the arachnid heart illuminates the agony and splendor of Jewish family life with a candor that is at once breath-taking in its simplicity and soul-shattering in its implied ambiguity. Some will doubtless be shocked to see such subjects as tuffets and whey discussed without flinching, but hereafter writers too timid to call a tuffet a tuffet will no longer. . . . .

Editorial Writer: Why has the Government not seen fit to tell the public all it knows about the so-called curds-and-whey affairs? It is not enough to suggest that this was merely a random incident involving a lonely spider and a young diner. In today's world, poised as it is on the knife edge of. . . .

WHEY-OUT FANTASY

Psychiatrist: Little Miss Muffet is, of course, neither little, nor a miss. These are obviously the self she has created in her own fantasies to escape the reality that she is a gross divorcee whose superego makes it impossible for her to sustain a normal relationship with any man, symbolized by the spider, who, of course, has no existence outside her fantasies. She may, in fact, be a man with deeply repressed Oedipal impulses who sees in the spider the father he would like to kill, and very well may some day unless he admits that what he believes to be a tuffet is, in fact, probably the dining room chandelier and that the whey he thinks he is eating, in fact, probably. . . . .

Flower Girl: This beautiful kid is on a bad trip. Like. . . .

MEANINGFUL EXPERIENCE

Student-Demonstrators: Little Miss Muffet, tuffets, curds, whey and spiders are what's wrong with education today. They are irrelevant. Tuffets are irrelevant. Curds are irrelevant. Whey is irrelevant. Meaningful experience! How can you have relevance without meaningful experience? And how can there ever be meaningful experience without understanding? With understanding and meaningfulness and relevance, there can be love and good and deep seriousness and education today will be freed of slavery and Little Miss Muffet, and life will become meaningful.

Child: This is about a little girl who gets scared by a spider.

(The child was sent home when the conference broke for lunch. It was agreed that the child was too immature to add anything to the sum of human understanding and should not come back until he had grown up.)

[From the Washington (D.C.) Evening Star]

STUDENT MILITANTS PLOT IN COMFORT

(By Paul Hope)

The weekly meeting of the SBDFPR (Students for Beating the Draft and Fomenting Peaceful Revolution) was in progress in Ivy Hall.

The SBDFPR used to meet in a dirty basement of a rundown building off the campus but after the last confrontation, the university president said he didn't see why they shouldn't set up shop right on the premises. For one thing, it would be closer to whichever university building they might want to take over next. And it also was convenient to the chemistry labs, which would make it handier to get materials for some of their peaceful pursuits.

The president wasn't aways so accommodating. There even was a time when he threatened to have the whole bunch arrested. But, as he said, there was nothing he had ever said or will say that couldn't be modified by circumstances. And, as they say, things change so fast in this modern age.

The university even has taken to having dinner brought in for the weekly meeting of the peaceful revolutionaries. At the last one, the students demanded a pre-dinner martini.

At this particular meeting, one of the leaders called Jerry was talking about the ROTC and another called Mark was instructing in the ways of the peaceful protest.

"Man, we've got to do something about that ROTC. They're out there teaching those guys to carry guns," said Jerry.

"Yeah, that's right," said Mark. "Say, Jerry, would you give me a hand with this fulminate of mercury I just had sent over from the chemistry building."

Turning to the assembled students, who were sitting cross-legged on the floor (the university had offered overstuffed chairs but they liked sitting on the floor), Mark said: "We're going to make some blasting caps tonight. I've told you how much to measure of each ingredient. Now, first mix the alcohol and the acid. Then pour on the mercury. Now put the powder you have left in the empty catridge cases and, there, you have a dandy blasting cap."

The ROTC cadets marched by outside, their guns clattering.

"It's absolutely immoral, the way they teach those guys to shoot and kill," said Jerry.

"Stoke, for God's sake, will you keep your beard out of the gun powder when you're smoking. You're apt to blow us all up," Mark remonstrated with one of the newer SBDFPR members.

"The way I see it," said Jerry, "any peace-loving students like us have a right to be free of any military influence like the ROTC. They even make them take a bath every day."

"Okay, men," said Mark, "now we're going to talk about incendiary time bombs. You should all have a copy of the New Left Notes we put out in February. If you don't, get a copy of the April 28 Congressional Record; Rep. Cederberg put in the text we passed out at a high school basketball game in Denver; it's on page H3164. Turn to the part on potassium chlorate.

"It would not be advisable to carry potassium chlorate around but we will show you how to make it by using other chemicals which would not be of a suspicious nature and are readily available. You need an automobile battery, either 6 or 12 volts will do, two carbon rods from dry cell batteries, a set of battery cables and clamps, one non-metal pot, one pound of table salt and one pound of potassium chloride. You fill the pot with water and . . ."

"The last time I went home," interjected Jerry, "my old man said I ought to join the ROTC and I told him, 'No, sir, I'm a peaceful man.' I said the only time I'd use a gun is to take over a college or shut down a plant or evict the draft board and things like that. Say, Mark, do you put the fuse in before or after you put the oil and gas in the bottle for this Molotov cocktail?"

Eldridge, another young leader, got to his feet. "I think it's about time for the discussion on instructing fellow students in how to beat the draft," he said.

Just then the university president knocked.

"Could I interrupt you new patriots for a moment," he said. "I have your after-dinner smoke . . . marijuana, just as you ordered. If you like, you may retire to the library for that."

[From the New York Times, Feb. 18, 1969]

OBSERVER: BOOM, BOOM, BOOM GOES THE CAMPUS

(By Russell Baker)

WASHINGTON, February 17.—With the controversial dynamiting of Oaksapp University's historic old Slingborn Hall by student militants, the crisis of the American campus took a fresh turn last week.

Progressives in the field of higher education had long regarded Oaksapp as a model institution. Curriculum had been abandoned five years ago following protests in which President Dixby Dross was hanged from the historic old Oaksapp oak on the quadrangle, once the traditional site of campus football victory celebrations.

At the same time, Oaksapp instituted a system of student autonomy, gave undergraduates the right to unlimited chapel cuts and granted amnesty to the leaders of S.E.S. (Students for an Exterminated Society) who had led the demonstrations.

RELEVANT CAMPUS

A recent report by the American Association of University Students, an organization established by the National Congress of Campus Activities in 1967 to police the nation's universities, commended Oaksapp for its "relevance to today's world."

In doing so, it pointed to the installation of billiard tables in every dormitory, the licensing of liquor sales in the gymnasium and the decision to divide the school year into two six-week semesters.

Why then, alarmed educators have asked, were the students moved to dynamite historic old Slingborn Hall? The answer seems to be that Oaksapp, for all its "progressive" adaptation to student needs, has failed to recognize that there is a new mood on the American campus today.

SURLY NEW MOOD

The spokesman for the new mood is the radial SURL (Student Union for Retirement Learning), which was formed last summer at a secret conference held at the Saginaw Blues Festival. The so-called Saginaw Manifesto declares that American universities have willfully and callously disregarded their obligation to prepare the concerned students of this country for retirement."

Hod Cassowary, the 43-year-old chairman of Oaksapp's SURL chapter, put it succinctly the morning after the dynamiting. "Students are tired of devoting 25 years of their lives to universities and then being turned out without so much as a gold watch," Cassowary said.

In meetings with student administrators before the explosion, Cassowary found the president and the trustees, whose average age is 19, "out of it." "I've been on this campus long enough to have earned seven master's degrees and four Ph.D.'s if we hadn't done away with curriculums," Cassowary declared, "and yet my needs are blithely ignored by a power structure of pipsqueaks. 'What are you complaining about?' they asked me. 'We let you have women in the dormitory any time you want.' "

It is now agreed that President Burke, who is twenty years old, alienated many of Oaksapp's more decrepit students when he lightly dismissed Cassowary's demands with a quip. "Old Hod's just hod under the collar," he told the press. His prestige was further damaged when SURL seized his office, rifled his mail and discovered that he had been in correspondence with the Y.M.C.A., the 4–H clubs and other youth-oriented arms of the power elite.

To many persons, SURL's demands seem purposely devised to outrage the universities. Its central demand is for a program under which every student would be able to retire, leave college and live on a full pension at the age of 45. Progressive educators argue that there is justice in this demand.

If the universities are not going to prepare the individual to survive in an extra-campus environment, they believe, it is only fair for the universities to provide their own guarantees of post-college security. The university student today, it is argued, becomes perforce a disadvantaged member of society because of a system which denies him an education.

COURSES FOR SUPERANNUATES

SURL also demands that Oaksapp establish a special department of retirement studies with courses in shuffleboard, European touring and checkers. This, of course, would violate the theory of unstructured curriculum.

Finally, Cassowary has demanded that Oaksapp be relocated in Jamaica or a similar environment "more relevant to the needs of retirement education." President Burke is open minded about this proposal. "If there are a few more dynamitings," he says, "we'll have to rebuild somewhere."

[From the Washington (D.C.) Post Apr. 24, 1969]

PROFESSOR'S STAND IS FIRM—BUT BRIEF

(By Art Buchwald)

One of the things that impresses people about the student demonstrations is the strong stand that some members of the faculty are taking on the issues.

I was on the campus of Northamnesty University and ran into a professor who was trying to stop his nose from bleeding. His clothes were torn up and he was walking with a pronounced limp.

"What happened, professor?" I asked, as I helped him search for his glasses.

"The militant students just took over my office and threw me down the stairs."

"Why, that's terrible," I said.

"From *my* point of view it is, but I think we have to look at it from *their* point of view. Why did they throw me down the stairs? Where have we as faculty failed them?"

"Are you going to press charges?"

"On the contrary. If I pressed charges, I would only be playing into the hands of the repressive forces outside the University who would like nothing better than to see the students arrested for assault."

"But they did assault you?"

"Yes. I have to admit I was surprised about that. But there was one heartening note. As they threw me down the stairs, one of my students yelled, 'It isn't you, professor. It's the system.' "

"That must have made you feel better."

"As I was tumbling down, the thought did occur to me that at least there was nothing personal in it."

"Say, Professor, isn't that the Philosophy Building going up in flames?"

"I believe it is. Now, why did they have to go and set fire to the Philosophy Building?"

"I was going to ask you that."

"I'm not quite sure, because I haven't seen any of the students since they threw me down the stairs. My guess is that it probably has to do with something the administration and the students are at odds about."

"But that's a terrible thing to do."

"I don't think we should make judgments until all facts are in. I would say burning down a philosophy building could be interpreted as an unlawful act. At the same time, there are moments when an unlawful act can bring about just reforms."

"But the books, the records, the papers are all going up in smoke. Shouldn't we at least call the fire department?"

"I don't believe the fire department should be called until the faculty has met and voted on what course of action should be taken. There are times when a fire department can only inflame a situation. We should also hear from the students who started the fire and get their side of it. After all, they have as much stake in the University as anyone else, and if they don't want a philosophy building, we should at least listen to their arguments."

"I never thought of it that way," I admitted. "Professor, I know you can't see very well without your glasses, but I believe the militant students over at the quadrangle are building a scaffold. They wouldn't hang anyone, would they?"

"They haven't before," the professor said. "But it's quite possible that this is their way of seeking a confrontation with the establishment."

As we were talking, a group of students rushed up and grabbed the professor. "We got one here," the ringleader shouted. "Get the rope."

"Don't worry, Professor," I shouted as I was pushed away by the mob. "I'll get the police."

"I wish you wouldn't," he said calmly as the students led him toward the scaffold. "If we don't let the students try new methods of activism, they'll never know for themselves which ones work and which ones are counterproductive."

[From the Washington (D.C.) Post, Feb. 18, 1969]

KEY DEMAND ON U.S. CAMPUSES: THE RIGHT TO BE INCOMPETENT

(By Art Buchwald)

As student demonstrations on campuses continue, the demands of the militants keep escalating. Some of the demands are reasonable, but others have built-in mouse-traps. A few that I question have to do with student demands that universities take in people whether they're qualified or not; that all students who have flunked out be allowed to return to school, and that professors abol-

ish the system of grading students for their courses.

I believe that in the liberal arts departments you might not have to be too concerned about high standards—you've seen one economics professor, you've seen them all—but it's in the sciences and professions that you can get a little tensed up.

If our future doctors, lawyers, engineers and scientists no longer have to face stiff qualifying examinations, or if the schools refuse to grade them on their abilities, some very weird situations might arise.

A patient goes into a doctor's office.

"What seems to be the trouble?" the doctor asks.

"I have a pain in my side, doctor."

"I don't know anything about pains in the side."

"I thought you were a medical doctor. At least that diploma says so."

"Are you some kind of a racist?"

"No, I'm a patient."

"Well, it so happens I am a medical doctor. I just didn't do very well in anatomy. Never cared much for it. As a matter of fact, we locked up the dean of the medical school until he agreed to drop anatomy as a required course. We got him to do away with biology also."

"But if you didn't like anatomy or biology, why did you become an M.D.?"

"A man has to be something."

Meanwhile, across town a man was being tried for first degree murder and his lawyer and he were listening to the prosecutor.

"I want you, ladies and gentlemen, to send this man to the chair."

The defendant turns to his lawyer and asks, "Can he do that to me?"

The lawyer shrugs. "Beats hell out of me."

"But you are my lawyer. Don't you know what the law says?"

"I never told anyone this before, but I never really cared much for law. Matter of fact, all during school I had this girl and she had an apartment and . . ."

"Look, I don't care about your girl. My life is at stake. If I lose, will you at least make an appeal?"

"What's an appeal? You start studying about all this legal mumbo jumbo in college and you won't have any social life at all."

"But the law says . . ." the defendant cried.

"What does the law say? And don't go too fast because I want to write all this down. I never did take notes in school."

The third scene could take place 20 years from now at the new Mayor John V. Lindsay Bridge connecting Long Island with Connecticut.

The engineer is standing on the platform with the dignitaries.

"Well, Mr. Doubleday, you built a mighty fine bridge."

"That's my job."

"It seems to be sagging at one end. Is that the way it's supposed to be?"

"I'll build the bridges—you cut the ribbon."

"Look, there goes the first truck over the bridge—it's falling. Doubleday, the entire bridge is falling!"

"Sorry about that, I never could figure out how to use a slide rule."

CHARITY AND THE PRIVATE SECTOR

(Mr. FULTON of Tennessee was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FULTON of Tennessee. Mr. Speaker, it is encouraging and gratifying when the private sector of our Nation utilizes its talents and abilities to assist and promote worthy charitable causes.

Such is the case with one of our major motion picture industries, Universal Pictures, and its outstanding film production of the hit Broadway musical, "Sweet Charity."

On June 7, 1969, there will be a premiere of this motion picture in my congressional district, Metropolitan Nashville-Davidson County. The beneficiary of this premiere will be the Nashville Memorial Hospital.

From 1959 to 1962, a group of dedicated individuals began their work which culminated in the construction in June of 1965, of a new hospital to serve the East Nashville and metropolitan area of Davidson County. It is a full service, nonprofit, community hospital of 211 beds, effectively meeting the medical needs of a major section of my congressional district.

The Women's Hospital Auxiliary of Nashville Memorial Hospital has a unique history. It was formed in 1962, long before construction even began on the new hospital. These ladies dedicated themselves to fundraising efforts and, in addition to funds raised during their campaign, the more than 200 volunteers have made personal gifts of over $30,000 to the hospital. Their many hours of volunteer work at the hospital have saved thousands of dollars, helping to keep hospital costs as low as possible.

Universal Pictures is to be commended for their willingness to utilize their production of "Sweet Charity" to such a worthy cause. It is my understanding that "Sweet Charity" has premiered in a number of cities across the Nation for equally worthy charitable organizations.

It should also be pointed out that Scholastic magazine has awarded the production of "Sweet Charity" its coveted "Bell Ringer Award." This award is presented to films of unusual merit which are eminently suitable for secondary school students.

The charity premieres of "Sweet Charity" is an outstanding example of how our motion picture industry is contributing so notably to the good of the community at large and to the cultural heritage of our Nation.

THE 23D ANNIVERSARY OF THE ITALIAN REPUBLIC

(Mr. ANNUNZIO was granted permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, today, June 2, marks a stirring event in the rich history of Italy, for on this day, in 1946, the great Italian people gave a resounding vote of confidence for parliamentary democracy as the form of government best suited to lead Italy on the road to recovery and peace.

In the ensuing 23 years, this democratic government has brought the Italians out of war and devastation into a new era of individual freedom, national integrity, economic stability, peace, and prosperity.

June 2, 1946, was, indeed a new beginning. The remarkable achievements of the Italian Republic in the past 23 years have amply shown that the Italians made the right choice.

Italy has succeeded not only in rebuilding its economy, but in rendering it extremely competitive in world markets as well. Fiat is one of Europe's largest automobile manufacturers and the Italian electric appliance industry has outpaced all its European rivals. In fact, last year Montgomery Ward bought 100,000 Italian—Ignis—refrigerators and freezers for distribution in America. Of 3,200,000 refrigerators made in Italy in 1967, 2,100,000 were exported. The Italians have captured 28 percent of the French market and 17 percent of the German market. Last year, the Italians manufactured 2,200,000 washing machines and exported over a million of them. This year, Italian manufacturers are moving into the television, dishwasher, and other appliance markets.

Italian textiles and leather goods are exported to markets around the globe. Rome and Florence rival Paris in the world of fashion. Today, Italy is one of the most outstanding and active members of the Common Market, and her gross national product is expected to rise again this year about 5 percent, as it did last year.

Mr. Speaker, Italy, through the centuries, has maintained an advanced civilization and has served as the font of Western culture. History has singled out the achievements and contributions of the Roman Empire, the Italian Renaissance, and the Risorgimento. Today, the Republic of Italy continues in this noble tradition, and its recent contributions in literature, music, the arts and sciences have achieved worldwide relevance, acceptance, and acclaim.

There are special bonds of affection between Americans and the people of Italy, for today there are in the United States over 25 million Americans of Italian descent.

I am particularly gratified this year over the tremendous recognition accorded to the Italians by the Congress of the United States. Last year, the Congress passed and the President signed into law on June 28, 1968, the Monday holiday bill. Beginning in 1971, Columbus Day will be celebrated throughout our land as a national legal holiday on the second Monday in October of every year.

We must fully realize the importance of this official recognition which we can now extend to Christopher Columbus. In America we celebrate as legal holidays Memorial Day, Veterans Day, Thanksgiving Day, and others, but these holidays mark an important event in the history of our country and do not honor an individual. The only person whom we have honored with a national legal holiday is the Father of our Country—George Washington. And now, the second person whom we in America will honor is the father of all immigrants—Christopher Columbus.

On September 8, 1966, the House of Representatives passed legislation to provide for procurement of a marble bust of Constantino Brumidi, the great Italian artist who has come to be known as the "Michelangelo of the Capitol" because he labored for more than 25 years to beautify the Capitol of the United States with his stirring murals, his colorful paintings, his bold and mov-

ing frescoes, and the exquisite bronze stairways which he designed. Evidence of Brumidi's artistic genius can be found everywhere in the Capitol Building which owes its interior beauty to him more than to any other man.

On April 30, 1968, the bust of Constantino Brumidi, which was executed in imported Italian marble by sculptress Jimilu Mason, was dedicated in impressive ceremonies in the Rotunda of the U.S. Capitol. His Excellency, Hon. Egidio Ortona, the Italian Ambassador to the United States, was present and participated in these dedication ceremonies.

Brumidi's bust has now been placed in the Senate wing of the Capitol, and it is there for all to see. This is indeed appropriate recognition for the great Italian artist who once said:

My one ambition and daily prayer is that I may live long enough to make beautiful the Capitol of the one country on earth in which there is liberty.

On April 25, 1969, the Chairman of the Atomic Energy Commission, Dr. Glenn T. Seaborg, informed me of the AEC decision to name the nuclear accelerator at Weston, Ill., in honor of the late Dr. Enrico Fermi.

The accelerator is now under construction, and formal dedication and naming of the Enrico Fermi Laboratory will not take place until major construction work has been completed and the facility is in operation, probably in the fall of 1972. The accelerator will have an energy of 200 billion electron volts—Bev—greater than now available at any accelerator.

Dr. Fermi was an Italian immigrant who came to the United States shortly before he won the Nobel prize in physics. He is regarded as one of the greatest physicists of our time and has come to be known as the Architect of the Atomic Age because his experiments in Illinois led in 1942 to the first self-sustaining nuclear chain reaction ever to take place.

I am delighted over the Atomic Energy Commission's decision to name the Weston accelerator in honor of Dr. Enrico Fermi, for this will be the first Federal nuclear facility in the United States to be named in honor of the eminent Italian physicist who is indeed highly deserving of this recognition.

The outstanding recognization given by the Congress of the United States to the accomplishments that Italians are making not only to America, but to the world, enhances the genuine feeling of friendship that the people of America have for the people of Italy.

I join my colleagues in the Congress in hoping that this friendship shall continue to flourish and that Italy and the United States shall continue to work together to bring peace to the peoples of the world.

I extend my best wishes to the people of the Italian Republic, as well as to the Italian-Americans in my own Seventh Congressional District of Illinois, and throughout our country, who are joining in the celebration of this happy occasion. May the Republic of Italy continue to experience peace and prosperity in the years ahead.

Mr. Speaker, I am happy to insert at this point in the CONGRESSIONAL RECORD an editorial which appeared in the Chicago Sun-Times today. I take this opportunity to commend and congratulate the editorial staff of the Chicago Sun-Times for this outstanding editorial and for their genuine interest in promoting a lasting and meaningful friendship between the people of Italy and the people of the United States. The editorial follows:

PROUD DAY FOR ITALY

This is a proud day for Italy and for all of Chicago's Italian-Americans. It is the 23d anniversary of the founding of the Italian Republic.

The end of World War II left Italy in a shambles. There was immense war damage, hunger and misery. But the Italians, a proud and hardy people, were determined to build a future.

Their first and proudest structure was a new government. In April, 1945, the first representative body was given the job of putting together the regulations for the election of a Constituent Assembly. On June 2, 1946, the Italian voters cast their votes for a republic.

Italy's recovery from World War II, its welcome into the Atlantic Alliance by the nations it had fought against, its entry into the United Nations in 1955, are benchmarks of its comeback from the immense damage done by the war. We salute our friends of Italian extraction in Chicago and the people of Italy on this anniversary.

REQUEST TO BUILD AN ABM SHOULD BE DENIED

(Mrs. MINK was granted permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. MINK. Mr. Speaker, one of the most critical issues pending before the Congress is the President's request that we continue building an ABM system.

The legislature of Hawaii has adopted a resolution petitioning the President and the Congress to reverse the decision to deploy an ABM system and specifically to reverse any plans to locate such a system in the State of Hawaii.

The legislature observes:

The orderly development of the State of Hawaii lies in its potential to create and expand understanding and trade among diverse cultures and peoples rather than its being an armed outpost of American power.

I agree that the request to build an ABM should be denied. Because of its significance, I submit this resolution at this point in the RECORD.

SENATE CONCURRENT RESOLUTION 16

Concurrent resolution petitioning the President and the Congress of the United States to reconsider the deployment of anti-ballistic missiles and the location of an anti-ballistic-missile system in the State of Hawaii

Whereas, the United States is devoted to furthering world peace, and to decreasing the tensions of the world's arms race, and to preventing nuclear weapons proliferation; and

Whereas, eminent nuclear physicists, including Nobel prize winners, science advisers to Presidents Eisenhower, Kennedy and Johnson, and scientists who have been active in developing the Nation's weapons systems, as well as personnel of the Department of Defense have stated that no anti-ballistic missile system can adequately protect a country from sophisticated nuclear attack and that the present United States superiority is a deterent to both sophisticated and simple offensive nuclear threats; and

Whereas, hunger and disease are as great a danger to peace and internal security as hostile arms, and huge military expenditures for quickly obsolete weapons systems prevent the use of funds to alleviate poverty, thereby increasing world insecurity; and

Whereas, the orderly development of the State of Hawaii lies in its potential to create and expand understanding and trade among diverse cultures and peoples rather than its being an armed outpost of American power; now, therefore,

Be it resolved by the Senate of the Fifth Legislature of the State of Hawaii, Regular Session of 1969, the House of Representatives concurring, that the President and the Congress of the United States be, and they are, respectfully petitioned to reverse the decision to deploy an anti-ballistic missile system and to locate a part of the system in the State of Hawaii; and

Be it further resolved that the President and the Congress of the United States be, and they are, respectfully requested to explore actively all possibilities which would lead to reduction of both offensive and defensive nuclear missile systems among nations, a nuclear non-proliferation treaty and gradual multilateral disarmament, and expanded non-military efforts to alleviate poverty and hunger at home and abroad; and

Be it further resolved that duly certified copies of this Concurrent Resolution be transmitted to the President of the United States, the President of the United States Senate Pro Tempore, the Speaker of the United States House of Representatives, the Secretary of the United States Department of Defense, Senator Hiram L. Fong, Senator Daniel K. Inouye, Representative Spark M. Matsunaga, and Representative Patsy T. Mink.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. PREYER of North Carolina (at the request of Mr. ALBERT), for today, June 2, 1969, on account of official business.

Mr. MCKNEALLY (at the request of Mr. GERALD R. FORD), for today, on account of official business.

Mr. MORSE (at the request of Mr. GERALD R. FORD), for the week of June 2, on account of official business.

Mr. PRICE of Texas (at the request of Mr. GERALD R. FORD), for today and the balance of the week, on account of official business.

Mr. NICHOLS (at the request of Mr. BEVILL), for today, on account of official business in his district.

Mr. LENNON (at the request of Mr. BOGGS), for an indefinite period, on account of illness.

Mr. ADDABBO (at the request of Mr. ANNUNZIO), for Monday, June 2, 1969, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. GONZALEZ, for 10 minutes, today; to revise and extend his remarks and include extraneous matter.

Mr. PUCINSKI, for 60 minutes, today; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. FLOWERS), to revise and extend their remarks and include extraneous material:)

Mr. FLOOD, for 15 minutes, today.
Mr. RODINO, for 10 minutes, today.
Mr. ROONEY of Pennsylvania, for 15 minutes, today.
Mr. RARICK, for 30 minutes, today.
Mr. COHELAN, for 10 minutes, today.
Mr. LOWENSTEIN, for 60 minutes, on June 4.
Mr. HALPERN (at the request of Mr. HASTINGS), for 5 minutes, today; to revise and extend his remarks and include extraneous matter.
Mr. WYLIE (at the request of Mr. HASTINGS), for 30 minutes, on June 4; to revise and extend his remarks and include extraneous matter.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:
Mr. DANIELS of New Jersey during consideration of the bill H.R. 763.
Mr. PERKINS (at the request of Mr. DANIELS of New Jersey) immediately preceding the remarks of Mr. DANIELS of New Jersey on the bill H.R. 763.
Mr. THOMPSON of New Jersey during consideration of the bill H.R. 2667 today, and to include extraneous material.
(The following Members (at the request of Mr. HASTINGS) and to include extraneous matter:)
Mr. HASTINGS.
Mr. ERLENBORN.
Mr. QUILLEN in four instances.
Mr. TEAGUE of California.
Mrs. HECKLER of Massachusetts.
Mr. PETTIS.
Mr. LANGEN.
Mr. WYMAN in three instances.
Mr. HOSMER in three instances.
Mr. CUNNINGHAM.
Mr. LIPSCOMB in two instances.
Mr. STEIGER of Wisconsin.
Mr. BOB WILSON.
Mr. BUCHANAN in two instances.
Mr. HORTON.
Mr. ASHBROOK.
Mr. ESCH.
Mr. DON H. CLAUSEN.
Mr. POFF.
Mr. SNYDER.
Mr. WHALLEY.
(The following Members (at the request of Mr. FLOWERS) and to include extraneous matter:)
Mr. LONG of Maryland in three instances.
Mr. FISHER in four instances.
Mr. MARSH in two instances.
Mr. WILLIAM D. FORD.
Mr. POWELL in two instances.
Mr. CAREY.
Mr. COHELAN in four instances.
Mr. HAYS in two instances.
Mr. BROWN of California in four instances.
Mr. RARICK in four instances.
Mr. DANIEL of Virginia.
Mr. CORMAN in five instances.
Mr. ROSENTHAL in two instances.
Mr. OLSEN.
Mr. JOHNSON of California.
Mr. ROONEY of Pennsylvania.
Mr. WALDIE.
Mr. RYAN in four instances.
Mr. MINISH.
Mr. PICKLE in two instances.
Mr. GONZALEZ in two instances.
Mr. HAWKINS.
Mr. ULLMAN in five instances.
Mr. O'HARA in four instances.
Mr. EDWARDS of California.
Mr. VANIK in two instances.
Mr. WOLFF in three instances.
Mr. EILBERG.
Mr. MORGAN.
Mr. ROGERS of Florida in five instances.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 412. An act to authorize and direct the Secretary of Agriculture to classify as wilderness the national forest lands known as the Lincoln Back Country, and parts of the Lewis and Clark Lolo National Forests, in Montana, and for other purposes; to the Committee on Interior and Insular Affairs.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced that on May 28, 1969 he signed enrolled bills of the Senate of the following titles:

S. 278. An act to consent to the New Hampshire-Vermont Interstate School Compact; and
S. 408. An act to liberalize the eligibility requirements governing the grant of assistance in acquiring specially adapted housing for certain service-connected disabled veterans, to increase the amount of such grant, to raise the limit on the amount of direct housing loans made by the Veterans' Administration, and for other purposes.

ADJOURNMENT

Mr. FLOWERS. Mr. Speaker, I move that the House do now adjourn.
The motion was agreed to; accordingly (at 3 o'clock and 46 minutes p.m.), the House adjourned until tomorrow, Tuesday, June 3, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

812. A letter from the Comptroller General of the United States, transmitting a report on the audit of the Export-Import Bank of the United States for the fiscal year ended June 30, 1968 (H. Doc. No. 91–124); to the Committee on Government Operations and ordered to be printed.
813. A letter from the Chairman, Joint Committee on Internal Revenue Taxation, transmitting a report on refunds and credits of internal revenue taxes for the fiscal year ended June 30, 1966, pursuant to the provisions of section 6405 of the Internal Revenue Code of 1954 (H. Doc. No. 91–125); to the Committee on Ways and Means and ordered to be printed.
814. A letter from the Deputy Assistant Secretary of Defense (Properties and Installations), transmitting notification of the location, nature, and estimated cost of certain facilities projects proposed to be undertaken for the Air Force Reserve, pursuant to the provisions of 10 U.S.C. 2233a(1); to the Committee on Armed Services.
815. A letter from the Under Secretary of the Navy, transmitting notification of the intention of the Department of the Navy to donate a surplus locomotive engine to the East Carolina chapter of the National Railway Historical Society, Greenville, N.C., pursuant to the provisions of 10 U.S.C. 7545; to the Committee on Armed Services.
816. A letter from the Comptroller General of the United States, transmitting a report on the administration and effectiveness of the work experience and training project at the Gila River Indian Reservation, Ariz., under title V of the Economic Opportunity Act of 1964, Department of Health, Education, and Welfare; to the Committee on Education and Labor.
817. A letter from the Acting Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation to authorize appropriations for expenses of the President's Council on Youth Opportunity; to the Committee on Education and Labor.
818. A letter from the Acting Secretary of State, transmitting a draft of proposed legislation to promote the foreign policy, security, and general welfare of the United States by assisting peoples of the world to achieve economic development within a framework of democratic, economic, social, and political institutions, and for other purposes; to the Committee on Foreign Affairs.
819. A letter from the Comptroller General of the United States, transmitting a report on opportunities for reducing costs of hospitalization, medical services, and drugs provided to Federal employees for job-related disablements, Bureau of Employees' Compensation, Department of Labor; to the Committee on Government Operations.
820. A letter from the Comptroller General of the United States, transmitting a report on legislation needed to avoid servicemen's bearing wartime mortality costs under the servicemen's group life insurance program, Veterans' Administration; to the Committee on Government Operations.
821. A letter from the Acting Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation to authorize appropriations for expenses of the Office of Intergovernmental Relations, and for other purposes; to the Committee on Government Operations.
822. A letter from the Acting Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation to authorize appropriations for expenses of the National Council on Indian Opportunity; to the Committee on Interior and Insular Affairs.
823. A letter from the Chairman, Federal Power Commission, transmitting a copy of a map of "Principal Natural Gas Pipelines in the United States, 1968"; to the Committee on Interstate and Foreign Commerce.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MACGREGOR: Committee on the Judiciary. H.R. 7906. A bill to regulate and foster commerce among the States by providing a system for the taxation of interstate commerce (Rept. No. 91–279). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ARENDS.

H.R. 11780. A bill to amend the Military Selective Service Act of 1967 in order to provide for a more equitable system of selecting persons for induction into the Armed

Forces under such act; to the Committee on Armed Services.

By Mr. CONTE:

H.R. 11781. A bill to revise the laws relating to post offices and post roads, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 11782. A bill to amend the Internal Revenue Code of 1954 to reduce percentage depletion rates for oil, gas, and certain other minerals to 15 percent, and to provide that percentage depletion shall not be allowed in the case of mines, wells, and other natural deposits located in foreign territory; to the Committee on Ways and Means.

By Mr. CORMAN:

H.R. 11783. A bill to amend the Federal Hazardous Substance Act to provide for child-resistant packaging to protect children from serious personal injury or serious illness resulting from handling, using, or ingesting any hazardous substance, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. EILBERG:

H.R. 11784. A bill to amend the Internal Revenue Code of 1954 to provide relief to certain individuals 65 years of age and over who own or rent their homes, through a system of income tax credits and refunds; to the Committee on Ways and Means.

By Mr. PERKINS (for himself, Mr. BRADEMAS, Mr. AYRES, and Mr. QUIE):

H.R. 11785. A bill to amend Public Law 85-905 to provide for a National Center on Educational Media and Materials for the Handicapped, and for other purposes; to the Committee on Education and Labor.

By Mr. HAYS:

H.R. 11786. A bill to amend the Merchant Marine Act, 1936, to encourage shipbuilding, and for other purposes; to the Committee on Merchant Marine and Fisheries.

H.R. 11787. A bill to clarify and strengthen the cargo-preference laws of the United States, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. HORTON:

H.R. 11788. A bill to amend title I of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 11789. A bill to promote public health and welfare by expanding, improving, and better coordinating the family planning services and population research activities of the Federal Government, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. LANGEN:

H.R. 11790. A bill to enable honey producers to finance a nationally coordinated research and promotion program to improve their competitive position and expand their markets for honey, and for other purposes; to the Committee on Agriculture.

By Mr. McKNEALLY (for himself and Mr. McCULLOCH):

H.R. 11791. A bill to amend the Voting Rights Act of 1965; to the Committee on the Judiciary.

By Mr. MORGAN:

H.R. 11792. A bill to promote the foreign policy, security, and general welfare of the United States by assisting peoples of the world to achieve economic development within a framework of democratic economic, social, and political institutions, and for other purposes; to the Committee on Foreign Affairs.

By Mr. O'NEAL of Georgia:

H.R. 11793. A bill to amend the Agriculture Adjustment Act, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. RIVERS:

H.R. 11794. A bill to authorize the extension of certain naval vessel loans now in existence and new loans, and for other purposes; to the Committee on Armed Services.

By Mr. ROONEY of Pennsylvania:

H.R. 11795. A bill to exempt from the antitrust laws certain joint newspaper operating arrangements; to the Committee on the Judiciary.

By Mr. WHALLEY:

H.R. 11796. A bill to prohibit certain weather modification activities over land areas of the United States; to the Committee on Interstate and Foreign Commerce.

H.R. 11797. A bill to increase from $600 to $1,000 the personal income tax exemptions of a taxpayer (including the exemption for a spouse, the exemption for a dependent, and the additional exemption for old age and blindness); to the Committee on Ways and Means.

By Mr. WYATT:

H.R. 11798. A bill to extend the life of the Lewis and Clark Trail Commission, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BROWN of California:

H.R. 11799. A bill to provide that the membership of local selective service boards reflect the ethnic and economic nature of the areas served by such boards; to the Committee on Armed Services.

H.R. 11800. A bill to establish an urban mass transit trust fund, and for other purposes; to the Committee on Banking and Currency.

H.R. 11801. A bill to amend section 592 of the Tariff Act of 1930 (19 U.S.C.A. 1592), and for other purposes; to the Committee on Ways and Means.

By Mr. CRAMER (for himself, Mr. BROYHILL of North Carolina, Mr. SKUBITZ, Mr. WYMAN, Mr. CLEVELAND, Mr. ROTH, Mr. KING, Mr. CLANCY, Mr. DEVINE, Mr. SNYDER, Mr. SCOTT, Mr. WHITEHURST, Mr. CHAMBERLAIN, Mr. BROYHILL of Virginia, Mr. MIZELL, Mr. HARSHA, Mr. EDWARDS of Alabama, Mr. COLLINS, Mr. BOB WILSON, and Mr. DUNCAN):

H.R. 11802. A bill to amend section 245 of title 18, United States Code, to make it a crime to deny any person the benefits of any educational program or activity where such program or activity is receiving Federal financial assistance; to the Committee on the Judiciary.

By Mr. QUILLEN:

H.R. 11803. A bill to provide for orderly trade in iron ore, iron, and steel mill products; Committee on Ways and Means.

By Mr. SAYLOR (for himself and Mr. GERALD R. FORD):

H.R. 11804. A bill to provide for the establishment of the Gateway National Recreation Area in the States of New York and New Jersey, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HAMILTON:

H.J. Res. 753. Joint resolution proposing an amendment to the Constitution of the United States, extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. MOSS (for himself and Mr. KEITH):

H.J. Res. 754. Joint resolution to amend section 19(e) of the Securities Exchange Act of 1934; to the Committee on Interstate and Foreign Commerce.

By Mr. SAYLOR:

H.J. Res. 755. Joint resolution to authorize appropriations for expense of the National Council on Indian Opportunity; to the Committee on Interior and Insular Affairs.

By Mr. LOWENSTEIN:

H. Con. Res. 279. Concurrent resolution expressing the sense of the Congress that the United States should begin to reduce its military involvement in Vietnam; to the Committee on Foreign Affairs.

By Mr. CLAY:

H. Con. Res. 280. Concurrent resolution on urgency of arms control negotiations; to the Committee on Foreign Affairs.

By Mr. KARTH:

H. Res. 429. Resolution that the Committee on Science and Astronautics be allowed to conduct certain inquiries; to the Committee on Rules.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

200. By the SPEAKER: Memorial of the Legislature of the State of Oregon, relative to allocating a fixed percentage of the revenue from national forest lands for investment in intensive forest management practices and roads; to the Committee on Agriculture.

201. Also, a Memorial of the Legislature of the State of Tennessee, relative to appropriations for fiscal year 1969 relative to sections 235 and 236 of the Housing and Urban Development Act of 1968; to the Committee on Appropriations.

202. Also, Memorial of the Legislature of the State of Florida, relative to the collection of sales and use taxes, documentary stamp taxes, and intangible taxes from national banks by the State of Florida; to the Committee on Banking and Currency.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 11805. A bill for the relief of Carlo Parpan and Pacida Sarda Flores and minor children Carlo, Mark, and Jonathon Flores; to the Committee on the Judiciary.

By Mr. CONTE:

H.R. 11806. A bill for the relief of Ashwani Kumar; to the Committee on the Judiciary.

By Mr. VAN DEERLIN:

H.R. 11807. A bill for the relief of Victoria B. Toia; to the Committee on the Judiciary.

By Mr. DONOHUE:

H. Res. 430. Resolution to refer the bill (H.R. 4561) entitled "A bill for the relief of the estate of Capt. John N. Laycock, U.S. Navy (retired)," to the Chief Commissioner of the Court of Claims pursuant to sections 1492 and 2509 of title 28, United States Code, as amended; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

128. By the SPEAKER: Petition of the Board of Councilmen, city and county of Denver, Colo., relative to the presence of chemical and nuclear materials near the city and county of Denver; to the Committee on Armed Services.

129. Also, petition of the City Council, Pittsburgh, Pa., relative to the antiballistic-missile system; to the Committee on Armed Services.

130. Also, petition of Antonio Escalera, Santurce, P.R., relative to redress of grievances; to the Committee on the Judiciary.

131. Also, petition of Geraldine M. Vickers, Lawndale, Calif., relative to redress of grievances; to the Committee on the Judiciary.

132. Also, petition of Cosimo Fiorillo, Boston, Mass., relative to redress of grievances; to the Committee on Post Office and Civil Service.

133. Also, petition of the Board of County Commissioners, Ashtabula County, Ohio, relative to the tax exemption on municipal bonds; to the Committee on Ways and Means.

SENATE—*Monday, June 2, 1969*

The Senate met at 12 o'clock noon, and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Thou in whom we live and move and have our being, enter our hearts and fit us for Thy service. Cross the threshold of our inner being and make us to be at home in both the world of the visible and the invisible, the temporal and the eternal. Enable us to live bravely in the world which is, while we labor for the world which is to come. In daily duties make us seekers of truth and servants of justice. In days of strife and storm lock our fortunes to Thy purposes, that we may choose Thy will as our will, Thy way as our way, Thy peace as our peace, and help win for the world that freedom which will enable all nations to bring their glory and honor into Thy kingdom.

In the name of Him who came to set men free. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, May 29, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT RECEIVED DURING ADJOURNMENT

Under authority of the order of the Senate of May 29, 1969, the Secretary of the Senate, on May 29, 1969, received messages in writing from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received on May 29, 1969, see the end of the proceedings of today, June 2, 1969.)

WAIVER OF CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the call of the legislative calendar, under rule VIII, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of measures on the calendar, beginning with Calendar No. 195 and the succeeding measures in sequence.

The VICE PRESIDENT. Without objection, it is so ordered.

PREVENTING TERMINATION OF CERTAIN FEDERAL OIL AND GAS LEASES

The Senate proceeded to consider the bill (S. 1193) to authorize the Secretary of the Interior to prevent terminations of oil and gas leases in cases where there is a nominal deficiency in the rental payment, and to authorize him to reinstate under some conditions oil and gas leases terminated by operation of law for failure to pay rental timely, which had been reported from the Committee on Interior and Insular Affairs, with an amendment, on page 3, line 1, after the word "within," strike out "fifteen days" and insert "twenty days"; so as to make the bill read:

S. 1193

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 31(b) of the Mineral Leasing Act of 1920 (41 Stat. 450), as amended (30 U.S.C. 188(b)), is amended by changing the period at the end thereof to a colon and adding the following: *"Provided,* That if the rental payment due under a lease is paid on or before the anniversary date but either (1) the amount of the payment has been or is hereafter deficient and the deficiency is nominal, as determined by the Secretary by regulation, or (2) the payment was calculated in accordance with the acreage figure stated in the lease or made in accordance with a bill which has been rendered by him and such figure or bill is found to be in error resulting in a deficiency, the Secretary shall notify the lessee of the deficiency and such lease shall not automatically terminate unless the lessee fails to pay the deficiency within the period prescribed in the notice."

SEC. 2. Section 31(c) of the Mineral Leasing Act of 1920 (41 Stat. 450), as amended (30 U.S.C. 188(c)), is amended to read as follows:

"(c) Where any lease has been or is hereafter terminated automatically by operation of law under this section, for failure to pay rental on or before the anniversary date or for failure to pay the full amount due and the deficiency is not nominal and payment was not made in accordance with the acreage figure stated in the lease or in accordance with a bill rendered by the Secretary and it is shown to the satisfaction of the Secretary of the Interior that such failure was the result of error or neglect on the part of the Department of the Interior, or where any lease has been or is hereafter terminated automatically by operation of law under this section for failure to pay rental on or before the anniversary date, but within twenty days after such date it is shown to the satisfaction of the Secretary of the Interior that such failure was either justifiable or not due to a lack of reasonable diligence on the part of the lessee, the Secretary may reinstate the lease if—

"(1) a petition for reinstatement, together with the required rental, including back rental accruing from the date of termination of the lease, is filed with the Secretary; and

"(2) no valid lease has been issued affecting any of the lands covered by the terminated lease prior to the filing of said petition. The Secretary shall not issue any new lease affecting any of the lands covered by such terminated lease for a reasonable period, as determined in accordance with regulations issued by him. In any case where a reinstatement of a terminated lease is granted under this subsection and the Secretary finds that the reinstatement of such lease will not afford the lessee a reasonable opportunity to continue operations under the lease, the Secretary may, at his discretion, extend the term of such lease for such period as he deems reasonable: *Provided,* That (A) such extension shall not exceed a period equivalent to the time beginning when the lessee knew or should have known of the termination and ending on the date the Secretary grants such petition; (B) such extension shall not exceed a period equal to the unexpired portion of the lease or any extension thereof remaining at the date of termination; and (C) when the reinstatement occurs after the expiration of the term or extension thereof the lease may be extended from the date the Secretary grants the petition."

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–205), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF BILL

The purpose of S. 1193 is to confer discretionary authority on the Secretary of the Interior to prevent, administratively, termination of certain oil and gas leases on Federal lands and to reinstate terminated leases under the limitations and conditions set forth below. Thus, the measure would enable the Secretary to do equity and at the same time relieve Congress of the necessity of considering private bills for one or the other of the above purposes. Such bills have been introduced in each Congress since 1954. The bill would accomplish its purpose by amending the appropriate sections of the Mineral Leasing Act of 1920, as amended (41 Stat. 450; 30 U.S.C. 188(b) and 188(c)).

BACKGROUND AND NEED

Prior to 1954 nonpayment of annual rental in connection with a noncompetitive oil and gas lease did not terminate the lease. Rather, the lessee remained liable for rental payments for the full term even though he may have abandoned his lease completely. In 1954, the 83d Congress amended the act by Public Law 555 to provide for the termination of a noncompetitive oil and gas lease "upon failure of a lessee to pay rental on or before the anniversary date of the lease, for any lease on which there is no well capable of producing oil or gas in paying quantities." This termination provision is automatic and was designed as a relief measure at the time.

The 83d Congress measure remedied the problem then presented, but created a new one. The automatic termination provision resulted in the termination of a number of oil and gas leases for failure to pay exact or timely rental in circumstances which appeared to warrant equitable consideration. The Secretary was not authorized to grant any waiver or other form of relief. To correct this situation, legislation was proposed in 1962 which would give the Secretary discretionary authority to reinstate these leases where the failure of payment was justifiable or not due to a lack of reasonable diligence

on the part of the lessees. It was recommended by the Department that the Secretary be given the authority for future cases as well as cases occurring between 1954 and 1962. Congress, however, limited the authority to past cases only.

In a number of cases since 1962, the law has operated to terminate leases where a rental payment was timely but it was short by a minimal amount. In one instance, the entire legislative procedure was required because of an error of 14 cents in rental payment resulting from a mistake by the Department itself. In other cases, the rental payment was timely, but it was deficient by a substantial amount. The 1954 act has been construed to apply to these cases as well as those where no payment has been made at all. In still other cases, payment is made in the correct amount, but it is not timely.

Failure to pay fully the exact amount of the annual rental or to pay it timely may have resulted, in a given case, from a variety of circumstances. Some examples are: errors in published notices, arithmetical errors in reminders, errors in totaling acreages of irregular lots and subdivisions, delay in the mails caused by transportation strikes, and delays caused by acts of God such as the 1964 earthquake in Alaska. Some of the deficiencies result from Bureau of Land Management error, and some result from an error on the part of the lessee.

The Bureau of Land Management has instituted a number of procedures designed to prevent clerical errors. They still occur, however, and leases have been terminated. As a practical matter, it is nearly impossible to prevent all errors, in view of the great volume of leases handled in Bureau of Land Management land offices each month. At the hearing, Assistant Secretary of the Interior Harrison Loesch testified there were some 90,000 oil and gas leases outstanding.

PROVISIONS OF MEASURE

S. 1193 is general legislation designed to provide authority to do administratively what hitherto has had to be done through the legislative process.

Section 1 deals with two types of lease situations which under present law require termination. One is where the rental payment, while made on time, is deficient by a nominal amount. The other is where the lessee paid the amount of rent billed to him by the Department, but the bill was in error and the error resulted in the deficiency. Under S. 1193, in these cases the Secretary must notify the lessee and the lease will not terminate if the lessee makes up the deficiency within the time presented in the notice.

Section 2 deals with leases that have terminated by operation of law for failure to pay the rental on time, or where the deficiency in rent payment is not nominal. In these cases, the bill provides that in order to have the lease reinstated, the lessee must, within 20 days of the anniversary date of the lease, show to the satisfaction of the Secretary that the failure to make timely payment, or to pay the full amount, was either justifiable or was not the result of lack of reasonable diligence on his, the lessee's part.

Under such circumstances, the Secretary may reinstate the lease if the lessee files a petition for reinstatement and tenders full rental payment, including back rental accruing from the date of the termination. A further condition of such reinstatement is that no valid lease has been issued on any of the land covered by the terminated lease.

The Secretary must allow a reasonable period of time, as determined in accordance with regulations to be issued by him, before issuing any new lease on the lands covered by the terminated lease.

In the event there have been administrative or other delays in the reinstatement and the Secretary finds that such delay has deprived a lessee of a reasonable opportunity to continue operations under the reinstated lease, the Secretary may, at his discretion, extend the lease term for a reasonable period. However, the extension may not be for a time longer than the period beginning when the lessee knew, or should have known, of the termination and ending on the date the Secretary grants the reinstatement petition. Also, the extension may not exceed the time remaining on the lease term at the date of termination. If the reinstatement occurs after the expiration of the lease term, the lease may be extended, subject to the above limitations, from the date the Secretary grants the petition.

THE COMMITTEE AMENDMENT

The committee amended S. 1193 by striking out "fifteen days" on line 1 of page 3, and in lieu thereof substituting "twenty days". This amendment is based in part on a suggestion made in the hearings by departmental witnesses and in part on a factual situation which is the subject of a bill, S. 689, sponsored by Senator Stevens, now pending before the committee which is a case in point. In this case, rental checks were mailed by the lessee in Houston, Tex., to the land office in Anchorage, Alaska, on September 18, 1967, but were not delivered until October 3, 1967, some 2 weeks later. The anniversary date of the lease was October 2, 1967, and thus under present law the leases were automatically terminated.

The time limitation is new to this year's bill, and was written in to prevent an unscrupulous lessee from using the reinstatement privilege as a means of speculation. That is, absent such a limitation, a lessee might deliberately allow his lease to terminate in order to see what companies were interested in the lands covered by his lease. Then he would obtain reinstatement and sell to the applicants at an inflated price.

It is the committee's intention that the time limitation provision will prevent such misuse of the administrative process for private speculation, and the Secretary is urged to be particularly watchful for any such activity.

COMMITTEE RECOMMENDATION

A bill similar in purpose to S. 1193 was considered by the committee in the 90th Congress. This was S. 1367, submitted by the Interior Department. It passed both the House and Senate in different forms, but no conference to reconcile the differences was held. The committee believes the current measure is a good compromise between the positions of the Senate and House on the 90th Congress bill, and that the time limitation in S. 1193 for establishing good faith and due diligence remedies what otherwise might have been a flow in the legislation.

There can be no question but that the legislation is needed, both to permit equity to be done to good faith Federal lessees and to relieve Congress with respect to the number of private bills required to accomplish the purpose of this measure on an individual basis.

Accordingly, the committee unanimously recommends prompt enactment of S. 1193, as amended.

EXTENSION OF TIME TO COMPLETE INSTITUTIONAL INVESTORS STUDY

The joint resolution (S.J. Res. 112) to amend section 19(e) of the Securities Exchange Act of 1934 was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S.J. RES. 112

Whereas additional time is required for the Securities and Exchange Commission to complete its study, and file a report with respect thereto, pursuant to section 19(e) of the Securities Exchange Act of 1934; and

Whereas the actual amount to be expended by the Commission in making such study and report will not exceed the original authorization of $875,000; and

Whereas an increase of $70,000 in such authorization is required because of the sums heretofore appropriated pursuant to such authorization $70,000 will be returned unexpended to the Treasury as of June 30, 1969: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 19(e) of the Securities Exchange Act of 1934 (15 U.S.C. 78s(e)) is amended—

(1) by striking out in paragraph (1) "September 1, 1969" and inserting in lieu thereof "September 1, 1970"; and

(2) by striking out in paragraph (4) "$875,000" and inserting in lieu thereof $945,000".

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–206), explaining the purposes of the joint resolution.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF JOINT RESOLUTION

Senate Joint Resolution 112 would amend section 19(e) of the Securities Exchange Act of 1934 to extend by 1 year from September 1, 1969, to September 1, 1970, the time in which the Securities and Exchange Commission is to study and make a report to the Congress on institutional investing practices in the securities market. In addition, the joint resolution would increase the amount authorized to be appropriated for this study from $875,000 to $945,000.

GENERAL STATEMENT

The Committee believes that the letter dated May 14, 1969, with attachment, from the Chairman of the Securities and Exchange Commission fully explains and fully justifies the need for this extension of time in which to complete the study and the need for the increased authorization. The letter with attachment from the Chairman of the Securities and Exchange Commission follows:

SECURITIES AND EXCHANGE COMMISSION,
Washington, D.C., May 14, 1969.

Hon. JOHN SPARKMAN,
Chairman, Committee on Banking and Currency, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: As you know, for a number of reasons there was a protracted delay in starting the institutional study authorized under Public Law 90–438. It is now moving as originally planned, but it is obvious that the study cannot be completed within the time limit of the original resolution.

The situation is set forth in detail in the attached memorandum which is in support of the request the Commission is now making that the time limit be fixed at September 1, 1970, rather than the present September 1, 1969. It is not expected that this extension will result in the expenditure of any more funds than were originally authorized.

Commissioner Richard B. Smith consented to personally oversee the study's operations and has devoted considerable time thereto. Both of us are available at your convenience, and we are most anxious to discuss the matter further, looking toward the introduction and consideration of a resolution changing the time limitation.

With kind regards, I am,

Sincerely,

HAMER H. BUDGE,
Chairman.

CERTAIN CIVILIAN EMPLOYEES AND FORMER CIVILIAN EMPLOYEES OF THE BUREAU OF RECLAMATION

The bill (S. 83) for the relief of certain civilian employees and former civilian employees of the Bureau of Reclamation was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 83

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) each of the following employees, former employees, and estates of deceased employees of the Bureau of Reclamation who received the overpayment of compensation listed opposite his name for the period from March 30, 1952, through August 13, 1966, inclusive, or any portion or portions of such period, which overpayment resulted from administrative error, is hereby relieved of all liability to refund to the United States the amount of such overpayment:

Name	*Overpayment*
Adriance, Mary S	$40.00
Albee, Stanley	10.96
Anderson, E. L	15.99
Chavez, Nicolas	15.08
Emmett, Wyllis L	9.62
Fife, Rowland W	1,324.62
Gallegos, Joseph M	50.60
Gallman, W. Brooks	10.96
Guerra, Ciro	14.34
Gutierrez, Ely E	19.65
Johnson, C. P	401.60
Marmon, Walter	14.42
Moss, R. A	12.80
Peavy, Patrick	1.44
Sanchez, Ernest G	1,534.77
Torres, Sinesio	429.60

Each such employee or former employee who has at any time made any repayment to the United States on account of any such overpayments made to him (or, in the event of his death, the person who would be entitled thereto under the first section of the Act of August 3, 1950 (5 U.S.C. 5583)), shall be entitled to have an amount equal to all such repayments made by him refunded if application is made within two years after the date of enactment of this Act.

(b) For purposes of the Civil Service Retirement Act and the Federal Employees' Group Life Insurance Act of 1954, each overpayment for which liability is relieved by subsection (a) of this section shall be deemed to have been a valid payment.

SEC. 2. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States full credit shall be given for any amounts for which liability is relieved by the first section of this Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–208), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

STATEMENT

The committee in the 90th Congress reported favorably S. 3517 which is identical to S. 83 of the 91st Congress, and in its report on S. 3517 of the 90th Congress, stated as follows:

"The Department of the Interior recommends enactment of S. 3517 and in its report, in part, states the following:

" 'This private bill covers a group of 16 employees of the Bureau of Reclamation, who received overpayments of salaries. These overpayments were discovered during comprehensive reviews of personnel and payroll records after routine audits of the records disclosed some irregularities.

" 'Of the 16 overpayments, 12 resulted from miscalculations of the waiting periods required for periodic step increases and four from failure to recognize the mandatory waiting period before promotion required by the Whitten amendment. The overpayments range from $1.44 to $1,534.77 for a total of $3,906.45.

" 'In recognition of the fact that the overpayments resulted from adminstrative errors and the employees were in no way responsible, we do not believe they should be required to make restitution. Although we have temporarily suspended action to collect the overpayments without this legislation we are without legal authority to relieve the employees of their obligation for repayment. In several instances, the repayment will constitute a hardship on the employees concerned."

" 'After a review of all of the foregoing, the committee believes that the legislation is meritorious and recommends that the bill, S. 3517, be considered favorably.' "

In view of the foregoing action of the committee in the 90th Congress in its favorable report on S. 3517, the committee adheres to its former recommendation and recommends that the bill S. 83 be considered favorably.

VILLAGE OF ORLEANS, VT.

The bill (S. 275) for the relief of the village of Orleans, Vt., was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 275

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 5103 (d) of title 39, United States Code, the Postmaster General is authorized and directed to (1) receive and consider any claims of the village of Orleans, Vermont, for the repayment of six unpaid United States money orders issued to such village in 1945 for the aggregate amount of $527.31, and (2) provide for the payment of the face value of such money orders to such village.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD, an excerpt from the report (No. 91–209), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to authorize and direct the Postmaster General to receive and consider any claims of the village of Orleans, Vt., for the repayment of six unpaid money orders issued to the village in 1945 in the aggregate amount of $527.31. The bill would require the Postmaster General to provide for the payment of the face value of the money orders to the village.

STATEMENT

This bill (S. 275) is identical to S. 839 of the 90th Congress which was passed by the Senate and on which the House took no action. The facts of the case as contained in the report requested from the Post Office Department and as quoted verbatim in the report (No. 1238) of the Committee on the Judiciary in the 90th Congress accompanying S. 839 when it was passed by the Senate, are as follows:

The Department is prohibited by law from paying a money order after 20 years from the last day of the month of original issue. Also, claims for unpaid money orders are forever barred unless received by the Department within that period (39 U.S.C. 5103(d)).

It is our understanding that in 1945 the treasurer of the village of Orleans purchased six money orders totaling $527.31, to be used for payment to the Province of Quebec, Canada, of a duty tax on certain securities. Later it was determined that there was no tax liability on the securities, and consequently the money orders were not used. The present board of trustees of the village was unaware of the money orders until recently, when they turned up in the personal effects of the deceased village treasurer.

Pursuant to the law cited above, records relating to the subject money orders have been destroyed. We, therefore, have no way of knowing whether duplicate money orders were issued in this case. If they were, enactment of S. 839 would constitute a double payment.

We would suggest the probabilities are that duplicates effecting a refund to the village were issued, since in all likelihood the question of the unused money orders and what to do about them arose when the village authorities met to discuss the financial affairs of the village. Presumably, the original money orders were lost or mislaid at the time; in which case it is reasonable to expect that the village would file for duplicates.

Enactment of legislation such as S. 839 would make it incumbent upon the Department to maintain money order records indefinitely. This would be contrary to the policy established by Congress in enacting section 5103(d) of title 39, United States Code; namely, that the records of the Department cannot be maintained indefinitely to adjudicate the millions of money orders issued annually.

At the request of the committee, the sponsor of the bill has produced an affidavit from the village of Orleans, which the committee believes overcomes the objection of the Department. The affidavit indicates that in this case there is no danger of a double payment.

In agreement with the previous action in the 90th Congress, the committee recommends the bill favorably.

NEW BEDFORD STORAGE WAREHOUSE CO.

The bill (S. 868) for the relief of the New Bedford Storage Warehouse Co. was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 868

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the New Bedford Storage Warehouse Company of New Bedford, Massachusetts, the sum of $365.98 in full settlement of the claims of said company against the United States arising out of services performed for the United States Coast Guard, pursuant to Government bill of lading A–0022724. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the

RECORD an excerpt from the report (No. 91–210), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The proposed legislation authorizes and directs the Secretary of the Treasury to pay out of any money in the Treasury not otherwise appropriated, to the New Bedford Storage Warehouse Co. of New Bedford, Mass., the sum of $365.98 in full settlement of the claims of said company against the United States arising out of services performed for the U.S. Coast Guard, pursuant to Government bill of lading A–0022724.

STATEMENT

This bill (S. 868) in the 91st Congress is identical to S. 3484 and H.R. 10851 in the 90th Congress. H.R. 10851 passed the House of Representatives but no action was taken in the Senate.

The Department of Transportation recommends enactment of this legislation.

In its report to the Committee on the Judiciary of the House of Representatives under date of October 19, 1967, the Department states:

"The bill will permit payment for charges of moving the household effects, of Mr. Max E. Baldwin from Fairhaven, Mass., to Greenfield, Mo. According to the carrier the shipment was delivered at destination on August 10, 1960. Mr. Baldwin was discharged from the Coast Guard in July 1960. The First Coast Guard District was unable to obtain a receipt from him that the goods had been delivered. This is necessary before payment can be made by the Coast Guard. On October 21, 1963, the matter was forwarded to this office for settlement; however, the statute of limitations had run on August 10, 1963.

"The Coast Guard made additional attempts to obtain a receipt from Mr. Baldwin without success. On March 16, 1964, the claim was forwarded to the General Accounting Office for settlement. Payment was denied because the statute of limitations had run. While a receipt from Mr. Baldwin was never obtained, there is little doubt that delivery was made. There is no record that any complaint of nondelivery was made.

The Department of Transportation, therefore, recommends enactment of H.R. 10851."

Since there is no evidence that the company ever acted with less than reasonable prudence and diligence, nor is there any question but that the household effects of the delinquent consignee were safely delivered by the company, the committee is of the opinion that the bill should be approved. Accordingly, it is recommended that the bill, S. 868, be considered favorably and so reported to the Senate.

WILLIAM D. PENDER

The bill (S. 901) for the relief of William D. Pender was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to William D. Pender, an employee of the Department of the Army, the sum of $3,602.69, in full satisfaction of all claims of the said William D. Pender against the United States for compensation for the loss of household goods and personal effects which he had to abandon in Fairbanks, Alaska, after he was incorrectly informed by the Department of the Army personnel that such goods and effects could not be stored or shipped at Government expense incident to his transfer from Fort Greely, Alaska, to Fort Belvoir, Virginia, and which could not otherwise be disposed of by the said William D. Pender because of prohibitively high commercial storage rates and the shortage of time between the issuance of transfer orders and the reporting date at his new duty station: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–211), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the bill is to pay to William D. Pender the sum of $3,602.69 for the loss of his household goods and personal effects.

STATEMENT

This committee approved a similar bill for this claimant in the last Congress which passed the Senate but no action was taken in the House of Representatives.

The Department of the Army, which approves the bill, set forth the facts of the case in reporting on a similar bill in the last Congress as follows:

This bill would authorize and direct the Secretary of the Treasury to pay $6,292.40 to Mr. Pender for his claims against the United States for the loss of his household goods and personal effects which he abandoned in Fairbanks, Alaska, after being incorrectly informed by Army personnel that such property could not be stored or shipped at the expense of the United States pursuant to his transfer from Fort Greely, Alaska, to Fort Belvoir, Va.

The Department of the Army has no objection to the bill if amended as suggested in this report.

Official records disclose that on September 5, 1962, Mr. William D. Pender, a resident of Alaska, received notification that he had been selected for an appointment as a nuclear powerplant operator at the Fort Greely Nuclear Powerplant. He reported to duty on the next day and worked at Fort Greely until September 20, 1962, when he began preparing for his departure to Fort Belvoir, Va., for a 48-week course pertaining to the operation of nuclear powerplants. He states that he was told by administrative personnel on Friday, September 21, 1962, that his goods could not be stored at Government expense over 90 days or shipped to Fort Belvoir. It is not clear when Mr. Pender was finally told that he could not store or ship his goods at Government expense but his travel orders, dated September 6, 1962, limited him and his wife to 400 pounds of hold baggage. He and his wife left by plane to the Fort Belvoir area on September 22, 1962, after disposing of most of their household goods to the Salvation Army because of prohibitive rates of commercial storage in Alaska. The only property not disposed of consisted of four boxes of clothes stored commercially, a box of tools stored with a neighbor, and a table and a record player stored with Mr. Pender's sister. The travel orders, dated September 6, 1962, were erroneous and were amended on November 6, 1962, to include shipment of Mr. Pender's household goods, but no administrative means were available to compensate him for his loss. Mr. Pender returned to Alaska following completion of the course of Fort Belvoir.

The Department of the Army does not oppose a bill of this nature when a civilian employee has sustained financial loss resulting from an erroneous administrative determination as to travel allowances. The travel orders, dated September 6, 1962, were clearly erroneous in restricting Mr. and Mrs. Pender to 400 pounds of hold baggage pursuant to a permanent change of station. The amount provided for in the bill represents replacement value as indicated by prices in the Sears and Roebuck catalog of all of the property disposed of by Mr. Pender when he departed Alaska for Fort Belvoir. A more reasonable means of reimbursement, however, would appear to be the estimated depreciated value of the disposed of property which is the method of reimbursement normally used when a claim is filed against the United States for loss of property pursuant to a permanent change of station. In an interview held in Alaska with Mr. Pender on April 18, 1966, Army personnel attempted to make an estimate of the depreciated value of Mr. Pender's property. Mr. Pender, however, could not recall with any precision the acquisition dates of many of the items. As some items were accumulated over a 12-year period, the most reasonable evaluation of all of the property would appear to be on the basis of a mean period of 6 years for depreciation, an estimated value of $4,527.69. This figure, however, should be further reduced to $3,602.69 because of Mr. Pender's action upon his departure for Fort Belvoir in entrusting to his neighbor a box of tools which were never returned and in carelessly disposing of other small items of substantial value, such as a rifle, a shotgun, and a tape recorder, which could have been stored commercially or entrusted to his sister.

In a letter, dated March 28, 1966, to the Department of the Army, Mr. Pender stated that his financial situation was marginal and his living costs were extremely high because he lives in an isolated area of Alaska. In an earlier letter to a Member of Congress, Mr. Pender stated that he was $5,000 in debt and that the financial hardship of replacing his household goods had caused that indebtedness. In view of these equitable considerations, the Department of the Army has no objection to the bill if amended as suggested in this report.

The cost of this bill, if enacted as introduced, will be $6,292.40. If enacted as suggested in this report, the cost will be $3,602.69.

The committee believes that the bill is meritorious and recommends it favorably.

MRS. AILI KALLIO

The bill (S. 1010) for the relief of Mrs. Aili Kallio was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1010

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay to Mrs. Aili Kallio, out of any money in the Treasury not otherwise appropriated, a sum of money to be determined as provided in section 2 of this Act, in full settlement of any claim she may have against the United States because of failure to receive merchantable title to a tract of land containing 24 acres more or less, located within the southeast quarter

southwest quarter, section 19, township 51 north, range 32 west, Michigan Meridian, Baraga County, Michigan, by deed recorded on the land records of Baraga County, Michigan: *Provided*, That prior to such payment Mrs. Kallio shall convey by deed in form acceptable to the Secretary of the Interior all her right, title, and interest in the above described property to the heirs of William Owen.

SEC. 2. The Secretary of the Interior, after taking into consideration such appraisals as he deems necessary or appropriate, shall determine the fair market value of the property described in section 1, as of the effective date of this Act, and shall notify the Secretary of the Treasury of said sum which shall be paid as provided in the first section of this Act.

SEC. 3. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by an agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–212), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The proposed legislation authorizes and directs the Secretary of the Treasury to pay out of any money in the Treasury not otherwise appropriated, a sum of money to Mrs. Aili Kallio as full settlement of any claim she may have against the United States because of failure to receive a merchantable title to a tract of land of approximately 24 acres, located within the SE¼SW¼ sec. 19, T. 51 N., R. 32 W, Michigan meridian, Baraga County, Mich.; provided that prior to such payment Mrs. Kallio shall convey by deed in form acceptable to the Secretary of the Interior all her right, title, and interest in the above described property to the heirs of William Owen.

STATEMENT

The Committee on the Judiciary in the 90th Congress reported favorably S. 2036. That bill was passed by the Senate but was not considered by the House. S. 1010 in the 91st Congress is identical to S. 2036. In its report on S. 2036 the committee stated:

The Department of the Interior has no objection to the enactment of this legislation.

The property described in the bill is part of the original allotment of one William Owen, deceased allottee No. 262 of the L'Anse Reservation, Mich. William Owen died testate July 10, 1918, and his will was approved by the President on September 20, 1921. Mr. Owen willed his entire estate to his surviving wife, Emeline Owen, who subsequently died Feb. 27, 1919. When the will of William Owen was approved, the Assistant Commissioner of Indian Affairs notified the special agent in charge of the Mackinac Agency (now L'Anse) that approval of the will by the President removed the restrictions on the lands and that they were no longer under the supervision of the Indian Office.

In 1923, Margaret Duggan, as administratrix of the estate of Emeline Owen, conveyed the land described in the bill, together with other lands, to Edward Sicotte for a consideration of $1,100. This transaction was approved by the Baraga County Court. This action was taken by Mrs. Duggan after the Assistant Commissioner had advised the special agent in charge that approval of William Owen's will by the President removed the restrictions on the lands. However, the Solicitor subsequently held that approval of a will by the President of an Indian who died after February 13, 1914, did not effect the removal of restrictions on Indian lands (Solicitor's opinion of February 11, 1944, M–33441). Mrs. Kallio, in 1934, prior to the Solicitor's opinion, purchased the land described in the bill from Mrs. Sciotte for a consideration of $850. Mrs. Kallio has stated that she first became aware of the default in the title when she attempted to sell the land in 1965.

There are 14 heirs to this parcel of land. The majority of the heirs refuse to convey their interests in this land in order to assist in clearing the title. At the same time, since the orginal conveyance was made in good faith upon advice from the Bureau of Indian Affairs that the property was no longer restricted, the present record titleholder should not, after having paid consideration and having acted in good faith, be penalized by being required to forfeit her right to the land without reimbursement.

The property in question is located approximately 2½ miles north and east of L'Anse, Mich. It fronts a paved, all-weather county road. There are no improvements on the land; however, there are 10 acres of cleared, idle cropland and 13.5 acres of timberland. Government appraisers, as of July 1967, have estimated the fair market value of the land to be $2,000. Mrs. Kallio, in a written statement, has acknowledged her willingness to accept this amount.

After a review of the facts of the case as set forth in the report of the Department of the Interior and in a report directed to the Honorable Philip A. Hart, the sponsor of this legislation, from the Minneapolis area office of the Department of the Interior, the committee is of the opinion that the bill should be approved. Accordingly, it is recommended that the bill, S. 2036, be considered favorably and so reported to the Senate.

The committee adheres to its recommendation on S. 2036 and recommends that S. 1010 be considered favorably.

HOMER T. WILLIAMSON, SR.

The bill (S. 1236) for the relief of Homer T. Williamson, Sr., was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1236

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Homer T. Williamson, Senior, of Warner Robins, Georgia, is hereby relieved of all liability for repayment to the United States of the sum of $490, representing overpayments of salary received by him as a civilian employee of the Department of the Air-Force at Warner Robins Air Force Base, Georgia, for the period from September 3, 1963, through April 12, 1965, as the result of administrative error in adjusting the salary of the said Homer T. Williamson, Senior, upon completion of the two-year period during which he was entitled to retain the rate of pay he was receiving prior to a demotion due to a reduction in force. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, full credit shall be given for the amounts for which liability is relieved by this Act.

SEC. 2. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Homer T. Williamson, Senior, the sum of any amounts received or withheld from him on account of the overpayments referred to in the first section of this Act. No part of any amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–213), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the bill is to relieve Homer T. Williamson, Sr., of all liability to refund to the United States the sum of $490 representing an overpayment of salary received as an employee of the Department of the Air Force at Robins Air Force Base, Ga., from September 3, 1963 through April 12, 1965.

STATEMENT

A similar bill for this claimant, S. 2200 of the 90th Congress, was favorably reported by this committee and passed by the Senate but no action was taken on it by the House of Representatives.

The Department of the Air Force has advised the committee that it has no objection to the enactment of the bill.

In its report on the bill, the Department of the Air Force sets forth the facts as follows:

"Effective September 3, 1961, Mr. Williamson's pay grade was changed from GS–5 to GS–4. He was entitled to, and granted salary retention under section 5337 of title 5, United States Code. Under Air Force regulations in effect on the date of his change to the lower grade, the rate of pay he would have received in that grade, had he not been eligible for salary retention, was GS–4, step g. GS–4, step g, was the maximum scheduled step rate of the grade at the time.

"At the expiration of the salary retention period, September 3, 1963, Mr. Williamson was erroneously placed in GS–4, step 10. GS–4, step g, (now step 7) plus any step increases he would have earned prior to the end of the salary retention period, was the rate of pay he should have received at the expiration of the salary retention period.

"A factor which may have contributed to the error in establishing Mr. Williamson's rate of pay was the change in the number of scheduled step rates of the compensation schedule upon enactment of the Federal Employees Salary Reform Act of 1962 (Public Law 87–793). That act eliminated longevity step increases and included them in the regular rate range.

"The error was discovered in a GAO audit in 1965. Corrective action was taken on all personnel actions. Mr. Williamson was informed of the overpayment and of his indebtedness to the Government. He repaid the indebtedness at the rate of $10 per pay period and had repaid in full as of April 16, 1967. There is no evidence of lack of good faith on the part of Mr. Williamson or administrative officials.

"Relief was granted by the Congress in a precedent case, Private Law 90–44, "For the relief of Charles H. Thurston." The Thurston case involves the identical type of administrative error as that involved in the Williamson case. Overpayments to both employees

were questioned by GAO auditors at the same time on the same GAO Inquiry No. 5Q 0188, dated May 27, 1965.

"Based upon a review of the circumstances of the case and the precedent case, the Department of the Air Force interposes no objection to enactment of the bill."

The committee believes that the bill is meritorious and recommends it favorably.

HENRY E. DOOLEY

The bill (H.R. 2940) for the relief of Henry E. Dooley was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–214), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to pay Mr. Henry E. Dooley, Mount View Terrace, Manchester Center, Vt., the sum of $394.49 in full settlement of his claims against the United States for reimbursement of the cost of transportation of the automobile of his son from San Francisco, Calif., to Manchester Center, Vt., after receipt of official notification that his son was missing in action in Vietnam.

STATEMENT

In its favorable report on the bill, the House of Representatives set forth the facts of the case as follows:

The bill, H.R. 2940, was introduced in accordance with the recommendations of the Comptroller General of the United States contained in a communication transmitted to the Congress by the Comptroller General as a meritorious claim. Section 236 of title 31 of the United States Code provides for special report to the Congress by the Comptroller General when he determines that despite the fact that a claim submitted to the General Accounting Office cannot be settled under existing law, it contains elements of legal liability or equity which justifies the consideration of a matter by the Congress.

The claim embodied in the bill is for reimbursement of expenses incurred by Mr. Dooley in personally transporting the motor vehicle of his son, Lt. (jg.) James E. Dooley, U.S. Navy, 686509, from San Francisco, Calif., to Manchester Center, Vt., during the period November 30, 1967, to December 10, 1967. His son was reported missing in action on October 22, 1967, while on a combat mission over North Vietnam. Following receipt of notice of his son's missing status, Mr. Dooley traveled to San Francisco, Calif., and drove his son's automobile to his home in Vermont for safekeeping pending a final determination of the son's status.

Mr. Dooley's claim was disallowed by the Claims Division of the General Accounting Office on March 4, 1968, for the reason that the law and regulations do not provide for reimbursement of the transportation expenses which he incurred. Mr. Dooley protested the action taken on his claim and urged that in the circumstances involved and in view of the savings which accrued to the Government as a consequence of his moving the car at personal expense, the claim should be allowed.

Provisions for the payment of pay and allowances and for travel and transportation benefits in the case of members of the uniformed services in a missing status are contained in chapter 10 of title 37 of the United States Code, 37 U.S.C. 551–558.

With respect to items of pay and allowances, section 552 of title 37 provides that a member in a missing status is, for the period he is in that status, entitled to the same pay and allowances, as defined in chapter 10, to which he was entitled at the beginning of that period or may thereafter become entitled. The term "pay and allowances" is defined in section 551 of title 37 as meaning basic pay, special pay, incentive pay, basic allowance for quarters, basic allowance for subsistence, and station per diem allowances for not more than 90 days.

As to travel and transportation benefits of such members, section 554 of title 37 provides, in material part, as follows:

(b) Transportation (including packing, crating, drayage, temporary storage, and unpacking of household and personal effects) may be provided for dependents and household and personal effects [which term may include one privately owned motor vehicle] of a member of a uniformed service on active duty * * * who is officially reported as * * * absent for a period of more than 29 days in a missing status * * *."

* * * * *

(e) In place of the transportation for dependents authorized by this section, and after the travel is completed, the Secretary concerned may authorize—

"(1) reimbursement for the commercial cost of the transportation; or

"(2) a monetary allowance at the prescribed rate for all, or part, of the travel for which transportation in kind is not furnished. * * *."

Under that statutory authority the shipment of the automobile of Mr. Dooley's son unquestionably could and would have been provided by the Government, had it been requested, at a cost considerably in excess of the amount of Mr. Dooley's claim. However, the committee observes that such a resolution was complicated by the fact that the serviceman is missing in action.

However, the General Accounting Office invited the attention of the Congress to the act of March 7, 1966, Private Law 89–218 (80 Stat. 1617), in which Mr. and Mrs. Earl Harwell Hogan, of Pine Bluff, Ark., were authorized to be paid the sum of $120 as reimbursement of the cost of transportation of the automobile of their son, the late Lowell S. Hogan, specialist, U.S. Army, from Bremen, Germany, his last duty station, to Pine Bluff, Ark. Private Law 89–213 states that Mr. and Mrs. Hogan transported their son's automobile at their own expense in reliance upon the erroneous advice of agents of the United States, who misinterpreted U.S. Army regulations pursuant to which such transportation was authorized to be made at the expense of the United States.

The General Accounting Office concluded that in the circumstances of his case, Mr. Dooley's claim contains such elements of equity as to justify its reporting with a recommendation that he be reimbursed for the expenses involved in the transportation of his son's automobile. The General Accounting Office recommended that authorization be given to pay Mr. Dooley the sum of $394.49, consisting of the following items: $152.35, his plane fare to San Francisco, Calif.; $92.29 for lodging; $63.50 for food; and $86.35 for gasoline and oil.

The committee agrees that the facts of this case merit legislative relief and recommends that the bill be considered favorably.

The committee concurs in the action of the House of Representatives and recommends that the bill, H.R. 2940, be considered favorably.

CAPT. RICHARD L. SCHUMAKER, U.S. ARMY

The Senate proceeded to consider the bill (S. 728) for the relief of Capt. Richard L. Schumaker, U.S. Army, which had been reported from the Committee on the Judiciary, with an amendment, on page 1, line 5, after the word "of" where it appears the second time, strike out $2,752.16," and insert "$2,268.48,"; so as to make the bill read:

S. 728

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Captain Richard L. Schumaker, United States Army, is hereby relieved of all liability for repayment to the United States of the sum of $2,268.48, representing the amount of overpayments of basic pay and allowances received by the said Captain Richard L. Schumaker for the period from May 21, 1966, through July 31, 1967, as the result of administrative error in determining his years of service for pay purposes. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, full credit shall be given for the amount for which liability is relieved by this Act.

SEC. 2. (a) The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Captain Richard L. Schumaker the sum of any amounts received or withheld from him on account of the overpayments referred to in the first section of this Act.

(b) No part or any amount appropriated in this section shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this section shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined any sum not exceeding $1,000.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–215), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF AMENDMENT

The purpose of the amendment is to conform the relief of liability for repayment to the United States representing the amount of overpayments of basic pay and allowances received by Capt. Richard L. Schumaker to the sum computed by the Department of the Army as the total amount overpaid. The Department of the Army is not opposed to the bill if it is amended as suggested.

PURPOSE

The purpose of this legislation, as amended, is to relieve Capt. Richard L. Schumaker, U.S. Army, from all liability to repay the United States the sum of $2,268.48, representing the amount of overpayments of basic pay and allowances received by Captain Schumaker for the period from May 21, 1966, through July 31, 1967, as the result of administrative error in determining his years of service for payment purposes. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, full credit shall be given for the amount for which liability is relieved by this bill. The bill would further authorize and direct the Secretary of the Treasury to pay to Captain Schumaker the sum of any amounts received or withheld from him on account of the overpayments referred to in the first section of the bill.

STATEMENT

The Department of the Army has no objection to the enactment, as amended, of this legislation. The Department of the Army's records disclose that Captain Schumaker applied for appointment as a Reserve officer for service in the Army Reserve on December 11, 1965. Under the applicable Army regulations (AR 140–101) he was eligible for appointment to the grade of first lieutenant due to his qualifications, including a bachelor of science degree in medical technology from the University of Tennessee and over 3 years professional experience in his field. In fact, on February 1, 1966, the commanding general, 3d U.S. Army, recommended that he be appointed a first lieutenant. On May 11, 1966, Captain Schumaker was tendered an appointment as a second lieutenant and assigned to the Medical Service Corps. He was concurrently ordered to active duty. He accepted the tendered appointment on May 21, 1966.

The tender indicated that he was credited with no "years of service in an active status" notwithstanding the fact that his qualifications made him eligible for such credit for each year, month and day of professional experience in his field. "Service in an active status", credited for education and professional experience under section 3353 of title 10, United States Code, and Army Regulation 140–101, is constructive service for the purpose of determining grade in which the individual will be appointed. It is not creditable for the purposes of determining base pay (37 U.S.C. 205 and par. 10103(c), Department of Defense Pay and Entitlements Manual).

On December 9, 1966, then Second Lieutenant Schumaker applied to the Army Board for the Correction of Military Records for correction of his military records to show that on May 21, 1966, the date he entered on active duty, he was credited with 3 years, 8 months and 11 days of "service in an active status" and on that date was appointed a Reserve in the grade of first lieutenant. On January 26, 1967, upon the recommendation of the Army Board for Correction of Military Records, the Secretary of the Army directed that his records be corrected to show:

"a. that he was tendered and accepted appointment in the grade of first lieutenant, U.S. Army Reserve, on May 21, 1966, and entered on active duty in such grade on that date; and

"b. that he was credited with 3 years, 7 months and 28 days service in an active status on that date."

On April 7, 1967, the Department of the Army informed Captain Schumaker that, due to the correction of his military records, he was entitled to certain back pay for the period May 21, 1966, through February 13, 1967. Included with the correspondence was a statement entitled "Computation of Payment Due Under Provisions of 10 U.S.C. Section 1552," and a completed form which he need only sign and submit to claim the amount due.

Captain Schumaker signed and submitted the prepared form for the collection of the net amount, $1,433, the Department of the Army found to be due him after deducting $446.53 for Federal Insurance Contributions Act and Federal income tax. He was paid this amount.

However, it appears that the Department of the Army in computing the amount of back pay due Captain Schumaker made an error in "years of service." The "years of service" as computed under section 205, title 37, United States Code, should have been "less than 2 years of service" instead of the 3 and 4 "years of service" used by the Department of the Army in figuring out his back pay. The "years of service" error was carried forward in computing Captain Schumaker's basic pay for the period February 14, 1967, through July 31, 1967. Captain Schumaker was promoted to the grade of captain on May 21, 1967.

In August of 1967 the Department of the Army discovered that Captain Schumaker had been overpaid and finally in August of 1968 after many reexaminations of his account it was determined that, as of June 20, 1968, he owed the Government $2,268.48 less $350 paid by Schumaker for a net debt of $1,918.48 computed as follows:

MAY 21, 1966–FEB. 13, 1967

Paid as:

First lieutenant (3) at $489 a month, May 21–June 30, 1966	$652.00
First lieutenant (3) at $504.60 a month, July 1–Sept. 22; 1966	1,379.24
First lieutenant (3) at $521.40 a month, Sept. 23, 1966–February 1967	2,450.58
Total	4,481.82

Entitled to pay as:

First lieutenant (0) at $342.60 a month, May 21–June 30, 1966	456.80
First lieutenant (0) at $353.70 a month, July 1, 1966–Feb. 13, 1967	2,629.17
Total	3,085.97
Total paid for period	4,481.82
Total entitlement for period	3,085.97
Amount overpaid	1,395.85

FEB. 14–JULY 31, 1967

Paid as:

First lieutenant (4) at $521.40 a month, Feb. 14–May 20, 1967	1,685.86
Captain (4) at $583.20 a month, May 21–July 31, 1967	1,360.80
Total	3,046.66

Entitled to pay as:

First lieutenant (0) at $353.70 a month, Feb. 14–May 20, 1967	1,143.63
Captain (0) at $441.60 a month, May 21–July 31, 1967	1,030.40
Total	2,174.03
Total paid for period	3,046.66
Total entitlement for period	2,174.03
Amount overpaid	872.63
Amount overpaid, May 21, 1966–Feb. 13, 1967	1,395.85
Amount overpaid Feb. 14–July 31, 1967	872.63
Total amount overpaid	2,268.48

The numerical notations in parenthesis in the above computation represent years of service creditable for basic pay purposes, e.g., "first lieutenant (3)" denotes a first lieuaenant with more than 3 but less than 4 years service creditable for basic pay purposes. "Captain (0)" denotes a captain with less than 2, and therefor no, years of service creditable for basic pay purposes.

The Department of the Army concedes that overpayment to Captain Schumaker was caused solely by its administrative error and there is no indication of fraud, misrepresentation, fault, or lack of good faith on the part of Captain Schumaker or any other person acting on his behalf.

In view of the above, if the bill is amended to substitute the amount of $2,268.48 for the $2,752.16, the Department of the Army is not opposed to the bill.

The committee accordingly recommends that favorable consideration be given to S. 728, as amended.

YVONNE DAVIS

The Senate proceeded to consider the bill (S. 757) for the relief of Yvonne Davis, which had been reported from the Committee on the Judiciary, with an amendment, on page 1, line 6, after the word "of" strike out "$561.05" and insert "$536.05"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any funds in the Treasury not otherwise appropriated, to Yvonne Davis of Old Town, Maine, the sum of $536.05. Such sum represents the amount of hospital and medical expenses incurred by the said Yvonne Davis in connection with an ear operation performed on her in a civilian hospital in Bangor, Maine, after having been erroneously advised by medical personnel at Dow Air Force Base, Maine, that she was, as a dependent parent of a member of the Armed Forces, entitled to hospital and medical care in civilian facilities at the expense of the United States.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–216), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the bill, as amended, is to authorize and direct the Secretary of the Treasury to pay the sum of $536.05 to Yvonne Davis, of Old Town, Maine, representing the amount of hospital and medical expenses incurred by the claimant in connection with an ear operation perfomed on her in a civilian hospital in Bangor, Maine, after having been erroneously advised by medical personnel at Dow Air Force Base, Maine, that she was entitled to hospital and medical care in civilian facilities at the expense of the United States.

STATEMENT

A similar bill was reported favorably by this committee in the 90th Congress, but no action was taken in the House of Representatives. The facts are contained in the report of this committee on S. 2026 of the 90th Congress and are as follows:

Mrs. Davis is the dependent mother of a member of the Women's Army Corps (WAC), Cp4c. Deborah F. Davis, WA8120775, Headquarters Company, WAC, Fort Myer, Va. As such a dependent parent (residing in a dwelling place provided by the member), she was entitled to hospitalization and medical care in facilities of the uniformed services, subject to the availability of space and facilities and capabilities of the medical staff. At the time involved, the Dow Air Force Base Hospital did not have an otolaryngologist on its staff, and, therefore, lacked the surgical capability required to perform an operation of the type needed by Mrs. Davis, the operation being a stapedectomy. As a parent, she was not entitled to any care from civilian sources under either the original Dependent's Medical Care Act or under the 1966 amendments. However, in the outpatient visit to the Air Force Hospital, Dow Air Force Base, November 28, 1966, Mrs. Davis was advised by an Air Force medical officer that she was entitled to obtain hospitalization and medical care from civilian sources at U.S. expense. Thereafter, her civilian physician had her admitted to the Eastern Maine General Hospital,

Bangor, Maine, and she underwent a stapedectomy operation at that hospital December 12, 1966.

Whereas the circumstances releated would justify a private law to reimburse Mrs. Davis is, of course, a matter of legislative discretion. The stapedectomy, while necessary to prevent a further loss of hearing, may not have been desired by Mrs. Davis if she had been properly advised that she was not entitled to medical care at the expense of the Government. However, since she had been advised to have the operation by her civilian physician and since it could not be performed at the Dow hospital, it can be argued that there was no reasonable alternative to obtaining the operation, if at all, from civilian sources. On the other hand, she might well have decided to make arrangements for the operation where she could have been accommodated on a space-available basis.

In view of her clear reliance on the erroneous information given to her by an Air Force medical officer, the Department of the Air Force believes that the uncertainty in the case should be resolved in favor of Mrs. Davis and the Department would, therefore, have no objection to an award to her in the amount of $536.05. This award reflects the $561.05 in medical and hospital costs incurred by Mrs. Davis reduced by $25 representing the contribution she would have been required to make to such costs by law had she, in fact, been a dependent of a member of the uniformed services eligible for medical and hospital care in civilian facilities at Government expense.

Inasmuch as Mrs. Davis was erroneously informed by an Air Force medical officer as to her eligibility for medical and hospital care in civilian facilities at Government expense, the committee is of the opinion that she should be reimbursed for her expenses involved.

The committee is in agreement with the Department of the Air Force that in view of Mrs. Davis' reliance on the erroneous information given her by an Air Force medical officer, the case should be resolved in her favor, and accordingly, the committee recommends that the bill, S. 2026, be considered favorably.

In light of the foregoing the committee adheres to its recommendation and recommends that the bill, S. 757, as amended, be considered favorably.

TECHNICAL CORRECTIONS IN TITLE 38, UNITED STATES CODE

The bill (H.R. 684) to amend title 38 of the United States Code in order to make certain technical corrections therein, and for other purposes, was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD, an excerpt from the report (No. 91–217), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXPLANATION OF THE BILL

The committee bill amends title 38 of the United States Code (veterans' benefits) to make certain technical corrections, eliminate obsolete terms and references, and to correct misspelled words and typographical errors which have occurred in the various amendments to title 38 since the veterans' laws were codified in 1958. The bill makes no substantive changes in present law; it merely makes technical corrections. The Committee on Finance agrees with the Committee on Veterans' Affairs of the House as to the desirability of making these changes and has approved the House bill without amendment.

The specific changes made by the bill are fully explained in the report of the Veterans' Administration, which follows:

REPORT OF VETERANS' ADMINISTRATION

VETERANS' ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR
OF VETERANS' AFFAIRS,
Washington, D.C., March 3, 1969.

Hon. RUSSELL B. LONG,
Chairman, Committee on Finance,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This will respond to your request for a report by the Veterans' Administration on H.R. 684, 91st Congress, an act to amend title 38 of the United States Code in order to make certain technical corrections therein, and for other purposes, as passed by the House of Representatives on February 17, 1969.

The purpose of H.R. 684 is to make certain technical changes in title 38, United States Code, in order to eliminate obsolete provisions contained therein, to provide for technical conformance of title 38 with other laws which have recently been enacted, to correct minor errors which have been discovered, and to repeal certain obsolete savings provisions which are no longer applicable.

The bill, as passed by the House, contained several amendments recommended by the Veterans' Administration.

We are enclosing, for the information of the committee, a section-by-section analysis of the bill.

In light of the above, we believe that H.R. 684 furthers the desirable effort of keeping title 38 current, and therefore recommend favorable consideration by your committee.

We were advised by the Bureau of the Budget in regard to our report to the House Committee on Veterans' Affairs on H.R. 684 as introduced, that there was no objection from the standpoint of the administration's program to the presentation of that report to that committee.

Sincerely,

W. J. DRIVER, *Administrator.*

EXTENSION OF TEMPORARY DUTY SUSPENSION ON CERTAIN CLASSIFICATIONS OF YARN OF SILK

The bill (H.R. 2718) to extend for an additional temporary period the existing suspension of duties on certain classifications of yarn and silk was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–218), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of H.R. 2718 is to continue for 3 years, until the close of November 7, 1971, the suspension of duties on certain classifications of spun silk yarn which expired on November 7, 1968.

GENERAL STATEMENT

Public Law 86–235, approved September 8, 1959, suspended for 3 years (until the close of November 7, 1962) the import duties imposed under paragraph 1202 of the old tariff schedules of the Tariff Act of 1930 on spun silk or schappe silk yarn (not dyed or colored, singles of more than 58,800 yards per pound, or plied of more than 29,400 yards per pound). The period of suspension was continued for an additional 3 years by Public Law 87–602, approved August 24, 1962, and by Public Law 89–229, approved October 1, 1965.

H.R. 15798 of the 90th Congress, a similar bill to H.R. 2718, was unanimously approved by the House on June 4, 1968. The substance of H.R. 15798 was also approved by the Senate. However, due to a failure of the two Houses to agree on an unrelated Senate amendment to H.R. 15798, the bill was not enacted.

Spun silk yarns are of two principal types: standard spun-silk schappe) yarn and silk-noil (bourrette) yarn. Standard or schappe spun-silk yarns for general textile use are manufactured from long parallelized silk fiber stock recovered from waste cocoons and silk filature waste and are used for making sewing thread, decorative stripings for fine worsteds, lacing cord for cartridge bags, and, in combination with other fibers, certain types of necktie fabrics, shirtings, dress, and suiting fabrics, upholstery, and drapery materials.

The silk-noil type of yarn is made from shorter length, and hence cheaper, silk fiber stock than schappe and must be spun on wool-spinning machinery. The material used consists of silk noils discarded as byproducts in preparing silk waste for spinning in standard spun silk yarns. Such yarns have few civilian uses except in mixture fabrics containing other fibers. Their chief use is in the weaving of silk cartridge cloth for powder bags for large-caliber ordnance.

The suspension of the duty was made in order to enable domestic producers of fine-yarn fabrics to import fine silk yarns free of duty, thereby making it more economical to produce fine-yarn fabrics in competition with imported similar fabrics. The committee is advised that the same reasons which justified the original suspension of the duty justify the continuation of the suspension.

The bill provides that the entry or withdrawal of any article which was made after November 7, 1968 (the termination date of the last suspension of duty), and on or before the date of enactment, may be liquidated or reliquidated as though such entry or withdrawal had been made after the date of enactment. Such liquidation or reliquidation of an entry or withdrawal is subject to a request being filed therefor with the customs officer concerned on or before the 120th day after the date of enactment.

No objection to the continuation of the suspension of duty has been brought to the committee's attention.

BILL PASSED OVER

The bill (H.R. 4622) to amend sec. 110 of title 38, United States Code, to insure preservation of all disability compensation evaluation in effect for 20 or more years was announced as next in order.

Mr. MANSFIELD. Over, Mr. President.

The VICE PRESIDENT. The bill will be passed over.

EXTENSION OF TEMPORARY DUTY SUSPENSION ON ELECTRODES FOR USE IN PRODUCING ALUMINUM

The bill (H.R. 10015) to extend through December 31, 1970, the suspension of duty on electrodes for use in producing aluminum was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–220), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of H.R. 10015, as amended, is to continue until the close of December 31, 1970, the suspension of duties on electrodes imported for use in producing aluminum.

GENERAL STATEMENT

Under the permanent provisions of the Tariff Schedules of the United States, electrodes of the kind covered by the bill are currently dutiable under item 517.61 at 10 percent ad valorem, the second stage of a five-stage reduction from 12.5 to 6 percent ad valorem agreed to in the Kennedy round. However, the duty on electrodes imported for use in producing aluminum was suspended from October 7, 1965, under Public Law 89-241, until July 15, 1966, was further suspended by Public Law 89-434 until July 15, 1968, and to July 15, 1969, by Public Law 90-571.

Electrodes of the type covered by the bill are used in the electrolysis of alumina into aluminum. These electrodes, including both anodes and cathodes, are consumed in great quantities in the electrolysis process.

Your committee is informed that there is presently insufficient production of electrodes to satisfy domestic requirements. However, the committee is also informed that new plant capacity is being developed to produce electrodes for future domestic consumption. For this reason, the committee agreed to the bill as passed by the House limiting the suspension of duty for a period of 18 months, until December 31, 1970.

TEMPORARY SUSPENSION OF DUTIES ON METAL SCRAP

The bill (H.R. 10016) to continue until the close of June 30, 1971, the existing suspension of duties for metal scrap was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-221), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of H.R. 10016, as passed by the House and approved by the committee, is to continue to the close of June 30, 1971, the existing suspension of duties on metal waste scrap, etc., provided by item 911.12 of the Tariff Schedules of the United States.

GENERAL STATEMENT

Legislation for the temporary suspension of the duties on various metal scrap was first enacted in 1942 (Public Law 497, 77th Cong., act of March 13, 1942, 56 Stat. 171). With various changes the suspension was continued from time to time depending upon the scarcity of the particular metals at the time.

This bill would continue for 2 years (until July 1, 1971) the temporary suspension of the duties on certain metal waste and scrap, etc., provided by item 911.12 of the Tariff Schedules of the United States; principally such metal scrap as iron and steel, aluminum, magnesium, nickel and nickel alloys. As before, the bill would not suspend the duties applicable to waste and scrap of lead, lead alloy, zinc, zinc alloy, tungsten, or tungsten alloy, nor would it suspend the duties applicable to articles of lead, lead alloy, zinc, zinc alloy, tungsten, or tungsten alloy.

ARTICLES TO WHICH BILL APPLIES

Item 911.12 of the Tariff Schedules of the United States applies to—

(1) Metal waste and scrap (provided for in pt. 2 of schedule 6 of the schedules), except copper, lead, zinc, and tungsten waste and scrap;

(2) Unwrought metal (except copper, lead, zinc, and tungsten) in the form of pigs, ingots, or billets (*a*) which are defective or damaged, or have been produced from melted down metal waste and scrap for convenience in handling and transportation without sweetening, alloying, fluxing, or deliberate purifying; and (*b*) which cannot be commercially used without remanufacture;

(3) Relaying or rerolling rails; and

(4) Articles of metal to be used in remanufacture by melting (except articles of lead, zinc, or tungsten, and not including metal-bearing materials provided for in schedule 4 or in pt. 1 of schedule 6 of the schedules, and not including unwrought metal provided for in pt. 2 of schedule 6 of the schedules).

BACKGROUND INFORMATION

Scrap of various nonferrous metals, whether imported or of domestic origin, may be considered for most purposes simply as relatively small components in the total U.S. supplies of the respective metals, although some manufacturers depend wholly on metal scrap as a source of raw material. The relation of iron and steel scrap to the total supplies of iron and steel is somewhat different from that existing with respect to nonferrous metals. This is because the economical production of steel by the open-hearth process requires that part of the iron-bearing materials used consist of heavy melting scrap. Thus, much iron and steel scrap constitutes a material important to the domestic production of steel. Despite the fact that imports of scrap metals have not in the past few years constituted important components of the total supplies of the various metals, the imports in some cases have represented important sources of the metals for limited numbers of consumers of such metals in some sections of the country.

The rates of duty on the principal types of ferrous and nonferrous metal scrap, the suspension of which would be continued by the bill, are shown in the following table:

Type of scrap	Item No.	Rate of duty
Iron and steel	607.11 or 607.12	22 or 30 cents per long ton plus additional duties on alloy content.
Aluminum	618.10	1.2 cents per pound.
Nickel and nickel alloy	620.02	Free.
Tin and tinplate	607.10 or 622.10	Do.
Magnesium	638.55	23 percent ad valorem.

Relaying and rerolling the rails would, in the absence of this legislation, be dutiable at the rate of one-twentieth of 1 cent per pound plus additional duties on alloy content under items 610.20 to 610.21 of the Tariff Schedules of the United States. Other metal articles not considered scrap within the meaning of the tariff classifications but imported to be used in remanufacture by melting are also exempt from duty under items 911.10 to 911.12 of these schedules. Such article would be dutiable, in the absence of special legislation, at various rates too numerous to mention in this report.

CONCLUSION

The Committee on Finance has received no information which would indicate any opposition to the legislation. Interested departments and agencies have indicated that they have no objection to the legislation. The U.S. Tariff Commission has indicated that the conditions which prompted the initial suspension of duty on metal scrap and the continuations thereof to the present time have not materially changed.

BILLS PASSED OVER

The bills (H.R. 5833) to continue until the close of June 30, 1972, the existing suspension of duty on certain copying shoe lathes, and (H.R. 8644) to make permanent the existing temporary suspension of duty on crude chicory roots were announced as next in order.

Mr. MANSFIELD. Mr. President, I ask that these two bills go over.

The VICE PRESIDENT. The bills will be passed over.

LUDGER J. COSETTE

The bill (S. 499) for the relief of Ludger J. Cossette was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 499

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Ludger J. Cossette, of Gonic, New Hampshire, a retired employee of the Post Office Department, the sum of $84.96, in full satisfaction of all claims of the said Ludger J. Cossette for additional compensation for emergency services performed by him for such Departments at its request, payment heretofore received by him for such services having been limited, by reason of his retired status, to the difference between the amount earned and the amount payable to him for the same period as retirement annuity: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-224), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the bill is to pay to Ludger J. Cossette of Gonic, N.H., a retired employee of the Post Office Department, the sum of $84.96 for additional compensation for emergency services.

STATEMENT

A similar bill for this claimant, S. 2584 of the 90th Congress, was approved by this committee and was passed by the Senate but no action was taken on it by the House of Representatives in the 90th Congress.

The U.S. Civil Service Commission advised the committee that it would have no objection to the enactment of the bill.

In its favorable report to the committee on the bill in the 90th Congress the Civil Service Commission said:

"Mr. Cossette, a retired employee of the Post Office Department, was reemployed for a total of 36 hours during the pay period beginning February 26, 1966. His net earnings for the service were $7.56. These earnings were limited by reason of his retired status, to the difference between his annuity and the amount that he would otherwise have earned if he had not been a retired employee. The civil service retirement law requires that the salary of a reemployed retired employee, such as Mr. Cossette, be reduced by an annuity allocable to the period of employment. The purpose of this provision is to prevent a reemployed retired employee from receiving a windfall of both salary and annuity covering the same period of time.

"S. 2584 would authorize payment of $84.96 to Mr. Cossette. This is the amount by which his earnings were reduced because of his retired status. The Commission has consistently viewed as undesirable any private bill which would single out one person for benefits not available to others similarly situated. In this case, however, we believe such legislation may be justified. Mr. Cossette did not seek this employment but performed the service on an emergency basis as a favor to the postmaster. It also does not appear that he was ever informed that his pay would be limited to the difference between his gross earnings and annuity for the period of employment. We therefore consider it patently unfair that Mr. Cossette, an experienced postal employee, worked almost a full week for $7.56.

"In view of these exceptional circumstances, the Commission would have no objection if Congress acted favorably on S. 2584."

The committee believes that the bill is meritorious and recommends it favorably.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar beginning with No. 385.

There being no objection, the Senate proceeded to the consideration of executive business.

The VICE PRESIDENT. The nominations on the Executive Calendar will be stated, as requested by the Senator from Montana.

EXPORT-IMPORT BANK OF THE UNITED STATES

The bill clerk read the nomination of John Conrad Clark, of North Carolina, to be a member of the Board of Directors of the Export-Import Bank of the United States.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF THE TREASURY

The bill clerk read the nomination of Murray L. Weidenbaum, of Missouri, to be an Assistant Secretary of the Treasury.

The VICE PRESIDENT. Without objection, the nomination is considered and confirmed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, that concludes the call of the Executive Calendar.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

ORDER OF BUSINESS

Mr. DIRKSEN. Mr. President, I ask unanimous consent to proceed for 10 minutes.

The VICE PRESIDENT. Without objection, the Senator from Illinois is recognized for 10 minutes.

SENATOR KENNEDY AND VIETNAM STRATEGY

Mr. DIRKSEN. Mr. President, I feel impelled to make some observations with respect to the statements made by the distinguished majority whip of this body, the Senator from Massachusetts (Mr. KENNEDY). He and I have much in common. Not only do we share membership in this great body, but also we entered Army service as privates—I in World War I and he with troops abroad in 1951. Nothing so enriches the kinship of the uniform as experience which comes from having been a private.

Often do I think back to those days when one stood reveille, did KP—kitchen police—duty, mended one's own clothes, washed his own mess kit, learned squads right and squads left, and performed a score of other duties to sharpen one's strategic and tactical expertise.

But one learns in due course that war is a tactical and strategic art. Objectives are to be assessed. Targets and positions must be evaluated. High ground and its importance in stopping infiltration must be equated with the cost in lives. The value of high ground was not lost on the Germans 25 years ago this week when they occupied the high promontory overlooking both Omaha and Utah Beaches and held it against every assault for more than 30 hours. To conclude that our military leaders in Vietnam were "senseless and irresponsible," as my distinguished colleague and private-at-arms put it, in taking Hamburger Hill, came as something of a shock. It did not dislocate my affection for him, but it did jolt my estimate of his wisdom and judgment.

Since that first statement on the Senate floor 2 weeks ago, he has spoken to a college graduation group in the course of which he was quoted as saying that senseless military actions in the hills and valleys of Vietnam "have delayed successful negotiation at the Paris peace talks."

All this has a slightly familiar ring. It sounds a bit like another Senator from Ohio who graced this body in 1861—more than a hundred years ago. His name was Benjamin Franklin Wade. He was chairman of the Committee on Conduct of the War. When General McClellan remained rather deliberate, with President Lincoln's approval, Senator Wade went to the White House and demanded that Lincoln throw McClellan overboard. "Who do I put in his place?" asked Lincoln. "Anybody," snorted Wade. Very cooly Lincoln said, "Wade, anybody will do for you but I must have somebody." All this because of the military conduct of General McClellan.

If what is being done in Vietnam is senseless and irresponsible, the Senator from Massachusetts should contact the Commander in Chief and suggest that he dismiss our military commanders and find others.

But I have an idea that the President, the people of this country, and our knowledgeable leaders are not about to do anything of the kind. They are more likely to recall what the historian Titus Livius, better known as Livy wrote 2,100 years ago when General Paulus was selected to conduct the war with Macedonia in 168 B.C. Here is what Livy wrote:

Lucius Acmiluis Paulus, a Roman Consul who had been selected to conduct the war with the Macedonians, B.C. 168 went out from the Senate into the assembly of the people and addressed them as follows, according to the historian, Titus Livius (Livy):

"In every circle, and, truly, at every table, there are people who lead armies into Macedonia; who know where the camp ought to be placed; what posts ought to be occupied by troops; when and through what pass that territory should be entered; where magazines should be formed; how provisions should be conveyed by land and sea; and when it is proper to engage the enemy, when to lie quiet.

"And they not only demonstrate what is best to be done, but if anything is done in any other manner that what they have pointed out, they arraign the counsul, as if he were on trial before them.

"These are great impediments to those who have the management of affairs; for everyone cannot encounter injurious reports with the same constancy and firmness of mind as Fabius did, who chose to let his own ability be questioned through the folly of the people, rather than to dismanage the public business with a high reputation."

I might say, parenthetically, that they attached to Fabius the term "delayer," and yet that was the tactic he should have used. Paulus continued:

I am not one of those who think that commanders ought at no time to receive advice; on the contrary, I would deem that man more proud than wise, who regulated every proceeding by the standard of his own single judgment.

What then is my opinion

That commanders should be counseled, chiefly, by persons of known talent; by those who have made the art of war their particular study, and whose knowledge is derived from experience; from those who are present at the scene of action, who see the country, who see the enemy; who see the advantages that occasions offer, and who, like people embarked in the same ship, are sharers of the danger.

If, therefore, anyone thinks himself qualified to give advice respecting the war which I am to conduct, which may prove advantageous to the public, let him not refuse his assistance to the state, but let him come with me into Macedonia.

He shall be furnished with a ship, a horse, a tent; even his traveling charges shall be defrayed.

But if he thinks this too much trouble, and prefers the repose of a city life to the toils of war, let him not, on land, assume the office of a pilot.

The city, in itself, furnishes abundance of topics for conversation; let it confine its passion for talking within its own precincts, and rest assured that we shall pay not attention to any councils but such as shall be framed with our camp.

That is what Livy wrote in "History of Rome" Titus Livius, volume 13, book XLIV, chapter 22.

That could have been written yesterday. It could have been gleaned from the pages of the CONGRESSIONAL RECORD. It is as fresh as new-mown hay. It is as true as the stars in their courses.

But all this has a very serious aspect. Hanoi quickly picked up this criticism. It was broadcast. Even the word "senseless" was used.

And what could be the impact on troop morale and discipline? When Senators, 12,000 miles removed from Hamburger Hill, call the 10-day action "senseless and irresponsible," can it be interpreted in any other way than a direct reflection on the judgment and competence of our field commanders in Vietnam. If this is to be taken as the home-guard appraisal of the skill, judgment, and capability of our commanders, what does it do to troop confidence?

General Paulus said it all 2,100 years ago when he observed:

If, therefore, anyone thinks himself qualified to give advice respecting the war which I am about to conduct, which may prove advantageous to the public, let him not refuse his assistance to the state but let him come with me into Macedonia.

Mr. MANSFIELD. Mr. President, I listened with a great deal of interest to the measured remarks of the distinguished minority leader, and I noted with interest his reference to something which happened before the birth of Christ, and which has become part of Roman history.

I also noted that he started his remarks by saying that both he and the distinguished assistant majority leader had much in common, not only because they share membership in this particular body, but also because in their military service they both started out as privates. I think I could join with my two colleagues in that respect, having been a seaman second class in the Navy, a private first class in the Marine Corps.

It is my recollection and understanding that the distinguished senior Senator from Massachusetts likewise achieved the high rank of private first class, and he was disappointed that he was unable to make corporal.

But I think that what he had to say he had a right to say; just as what the distinguished minority leader has said he had a right to say. Members of this body are supposedly mature in judgment; Members of this body are responsible for every word they say; and Members of this body have to account to the people of the States from which they come for their actions as well as their words.

In my opinion, Vietnam is a barbaric, tragic, and senseless war. It is a war in which we never should have become engaged because, in my opinion, it is not vital to the security of the United States. This statement is nothing new with me. I have made this statement time and time again on the floor of this Chamber, and I have made it to the people of the State of Montana, whom I have the honor and privilege to represent.

I think, as far as Vietnam, is concerned, it strikes into the heart and mind of every one of us, regardless of our personal feelings on the war.

I picked up the Great Falls, Mont., Tribune this morning and noted that up to Memorial Day 179 citizens of my State had made the ultimate sacrifice, and that in 1 year to the day—from Memorial Day 1968 to Memorial Day 1969—nine citizens of the city of Great Falls had made the supreme sacrifice. The totals were for a small city and a small State of less than 700,000 in population—the price which Montana has paid in this war—and for what? For what?

Just ask yourselves that question.

The distinguished minority leader refers to the importance of a particular hill. It is my understanding that after that hill was taken—and it took 12 assaults to achieve the objective—it was abandoned. It is my understanding that there were other hills in the same vicinity just as important, I would assume, as was the particular hill in question. It is my further understanding that the general who was responsible for this undertaking, said in effect—and I think I quote him almost exactly—that "The hill had no strategic value."

Well, as I tried to say last Thursday, hills can be taken and lost, hills can be held for a long time or held temporarily, but lives once taken are gone forever. The taking of a life is permanent.

The distinguished minority leader mentioned Fabius, referring to him as "Fabius the Delayer." Fabius fought for years and years and finally he won, but he won at a terrific cost in lives. Nevertheless, Rome survived.

We will survive, in spite of the tremendous cost now approaching 40,000 dead in Vietnam, well over 200,000 in casualties, and almost $100 billion in cost. We will have to live with this mistake which we have made and do the best we can to find a way out of it.

So far as Hanoi's picking up the words of a Senator in this body is concerned, they have been doing that for 3 or 4 years, ever since the war started. And, may I say, in reverse, that we in this country have picked up the words of prominent officials in Hanoi, when it suited our convenience, and we have also released secret documents, when it suited our convenience—documents which indicated that the enemy was losing the war and that we were winning it, and that victory was just around the corner. Well, gentlemen, we know where we stand in that respect at the present time.

I would say that on the eve of President Nixon's meeting with President Thieu at Midway on Sunday next, it would be well for us to try to show a degree of coordination and unity behind Mr. Nixon. On the basis of what he has done to date and what he said in his speech—I think it was the 14th of May, wherein he laid out the points which allow him great maneuverability and flexibility—I believe he will uphold what the aims of America are in this war and not what may be someone else's.

We have borne a great burden in manpower, in treasure, and in tragedy and I have every confidence that the President of the United States meant what he said in his speech to the Nation on Vietnam, and I have every confidence that he will uphold his position when this meeting occurs on Sunday next.

Mr. President, so far as I am concerned—and this is nothing new with me—every Senator, whether he be Republican or Democrat, whether he be hawk or dove, will have the right and should have the right to speak as he sees fit, because he does have to answer to his colleagues, to his people, and to the Nation for what he says. Of all the people in all branches of Government outside of the President and Vice President, we are subjected to the will of the people who sent us here. We are answerable to them and we are answerable for every act we take and every word we utter.

I think it is one of the great privileges of this body that we have the right to speak from our hearts and from our minds, and to state honestly what we think about this or any other subject which is of vital interest and import to the Nation.

Mr. DIRKSEN. Mr. President, I make two observations. The question of whether we should or should not be in Vietnam is not before us. We are confronted with the stark fact that we are there and that we have one-half million Americans in Vietnam today.

They are under very able leadership. The question is whether that leadership now shall be undercut and whether remarks shall be made that reflect upon that leadership and have a chance to impair the confidence of the troops who have to do the fighting.

That is the point I make.

I would have been shocked, I think, if as a soldier on the Western Front over 51 years ago, similar remarks had been made on this floor about those who were our commanders, indicating what the strategy in World War I should have been.

Thus, it is always a question of making certain that discipline is not impaired and morale is not impaired.

That is the point I make. And that is the point that must necessarily be criticized, and, whenever it occurs, I shall certainly speak my piece at any time and

at any place, and take issue with those who do it.

I do not for a moment contest their right to say it. They can say what they like, and it can be as frivolous or as meaningless as they have capacity to make it; but I am not going to let it go by unchallenged in the interest of those who are doing the hard fighting in Vietnam 12,000 miles from this Chamber.

Mr. MANSFIELD. Mr. President, so far as leadership is concerned, I think we should place that particular matter in its proper context.

A soldier carries out his duties and his obligations. He is directed by the authorities here in Washington as to the sort of procedure under which he must operate. It is my understanding—and I think it is the correct one—that when the bombing of the north stopped, around the first of November last year, orders were issued under the previous administration to "keep the pressure on."

If that policy is still the policy of this Nation in Vietnam, then I think the fault lies not with the military leaders in the field but with the high military, political, and civilian leaders in this country who are responsible for the laying down of policy.

So far as the military is concerned, it is their duty and their obligation to carry out that which is laid out for them to do. They have no choice in the matter. But, so far as making policy is concerned, we should remove any stigma from Vietnam and its leadership and the soldiery there, and place whatever blame there is where it belongs—right here in Washington.
